This war has been fought by a united country—a country not beaten and dragooned into unity; rather, a country that has consciously subordinated its differences of opinion to the great common necessity of defense.

To win the war, we first won harmony among ourselves. We trusted ourselves to be Americans. We made the distinction between patriotism and partisanship. We showed the world how, as Wendell Willkie said, the free are strong and the truly strong are free.

Liberty in America has always been strengthened by crisis. Liberty in America has always risen to responsibility. The world was surprised because we dared to hold a wartime election. We welcomed the test.

Now the making of the peace lies before us. No peace can be won in a year or even in a decade. We may be thankful that no peace can be lost in a year either. The crisis of war is self-evident. But the crisis of peace is invisible. The obligation imposed upon a free people to be responsible is, therefore, even greater when a peace can be lost than when a war must be won.

We did not realize this when we were losing the last peace. When the shooting stopped, we assumed that the danger had ended. Patriotism was blacked out by partisanship. Our national interest was subordinated to lesser issues. We lost the peace when we lost sight of the responsibility of partisanship. This must not happen again. Hitler dead must not divide the Nation that Hitler alive united.

The men who won the war in 1918 and lost the peace in 1920 had more excuse for their lack of vision than we do now. A new situation faced the world then. The world has just become one.

The last war broke up the old system of alliances. It swept the personal diplomacy of kings and princes out on a tide of democratic hopes. But not only was cooperation between nations necessary to maintain peace after 1918. Political maturity and responsibility on the part of the common people had become a basic necessity too.

The last peace conference was a holiday for old men who liked to play games with maps. State-making replaced king-making as the fashion of the day. What the so-called practical men of 1920 forgot, what it took the world 25 years of cynicism and tragedy to learn, was that a strong state must be a united nation. In peace as in war, a modern state is as strong as its citizens are united.

Some far-sighted men in every country saw this necessity. One of them in this country was Governor Cox, of Ohio. Another was Franklin Roosevelt. When Wilson became a casualty of World War I, and young Roosevelt followed Cox into the campaign of 1920, he knew that the fight he was making was not for the lost peace. It was for this one. It was for the peace we must now win in his name.

Anyone who has lived through these past 25 years—anyone who merely reads their history—knows the facts. Political immaturity and irresponsibility, social and moral default, mean war. They always have and they always will.

Our oceans are no longer barriers against a possible enemy. A Maginot line is not a secure wall against hostile neighbors. It is only a wall against ideas and progress. America's only protection in the days ahead lies in the wisdom and the imagination with which we meet the inevitable problems that will plague us. We are strong. We are free. We are generous-minded. Our national dreams disdain imperialism and conquest. Instead, we truly believe that it is to our national interest to see freedom, and mature self-government, spread over the entire rest of the world as quickly as possible.

Those ideals and beliefs—the imaginative mind and the quick practicality of the American—they are our strength and our defense. If we live up to our ideas, if we bring to the problems of peace all our ingenuity, all our faith in God and our trust in fellow men, then we have nothing to fear. We shall pioneer into the future with the courage and the dignity and the rich success of the men who conquered the Rockies and won the Columbia River for a new nation "conceived in liberty and dedicated to the proposition that all men are created equal."

## Mr. Wallace's Horoscope

EXTENSION OF REMARKS
OF
**HON. THAD F. WASIELEWSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of November 3, 1945:

MR. WALLACE'S HOROSCOPE

Secretary of Commerce Wallace has issued a report dealing with wages and profits in the automobile industry that will simply add to the flames of current wage controversy. Except for purposes of political propaganda, there is no excuse for publishing a document of this description bristling with hypotheses and unverifiable assumptions. It is designed to prove that the automobile industry could increase basic wage rates 25 percent by 1947 without raising prices and yet continue to make high profits. To reach these conclusions Mr. Wallace's statisticians have had to do a lot of guessing about future conditions—what they are likely to be in the next 2 or 3 years as regards increases in productivity and in material costs, volume of sales and other factors affecting future profits. "Even with a 25-percent wage increase and some increase in material costs," according to the report, "profits three times larger than in the 1936–39 period can be expected on sales two and one-half times as large" in 1947 and 1948 on the basis of 1942 prices.

As was to have been expected, spokesmen for the automobile industry dispute the validity of the Department's estimates and protest its conclusions. President Wilson, of General Motors, says that his company would have to increase its volume of production by 60 percent over 1936–39 in order to make as much money as it did during that period, under OPA price formulas, without any wage increases whatever. And the general manager of the Automobile Manufacturers Association declares that labor efficiency in the industry is currently 20 to 40 percent below prewar levels. This clash of opinion again emphasizes the need for labor and management to get together and settle their differences by means of an impartial fact-finding analysis of the position of the individual automobile companies involved in wage disputes. It is certainly not the business of the Department of Commerce to prejudge the issues at stake in pending wage controversies by resort to sweeping conclusions based on assumptions open to challenge.

Furthermore, the Department of Commerce study seems to take it for granted that if an industry is able to meet wage increases out of profits, the case for higher wages has been proved. In the present instance, however, the question should be raised as to whether all these prospective profits of the automobile industry belong of right to the automobile workers. Why should they be the sole beneficiaries of technological progress and reduced production costs? Under a progressive free economic system, the gains from industrial progress should be shared by all workers as consumers. Sharing is accomplished by lowering prices. This is the way to stimulate expansion and create jobs. Moreover, the man who has invested his savings in an industry is also entitled to a share in the rewards of progress. If all future profit increases are skimmed off by wage increases, the incentive to effect economies and expand markets by lowering prices will be greatly weakened, if not killed. These larger issues involved in current demands for wage increases have been almost lost to sight owing to the statistical bombardments to which we have been subjected. Yet, they are of fundamental importance to the preservation of a sound, progressive, private business economy.

## VJ-Day Address by Mayor Patton, of Knoxville, Tenn.

EXTENSION OF REMARKS
OF
**HON. TOM STEWART**
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the RECORD a speech delivered on VJ-day, August 14, 1945, by Mayor E. E. Patton, of Knoxville, Tenn. The speech was broadcast over Station WNOX.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

This is the most glorious day in the history of America since the day the Pilgrim Fathers landed at Plymouth Rock. It means that the treacherous Japs have been whipped to their knees; it means that no more brave and gallant American boys will have to shed their precious blood and sacrifice their lives on the altar of the god of war; that our boys in the far-flung Pacific and all the other battlefields of the earth will come home at an early date to their loved ones.

Every loyal American will give thanks to Almighty God for victory over a barbarous and uncivilized foe; every loyal American will pray God that never again will the earth be cursed by war.

We know that hundreds of our brave boys from this city and section have laid down their lives in order that we might remain free. To the fathers and mothers and other relatives of these gallant sons of freedom our hearts go out in sympathy and love; and may the God of love, and charity and forgiveness be with them in their hour of deepest grief. The bodies of these brave men consecrate and hallow the soil of every country in the Eastern world; their warm blood has reddened the blue waters of the seven seas. God bless and comfort their relatives that they may have faith that they will meet their loved ones in that temple not made with hands.

We should begin to put into operation our plans for seeing that our boys come home to a welcome as high as the heavens, as deep as the ocean, as warm as the rays of the friendly sun; a welcome that should come from the heart; that we highly resolve that everything possible shall be done for their happiness and success.

This is not a time for wild orgies of drink and dissipation; but rather it is a time for fasting and prayer. To this end, the people are urged to assemble in their respective churches and synagogues and there give thanks to God for the peace that now covers the earth, with a solemn petition that never again shall the earth run red with the blood of heroes.

And, now, by virtue of the authority vested in me as mayor of the city of Knoxville, I hereby proclaim tomorrow, August 15, as a solemn and sacred holiday, and I hereby declare that all offices of the city of Knoxville will be closed during the entire day of August 15; that city employees, with the exception of the fire and police departments, will not report for duty tomorrow.

In the language of a great American, let me propose a toast in the following words, "Cheers for the living; tears for the dead."

## A Free Press

EXTENSION OF REMARKS
OF
**HON. ALBERT W. HAWKES**
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an editorial which was printed in the Jersey Journal, of Jersey City, N. J., on Tuesday, October 23, 1945, under the subject Only Congress Can Free Associated Press From Marshall Field Fetters.

Without in any way questioning the judgment of the Supreme Court in this case, it is my opinion that the people of the United States and their Representatives have much to think about in connection with the effect of this Supreme Court decision on a free press. To my way of thinking, we can never hope to get rid of dictatorship or lead the way to peace unless we keep our press and news-gathering agencies from from governmental control or suppression of any kind that interferes with giving the true facts and correct news to the people in the home.

If it is necessary for the Congress to take special recognition of this case in order to preserve freedom of the press and proper freedom of enterprise for news-gathering agencies, then in my opinion such action should be taken by the Congress without delay.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ONLY CONGRESS CAN FREE ASSOCIATED PRESS FROM MARSHALL FIELD FETTERS

Marshall Field, one of America's richest men, publisher of the Chicago Sun, has the distinction of having succeeded temporarily in shackling the free press of the United States.

He may be expected once again to knock on the door seeking membership in the Associated Press. He should be unanimously voted down, if he does apply at this time. Here's why:

1. When he first applied for membership in the Associated Press he failed of election. A Chicago newspaper member in good standing objected to the election of Field's Sun on the grounds (as he was entitled to object under the bylaws then in force) that for many years the present members have expended millions of dollars to develop a news service which it would be unfair to make available to competitors of the present members in Chicago. Newcomers could buy news service from the United Press, or from Hearst's International News Service, or build up from scratch their own world-news coverage (as the radio people have done to some extent). By Field's willingness to see his application and its denial used as a lever or crutch for

an antitrust case against the Associated Press, Field has demonstrated his failure to see the value to our Republic of a press free from governmental control.

2. A renewed attempt by Field's Sun to gain membership while the Associated Press is being run under the supervision of the courts would be proof that Field is willing to submit the management and news judgment of his Chicago Sun to the superior control of the Government. At the present time, as a result of the antitrust case arising out of the refusal to admit Field to membership, the Associated Press is a ward of the courts. It must submit to the courts some sort of bylaw satisfactory to the courts and then adopt such bylaw; or else, it must accept a bylaw written by the courts for the Associated Press. This bylaw must prohibit a vote against any newspapers on the ground that admission would destroy the competitive advantage of members. How can even the wisest judges in the United States write a bylaw to do that and still leave the Associated Press free? Field, being plainly out of sympathy with the fundamentals of a real free press in the United States, is just as plainly not a suitable person to admit to the membership of the Associated Press.

Field should know that any request by him for admission to the Associated Press will be out of order until the Associated Press has been freed by an act of Congress from restraint by the courts. If and when Congress relieves cooperative news-gathering organizations from application of the Sherman Antitrust Act, then will be time enough to consider a fresh application from Field, if he then wants to make such application.

The board of directors of the Associated Press is trying to comply with the order of the Court by the second week of February. In the meantime, the free press of the United States, which is the precious right of the people of the United States, must look to Congress for correction of the situation.

The courts have done their duty. They have interpreted the law and applied it to the Associated Press. It must be clear to Congress now that a law intended to protect the people against monopoly has a result never intended when it is applied to mutual news-gathering cooperatives, such as the Associated Press. It was further never intended to destroy the right of cooperatives to choose their members or to use for their own benefit the commodity—news—which they had bought with their own money and reported by their own efforts.

Cooperative news-gathering organizations should be exempted from the application of the antitrust laws. Proper legislation enacted before the end of the year would relieve the Court of a duty which must be distasteful, namely, trying to run the free press from the bench, and would restore to the people confidence that the report of the world's and the Nation's news is free from control by the Government.

## Atomic Controls

EXTENSION OF REMARKS

OF

### HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Atomic Controls," written by Ernest K. Lindley and published in Newsweek of the issue of October 29, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ATOMIC CONTROLS

(By Ernest K. Lindley)

Public discussion of the control of atomic energy has become unnecessarily confused by failure to distinguish between its national and international phases.

President Truman drew a line between the two. It was not arbitrary. It was as natural and workable as the distinction between prohibiting private citizens from maintaining armed forces equipped with 155-millimeter howitzers, poisonous gases, and B-29's complete with bombs, on the one hand, and the international regulation of armaments on the other.

Whatever may be done about international control of atomic energy, internal regulation is obviously imperative. In addition, prompt action is necessary to protect and enhance an asset which is so valuable that it makes the initial investment of more than $2,000,000,000 look like chicken feed.

Should the vast wartime research and engineering combination which produced the atomic bomb be allowed to evaporate? Should the vital plants and installations in Washington and Tennessee be turned over to the highest private bidders? Should uranium-235 and plutonium be sold on the public market or passed out to the first callers? Should the scientists and engineers who worked on this project be encouraged, or permitted, to peddle or give away their knowledge wherever they choose? Should American owners of the raw materials from which atomic energy now can be produced be allowed to sell these materials wherever they like? Should we relinquish to unregulated private enterprise or other nations the atomic raw-materials sources outside the United States on which we now have contractual claims?

Fifty similar questions could be posed. The answers are self-evident. But most of them can be made effective only by congressional action.

President Truman has asked that Congress create a national commission to manage and regulate the release of atomic energy within the United States. He asked that this commission be clothed with broad powers to conserve and improve a priceless asset and to safeguard the public against the hazards of irresponsible experiments.

This relatively clear proposition is being blurred by argument over international policy. It is not too soon to explore the international side. Mr. Truman is already examining it with our copartners in the atomic bomb Britain and Canada. In due course—the sooner the better—the United States should set forth a program for the international regulation of atomic energy. But this will require much more study. For an ill-considered step might be fatal to the United States and to all of civilization.

It was exactly for that reason that Truman asked that Congress act now only on a system of internal controls. Such a system is absolutely necessary, regardless of the decisions made later concerning international policy. There are many reasons why it is needed promptly. Not the least is to hold together the wartime organization which produced a miracle and to assure that large-scale experiment continues.

The Truman plan for internal control supposes nothing concerning our international policy except that it is to be framed by the Government of the United States. This means, of course, that individuals privy to secret information cannot be at liberty to give it to others on their own initiative. It means that when now-secret knowledge is shared with other nations it should be as a considered national act.

Many of the scientists who worked on the atomic bomb think that the secrecy provisions of the May-Johnson bill are so severe that they will hamper legitimate research. Some apparently feel that there should be no restrictions whatsoever. The objections of the first group can be met by slight modifications in the bill, and probably will vanish with the appointment of outstanding scientists to the Atomic Energy Commission. The second group is thinking of science alone rather than of all the realities of the world which must be weighed in framing our international policy.

The orderly procedure for Congress is to set up the internal-control system now, and take up the international problem later. The former is both easier to be sure about and more urgent if our national investment in atomic energy is to be conserved.

## A 20-Percent Hike in Federal Pay?

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of November 3, 1945:

A 20-PERCENT HIKE IN FEDERAL PAY?

President Truman is asking Congress to raise the pay of persons in the Federal classified service a flat 20 percent and to make even more substantial increases in the pay of the higher officials of Government. The increases, it is said, would apply to 860,000 persons and would cost $414,570,000 a year. For the higher jobs, the raise would be $10,000 a year and would bring Supreme Court justices to $30,000, Cabinet members to $25,000 and Congressmen to $20,000.

It is not necessary to go into the merits of the various increases to deplore their being suggested at this time. The country is beset by labor difficulties and it is trying to float a Victory loan. Surely any plans for greatly increasing the pay of Federal employees should await the settlement of wage disputes in industry and the completion of the loan drive.

The President, coming forth at this time with extravagant demands for higher pay for 860,000 people, is revealing more of the same kind of ineptitude he showed in his recent address on wages.

A fair case could have been made out for an increase of 10 percent in the wages of the Federal classified service, as it can be made out for many groups of industrial workers. But the suggestion of a 20-percent increase can only encourage labor to persist in uneconomic demands. That and the 50- to 100-percent increases proposed for high-ranking officials cannot help but have a bad effect on the present loan drive, for citizens will wonder about the why and the wherefore of appeals that are made to them, even though these appeals do have a good basis in fact.

## British Empire Trade Preferences

EXTENSION OF REMARKS
OF
**HON. GUY CORDON**
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. CORDON. Mr. President, in view of the action which the Congress has taken during the current year in extending and broadening the powers of the Export-Import Bank, in adopting the Bretton Woods agreements, in liberalizing reciprocal-trade agreements, and in taking other steps on the part of the Federal Government looking toward a broadening of international trade, I am greatly concerned at reading in the New York Times of today an item under the heading "New Zealand bars 1946 United States imports," and a following article in which a former Prime Minister of Canada appeals to the United States to permit the so-called British family of nations to maintain their present trade preferences. I ask unanimous consent that both these articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

NEW ZEALAND BARS 1946 UNITED STATES IMPORTS—WEIGHT OF PURCHASING THROWN TO BRITAIN BY LICENSE LIST—CANADIAN BACKS PREFERENCE

WELLINGTON, NEW ZEALAND, November 4.—The Government's import licensing schedule for 1946, issued today, virtually eliminates United States goods and gives heavy allocations to Britain.

It was explained that "some uncertainty exists regarding imports from nonsterling areas, and as a result it has not been in general possible to provide allocations for imports from those sources in the meantime." It is hoped, however, that a solution of this problem will be found before long.

The import schedule, issued for the eighth year to meet the flight from New Zealand of pounds after 3 years of a labor administration, shows that the country maintains its novel stand that this policy is not discriminatory against the United States since other countries also are barred. The State Department, however, has argued that the policy is a departure from the Atlantic Charter, and possibly from article VII of the lend-lease agreement.

It also shows that Finance Minister Walter Nash has lost no time to justify the Government's procedure in utilizing the cut in New Zealand's holdings of sterling funds that he recently made by repaying one-fifth of this country's bonded indebtedness to Britain.

After this operation, Mr. Nash says that while the state of New Zealand's London funds gives grounds for satisfaction, it must be remembered that it will be necessary to draw heavily on them for essential imports. Foreign purchases of machinery necessary to replace that worn out or made obsolete during the war and also to equip new industries and develop existing ones will be substantial.

RAW MATERIAL FIGURE LARGE

Mr. Nash said that a large expenditure was envisaged to provide raw materials for industry, meet transport needs and carry out the development of the Government's hydroelectrical works.

Some relaxation has been made in controls on consumer goods, but the country cannot afford the money for nonessentials or goods that can be satisfactorily supplied by domestic plants, Mr. Nash said.

The import schedule showed that the allocation of foreign funds for carpets in 1946 will be 150 percent of this year's figure, linoleum 15 percent, chinaware 133⅓ percent, sporting goods 200 percent, printed books 125 percent, and organs and pianos, for which there has been no allocation for years, 100 percent of the 1938 total—all covering only British goods. For British bicycles imports of 260 percent of the 1941 shipments will be permitted, and for motorcycles 50 percent of 1938 purchases. For vacuum cleaners the British have permits equaling 50 percent of the imports from all sources in 1938.

CANADA CITES BRITISH AID

LONDON, November 5.—Defending empire trade preferences as legitimate concessions granted in the British family of nations, Viscount Bennett, former Prime Minister of Canada, appealed to the United States today not to ask slashes in preferences in exchange for a loan to Britain. He was guest speaker at a luncheon meeting of the American Chamber of Commerce in London.

"I would like you to bear in mind that we are a people who have made great contributions to the world," Lord Bennett said. "We have preserved civilization. We stood alone for a year and we are very tired indeed."

Lord Bennett added that it did not seem proper to him "that this family should be compelled by circumstances over which it has no control to abandon its family relations in order that we may borrow a few dollars."

Recalling that he presided at the Ottawa Conference in 1932 when imperial preferences were worked out for members of the Empire, Lord Bennett said that since then the United States had succeeded in getting "enormous concessions in the way of reductions in the preference rates."

"The cuts made have deprived Canadian wheat growers of a favored position in the British market and took other advantages away from other members of the Empire," he said.

In view of the concessions already given to the United States, he added that it was difficult to understand why Washington officials were asking for even more.

The reason the United States is considering a loan to Britain is that it is recognized as necessary that Britain be prosperous, he argued. The only sure way of guaranteeing prosperity for the Empire is to permit it to retain preference, he concluded.

## San Francisco Proposed as Capital of the United Nations

EXTENSION OF REMARKS
OF
**HON. WILLIAM F. KNOWLAND**
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
*Tuesday, November 6 (legislative day of Monday, October 29), 1945*

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the San Francisco Chronicle of October 30, 1945, urging the selection of San Francisco as the capital of the United Nations. The article is by Dr. Herbert V. Evatt, Minister of External Affairs of Australia.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EVATT PLEADS THE CASE OF SAN FRANCISCO AS CAPITAL OF THE UNITED NATIONS

(By Dr. Herbert V. Evatt)

(The case for San Francisco as seat of the United Nations Organization is presented here by Dr. Herbert Vere Evatt, Australian Minister for External Affairs, and strong man of the United Nations' Conference on International Organization. Just arrived in Washington from London to attend the first meeting of the Far Eastern Advisory Commission, Dr. Evatt yesterday telegraphed the accompanying article to San Francisco for exclusive use in the San Francisco Chronicle. It reiterates his hitherto unpublished plea before the Preparatory Commission for selection of San Francisco as the new world capital.)

I think that what we are called upon to do is recommend a seat for the permanent headquarters of the Organization. And in my opinion, nothing could be worse than to start off by deciding that it is to be in Europe or not in Europe, and then to choose by way of compensation or compromise a Secretary General from the continent or zone which is not selected for the seat of the Organization.

In my view, the Secretary General question must be kept absolutely distinct from the question of the seat. Clearly the Secretary General should be elected upon personal qualifications.

What we are required to do is ask what place is most suitable for the seat of the United Nations. Australia's view is in favor of San Francisco—not because it is part of the United States, or because it is not in Europe—but because, after considering all the available evidence, San Francisco is the most suitable site.

I think it is obvious that the peoples of the world expect a fresh start to be made in world organization; we consider that that can best be done by choosing a new site. That view tells strongly against Geneva, but the case for San Francisco is not a negative case but a positive case.

San Francisco has all the facilities. So far as the argument of distance is concerned, modern transport has greatly reduced its importance and the facilities for transport to and from San Francisco are excellent.

It has been claimed that it is essential that the Organization should operate in complete freedom from local or governmental pressure. I agree with that. But it does not follow that the seat should not be situated in the territory of a great power.

There is nothing in the Charter that suggests that the site should not be in the territory of any power. Why should the fact that the United States is a permanent member of the Organization debar a site otherwise suitable from being selected as the permanent seat of the Organization? If that fact was thought to be disqualifying, it would have been expressed in the Charter. There is no such disqualification.

San Francisco is a city which breathes the very spirit of freedom. Freedom of expression is guaranteed in the country of which San Francisco belongs; freedom of expression is enforced by the courts; nowhere in the world is freedom more secure.

It is a city of progress, it looks with courage and confidence to the future. That is the atmosphere which is required for the success of the new Organization.

In drawing up the Charter at the Conference in San Francisco, we all recognized with

gratitude and admiration the debt we owed to the city of San Francisco and its people. In fact, the Charter was worked out in the spirit of San Francisco—the spirit of progress and freedom and tolerance.

I realize that the question cannot be dealt with finally today but I am convinced that the claims of San Francisco are pre-eminent and are already proved by the great success of the San Francisco Conference, which produced the Charter under which the new Organization will have its being.

The situation is quite clear. We make a recommendation to the Preparatory Commission. In turn, it makes a recommendation to the Assembly. Our recommendation might not be adopted by the Assembly. It is difficult at this stage of the investigation to secure unanimity. Therefore, I think the attempt to get it should not be pressed.

At the same time, a stage will be reached in which a very distinct majority will express its view, and that is the stage at which the minority might reasonably be expected to yield. Today, at any rate, there is a substantial majority of this committee against the headquarters being situated in Europe.

PACIFIC PROBLEMS

I regret that the reaction of one or two of the delegates suggests asking them to go to San Francisco for meetings is almost like asking them to go into exile. In my opinion that approach is quite wrong. Indeed, it contributed to the first breakdown of the League, which occurred in the Far East. If going to San Francisco leads to a greater interest in Pacific problems, that will be all to the good.

I also urge strongly that we should not recommend a temporary or provisional headquarters of the Organization. The Charter and the constitution of the Preparatory Commission require us to make recommendations concerning a permanent headquarters of the United Nations. It is quite contrary to that requirement to select a temporary headquarters.

In Australia, we had a temporary capital until Canberra was finally selected. But the temporary capital remained temporary for a quarter of a century.

If we established a temporary headquarters, vested interests would grow up tending to prevent any subsequent change, while year by year the proceedings of the Assembly would be convulsed by this contentious issue. Therefore, let us abandon the idea of a provisional headquarters and proceed in an orderly way forward to the selection of a permanent site. That is what we are required to do by our Charter.

## Slave Labor

REMARKS

OF

### HON. WILLIAM J. GALLAGHER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. GALLAGHER. Mr. Speaker, I have always believed in the doctrine of freedom. However, many advocates of the free American system, or in the name thereof, insist that that system can only exist by having slave labor. We have freed labor by the Clayton Act under the Wilson administration, and by the Wagner Act under the Roosevelt administration. The captains of industry now, however, want to go back to the old times where unions can be disrupted by injunction and blackmail; they want to establish that as the rule of the land.

Such legislation as the Ball-Hatch bill and that proposed by the House Military Affairs Committee, make not for industrial peace and prosperity, but the reverse. Can it be that our industrial and political tories want to force a capital-labor war, by way of the general strike method. In such a strife only industrial pirates gain and then only by national misfortune.

## Oliver K. Bovard

EXTENSION OF REMARKS

OF

### HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. COCHRAN. Mr. Speaker, the death of a journalist does not always warrant reference to his passing in the House of Representatives, but when Oliver Kirby Bovard, managing editor of the St. Louis Post-Dispatch from 1908 to 1938, passed away it was the end of a career of one of the most outstanding journalists in the United States. He was 73 years of age. He had been ill only 2 weeks, his sickness developing from a hunting trip.

It was Mr. Oliver K. Bovard and his staff who did more than any other individuals to bring out the facts of the naval reserve oil scandal, Teapot Dome, of the 1920's. Likewise it was Mr. Bovard and his staff who uncovered the evidence that resulted in the resignation of Federal Judge George W. English of the East St. Louis-Danville district, who resigned on the eve of his trial before the Senate as a result of impeachment proceedings instituted in the House.

It has been my pleasure to be able to call Mr. Bovard my friend for over 40 years. Under the permission granted me, I am including in my remarks excerpts from an article published in the Post-Dispatch a few days ago. They follow:

Post-Dispatch readers, and more than a generation of newspaper workers in the Middle West, to whom he was known as "OKB," remember the 6 years' news campaign directed by Mr. Bovard to bring out the facts of the naval reserve oil scandal of the 1920s; the expose which brought the resignation of Federal Judge George W. English, of the East St. Louis-Danville district, on the eve of his trial by the Senate on charges developed solely by this newspaper; the exposure of the baby hoax of Mrs. Nellie Muench and accomplices, resulting in Federal prison terms for four persons; the padded registration expose of 1936; and the fights on franchise and utility issues in St. Louis and at Jefferson City which were sparked by a relentless quest for facts vital to the public interest.

* * * * *

HIS FIRST BIG STORY

Mr. Bovard's first important news story, printed a few days after he joined the Post-Dispatch staff early in 1908, was a factual account of the paying of money to members of the municipal assembly for their votes on a street-railway franchise. The story aroused the public, and a circuit judge charged the grand jury either to indict the persons guilty of bribery or to indict the editor of the Post-Dispatch and the writer of the article for criminal libel. The grand jury indicted no one, the prosecutor took no action, and the boodlers had come under the protection of the statute of limitations when, more than 3 years later, Circuit Attorney Joseph W. Folk's vigorous inquiry established the truth of the Post-Dispatch news account. Some of the participants were convicted by Folk of later acts of bribery, and were sent to the penitentiary.

From the beginning of his work as an executive, in 1900, Mr. Bovard strove to make the Post-Dispatch first in presentation and treatment of news of public importance and to make its daily coverage of all sorts of news more thorough and accurate.

Early in his tenure as managing editor, he brought about establishment of the Post-Dispatch's Washington bureau; this paper had previously depended on the Washington bureau of the affiliated New York World. The bureau, under his direction, obtained material for a news campaign in behalf of the nonviolent persons among the political prisoners who remained in confinement after the World War. President Harding freed 28 of these prisoners, and others were pardoned later by President Coolidge.

NAVAL OIL SCANDAL

In 1922, when the first revelations of the naval reserve oil scandal were made, the Post-Dispatch, under Mr. Bovard's direction, began its persistent inquiry into the facts. Senator THOMAS J. WALSH, prosecutor of the cases, testified later to the value of the series of news stories in apprising the country of the surrender of the oil reserves to exploitation. When the Fall bribery, with $233,000 Liberty bonds, was made known, the Post-Dispatch's demand was "Who Got the Bonds" and this query was answered, to a considerable extent, after it printed the bonds' serial numbers.

In the same period came the Judge English investigation, following orders by Mr. Bovard from a hospital bed while he was recovering from an appendectomy. For their work in the oil and English cases, respectively, the late Paul Y. Anderson and the late John T. Rogers received Pulitzer prizes for a reporter's work.

Matters of national importance in which, under Mr. Bovard's direction, the Post-Dispatch went far beyond routine news concepts, were the fight on President Roosevelt's court-packing bill in 1937, and the news presentation, late in 1931, of the depression which then had paralyzed business and industry for 2 years.

FALSE ARMISTICE REPORT

On November 7, 1918, when a St. Louis afternoon paper issued extras carrying the false armistice report, Mr. Bovard, knowing of the report, discredited it, and the Post-Dispatch printed no reference to it, except to tell of the wild downtown celebration caused by the unverified announcement, which was shown in a few hours to be unfounded. As to this, Mr. Bovard wrote, in connection with the biographical memorandum previously quoted:

"The extra—issued by another paper—said the signing took place at 11 a. m. French time. Analysis of the official news from France showed that the German armistice commissioners had not entered the French lines up to that hour, and that General Pershing's army was heavily engaged in front of Sedan as late as 1:45 p. m. It was further obvious that the signing could not take place for several hours after the meeting of the parties. Finally, the message bore no inherent mark of truth; no authority was given. It was mere assertion. While this was not a

factor in reaching the decision, it was interesting to note."

Personally, one of the least known of men in important executive positions in St. Louis, Mr. Bovard made few public appearances, and his photograph was first generally published with the announcement of his retirement. His keen wit was sometimes turned upon news workers whose work fell short of his standards. To one man, a former theatrical advance agent, who magnified the convivial side of his calling, he once handed a pay order with the remark: "I have stood between you and a stage career long enough." Paul Anderson wrote that "despite legends which dramatize Bovard's sardonic humor and cruel wit, the fact remains that he was the best friend of every competent man who ever worked for him."

## The Fight for Agricultural Equality

EXTENSION OF REMARKS
OF
### HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address delivered by Senator JOHN H. BANKHEAD, of Alabama, before the annual meeting of the Alabama Farm Bureau Federation at Biloxi, Miss., on October 31, 1945:

It is a pleasure to be here today with homefolks even though we are some distance from home. With conditions as they are, I make as few long trips as I possibly can. But this trip to meet with Alabama farmers, and other farmers too, is one that I made gladly.

During the years I have been in the Senate I have devoted most of my time to agriculture and to southern agriculture in particular. More than any other group, perhaps, the farmers needed help and still do, for that matter. It is true there has been some improvement during the past few years, a good deal of improvement, in fact, but farmers had a long way to go, and still have a long way to go. While farm income during the war has been at the highest recorded levels, it is still well below the income of industrial workers. For example, the per capita net income of all persons living on farms averaged $534 in 1944, but persons living off the farm received $1,317. The average realized net income per farm in the United States in 1944 was $2,269, whereas in the 10 principal cotton growing States the average per farm was $1,702, or 75 percent of the United States average.

The farmer may be well off by comparison with years past, but he is not well off by comparison with other groups. The farmer will not have received justice until he gets the same pay as the other fellow, other things being equal, for the same work. That is my objective and the objective of all true friends of agriculture.

This fight for agricultural equality has been a long hard fight and still is continuing. I do not need to tell you how hard it was to persuade the Government to help raise farm prices. As many of you will remember, the McNary-Haugen bill was twice vetoed by President Coolidge. The farmers had to contend with the opposition of many men high in Government and industry. The idea of these men—an idea which still is very much alive, by the way—was that it was all right to extend Government aid to business, but socialistic to extend such aid to agriculture. For years, industry has had its tariffs, its patents, and a mass of protective legislation. As you well know, labor has protection and very efficient protection growing out of Federal legislation. Finally, the Government reluctantly decided that it had some responsibility toward agriculture and extended to it a measure of the protection given other groups. Farmers will not give up that protection. They fought to get it and they will fight to keep it.

One of the big reasons why the farmers got protection and why they have kept it is the American Farm Bureau Federation. Men like Ed O'Neal, Walter Randolph, and many others have given the farmers of Alabama and of the country the kind of service that cannot be bought with money. They have organized the farmers and massed their strength against the strength of other organized groups. Only through organization can farmers make their wants known, and, what is more important, get what they want. Without organization, they are helpless.

I have worked with the Farm Bureau Federation for many years. As a result of that experience I say to you that it is in the interest of the farmers of America to strengthen and build organizations like the Farm Bureau. If only the farmers had seen what I have seen, there would be a powerful and vigorous farm bureau in every State in this Nation.

I stated a few moments ago that farmers would fight to keep the protection they had gained. However, they will give up that protection willingly, in my opinion, on one condition. That condition is that other groups also give up their protective legislation and special advantages. Later on I propose to discuss phases of this situation in more detail. But first, I would like to review for a moment the situation in 1932 and some of the things which have happened since that depression year.

Let me illustrate the change by some figures about Alabama. In 1932 Alabama farmers received $37,621,000 for their cotton. In 1944 they received $118,851,000 for their lint and seed, or about three times as much as they got in 1932. In 1932 the Alabama peanut crop sold for $2,136,000 and in 1944 for $23,397,000, or about 10 times as much as in 1932. The value of Alabama livestock products was $13,341,000 in 1932; 12 years later it amounted to $80,663,000. The value of all Alabama crops and livestock in 1932 amounted to $62,547,000; in 1944 it amounted to $275,960,000. Cash income per farm in 1932 averaged $237 in Alabama but in 1944 it averaged $1,129, or almost five times as much. The figures tell the story of the difference between 1932 and 1914. I don't have to explain them.

I don't want to dwell on the bad years. Nevertheless, it is a good thing to think about them now and then. We don't like to recall 5-cent cotton, 8-cent tobacco, 2-cent peanuts, $3 hogs, and 30-cent corn. We don't like to think about the time when community after community lay paralyzed under the blight of depression and the thought of almost everyone was, "What will we do?" No, we don't like to think about those times, but to the wise their memory can serve a most useful purpose. If we aren't careful, 5-cent cotton and the other low prices will come back.

Inevitably, ruinously low prices will come back if we remove protection from agriculture and leave labor and industry protected. There is an insistent demand for the withdrawal of Federal aid from agriculture. We hear frequent demands for a reduction in the loan rate on agricultural commodities. The groups and people which urge this know full well that loans on agricultural commodities are the most effective method for protecting agricultural prices and income. As farmers have learned, appropriations from the Treasury are a most uncertain and precarious means of augmenting and stabilizing farm income. One year farmers have these appropriations; the next year they do not. On the other hand, the loans are not only simple and reliable but, on the basis of experience thus far, are far less costly than appropriations. Since 1933 the Commodity Credit Corporation has made loans aggregating billions of dollars, and, exclusive of wartime subsidies made to hold down the cost of living, has made a profit of approximately $34,000,000 on its operations. All of this and more than $50,000,000 more was made on cotton.

As you know, I was in the Senate at the time of the passage of the original Agricultural Adjustment Act. I helped lead the fight in the Senate for this measure. It embodied some fundamentals which I regarded as fair and just and which I regard as fair and just today. Let us see what those fundamentals were.

The right of the farmer to have Government aid in his effort to get a decent price and income for his labor was clearly recognized in this act. One of the means employed to give him this decent price and income was assistance in adjusting the supply of agricultural commodities to the demand.

Before the first Agricultural Adjustment Act, the farmer had no legal machinery to help reduce production. One year later, I helped put through the Bankhead Act which provided for compulsory production control. Through it, noncooperators were forced into line and prevented from taking advantage of their neighbors. The idea embodied in the Bankhead Act now is embodied in the Agricultural Adjustment Act of 1938 which provides for marketing quotas. It also is embodied in related legislation, including a control measure for peanuts. But prior to the measures to which I have referred, the price the farmer received for his product in the market place depended in large part upon the supply of that commodity. A big cotton crop meant, generally speaking, a low price. So did a big potato crop, a big peach crop, a big peanut crop, and so on through the list.

One hears nowadays that farm income depends primarily upon the income of the country as a whole. To a certain extent this is true. But I would like to remind you of agriculture's experience in the 1920's. Prior to World War II, the high for national income was nearly $90,000,000,000 in 1929. Yet, agriculture's share of this national income amounted to only 7.8 percent as compared to 16.6 percent in 1918 and 12.4 percent in 1910-14. The rest of the country was relatively prosperous in the 1920's. Agriculture went steadily downhill. The stock-market boom could not drown out the plaintive cry of farmers, pleading for fair prices. All this time, the law of uncontrolled supply and demand was operating—operating at the expense of the farmers.

But industry never has allowed itself to be governed by the law of uncontrolled supply and demand which operated with regard to agriculture prior to 1933. Industry consistently practiced rigid production control; in fact, a primary reason for the formation of monopolies and trusts was the elimination of competition thereby enabling production control to work more effectively. Of course, if production control operated effectively, prices were kept at satisfactory levels without too much difficulty.

If anyone doubts what I am saying, let him find out what happened during the last severe depression. During the 1929-33 period, production of five major industrial commodities declined from 70 to 83 percent; prices only 6 to 33 percent. In agriculture the story is just the reverse. Prices declined 63 percent; production only 6 percent.

Uninformed people take it for granted that production control in agriculture, that is, planned production control, has failed. So far as cotton is concerned, they do not know what they are talking about. Before 1932, the acreage in cotton averaged over 40,000,000 acres annually. The 10-year average yield was around 170 pounds per acre. Since 1932, the acreage in cotton has averaged 23,715,000 but the yield has gone up until it averaged over 290 pounds per acre in 1944 and has been well above 200 pounds for every year since 1932. Most informed persons will agree that the release of thirteen or fourteen million acres from cotton has been primarily responsible for the diversification and soil conservation that has taken place in the South during the past 15 years.

Furthermore, production control in tobacco has been an outstanding success. So successful has the program been, in fact, that flue-cured and burley producers insisted that it be continued throughout the war.

It is true that agricultural production, taken as a whole, declined very little in the 1932-39 period. This does not mean, however, that production control failed or that the fundamental reasons which brought it about have changed. The agricultural adjustment programs produced similar results where corn and wheat are concerned as they did for cotton and tobacco. This enabled corn, wheat and other farmers to conserve their soil and to build up their lands so they could—and did—produce more per acre. While corn and wheat production have not declined, one of the reasons for this was the increase in production per acre which followed the triple A programs.

All over the country the farm programs since 1932 helped farmers. They put farmers and farming back on their feet. Both were in condition to meet the test imposed by the war. On the average, farmers produced 26.6 percent more during the wartime period than during the 1935–39 period, notwithstanding the loss of millions of farm workers. They had other disabling difficulties. Had it not been for Federal programs for agriculture inaugurated since 1932, this increased production would not have been possible.

Now, some persons predict that our agricultural structure will collapse unless existing programs are changed, and changed quickly at the expense of the farmer. Undoubtedly some changes will be needed in existing farm programs. But let those people who want the price of cotton and other farm commodities reduced remember that their record for prophecy is not too good. Nor is their record as sincere friends of agriculture too good, either.

Let me emphasize again that the record production of food and fiber which made an invaluable contribution toward winning the war would not have been possible if we had left it to the free market to set the price for farm products. This market, let me reemphasize, is not a free market where industrial prices are concerned. It is not a free market where labor is concerned.

With this fact in view, I am proud of the part I have played in enacting Federal legislation for farmers. The handlers and processors are always complaining about this legislation, but the farmers are not complaining. The farmers do not feel that Congress betrayed them. The tears that are shed are being shed by other interests. In the light of your experience as farmers, I will let you draw your own conclusions as to the reason for these tears.

Not long ago, I made a brief compilation of some of the agricultural legislation which I have helped put through Congress. I have decided, however, to mention some of recent action.

I am a coauthor with the late Henry Steagall of the provision in the Stabilization Act of 1942 increasing the rate on mandatory loans on basic commodities from 85 to 90 percent of parity. This act extends the support prices on almost every major agricultural commodity until 2 years after the end of the war, thus assuring there will be no price collapse of agricultural commodities such as followed the last war. Incidentally, the loan rate on cotton due to legislation sponsored by me is now 92½ percent of parity, and will continue at that rate for the 2-year period referred to. For the crop year 1944 the rate was 95 percent of parity, the rate being increased as the result of an amendment introduced by me.

I am a coauthor of the Bankhead-Jones Act, authorizing increased appropriations, amounting to $17,500,000 annually, for extension experiment-station work and land-grant college support, and also coauthor with Representative FLANNAGAN, of Virginia, of legislation enacted in 1945 which authorized another increase in Extension Service appropriations of $15,000,000.

I am a coauthor of the Bankhead-Fulmer bill, providing Federal crop insurance for cotton.

I am coauthor of the Bankhead-Brown amendment to the Price Control Act. This amendment provides that the price ceilings on a major individual cotton textile item shall be such that it will reflect parity for raw cotton, thus placing a sufficient margin in the textile ceilings for the cotton mills to pay parity. This amendment also directs the President to use all lawful means and all agencies of the Government to assure farmers parity. Under this amendment the Government purchased cotton of the 1944 crop at prices averaging 99.9 percent of parity. The Bankhead-Brown amendment is still in effect and is a prime factor in securing parity prices for the 1945 cotton crop.

In 1945 I was coauthor with Representative FLANNAGAN of a bill, S. 298, which became a law, to extend the life of the Commodity Credit Corporation, and to increase CCC funds available for agricultural loans to $4,750,000,000. This measure is of tremendous importance to all farmers, carrying as it does the funds for support programs on all major commodities.

This is only a partial list of the agricultural legislation with which I have been connected in one way or another. I am giving you this résumé not to boast or for the purpose of reflecting glory upon myself. There were many Members of Congress who helped frame these measures and who did all in their power to put them through the House and Senate. On much of this legislation I had the help of most of the farm organizations, including, of course, the Farm Bureau. That organization has been my strong right arm.

When there is legislation of importance to agriculture pending in the Congress, it isn't hard to find Ed O'Neal. He'll probably be somewhere around the Senate or the House, depending upon which branch has the legislation at that particular time. And with him, in all probability, will be Randolph, Ransom Aldrich, Romeo Short, Harold Young, Earl Smith, Wingate of Georgia, and some of the other Bureau leaders that most of you know.

In the months to come, we will need Ed O'Neal and his lieutenants at the Capitol. Agriculture faces many difficulties, and cotton is near the head of the list in that regard.

Let me say here and now that the way out of these difficulties is not a return to the ruinous prices which prevailed during depression years. We cannot have prosperity in this country by deflating agriculture and inflating industry.

There is now pending in Congress a proposal to raise the minimum wage in industry to 65 cents per hour, later increasing the rate to 75 cents an hour. Labor in many industries is asking pay raises. Industry is balking at the reconversion prices fixed by OPA. The trend in these fields is toward higher wages and higher prices. It is toward a high wage and price structure supported by Government action. With the abandonment of the Little Steel formula and the removal of restrictions upon wage increases, and increase in both wages and prices is likely. It is clear also that the living costs of farmers will be correspondingly increased.

It is strange to me that some southern businessmen and some editors agitate constantly for a cotton price which is competitive with cheap cotton labor of foreign countries, but are not worried about the tariffs which keep out of our county foreign cheap-priced goods. They should be consistent. What is sauce for the goose should be sauce for the gander. We should have either a high-price level for farmers and industry, or a low-price level for both. So far as I am concerned, I favor a price level that will enable workers on the farms and in the factories to buy on a parity-price basis the products of the labor of each group. It is not in the interest of farmers to have low wages for industrial workers. City families must have purchasing power to pay fair prices for the things farmers raise. By the same token, it is not in the interest of city workers to have low prices for farm products. Farmers must have purchasing power if they are to buy the things which workers make. It should be kept in mind that farmers and their families comprise 19 percent of our population. A high national income cannot be maintained if agricultural purchasing power is not maintained.

I am opposed to tampering with cotton prices on the flimsy pretext that as industry is reconverted there should be a reconversion of farms and cotton production and prices. The industrial reconversion will result in higher prices, not lower ones. If any change in the price of cotton is made at this time there are many reasons for increasing the price.

The public debt of this country is $262,020,413,381.79, as of September 30. How can we pay this staggering public debt unless we maintain a high price and high wage standard? We cannot do so. Yet, we are confronted with repeated demands that farmers reduce their prices. If labor and industry are to remain on a high wage and price plateau, the only result of decreasing agricultural prices will be to condemn the farmers perpetually to a low living standard.

There is no need for price reductions merely because we have moved from war to peace. Certainly, I will oppose with all the power at my command any attempt to reduce the loan rate during the 2-year support period. And unless there are radical changes in conditions, I will continue thereafter to oppose proposals to reduce loan rates, believing as I do that such reductions will reduce the price of the major agricultural commodities.

On the one hand we are told that agricultural prices should be reduced. On the other we hear that the world, or a large portion of it, is starving and that we must help feed millions. I believe that we should use our surpluses during the next few years to prevent starvation in war-ravaged territories. I know of no better way to spend some of the millions that we must contribute toward world recovery. And in appropriating the funds which will be used to buy food and fiber to contribute to world rehabilitation, the Congress should see that the money spent in this country is spent in a way that will stabilize and support the price of American farm products. One way to do this would be to make the Commodity Credit Corporation the purchasing agent for the food and fiber referred to and to direct that its purchase be made in the open market.

After a reasonable time for adjustment of manpower and production machinery, we will, in my opinion, enter into a period of prosperity. It is short-sighted for southerners to consider seriously any program which will result in a smaller volume of purchasing and debt-paying power in the Cotton Belt.

We are told that rayon will take cotton's market unless we drastically reduce the price

of cotton. In my opinion, the use of synthetic fibers will increase no matter what we do about the price of cotton. The synthetics are preferred in certain fields. For years rayon sold far above the prices of cotton and yet its use expanded steadily all those years. Part of this was due to improvement in the quality of rayon and part to better promotion and advertising. Instead of calling for lower prices, the true friends of the cotton industry should insist that cotton devote as much time and money to research and promotion as the rayon industry devotes to those fields. There are magnificent possibilities in an expanded and coordinated research program—a program which should have the support of the Federal Government. I shall do all in my power to see to it that the cotton industry develops such a program. If so, the use of cotton might be expanded steadily and the farmer might get a fair price for his product.

The salvation of the cotton industry will not come through price decreases to meet foreign-price competition. Rayon expanded into the tire-cord field during this war because rayon, according to the Army, who was partial to rayon, gave a more satisfactory performance where tires were subjected to unusually heavy pressure and high speeds. This was not a matter of price; it was a matter of performance. The way for cotton to get this market back is for the cotton industry to develop a better tire made from cotton cord. Already, cotton cord for tires has been greatly improved. It can be improved a good deal more. Cotton must keep its markets on performance.

Let me remind those who fear rayon that this fiber is made primarily from linter pulp and wood pulp. Why do those who advocate lowering the price of cotton not worry about the price of linters, which as you know is a byproduct of cotton? Why don't they worry about the price of the wood which is used in making the pulp which in turn is used to manufacture rayon? Maybe, instead of cotton being too high, linter prices and wood prices are too low.

From time to time, I have seen references to the fact that our forest resources steadily and systematically are being wasted. Most of the wood that is sold to make pulp for the manufacture of rayon is owned by farmers and cut by farmers. I believe that the farmers who sell this pulp are selling it all too cheaply. They are following the familiar farmer practice of giving away their labor and their resources at the same time.

I also would like to see attention given to improvement in the marketing and handling of cotton. There is room, perhaps, for improvement and far-reaching ones in the manufacture and marketing of cotton products.

In this connection, I recently got hold of a very interesting little pamphlet. It is Marketing and Manufacturing Margins for Textiles, and is the result of a study by L. D. Howell, of the Bureau of Agricultural Economics. This study shows that in 1939 the farmer for his cotton got only 7½ cents of every dollar spent by consumers for cotton clothing and household goods made from cotton. Here is how the remainder of the dollar was divided. Seven-tenths of a cent went for ginning and baling, 2.1 cents for merchandising, 10.5 cents for spinning the yarn and weaving the cloth, 8½ cents for dyeing and finishing cloth, 29.9 cents for manufacturing apparel and household goods, 8.2 cents for wholesaling, and 32.6 cents for retailing. This is what Mr. Howell stated in the introduction to his study:

"The cost of marketing agricultural products has an important bearing on returns to farmers, on the one hand, and on marketing outlets and levels of living, on the other. The relative importance of marketing costs for textiles is indicated by the fact that on the average more than seven-eighths of the consumer's dollar paid for textile goods is usually absorbed in marketing and manufacturing margins. A reduction of 5 percent, for example, in these margins would make available for distribution to farm producers or to consumers, or to both, more savings than a reduction of one-third in the cost of producing the raw fibers on the farm."

This language, mind you, is not my language or that of any farmer. It is the language of an economist for the Bureau of Agricultural Economics.

I would again advise some of those who harp continually on the necessity of reducing raw cotton prices to look to their own fields, to see whether some reductions cannot be made there. And I would suggest to farmers that they look into some other fields and put some other low price advocates on the defensive for a while.

What I have said about cotton applies equally well to some other farm products. In some instances, perhaps, there should be a decline. I know of none at this time. The situation surrounding each product merits careful examination before conclusions are drawn. But to propose that Government aid to agriculture be withdrawn and the farmer sell in an open market and buy in a closed one is outrageous. This talk of reducing loans and paying farmers parity with appropriations out of the Treasury, is, in my opinion, misleading. As I have indicated, appropriations cannot be depended upon. We cannot get appropriatinos for cotton without getting appropriations for other agricultural commodities. The resultant total would be, in all probability, many billion dollars annually. The public, as I see it, would not go along with such a policy for any lengthy period. The result of lowering the loans on cotton and other commodities would, in my opinion, be a lowering of the prices for the commodities. So long as industry and labor insist upon high wages and high prices, agriculture must resist efforts to reduce substantially prices for farm products. In their own interests and in the interests of the country as a whole, farmers should resist these efforts.

Of course, a part of the low-price plan for farm products is unlimited production of farm products, even at a loss. Nobody expects a manufacturer to continue to make goods at a loss. Yet that is what agriculture is asked to do. When hard times come, farmers are to go right ahead, flooding the markets and piling up surpluses and beating down farm prices.

I do not favor production control for the sake of production control. I wish that farmers could produce to the fullest and get a fair price for all they raise. As things stand now, this happy state of affairs cannot be. Therefore, I urge farmers to use the powers of the Federal Government to protect themselves—just as other groups use there powers. Where production control is effective it should be applied. I urge farmers to use the aid of the Government wisely and moderately, but effectively. So long as I am in public life I will do all in my power to see that Federal powers are available to farmers if they continue to be available to the rest of the country. I feel that such a course is not only in the interest of the farmers, I feel that it is in the interest of the Nation as a whole.

## The President Slaps Congress

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of November 2, 1945:

THE PRESIDENT SLAPS CONGRESS

President Truman, in his wage policy talk to the Nation, practically accused Congress of indifference to public interest in refusing to adopt three extremely doubtful measures conceived and consistently pushed by the administration.

The first of these would set a national standard for unemployment compensation. The second would keep employment offices, taken over by the Federal Government from the States during the war, under Federal control for a further period. The third is the misnamed "full employment" bill.

Congress has seemed to hold States can approach the matter of jobless pay maximums, each for itself on the basis of its knowledge of its own conditions and its own needs, better than can the Federal Government.

Congress has seemed to hold, if there was ever any need for Federal operation of employment offices, the need disappeared with the decline in the labor demands of war plants. The States have had long experience in this field and can resume control almost overnight.

Congress, along with a large section of the population, apparently has felt that the full employment bill at least belies its name. It would furnish nobody a job. Its terms and its background are so vague that it is objected to by some as a menace and by others as wholly ineffective.

We believe that it is much more desirable to prepare a program of great public works—the St. Lawrence seaway, the Missouri Valley development, transcontinental roads—and have that ready to give jobs to those who need them, rather than pass a hollow resolution that there shall be jobs for everybody.

If economists marveled at the shallowness of the President's thinking, politicians must marvel at the sharpness of his criticism of Congress for its refusal to be whipped into passing three extremely doubtful measures.

## Why No Effective Price Control?

EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, we have a dairy program in operation that is difficult to understand. None but those who had too many sips from the New Deal fountain of philosophy would ration butter when the cream from which butter is made is not rationed.

Butter, with 81 percent butterfat, has an OPA ceiling of some 50 cents per pound. On March 20, I told the House about other dairy products, such as a dairy concoction made in Ohio with a 20 percent fat and a 45 percent moisture selling as cheese for 55 cents a pound right in sight of the Capitol. This means $2.75 per pound of butterfat as purchased by the consumer.

I recently sent two samples to the Agriculture Department to be analyzed. These products were sold as American cheese, not as cheese foods. The product was supposed to have been manufactured in New York.

The following letters furnish the facts on these two samples:

UNITED STATES DEPARTMENT
OF AGRICULTURE, PRODUCTION
AND MARKETING ADMINISTRATION,
*Washington, D. C., October 18, 1945.*

Hon. REID F. MURRAY,
*Washington, D. C.*

DEAR MR. MURRAY: In line with your recent conversation with Mr. Henry G. F. Hamann of the Inspection and Grading Division of the Dairy Branch, you will find attached hereto copy of a report submitted by our Chicago laboratory relating to the samples of cheese you asked us to analyze.

We trust this information will be of some help to you.

Very truly yours,

T. G. STITTS,
*Director, Dairy Branch.*

[Enclosure.]

PRODUCTION AND MARKETING ADMINISTRATION,
*Chicago, Ill., October 10, 1945.*

Mr. B. J. OMMODT,
*Production and Marketing Administration, United States Department of Agriculture, Washington, D. C.*

DEAR MR. OMMODT: Below you will find the results of the two cheese samples which were to be analyzed for your information. These samples were brought to the laboratory by Mr. Meister.

| | Moisture | Total fat | Fat dry basis |
|---|---|---|---|
| Large sample | 44.4 | 24.20 | 43.53 |
| Small sample | 44.7 | 21.96 | 39.71 |

Very truly yours,

O. J. KAHLENBERG,
*Senior Chemist.*

Mr. Speaker, this alleged cheese from New York were purchased at 59 cents per pound. The OPA ceiling on American cheese is 39 cents per pound and it contains 32 percent fat and 37 to 39 percent moisture. Compare this with the 44 percent moisture and 21 to 24 percent fat concoctions that are being sold a few blocks from the Capitol for 59 cents per pound.

The consumers are being cheated out of millions of dollars and yet certain groups who claim to speak for the consumers say that the OPA is protecting them.

The OPA claims they cannot do anything about these falsely advertised products and evidently no other bureau of the present administration wishes to do anything about what is taking place.

## The Atomic Bomb

EXTENSION OF REMARKS
OF

### HON. VICTOR WICKERSHAM

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. WICKERSHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

FORTUNE,
*New York, November 2, 1945.*

DEAR MR. WICKERSHAM: Elmo Roper has just completed a Nation-wide poll of public opinion on the atomic bomb. The survey is scheduled for publication in the December issue of Fortune, but due to the immediate importance of this information, we are releasing it to the press in advance of its appearance in our own magazine.

Because of your concern as a Member of Congress, I am enclosing a copy of the release for your information.

Cordially yours,

WILLIAM D. GEER,
*Publisher.*

TWO-THIRDS OF UNITED STATES PEOPLE BELIEVE ATOM BOMB SECRET WILL BE OUT WITHIN 5 YEARS, FORTUNE SURVEY REVEALS—40 PERCENT THINK RUSSIA WILL BE FIRST WITH ATOMIC BOMB OF ITS OWN—MAJORITY SAY WEAPON SHORTENED WAR BY 6 MONTHS TO A YEAR

NEW YORK, November 1.—Two out of three Americans believe the United States cannot keep the atomic bomb a secret for more than 5 years, the Fortune survey reports today.

Russia is regarded by 40 percent of the people as most likely to win the race to develop another atomic bomb, according to this survey, which was conducted by Elmo Roper. Other Fortune survey findings:

1. Only 15.7 percent of the people think the atomic bomb has increased the chances of a future world war.

2. 53.2 percent think the use of the bomb shortened the war against Japan by something between 6 months and more than a year.

3. Almost the same percentage (53.5) are convinced that we should have used the two bombs against Hiroshima and Nagasaki exactly as we did.

"It took the United States about 5 years to develop the first atomic bomb," Fortune pointed out, asking, "About how long do you think it will be before some other country will develop one if we don't give them any help at all on it?" The replies:

| | Percent |
|---|---|
| Less than 5 years | 52.7 |
| About 5 years | 12.9 |
| Total | 65.6 |
| More than 5 years | 11.7 |
| Never | 4.5 |
| Don't know | 18.2 |

Among the college-educated an even larger percentage (83.2) think an atomic bomb will be developed elsewhere within 5 years, Fortune discloses.

"Which nation or nations," Fortune then asked, "do you think will be the first to develop the atomic bomb?" The answers follow:

| | Percent |
|---|---|
| Russia | 40.4 |
| Germany | 28.5 |
| Great Britain | 8.9 |
| Japan | 7.4 |
| Other | 1.7 |
| None | 4.5 |
| Don't know | 19.0 |

"Those who picked Great Britain either forgot that Britain is a party to the bomb or believed that Britain would develop separate facilities for producing the bomb," Fortune comments.

In Fortune's opinion, stories of how near the Germans came to developing the bomb probably influenced some of the 28.5 percent who named Germany. "Apparently some of the public was sufficiently impressed to believe that Germans can complete the bomb even with a shattered and closely supervised industry. The selection of Germany probably does not reflect ignorance of the present German situation, for 35 percent of the college-educated picked Germany to be next with the bomb. And the well educated are usually well informed."

On the subject of another big war, people are less optimistic than they were 6 months ago. Answers are compared below to the Survey's question: "Do you think that there will probably be another big war during the next 25 to 30 years, or do you think there is a fairly good chance to avoid it?"

| | October 1945 | April 1945 |
|---|---|---|
| | Percent | Percent |
| Big war | 38.0 | 27.1 |
| Good chance to avoid it | 51.1 | 65.7 |
| Don't know | 10.9 | 7.2 |

Yet nearly half the people think the atomic bomb actually decreased the chances of a future war—and these people include a third of those who are pessimistic about chances of avoiding another world conflict.

Fortune asked: "Do you feel that the atomic bomb has increased or decreased the chances of a future world war, or made no difference one way or the other?" A breakdown of replies follows:

| | All the people | Those who think a big war will come | Those who think there is a chance to avoid a war |
|---|---|---|---|
| Chances of war— | Percent | Percent | Percent |
| Have been increased | 15.7 | 23.3 | 11.2 |
| Decreased | 46.9 | 33.7 | 58.5 |
| Remain unchanged | 24.1 | 30.4 | 21.0 |
| Don't know | 13.3 | 12.6 | 9.3 |

As for the effect of the bomb on the length of this war, only 8.4 percent think it made no difference at all. Here is how opinion divided on the question: "How much longer do you think the Japanese would have held out if it had not been for the atomic bomb?"

| | Percent |
|---|---|
| No longer | 8.4 |
| A month or less | 9.9 |
| 2 to 5 months | 17.0 |
| Total | 35.3 |
| 6 months | 17.2 |
| 7 to 11 months | 3.3 |
| 1 year | 15.1 |
| Over a year | 17.6 |
| Total | 53.2 |
| Don't know | 11.5 |

What effect, Fortune wondered, did the atomic bombs have on the United States mind? The attitude scale below shows that while the majority is satisfied with the use of the bombs, there is more disappointed ferocity than compunction among the rest of Americans. The question: "Which of these comes closest to describing how you feel about our use of the atomic bomb?"

| | Percent |
|---|---|
| We should not have used any atomic bombs at all | 4.5 |
| We should have dropped one first on some unpopulated region, to show the Japanese its power, and only dropped the second one on a city if they hadn't surrendered after the first one | 13.8 |
| Total | 18.3 |
| We should have used the two bombs on cities, just as we did | 53.5 |
| We should have quickly used many more of them before Japan had a chance to surrender | 22.7 |
| Don't know | 5.5 |

Heaviest vote for the last and most destructive course came from the poor and from people of the Southwestern States, Fortune reports. The prosperous and the well-educated turned in larger than average minori-

ties for the two milder courses of action. Negroes differed radically from the poor; their choices followed a pattern similar to that of the well-to-do.

## Sales of Surplus Automotive Equipment to Veterans

EXTENSION OF REMARKS
OF
### HON. CARTER MANASCO
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. MANASCO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SURPLUS PROPERTY ADMINISTRATION,
*Washington, D. C., October 20, 1945.*
Hon. CARTER MANASCO,
*House of Representatives,*
*Washington, D. C.*

DEAR CONGRESSMAN MANASCO: This is in answer to the questions you raised in our recent telephone conversations about sales of surplus automotive equipment to veterans at Fort Meade, Md., and Fort Devens, Mass.

Our Compliance Division has made a thorough investigation of both of these sales which, as you know, resulted in unfavorable news stories and complaints from veterans. The following is a brief summary of what our investigators found.

The veterans had legitimate complaints. The sales were inadequately organized and arrangements between the Smaller War Plants Corporation and the Commerce Department were not properly coordinated. There was a break-down in the sales procedure, but our investigation does not disclose any deliberate noncompliance nor discrimination against the veterans.

The situation was made worse at Fort Devens by such unfortunate situations as the parking of jeeps which were not surplus on the same lot with the trucks which were for sale, and in the fact that vehicles sold to dealers several days previously at Fort Meade were being driven away at the time when the veterans were having their difficulties. In the Massachusetts case the situation was further complicated by the head of the Commerce Department office there, who held an unfortunate press interview in which he attacked veterans.

Another bad factor was the lack of proper information on the part of veterans as to the procedure to follow in obtaining vehicles, and also lack of information as to the type of vehicles available and their condition. This resulted in the majority of veterans arriving at the site of the sale without having previously qualified with SWPC, as is required. At Fort Meade, for example, only 29 of 129 veterans at the first day of the sale had qualified with SWPC.

Still another contributing cause to the trouble was the fact that at Fort Meade the majority of the vehicles were not particularly suitable for civilian use and no batteries were available, so that vehicles had to be purchased without the purchaser testing the motor. This has been corrected in recent sales.

Newspaper accounts of the Fort Meade sale pictured conditions as worse than our investigation disclosed them to have been. For example, they did not mention that the veterans were sold their vehicles at prices uniformly less than dealers had been paying.

Newspaper stories also failed to mention that many of the trucks were unsuited to civilian use, not because of their condition, but because they were constructed for a particular military purpose.

Intensive efforts are being made to get the information across to the veterans on the correct method of obtaining surplus vehicles and the administration is also taking steps to correct the inadequate planning and lack of coordination which characterized these two sales.

As you know, a new veterans' regulation has been put into effect since the time when these sales were held. This regulation was worked out in cooperation with the major veterans' organizations and we believe that it will enable the veterans to exercise the buying priority which Congress intended them to have. The SPA will be glad to get for you any further information you may wish concerning these sales.

Sincerely yours,
W. STUART SYMINGTON,
*Administrator.*

## Navy Day Address of Admiral Alva D. Bernhard

EXTENSION OF REMARKS
OF
### HON. JOHN E. LYLE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. LYLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Navy Day address at Corpus Christi, Tex., October 27, 1945, by Rear Adm. Alva D. Bernhard, United States Navy:

It was with a feeling of humble pride and pleasure that I accepted the invitation of your Navy League to address you today on Navy Day, 1945. I feel honored to have received this invitation. I remember well the first time I saw Corpus Christi in the summer of 1940 from 10,000 feet in the air. The great naval air stations that exist here today were then nothing but empty spaces. Plans and organization were not yet worked out. I had received orders to come to Corpus Christi to build the greatest air station in the world. It's a matter of history that this task was accomplished in record time. Its accomplishment was greatly expedited by the cooperation and the loyal assistance of the people of Corpus Christi and of Texas. The main base was commissioned in March 1941 and we immediately started training aviators. By November of '41 we were graduating naval aviators daily and in the month of February '42 we graduated more than 300 naval aviators—a mark which had been our goal at the beginning—but after Pearl Harbor Day the lid was off and we had no limit.

Today the Navy is 170 years old. Today also is the birthday of former President Theodore Roosevelt, who may well be called the father of the modern Navy. I've always remembered a statement he made in one of his addresses, "Whatever arms have cost us, they have made and kept us a great Nation."

The mission of the United States Navy is control of the sea and of the air above it. In the past two World Wars our enemies failed to control the seas and they were defeated. In the future—as in the past—the key to victory and to the freedom of this country will be in the control of the seas and of the skies above them. Due to our geographical position no foreign enemy can reach us without coming across the sea. Conversely—we cannot reach or defeat an aggressor without crossing the sea. If we control the sea and the air above it, we will remain secure.

In the latter part of March 1942, I was detached as commandant of Naval Air Center, Corpus Christi, and ordered to the Naval Air Force, Atlantic Fleet. This time was probably the darkest period in the war for the United States. Our merchant ships, tankers, and supply ships were being sunk daily at a prohibitive rate and unless we could build more ships and stop these attacks we would soon be isolated from our allies in Europe. German submarines were coming to the very gates of our harbors and sinking our ships with almost complete impunity. They would lie on the sandy bottom until they heard a ship coming—then come to the surface, torpedo it, and go back down below for another listening period. They could do this because we had neither the ships nor planes nor bombs nor guns to stop them.

This condition did not last long—soon we were getting planes and antisubmarine vessels in rapidly increasing numbers. We had the crews trained by the time we received the ships. It became too hazardous for enemy submarines to remain in shallow waters and they were driven out to sea where their targets were fewer and life not so easy for them. Finally they began to hunt our convoys with wolf-pack tactics—where as many as a dozen submarines would shadow one convoy and attack it for days. At that time we did not have enough escort vessels or planes—but we had to keep the supplies moving. We finally began to get deliveries of our most effective weapon which greatly expedited the defeat of submarines in the Atlantic—this was the escort carrier with its air group. The first few were converted from merchant ships. These vessels operated along convoy routes in midocean—in the area which was too far from shore for land-based planes to be effective. When these little carriers, with their aircraft and submarine escorts, through secret instruments and weapons, began wiping out whole wolf-packs, the Jerrys finally admitted defeat for their greatest weapon at sea, on which they had counted heavily to win the war.

By securing control of the seas we were able to transport safely vast numbers of men and vast quantities of equipment, stores, and material for bases. We were able to invade enemy lines and come to grips with him, and defeat him, and end the war in the Atlantic.

It was sea power that made this outcome possible. I do not mean that sea power alone won the war—but it could not have been won without sea power.

By sea power I mean not only ships and planes with their highly trained crews but farms, factories, schools, training stations, air and ship bases, transportation, everything needed to support the force at sea. The great air training organization at Corpus Christi with its many bases was an indispensable part of our sea power.

The war in the Pacific was in principle similar to the Atlantic war but far more difficult. The vast distances multiplied the number of ships required, made many more bases necessary, and you remember the enemy, prior to his sneak attack at Pearl Harbor, had prepared hundreds of unsinkable air bases all over the Pacific, between us and our objectives. We had to secure control of the seas before we could advance across the Pacific. We had to capture the enemy's unsinkable aircraft bases that we needed, and put them to our own use.

To make possible the capture of these strongly fortified islands a new weapon was devised—it was the fast carrier task force. When we built enough carriers, with their air groups, battleships, cruisers, and destroyers to protect them, we went anywhere in the Pacific with impunity and attacked any island or group of islands, destroyed their

planes, the facilities of their bases. This was followed up by a surface bombardment, the landing of amphibious forces, and the island bases were ours and were rapidly developed with everything we needed for air and naval bases. The enemy islands we did not need we simply bombed and bombarded until they were of no further use to the enemy, whose fleet could not supply them and left the garrisons to wither on the vine. Hundreds of thousands of enemy troops were still on these isolated bases on VJ-day, and have surrendered. Our fast carrier task forces spearheaded every attack in our advance across the Pacific.

As our sea power increased, and the enemy's sea power decreased, our jumps across the Pacific to new bases became longer and longer, and we finally had bases built up at the very threshold of the home islands of Japan, air bases for long-range bombardment planes, for medium bombers, and for fighters. Army and Navy air power made daily bombardments over the cities of Japan and played havoc with their factories, arsenals, fuel and gasoline storage, and in fact with everything necessary for the enemy to wage war.

Our fast carrier task forces made continuous raids on enemy shipping; his navy yards, his men-of-war, his air fields in the enemy homeland. When the enemy's last battleship, the *Yamato*, the flagship of the Imperial Fleet, several other warships, and 662 enemy planes were destroyed by our fast carrier task-force planes on April 6 and 7, 1945, the Imperial Japanese Fleet no longer existed.

During the war in the Pacific we had a powerful force of submarines operating in enemy waters. Just how effective they were was never disclosed until the war was over. As our submarines increased in number they were sent out to make it highly hazardous for any Japanese ship to sail the seas even in the far western Pacific. Our submarines at the end had sunk 1,256 enemy ships, with a total of over 10,000,000 tons of shipping.

On VJ-day Japan had a larger army and a far more powerful air force than she possessed on December 7, 1941. In the home islands, at the time of the surrender, there were more than 2,000,000 trained professional soldiers; in China, Manchuria, Formosa, and the by-passed islands there were more than 3,000,000 soldiers. On the day war ended Japan had approximately 6,000 combat planes.

Why did Japan surrender before being invaded? It was because the Japanese live on islands—they are a maritime nation dependent on food and materials from overseas—and they had lost their seapower and could no longer live. Their sea communications were destroyed, their people were at the point of starvation, their industry was destroyed, they lacked fuel for their ships and gasoline for their aircraft.

We had sea power which made it possible to protect our lines of communications and move vast numbers of men and quantities of materials to our forward bases and prepare for a successful invasion of the enemy home islands.

There is much confused thinking today about the atomic bomb. Much misinformation is being circulated—largely due to lack of accurate knowledge. Many people believe that armies and navies will become obsolete and that future wars will be frightful orgies of long-range mass extermination of whole countries. This belief is not true. To the Navy the atomic bomb is just another bomb more powerful than any we have had before. It will still require ships and planes and men to use it against our enemies—or for our enemies to use it against us. In the past, many weapons have been invented for which claims were made that they were so frightful that they would end war. None have done so nor have we ever failed to invent a defense against such weapons. We will do so in the future and our sea power will use the atomic bomb—or any other better weapon that science can devise—if necessary to do so—against our enemy armed forces. The invention of the atomic bomb has made our sea power, including air power, more important and necessary than ever before. Our defense frontiers are no longer the waters adjacent to our shores; they extend over all the oceans of the earth.

We developed many secret weapons during this war, all of which greatly assisted in winning it, but we have one secret weapon which really won the war all by itself, and that is the people of the United States of America. First, I give credit to the young men and women of the armed forces; their loyalty, courage, endurance, and bravery were magnificent. They are all heroes. Next, I give credit to the people of the home front. They bought bonds, which means they supplied their Government with necessary money in astronomical sums. They supported industry with millions of men and women who left their homes to work in factories. A production miracle occurred that supplied our fleets and armies with everything they needed when they needed it. This miracle also supplied our allies with forty-odd billions of dollars worth of lend-lease supplies, without which they could not have continued to fight. When the home fronts of Italy and Germany could no longer supply their armed forces, we invaded those countries and beat them. They surrendered. When the home front in Japan was shattered by our attacks, although they had an army of 5,000,000 men and a powerful air force, they quit. They surrendered. They allowed our armed forces to occupy their home land without a fight; they now submit to our will. Victory was won by our greatest secret weapon—the people of the United States of America.

There is one final requirement of sea power which I have not mentioned—that is the organization which creates sea power and directs its use both in peacetime and in wartime. Our present organization—the Navy Department—has done this so effectively that our sea power has made possible the winning of two world wars. World War II has truly been a global war. There is no ocean on earth in which the influence of our sea power has not been felt. The use of sea power is a fit duty for naval officers who have spent their lives in preparing for this great task. In spite of the unsurpassed record of our use of sea power in two world wars—there is a strong movement being advocated today to change the organization of the Navy Department and combine it with other departments of the Government. The Navy believes this would be a step backward and that at some future time officials not familiar with naval operations might hamper its intelligent use of sea power and thereby endanger the security of our country.

Today you people of the United States of America own the greatest sea power ever created in the history of the world. We have accomplished a great task of winning victory and now we are confronted with one as great of implementing victory into peace for the entire world. I wish I could tell you there would never be another war—I hope and pray there will not—but human nature has not changed and there are still lots of potential aggressors in the world.

We have joined a community of nations and we have pledged ourselves to create a world governed by laws and not by dictators. To keep this pledge we must remain strong. History has demonstrated that the greatest instrument for preservation of peace is sea power. We have it now—let us keep it and redeem our pledge to peace-loving nations for our own security and for the security of the world. Let us speak softly and carry a big stick.

## Home Seekers Watch Death Notices, Besieging the Bereaved for Places to Live; Real Estate Lobby Propaganda Misconstrues Facts of Housing Situation

---

EXTENSION OF REMARKS
OF
## HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. PATMAN. Mr. Speaker, last week the Chicago correspondent of the New York Times reported that homes and apartments are becoming so scarce that would-be renters are watching the death notices in the daily newspapers, then besieging the bereaved to rent the quarters vacated by the newly dead.

That this could happen in our country today is shocking. But this is doubly shocking—while this shameful, ghoulish scrambling for the quarters of the dead takes place, Washington real-estate lobbyists continue to complacently assure us that the housing demand is overrated. They contend that a little such shortage is good for the real-estate business, and that the demand is not so great as we think.

Homecoming veterans are beginning to seek shelter for themselves and their families for this winter with a grim desperation, willing to pay any price. Yet these lobbyists tell us not to worry about it, that by next year the building industry can start building homes to meet the demand. In plenty of time, they say, to prevent runaway inflation in home prices, and to meet the need for homes.

Gentlemen, I submit that these people have but one interest in this housing problem—to make the highest possible profit at the expense of the Nation and the rest of the building industry. They represent the small group of big speculative builders who sell houses a hundred at a time. They are fighting to avoid controls on both building materials and home prices. They wish to be able to outbid the little builder for scarce material in an open market. If they wreck him as a future competitor, all the better. They wish no control on home prices—it might cut their profits on the juiciest market they have had in a quarter of a century. The effect this policy may have on the man who buys does not move them one whit.

Under pressure, they have paid lip service to the need for some control. They agreed to have a "meeting" to work out some system of self-policing of the building industry. Officials already have pointed out that trade associations acted promptly in warning speculative operators who a few weeks ago raised the prices of $8,000 homes built under WPB's old control orders.

The effect of these warnings can be seen in last Sunday's newspapers. The same speculative builder to whom I called attention on the floor of the House 2 weeks ago, the same man who was given a price of $7,250 on his homes and

raised the price to $9,000 after controls were lifted, advertised those houses for sale after being warned by his association. The price was still $8,990 Almost every home advertised for sale ran above $13,000

This blindness to the serious problem in housing facing us, to the danger of inflation threatening us, and the lack of forthright action, has been the chief characteristic of housing discussions in Washington lately.

I have no quarrel with either the building industry or the rank and file of the real estate profession. I have fought hard for them, time and time again, when they ran into difficulties with the Office of Price Administration or other governmental agencies. I am sincerely interested in seeing to it that the realtor has houses to sell and that he make a fair profit. Because of that interest, I am equally concerned about the possibility of his going bankrupt in the bursting of a real-estate boom.

However, I am critical of this small group of speculative builders who have been so vociferously active in Washington. This is the group that has assured the administration that if building controls were lifted, sufficient houses could be built to meet the demand.

That statement alone is typical of the failure to recognize the genuine causes of the housing jam, the misconstruction that has been put on the facts underlying our housing problem. This lobbying group has declined to acknowledge that scarcity of materials, not any governmental controls, has been the real factor limiting our ability to build homes. They likewise have declined to acknowledge the obvious fact that thousands of houses have been built under control to the extent that present material stocks are at an all-time low.

This group of speculative builders, interested only in profit, does not agree that returning veterans should be given priority on homes, or given protection against inflated prices. They have publicly expressed the opinion that a little more inflation would be good for the country. They have seemed oblivious to the dangers of an uncontrolled building boom, and have failed to recognize that their course will return a profit to a few at the expense of the country's economic future.

After hearing many of their statements, both public and private, I can only reach the conclusion this group has three selfish objectives:

First. To secure the removal of all controls so their single group will be able to use its extensive financial reserves to outbid the small builder for what little supply of building material is available. Most of them are confident that they can pass on the excessive construction cost to the ultimate home buyer in the present market.

Second. Many of the speculators (a few of them leaders in the various real-estate organizations) are confident that they can make a killing in the present rising market and get out before the crash comes, leaving the mortgage lenders and the buyers to suffer in the subsequent crash.

Third. Many of the speculators apparently feel that they have no moral obligation to other members of the real-estate profession to avoid an inflationary situation, to the veterans needing homes, or to their country. It is a coldly selfish attitude of "We want the profit. It is every man for himself and the devil take the hindmost." Some of these men, who realize the inflationary danger of the present market, feel the more builders who go out of business as a result of the lack of materials, the less competition they will have from from the little builder when the supply situation improves next year.

In view of the very real inflationary threat to the Nation created by rising housing prices, and the growing scarcity of building materials, I cannot subscribe to such a selfish attitude, regardless of its sincerity.

I firmly believe that the bulk of realtors and builders in the country are better men than that, are farsighted enough to realize the danger of a "boom and bust," and are willing to submit to control of prices for a few months longer until we can produce the material to build more homes.

Simply stated, the facts of our housing problem are as follows:

There is a greater shortage of building material now than at any time since 1941. It will be next June or July before manufacturing facilities can reconvert and step up production to a point where a sizable amount of building material will be available.

Between now and next July the scarcity of houses will continue to be critical—whether or not we have any controls. It is conservatively estimated that more than a million and a half homes must be built to begin to meet the demand. Against this, the building industry says it can only construct 450,000 homes, and can build those only if sufficient materials can be produced.

This unprecedented need for homes, plus the many millions of dollars' worth of wartime savings in the hands of the people, has developed a purchasing power that could lead to run-away, uncontrollable inflation in our economy.

My sole aim in considering these facts is to seek some means of holding down prices so the ordinary citizen and the veteran can have a fair chance to buy homes at a decent price during these next critical 9 or 10 months.

I am in full agreement with the statement of sincere spokesmen for the builders that scarcity of homes is due to the return of the veterans, the unscrambling of families who have been living in doubled-up fashion, and the movement of war workers, plus the deterioration of old houses.

But I do not agree with the contention that cessation of building activity has been due to Government regulations. Instead, I hold that it is due primarily to the scarcity of materials. Regulations necessarily were imposed to channel what supplies of material were available so that most legitimate demands could be met first. That need for channeling of materials still exists. Low-cost homes should be built before mansions. The veteran should be given a priority.

In view of the present scarcity of building materials, Government control is still essential to prevent competitive bidding among builders that would send materials prices ballooning.

Some of these Washington representatives apparently are out of touch with the rank and file of the building industry. Many builders have expressed the opinion to me that they dislike price control, but dislike the prospect of runaway prices on construction material even more. They have no desire to see controls lifted for some months. If such controls were lifted, there can be little question that the big mass builders could easily absorb all of our present stocks through their mill and factory contacts, putting the little builder out of business.

Despite the complaints of building spokesmen against regulation, it is the opinion of experts both within and without the industry that if all governmental control were removed tomorrow, housing construction could not be stepped up before next June or July.

However, if these controls were removed, prices of all materials from brick to nails would immediately rise under the pressure of competitive bidding. That is what I would like to avoid, not only because of the home buyer, who must eventually foot the bill, but because it would put thousands of small buiding contractors out of business.

Again, the speculative spokesmen cry for lifting of rent ceilings on the ground that it would increase building of needed rental property. Their reasoning on this is equally fallacious. In the face of the present material shortage, I do not see how construction of rental property can be stepped up any more than construction of dwelling units—regardless of how much incentive was given the builder by unlimited rents.

Removal of rent control in those congested areas where it now applies would, in my opinion, result in the eviction of thousands of families unable to pay the higher rents. They would be seeking other places to live—and the housing shortage would be further aggravated.

It is true, as real-estate spokesmen reiterate, that a ceiling price on homes will not produce more homes nor create sales. But once more they are attempting to mislead us as to the purpose of imposing ceiling prices. Such a control would be imposed—during the next nine critical months—solely to prevent soaring prices from wrecking the real-estate industry in a boom and bust period, to prevent ruinous inflation from striking our country. We should learn from our sad experience in an exactly similar situation after the last war.

Once more paid propagandists of the real-estate lobby are attempting to misconstrue the facts with the contention that if the market price of a home is too high it will not sell, and the realtor will do no business. They tell us that this would constitute automatic price control. They know and the public knows that in the present market a home will sell at almost any price.

If a ceiling price accomplished the one task of holding the line against inflation, it would serve a worthy purpose.

I fully believe the Government is doing everything humanly possible to stimulate increased production in the building field. Mr. John Snyder, Reconversion Director, has taken a long step in the right direction with his six points to step up manufacture of building materials. Incentive prices have been given segments of the industry.

However, the results of these efforts cannot be felt for months in the actual production of homes. Until then, we must provide protection for the small builder and the home buyer, and prevent an inflationary upsurge in home prices.

Our duty is clear on this point. If we are to sincerely conduct our fight against inflation we cannot view the rising waters of this housing boom as a mirage. The danger is imminent. The penalty will be imposed on all of us if we fail to stop this inflationary tide before it engulfs the Nation.

## Navy Day Address of Admiral P. N. L. Bellinger

EXTENSION OF REMARKS

OF

## HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. RIVERS. Mr. Speaker, we were indeed fortunate on October 27, it being Navy Day, to have as our guest speaker on the occasion of the celebration of that event at Charleston, S. C., a native son of South Carolina, Admiral P. N. L. Bellinger, commander, air force, Atlantic Fleet. So interesting were his remarks and so timely at this time when America contemplates an adequate fleet to keep the peace which the Navy helped so gloriously to win, under unanimous consent, I insert his address in the Appendix of the RECORD, so that in future years his words may bear testimony to the vision which men in similar positions demonstrate to insure future peace and protection to the peoples of the world:

It is a real pleasure for me to be here tonight, because in addition to the many attractions Charleston offers a visitor, it offers me an opportunity to visit my home State. Of course, Cheraw is quite a distance from here but every South Carolinian knows that when he has been away for a long time, anywhere within the State's borders is home.

I am especially glad to talk to you tonight about the Navy, not just because I have spent all my adult life in that service but because I believe that what we are doing and what we are thinking about our Navy, on this Navy Day, give a clear indication of what we will be doing as a Nation during the critical years ahead of us.

The American people today possess the greatest Navy the world has ever seen. With the largest fleet, the mightiest naval air force, and the broadest expanse of naval bases, it guarantees for America effective access to any part of the globe.

But what are we going to do with this great Navy? Are we going to demobilize the men, decommission the ships and dismantle the bases, leaving our security to strange new weapons operated with push buttons? Are we going to abolish this great weapon we have forged, and rely for our safety on the innate goodness of human beings? Or, on the other hand, are we going to maintain this overwhelming power at peak strength and attempt to force upon all the world our own ideas of politics, economics, and ethics?

Of course, we shall adopt neither extreme. We shall acknowledge the innate goodness of most human beings, and keep our Navy strong. We shall grant the right of other people to their own systems of freedom and be ready to repulse any attack upon our freedom.

But saying this doesn't make it so, and it is because some foresighted people knew this that we have Navy Day. The first Navy Day was celebrated in 1922. October 27 was selected because it was on that date in 1775 that the Continental Congress received the bill providing for the original United States Fleet. Incidentally, the 27th of October is also the birthday of Theodore Roosevelt, who, like his great kinsman, loved the Navy and did so much to build it to greatness. Navy Day was sponsored then, as it is now, by the Navy League, an organization of patriotic civilians whose prime purpose is the security and defense of our country and who believe that the best way to achieve this security and this defense is to maintain a strong Navy.

However, despite the efforts of members of the Navy League and countless other citizens, the years that followed 1922 saw anything but the building of a trong Navy. In 1921, the year before the Navy League was established, this country had led in the calling of a naval disarmament conference; a few years later many of those who were advocating a strong Navy were being stigmatized as "merchants of death"—and not long before our enemies struck, many of our citizens sincerely—and effectively—opposed the building of new planes and ships and the fortifying of vital bases. Pearl Harbor was the almost inevitable result.

I believe that the Japanese sneak attack succeeded primarily because of a national attitude, an attitude which only a few months earlier, in the face of a fast-spreading war, had caused the House of Representatives to come within one vote of disbanding our brand-new Army.

That Sunday morning, December 7, 1941, there were 8 battleships, 7 cruisers, 28 destroyers, and 5 submarines at Pearl Harbor. The Japanese planes sank five of the battleships and damaged the other three. They also destroyed a goodly portion of our naval combat planes.

In the western Pacific during the days that followed, our small Asiatic Fleet, no larger than a modern task force, was driven south and cut to pieces; our few aviation units were forced to flee to Australia, and our garrisons on Guam and Wake were captured. We lost our only drydocks in the western Pacific when Japanese carrier planes nearly obliterated Cavite during a 10-minute attack in their invasion of the Philippines.

By early May, the Japanese had pushed the Allies out of 10,000,000 square miles of ocean areas and were heading for the east coast of Australia. Our forces challenged them in the Battle of the Coral Sea. What followed was the first major engagement in naval history in which surface ships involved did not fire a single shot at each other. It was purely a naval air battle, with the opposing warships remaining hundreds of miles apart.

The surviving Japanese ships fled north and little was heard of the enemy fleet until they decided to take Midway. What they took was anything but the island of Midway. It was the most decisive defeat suffered by the Jap Navy in 350 years.

These two naval air battles—Coral Sea and Midway—turned out to be decisive, but during the following weeks they seemed little more than silver linings for some very dark clouds, for it was at that time that the Germans broke through to El Alamein and Stalingrad seemed about to fall.

Although the Japs' southward march had been stopped in the Battle of the Coral Sea, they had seized strategic positions in the Solomons and were building an airfield on Guadalcanal. We decided to capture it.

You all know the story of that epic struggle, of how our Marines hung on against overwhelming odds and set the pattern for their heroic advance straight into Japan's front yard, of the fact that after 6 months of bitter warfare on land and sea and in the air, the Japanese pulled out what they could and began the withdrawal that was to end in Tokyo Bay.

Few Americans realize, however, by what a close margin victory was won. Few know, for example, that on Navy Day, 1942—3 years ago tonight—the only American aircraft carrier left for action in the Pacific was the *Enterprise*, and she had 27 feet of water in her bow as a result of battle damage. The *Hornet*, our newest carrier, had been sunk the day before, during the Battle of Santa Cruz. The few others that we had were either undergoing battle damage repair or had been sunk.

But from then on, our forces grew steadily in size and in power. The Japanese were thrown out of the Aleutians, beaten in the Gilberts, in the Marshalls, in the Marianas, and in the Philippines, until finally at Iwo Jima and at Okinawa American courage captured the gun mounts needed for the assault on Japan itself.

Meanwhile the Navy had been fighting another full-scale war in the Atlantic. I am sure I need not tell the people of Charleston much about that. You were a part of it. It was from bases like those in this area that our planes and ships went out to destroy the U-boats.

The Germans knew they had to win the Battle of the Atlantic or lose the war. They threw into that battle everything they could and for a time they succeeded all too well. Had their early successes continued, there could have been no landings in Africa, no invasion of Europe. In fact, Russia and Britain might have been overwhelmed.

In our efforts to beat the U-boats we concentrated along our coastal areas all the ships that could be spared from other equally pressing tasks and almost any planes that could fly. Finally, the submarines were driven away from our shores and began concentrating in midocean. There, they believed, they were safe from our aircraft, which had turned out to be highly effective against them. We then introduced escort carriers into the Atlantic and in spite of the fact that terrible weather was added to all the other dangers of flying from baby flattops, they hunted down and destroyed the Nazi wolf packs.

By the end of 1943 the U-boat menace in the Atlantic was under control, but it remained so only because of the heroic work of many thousands of men. Their heroism was not always manifested in actual combat with the submarine but in the continual night and day grind, battling the elements in their effort to apprehend the submarine. Even during the final weeks before the German surrender, the U-boats came out with new devices and new tactics which threatened our victory. For example, they installed "schnorchels" which permitted the subs to be run submerged almost indefinitely and which added greatly to the difficulty of finding and destroying them.

When the Germans surrendered we prepared to turn all our power against the Japanese. Before this could be done, however, the power already being exerted against them took effect and they, too, gave up.

The surrender of Japan, it should be remembered, came before a single American soldier had set foot on the Japanese mainland. It was the first time in history that a major power had been forced to acknowl-

defeat before invasion. It demonstrated clearly what the power of an air-sea Navy could do to a nation even while her Army was at peak strength.

Japan was almost helpless, strangling to death under the Navy's air and sea blockade, before the first atomic bomb fell and before the Russians declared war against her. The record now reveals that her rulers had been trying to get out of the war for weeks. They knew that regardless of how many million men they had under arms, without planes and ships their army was useless.

I do not intend to argue that this service or that arm won the war. It was the systematic application of all kinds of power that won. But I want to stress the fact that it was integrated air-sea Navy, planes and ships working together in perfect unity, which played a major part in our victory. Naval aviators were largely instrumental in breaking the back of enemy resistance in both the Pacific and the Atlantic. Significally, after the attack on Pearl Harbor the number of Navy planes increased from 5,000 to more than 37,000 and the number of pilots from 6,000 to more than 55,000.

During that time the number of our carriers increased from seven to approximately a hundred, and it was these carriers which stood off Japan during the closing days of the war and hurled thousand-plane raids at the enemy. They not only raided the Japanese mainland; they stayed there, beating down the Japanese land-based air force despite all that the Japs and the weather could do.

One advantage of these flexible mobile airfields, which, in effect, is what carriers are, is their ability to move in close, hit hard and often, and withdraw quickly. The enemy, being constantly thrown off balance, is at a loss to know where to concentrate his available defense. Usually he tries to spread it over his whole area and the result is that he is weakened everywhere. Our carriers demonstrated that they could go anywhere, fight off the best the enemy could throw at them, and stay there to give close support to landing forces. They were ready to furnish the air support for the invasion of Japan when the enemy surrendered.

It is because of these qualities that a large number of carriers was included among the vessels suggested for the postwar Navy by Secretary of the Navy Forrestal. He told the House Naval Affairs Committee on September 19 that the postwar Navy should comprise approximately a thousand major combatant ships, of which 300 should be in active service, about 100 in a "ready reserve," and the remainder in a "laid-up reserve" with only care-taker crews aboard but ready on short notice to join the fleet upon the approach of an emergency.

This would call for a postwar Navy of some 50,000 officers and half a million men as compared with 300,000 officers and more than 3,000,000 men in the Navy at the time of Japan's surrender.

Our postwar Navy must be organized and maintained on an offensive rather than a defensive basis. It must be prepared to take quick offensive action thousands of miles from our country's shores. The costly experience of two wars has taught us that there is no security in our relative geographic isolation. The very fact of our isolation requires a Navy of far-reaching power, power to display at all times in distant waters a naval might sufficient to discourage would-be aggressors and convince the world that we mean to keep the peace.

Although teamwork throughout our fleets and between all combatant forces was the foundation of success, I believe that naval aviation more than any other single agency was responsible for winning World War II. Carrier aviation in particular spearheaded every campaign in the Pacific and made it possible not only to bring other forces into action but also to continue them in action for extended periods by furnishing air protection. Our enemies know this and our postwar Navy should reflect it.

Much has been said about the atomic bomb. There are those who believe that this invention makes it unnecessary for us to maintain a large Army or a powerful Navy—that the atomic bomb should end all wars. But as the Secretary of the Navy told the House committee, no one knows the ultimate effect of atomic power. The possibilities are almost beyond our comprehension and every effort should be made to develop this weapon not only to wage war but to preserve peace and foster the general welfare.

In the same manner that air power has been developed, atomic power will doubtless be developed, but until more of its ramifications are known we should rely, for the most part, upon the weapons which smashed Germany and Japan. Until technical developments radically change the concept of modern warfare, it would be folly to discard the weapons which have proved their worth.

On the other hand, the postwar Navy must foster research and development—be quick to probe, and accept new weapons—and to change its theories so as to be abreast of science and invention at all times. I am sure that the Navy's record in the development of radar, the proximity fuse and many other special devices, as well as its participation in the development of the atomic bomb, gives assurance to the American people that the Navy's historic mission will be carried out with whatever weapons are most effective. You may be sure that if we are so unfortunate as to have another war, the Navy will continue to keep that war away from our own shores and carry it to the enemy.

## Who's Selling Your City?

EXTENSION OF REMARKS
OF
### HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article entitled "Who's Selling Your City?" by Mr. Hubert M. Harrison, Longview, Tex.

WHO'S SELLING YOUR CITY?

In the keen competition between cities, regions, and States for postwar patronage of tourists and investors, word-of-mouth publicity will play a large part in fixing the standing of your community. All the beautiful pictures and alluring advertising matter that your city can issue may be offset by what little people up and down main street say about the town and how they treat visitors.

Most of us form our opinions about towns largely by the treatment we receive from taxi drivers, waitresses, hotel clerks, retail sales people, traffic cops, and gasoline service station attendants. This may be illogical but it is human nature.

My visit to one great southern city was almost spoiled by an insulting head waitress. A certain city in East Texas, which is the home of some of our finest citizens, is notorious for its bad food and poor restaurants. The name of another nice little town always suggests dirty show windows to me. In a southern resort city recently an unusually capable and courteous automobile mechanic and a hotel manager who went out out of his way to favor me had more to do with "selling" me on that town than their delightful climate and their excellent chamber of commerce. Another southern city which is proud of its traditions and gardens will always be remembered because of the most exorbitant taxi fares in my experience and the largest and most veracious mosquitoes.

A pleasant, alert filling station attendant will meet and greet many more visitors to your city than the president of your chamber of commerce. That gum-chewing blonde waitress at the Bum Bum Cafe dispenses more local history than the DAR even if it is mostly incorrect. A few live local chambers have realized the important public relations value of little people. Some cities have regular meetings of waiters, taxi drivers, retail clerks, and gas service employees to inspire them to know the city and sell it right.

Only a few visitors to a city ever call at the chamber of commerce. Only a fraction of 1 percent of the people who are sizing up your town ever meet the president of the first national bank.

The reputation of your town with visitors is largely in the hands of little people. Let's try to see that they sell your city by actions that speak louder than words.

HUBERT M. HARRISON.

EAST TEXAS, *November 1945*.

## Full Employment a National Necessity

EXTENSION OF REMARKS
OF
### HON. GEORGE E. OUTLAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. OUTLAND. Mr. Speaker, under permission to extend my remarks, I am including an excellent article from the November 1945 issue of the Journal of the National Education Association by the Honorable JAMES E. MURRAY entitled "Full Employment a National Necessity":

FULL EMPLOYMENT A NATIONAL NECESSITY

(By Hon. JAMES E. MURRAY, Senator from Montana)

"You take my life when you do take the means whereby I live."—*Shakespeare.*

No longer in the United States is a man allowed to starve because he lacks the means whereby he lives. But if all men are entitled, in addition to life, to liberty, and the pursuit of happiness, then it follows that all men are entitled to the means by which they can attain these inalienable rights. Charity makes a man dependent upon the giver; a dole, upon the state. Man can be truly free only if he through his own powers can produce what he needs for his own happiness. Freedom in our times means, first of all, the right to a job.

A year ago the then Senator Truman, as a member of a subcommittee of the Military Affairs Committee, joined me in submitting a report to the full committee, in which we pointed out that "no thoughtful American—no matter what his creed or station in life—would deny that every man or woman in the country who is willing to work and capable of working has the right to a job." The President in his message of September 6 reiterated his views on this subject when he called for "a national reassertion of the right to work for every American citizen able and willing to work."

Largely through the power of education we have become the most productive people on earth. We continue in ever-increasing volume to educate more people to become increasingly more productive. (It is true that segments of our population are not sufficiently educated to produce enough for their

own well-being, but the percentage is small and we are, I hope, about ready to break the vicious circle in two places—in the school and in the opportunity for a job at a decent wage.)

Yet we are confronted with the problem of producing more than our present economic system permits men to consume. If we are to supply the jobs for which people are being educated, it is imperative that education emphasize man as the consumer, and as the end for which our economic machinery is intended to function. We must also educate people to make good and full use of their leisure. In contrast to the doctrine propounded by Adam Smith, this generation must be taught that only if we follow our unselfish social interests will it be to the best interest of each one of us.

It is the basic philosophy of the full employment bill, S. 380,[1] that the human being is the center about which economic life revolves and that our economic machinery should function constantly in the best possible way for his benefit. The bill recognizes that human freedom and happiness are unavailable without the opportunity of all workers for productive employment. The bill is designed to overcome the weaknesses of our present system, to encourage and stimulate private enterprise to produce to the maximum extent possible, and to insure a standard of living and purchasing power sufficient to absorb all that can be produced.

The means used are not new or revolutionary, and certainly they are not socialistic. The bill's only claim to distinction is that it does emphasize and take very seriously that which has been ignored or to which only lip service has been paid. The bill assumes that the private-enterprise system is a good one and that Government is run by and in the interest of the governed. It continues, expands, and formalizes the successful wartime cooperation of industry, agriculture, labor, local and State governments together with the Federal Government in the common interest of all. It legally recognizes and spells out the duties of the President and the Congress and their responsibility for maintaining sound economic conditions.

At the same time it establishes a better channel of communication between the executive and the legislative branches of the Government and between the two Houses of Congress and their several committees. It puts the responsibility where it belongs.

WHAT THE BILL DOES

The familiar tactic of labeling has been resorted to by the critics of the full employment bill. Aside from being called communistic and socialistic, which hardly anyone takes seriously, the bill has most frequently been called a public works or deficit-financing bill. A casual reading or careful study of the bill will show that it is neither. The bill sets up a scientific framework and machinery which enable the President and the Congress to look at the economy as a whole and to utilize in the best possible way the knowledge of all groups, public and private, in bringing about full employment and full production.

The President, according to the bill, after estimating what the labor force will be, would analyze the current economic conditions and trends. Depending on whether he estimates (a) that more people will be seeking work than current conditions would seem to provide jobs for, or (b) whether there are more jobs available than there are people seeking them, he would then recommend either a program designed to encourage private enterprise (a) to fill the job gap or (b) to reduce the inflationary gap. Such a program would include, for example, policy suggestions and legislative recommendations on taxation, money and banking, foreign trade, agriculture, wages, social security, etc.

Such a program would be a consensus of the best ideas for bringing about the optimum economic environment for private enterprise in the light of the best and most comprehensive data on economic conditions and outlook by industry, by area, and for the Nation as a whole. If this program did not result in enough jobs for all desiring them, then and only then, would the bill make it incumbent on the President and Congress to enact a program of public expenditures and investments. Such a program would not be limited to public works. It would include public services, loans and assistance to business, agriculture, home owners, veterans, or consumers, or for other purposes. It is a much broader approach and permits more flexibility than would a program of merely public works. It would enable the Government to keep the economy operating constantly at full employment levels of production. No longer would the Government have to wait until after the wheels of industry had slowed down or stopped and unemployment had piled up before action could be taken. The program is designed to prevent emergencies from arising.

Consumers with the assurance of continuous high levels of income would maintain a high level of expenditures. Private enterprise being similarly assured of sustained demand would confidently produce at high levels, thus reducing the need for Federal investments and expenditures.

WHY THE GOVERNMENT MUST STEP IN

The Government has been increasingly forced to take a more active part in the economic affairs of its citizens. Contrary to the general belief, every step has been taken reluctantly and only after very careful consideration. The men in Congress and in the White House are probably less inclined to let the Government run things than are the men and women they represent. The reasons the Government has had to step in so often have been many and varied, but one of the chief reasons has been that we have allowed our free competitive system, in large part, to degenerate into private collectivism.

Huge corporations have been allowed to develop and devour the economic energies of men. These economic octopuses have spread their tentacles over the economy to such an extent that all businesses and enterprises are affected by their decisions. Small business either buys from, sells to, or competes with big business. The farmer buys his wares from big business and sells his produce to it and to the mass of workers employed by it.

These corporations determine the price and the amount which will bring them the maximum profit. High prices and restrictions of production have resulted in lower purchasing power and less employment. Government influence and decisions favorable to their practices have been one of their chief unethical technics.

The full employment bill intends to stop this. It does it by specifically requiring the President to recommend and the Congress to decide upon policies and programs which prevent monopolistic practices from interfering with continuing full employment. More than that, the bill seeks to encourage good economic conduct on the part of these large corporations by insuring business as a whole a large and more predictable market and a favorable economic climate for continuously profitable operation.

To the extent that the monopolist fails to end monopolist practices and persists in carrying out restrictive production and employment policies, in spite of the above, he would, in effect, force the Government to resort to the investment and expenditure device. The monopolist is definitely put on the spot. It is upon him, more than anyone else, that the decision must rest whether the Federal Government will be required to spend or invest much. It is he who has forced the Government to interfere on the side of free enterprise.

CONGRESS MADE RESPONSIBLE

The bill places the final responsibility for the decision on the full employment program on the shoulders of Congress. The bill sets up a Joint Congressional Committee to receive and consider the National Budget Message of the President. This committee would hold hearings on the Budget message and then send a report and concurrent resolution to both Houses of Congress recommending a specific program of action, which would in all likelihood vary in some or many respects from that recommended by the President.

The concurrent resolution and the report, of course, would offer the opportunity for comprehensive debate and full publicity on total economic policy and a consideration of an integrated and coordinated program in relation to it. The passage of the bill would mean that Congress would no longer be able to get by with hit-or-miss or piecemeal legislation.

Sectionalism on the part of Members of Congress and those whom they represent would tend to be discouraged and a national point of view would be encouraged. The debate would bring out clearly the dependence of the welfare of the community upon that of the Nation, and the Nation's upon that of its communities.

It would provide the opportunity for Representatives and Senators to become real national figures and, very important politically, they would be given credit for their work back home.

A FIRST NECESSARY STEP TOWARD FULL EMPLOYMENT

The bill offers the first necessary step toward full employment. It is no substitute for any bill or for a program such as has been boldly and intelligently outlined by President Truman.

But Congress, if it passes the full employment bill, will have declared that it has the responsibility for maintaining full employment and it would be required to view legislation in terms of that responsibility. Congress would begin to see, as it viewed the economic problem as a whole, that only insofar as it provides for all without discrimination would it lessen the need for providing at all.

[1] As this article is written, the bill has passed the Senate and is now before the House.

## The Tax Bill Is Ready

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of November 2, 1945:

THE TAX BILL IS READY

Congress, which has a habit of delaying tax bills, is to be congratulated for getting the 1946 measure passed and into effect so promptly. There were several controversial issues involved and it cannot be said that all were settled ideally, but, by and large, a good job was done and done in time so that the Treasury can prepare new withholding tables and other forms safely in advance of January 1.

Probably too much "relief" has been given the individual taxpayer, but few who ben-

efit will criticize Congress for that. The continued freezing of the old-age and survivor pay-roll tax at 1 percent was definitely uncalled for, but this, too, was a "safe" mistake for Congress to make.

These and other provisions may be criticized by experts, but there may be excuse in the fact that speed was essential and that this is only a temporary, stopgap revision. The big task now awaits congressional attention—a complete revision of the country's tax program.

It may be hoped that a quick start will be made on this more fundamental revision, which will require the development of a new over-all tax policy. The time has come to consider anew the part that business taxes, import tariffs, excises, individual income taxes, and death duties should have in the financing of government. Theories as to taxation have changed considerably in the last few years. In arranging a postwar tax program these new theories should be given due weight and the whole tax structure should be simplified and streamlined so far as this is possible.

The move should, of course, be in the direction of discontinuing indirect taxes in favor of direct levies and in bringing into the tax picture every person with a regular, even if modest, income.

## One World or None

EXTENSION OF REMARKS
OF
**HON. HOMER A. RAMEY**
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. **RAMEY.** Mr. Speaker, pursuant to the privilege given me to extend my remarks in the RECORD, I include an address delivered recently by Rev. William E. Dudley, LL. D., minister of the First Congressional Church in my home city of Toledo, Ohio. The address is as follows:

ONE WORLD OR NONE

The newspaper headlines are startling enough to wake the dead but not sufficiently dramatic to hold the attention of the living. We are informed that 750,000 people were killed and injured by the two atomic bombs which this country released upon two Japanese cities.

There are many reactions to this assault against humanity. There is one small group that is deeply troubled, to whom this act is a disturber of conscience, a stimulant to shame and contrition. Another group holds that the Japanese soldiers and civilians alike deserved every punishment produced by human ingenuity. Still another faction justifies the bombing as an advance agent of peace. Their argument is that half a million lives lost now is safer economy than ten times the number later. Then there are those who say that one cannot stop the march of science because men choose to use science for evil ends.

MAN NEEDS TO ASK GOD'S FORGIVENESS

Whatever the reaction and attitude to this latest invention of destruction, we know that a tremendous amount of rationalization is involved, which means that much that is done cannot be justified. Indeed, we have heard very little about any moral and spiritual disturbance in the heart of man. No group of people or single nation has come to feel the need of kneeling down and asking God's forgiveness for their crimes against humanity. In this country, for example, few have talked about the terror, suffering, and torturing pains that gripped helpless civilians in the early hour of a great city when more people were exposed to danger than at any other hour of the day.

Had these atomic acts been perpetrated by some enemy nation our indignation and anger would know no bounds. We were shocked when the Germans gutted Coventry and blasted London. Those were dastardly deeds and we said so. Why is it that we are not morally disturbed regarding our own acts upon Japan? Why is there not more sensitivity concerning the wholesale slaughter we have wrought? The answer is that if Germany or Japan had first secured the weapon they would have gone the limit. That is doubtless true. The fact remains that we went the limit. This is disturbing, because though the act may have been one of military necessity, there were no qualms of conscience.

It would seem that every concept of decency has been dulled among the nations. Every vestige of human sympathy has been scattered to the winds. Thus all the nations, including our own, front toward barbarism and not toward the Christian ethic.

NO KIND OF FUTURE SECURITY IN PRESENT TREND

Again we should remember that there is no kind of future security in the present trend. An American general said recently, "We must not fail to strike down any future aggressor nation before it gets dangerous." At what point does an aggressor nation become dangerous? Furthermore, how are we to know that the United States will always possess the last secret in military destructiveness?

As a prominent journalist recently put it, "Are we asked to believe that the Anglo-Saxon peoples have alone been granted the Godlike power to crack atoms?" Scientific knowledge is universal. The idea of atomic destruction has been studied in all parts of the world. German physicists, including a German Jewess, aided in the evolution of the atomic bomb. Danish scientists made their contributions to it. Great Britain added her quota to the laboratory tests. An Italian used the proceeds of the Nobel prize to reach America to help the atomic race along. This country furnished its resources and genius and gave the thing a name. Scientific knowledge knows no bounds.

This situation means that no one nation, or three nations, or any San Francisco treaty can control world peace indefinitely. The idea that America must strike down any nation before it gets dangerous is naive and impracticable. It reveals how blindly we are led toward an understanding of atomic energy and its basic implications. As nations we are dependent upon each other for survival. We are at the mercy of each other. We can totally destroy each other because this is one world or none.

We shall do well to discount the idea that America is self-sufficient. The nations that now control the atomic bomb may lose that control at any moment. Sooner or later some nation, great or small, will evolve some new horror until the whole earth becomes bedlam. To believe that any small group of nations can be trustees for the safety of humanity may have been true yesterday, but it is not true today.

NATIONS MUST GET ON AMICABLY TOGETHER

What we need is not so much the ability to strike down an aggressor nation, but the sense and eagerness to create a revolution in human thinking. A nineteenth century nationalism is totally obsolete for twentieth century needs. We have cracked the atom, but what of it if in so doing we have cracked humanity? We shall not heal the damage by more cracking in the name of brute force. The condition demands a new kind of conduct that takes in the whole human race as the basic part of God's creation. The problem is not how is the world to be run by the Big Three or controlled by the power that holds the latest atomic device, but rather the willingness of groups of people in every nation, large and small, friendly and unfriendly, to get on amicably together as children of God.

This assumption brings us at once to the need for some kind of philosophy, religion, or gospel—especially a philosophy, religion, or gospel that demands recognition of the moral and spiritual implications of life. I am convinced that the economic materialists have little to offer. Speedier airplanes, more destructive weapons, intricate radar instruments have their place, but if through wrong uses there is a shrinkage of the human spirit, a lessening of the moral urge, an utter disregard for the right human relationships, of what avail?

So, too, our isolationists are confused in their reasoning in the light of modern conditions. Isolationists are people who live in small fractions of the brain that long ago stopped thinking. The problem today is not how can we through human cleverness practice insularity and survive, but how can we share our enlightenment about human decency, sympathy, and understanding so that the whole world may benefit. The further we go without spiritual insight, the more brutal life becomes; and the more fragile is the future security of the nations.

PRESENT-DAY THINKING OBSOLETE

The present attitude toward the understanding and settlement of world problems is utterly inadequate. This means that present-day thinking is obsolete, whether it be the thinking of our political leaders or of the man on the street. Modern man is in the throes of a fatal disease. He has become an opportunist and in many respects a devil. He has lost all sensitiveness to the sufferings of the world. To say that 1,000,000 people are absolutely homeless does not cause the loss of one single hour's sleep. The result is that the democratic way of life—which is the brotherhood way of life—is failing, and our so-called Christian conduct is being revealed as the shabby article it is.

At this point of human history, the drift is toward one kind of totalitarianism or another. Thus the nations are in constant fear, and the citizens of every nation, including our own, are bartering away their God-given liberties. We are in the hands of far too few people. We place our problems at the doors of small groups and let it go at that. We leave our thinking to politically elected representatives of the third-rate kind. Thus democracy has so little to say and the Christian way of life is jeopardized. When half a dozen individuals resolve that a new terror shall be loosed upon the world, the act is perpetrated without our knowledge or sanction. This condition indicates the lack of a sufficient amount of moral or spiritual restraint. The fact is that grave tragedies soon will overwhelm mankind if the energies of the nations are to be employed exclusively to outwit, out-fight, out-think, and out-devil each other.

How long can what is left of civilization endure if each nation considers itself a law unto itself in an age when man's knowledge of atomic energy gives the lie to such specious reasoning? Is anyone fool enough to believe that nationalism is enough in an age that demands international control? Is there a single isolationist abroad stupid enough to imagine that the United States, with its 132,000,000 population, can remain aloof from world events, events that crash the boundaries of all nations as so many papier-mâché fences? Unless the nations get a world vision and plan well some kind of supersovereignty, there can be no peace for the future. What we need is universalism. It is one world or none.

Such was the one world that God created when He first flung this planet from His hand; it was one humanity God fashioned when He created man in His own image to live prosperously and joyously. In the Garden of Eden He breathed His breath into the

dormant clay, and the clay became flesh. Man became a living soul with the power of free will to rise to heights sublime or fall. Man fell. He was driven from Paradise. Angels with flaming swords guarded the gates and announced that there could be no security or peace in a divided allegiance. The tragedy deepens. Man in his insularity, greed, discontent, and sinister cleverness defies his Creator. Thus the hand of man is against his brother, and the hand of one nation is against another until darkness and confusion blot out the divinity man's iniquity derides. In some such way are we lost. Humanity is broken into a thousand parts. Its comeliness has fled. Its moral grandeur is wrapped in fog. Its sense of divine direction is obliterated. Nationalism divides humanity. It creates suspicion. It perpetrates greed.

Again the question becomes paramount. What kind of philosophy, religion, or gospel can be substituted for this present blind confusion? What kind of conduct should replace the stark-naked materialism that is at once man's shame and undoing? None is big or good enough unless its scope takes in all the world and its plans enfold all mankind. This is the heart of the teaching of Christ.

Said Christ, "That they all may be one," meaning all races and classes, white, black, yellow, red, and brown; Christian and Jew, bondman and free, prince and pauper, merchant and common clerk, my lady of leisure, charwoman, and seamstress. It means wherever these are in Europe, Asia, or the Americas, all are the children of God. This is one world and one humanity. To believe less is to refute the God who made us and the Christ who bled on Calvary's cross.

Of course, we are the citizens of a great republic and are proud of it; but of greater significance is the fact that we are the children of a great world order. Beyond that, we are the citizens of a vast and exhaustless universe, in which time and space are no more than child-made blocks with which we daily play. Let us not permit human knowledge and its techniques to submerge our beliefs in the universality of human nature and its spiritual origin. Much has been said about progress in the economic and social realms to the extent that industrialism has become a way of salvation and the scientist a new kind of world savior.

RAW MATERIALS OF EARTH FOR USE

The fact is overlooked that industrialism and science are merely man-made techniques applied to the raw materials of the earth for man's use and profit. It might be more correct to change the order to man's profit and use. Whatever the sequence, these are bread and butter, clothes in shops, mortgages on property, bread in bakeries, steel in foundries, cotton in mills, carpets on stairways. All are important; yet man faces ruin if he persists in placing implicit trust in the techniques of industrialism and science.

"THESE TIMES"

(By Gertrude Ryder Bennett)

"Our motors pierce the clouds. They penetrate
The depth of oceans. Microscopes reveal
New worlds to conquer, while we dedicate
Our intellects to strength of stone and steel.
We are as proud as those who built a tower
To reach to heaven. Recklessly we rear
Our lofty Babels, arrogant with power.
How dare we boast of cities while we hear
The nations groping through the dark along
The road of life? What right have we for pride
Till truth is steel and faith is iron strong.
Till God and man are working side by side?
Then let our prayers and labors never cease;
We act the prologue of a masterpiece."

There must be a return to the basic virtues. Love, justice, mercy, and faith in God are necessary in any permanent world order. The principles of the Gospel must be applied to world problems if humanity is to endure. Through centuries man has mastered physical phenomena, but he has not mastered the mysteries of the human spirit. There have been high points in man's evolutionary struggle through applied knowledge and inventive genius; there have been moments when man has glimpsed the glory of the Holy Grail. But the main product of man's endeavor is a hodgepodge beyond power to classify or describe.

HUMANITY BROKEN INTO A THOUSAND PIECES

Man is confused by his knowledge and hardened by the independence and impudence of the brain children he has created. Cleverness, mechanical ingenuity, scientific knowledge, mass-productiveness await man's demonic or spiritual control. Unfortunately, thus far man's greed and cunning have outrun his hope and aspiration. Consequently, our so-called Western civilization is a thin veneer that covers the cowardice, hyprocisy, and greed which is everywhere dominant and triumphant.

The human order is broken into a thousand pieces. Disillusionment is complete. Confusion ruins the structure that humanitarians, prophets, and saints thus far have wrought. Through the unholy urge of an economic materialism man is exploited; he is subjected to humiliation; he is the victim of campaigns of intolerance and hate. Thus he becomes the "pale martyr in his shirt of fire." His dignity is destroyed through the welts inflicted upon his body and the bruises imposed upon his spirit by a mad and unfeeling world that does not care. Certainly, the individual is not regarded as a member of one humanity or a citizen of one world. This condition leads to increased disorder and a more complete destruction of the present world pattern.

Atomic energy is man's last adventure. The atomic bomb is an index of the mind's anarchy and the soul's despair. The first use of atomic energy in man's scheme of things is to blow up cities so that humanity is totally buried in a soulless rubble. Two billion dollars was not too much to spend for such destruction, which reveals the low level at which the nations think and live. There is no unified attempt to give human beings a chance and a goal. Anyone with insight and sense knows that in the future there will be one world or none.

Can we dodge the dynamite man's hands create? Have we the will to blaze new trails over the bruised and tortured earth? Is it within the power of modern man to retrace through jungles of muddled thinking a way that leads to goodness, security, and God?

## Shall It Be "UNRRRA"?

EXTENSION OF REMARKS
OF
**HON. JOHN W. McCORMACK**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald of November 3, 1945:

SHALL IT BE "UNRRRA"?

The 45 countries which joined to aid the war-broken peoples of the world called the new organization the United Nations Relief and Rehabilitation Administration. The House, in appropriating the rest of America's $1,350,000,000 contribution for 1945, has sufficiently altered the purposes of the agency so that it might now be called the United Nations Relief, Rehabilitation, and Reformation Administration.

The story is this: The Republican Congressional Food Committee, in recommending that UNRRA be permitted to finish the job in Europe, declared that there had been too much secrecy surrounding its operations. It urged that, as a condition of further assistance, accredited press and radio representatives be admitted to recipient countries and given full freedom to observe and report on the distribution of supplies. The House, by a majority of 20, accepted this restriction, over the earnest protests of Secretary Byrnes and UNRRA Director Lehman.

Unlike the old Hoover organization, the recipient countries are doing the actual distribution of relief supplies. Perhaps this was a mistake in policy. In Yugoslavia, for instance, Premier Marshal Tito may be helping to secure his ascendancy by directing the hand-outs, a political stratagem not unknown in this country.

The question now is: Do we want to fortify our official observers to combat such relief perversion or should we turn the job over to the press?

The House amendment looks innocuous, for it seems to apply only to UNRRA activities. But no one can believe that our correspondents in relating what is done with relief supplies will fail to reveal political and social conditions. No competent job of reporting could be performed otherwise. So the amendment really constitutes an attempt to remove censorship. In effect we would be saying to these countries: Either you adopt our views on freedom of communications or starve.

In the first place this is extremely autocratic behavior. If Russia should attempt anything like that in this hemisphere we would say: "Go to!" In the second place, we are only 1 of 45 nations contributing to UNRRA. Though ours is by far the largest contribution, that doesn't give us the right to change the rules by unilateral decision.

We all want world-wide press freedom. We want our UNRRA aid to be distributed fairly. But the House amendment is a bad way to attempt either.

## Hon. James A. Farley

EXTENSION OF REMARKS
OF
**HON. SOL BLOOM**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James A. Farley, Friday, November 2, 1945, over radio station WJZ, at 6:45 p. m., under the auspices of the Citywide Independent Citizens Committee for the election of O'Dwyer-Joseph-Impellitteri:

Ladies and gentlemen, I welcome this opportunity afforded me by the Citywide Independent Citizens Committee for the election of O'Dwyer, Joseph, and Impellitteri, to make known my views in this campaign. I shall speak plainly. In all my years in politics I have made it a habit to speak plainly. My experience has taught me that the people welcome plain speaking by those who exercise political leadership.

This ticket, sponsored by the Citywide Independent Citizens Committee, is an excellent ticket. General O'Dwyer is as fine a candidate as has run for mayor in our time. My friend, Senator Lazarus Joseph, our can-

didate for comptroller, is an able and attractive man who has made a record at Albany which is all the guaranty I need that he will conduct properly the high office to which he aspires—and to which he will be elected. Vincent R. Impellitteri, another friend of mine, was an effective assistant district attorney of New York County and his record there induces confidence in his stewardship as president of the council in the years to come.

I have always favored, and I think my record shows it, the selection of men for high office who have qualified by previous broad experience. It is too grave a risk in these troubled times to elect officials without ripe administrative skill and judgment. Of General O'Dwyer's Republican opponent, it may be said that although he is mature in years, he has had no experience whatever in the actual handling of large governmental affairs.

I was for General O'Dwyer when he was a candidate for the office of mayor in 1941, because I thought he was the best qualified man then in the field. I am for him again in 1945, because what has happened in the past 4 years has strengthened the view I held in 1941. His notable services to our country during the war have brought out in high relief the strength of character and the capacity that I saw in him in 1941; and these services have given him immense administrative experience and breadth of vision.

With all his splendid achievements, General O'Dwyer has remained a modest man. He has not himself stressed his own brilliant record. But I can talk about the O'Dwyer record since he is to modest to do so. The public posts and places that he has held make up a truly impressive record. He was magistrate, judge of the Brooklyn Adolescents' Court, county court judge, district attorney of Kings County. Then followed his notable service to our Government.

The general's record in his first public office that of magistrate, and particularly his judicial conduct in the labor troubles of the early thirties showed where his heart was.

It was natural that our great Gov. Herbert H. Lehman—I wish he were still in Albany—should, in December 1937, appoint this able judge to the county court bench in Kings County. When he was county judge the wails of the crooks who found him unapproachable echoed through the city. In that well-compensated and honorable post many a man would have remained. Not O'Dwyer. At a sacrifice of long tenure in office and at a reduction in salary, he accepted the office of district attorney of Kings County. In his first few months as district attorney he cleaned up that murderous mob of hoodlums know as Murder, Inc.

That was a blow at gangsterism unequaled in the annals of crime.

The day after Pearl Harbor, General O'Dwyer offered his services to President Roosevelt, and shortly thereafter was commissioned a major in the United States Army. His great investigating talents were instantly put to use by the War Department. His rise was rapid, and in 1944, when he was a brigadier general, President Roosevelt selected General O'Dwyer to investigate the Italian situation, so threatening to the welfare of millions of people and to the economic future of Italy. With the rank of minister, and as personal representative of the President of the United States, he headed the economic section of the Allied commission in Italy.

The example that he gave the Italians of democratic methods, and the understanding he showed for the problems of an unhappy people, have not been forgotten. A grateful Italian Government conferred upon him the prized decoration of Grand Officer of the Crown of Italy. While on active duty he was unanimously reelected district attorney of Kings County, having been nominated by all parties.

In June 1944, General O'Dwyer was appointed executive director of the War Refugee Board, established by President Roosevelt to help those unfortunate European minorities who, because of race, religion, or political faith, had been persecuted by the Nazis. Thousands of people owe their safety and the improvement of their conditions to the work of this gallant humanitarian. General O'Dwyer was practical about it. When it was a question of trucks to carry food, he got trucks. If the trucks needed tires and gasoline, he got the tires and gasoline.

There is General O'Dwyer's record. And no political opponent, no matter how base he may be, can mar that glorious list of high achievements.

On the merits, General O'Dwyer is entitled to your votes and worthy of all your efforts to swell his plurality, which, I predict, will be unprecedented for a candidate for mayor in this great city.

But there is more to this campaign.

As mayor, General O'Dwyer will be concerned with our schools, our police, our housing, our sanitation, our parks, our city finances, and many other important problems. One matter of great importance to this city is the adequacy of its port facilities. Our foreign trade—passing through New York—supplies a great deal of our city's income, affecting the livelihood of all of us. To this problem I know that General O'Dwyer will devote his mature judgment.

The next few years will prove that this city can be made a better place for all of us, and in his speeches General O'Dwyer has shown that he is fully aware of the city's shortcomings. He has not promised the moon, but he has evidenced an awareness of the city's needs. His record shows that this awareness, and the pledges he has made, will be translated into action. It is easy indeed for a candidate to go from place to place promising one group this and another group that. But General O'Dwyer has not dealt with the people as groups but as New Yorkers all. And we know that the promises he has made will be kept.

I have known the two opponents of General O'Dwyer for years. I have met the Republican candidate at Democratic meetings and conferences of all sorts, including those of Tammany Hall, throughout the years. We Democrats regard him as a loyal member of our party. Some of us were astonished when he jumped the political fence and took the Republican nomination for mayor. We knew that he, as a Democrat, had been anxious to run for mayor, because he had made long and strenuous efforts to get the Democratic nomination.

Having failed in that effort he apparently concluded that any nomination was better than none. And now his supporters are wondering whether he will run a poor second or a bad third.

Then, there is the "no deal" candidate, a splendid young man whom I know well. He is a bred-in-the-bone Republican. Many of us in politics fully understand his dismay and anger when his party turned from him to a Democrat. He had a commendable record in the Republican Party and in public service, and could have expected better of his party.

The untruthful charge that General O'Dwyer is bossed by anybody is ridiculous to those who know what is going on in politics in this city. I do not think that silly charge is fooling anybody.

The charge that Communists influence him is likewise poppycock. If I thought that he was influenced by any group opposed to our American institutions and traditions, I would not be speaking to you tonight, because I particularly despise all fifth-column organizations.

Why is a lifelong Democrat the candidate of the Republicans? I said I would speak plainly. I say, without fear of honest contradiction, that in high Republican circles at Albany—and in certain Republican circles here in this city—it was decided that such an extraordinary move would help Governor Dewey's campaign for reelection next year. These Republican leaders thought they would try to move certain groups of Democrats and liberals into the Republican column.

They thought that by nominating a Democrat this maneuver could possibly be accomplished. There it is, as plain as that. And that is the real reason for the nomination of Judge Goldstein, and the only reason. He is well known in this city, and the Albany group and their New York City followers decided that they could do some recruiting among his Democratic friends and followers in behalf of Governor Dewey.

Now I happen to think that the office of mayor of this city is so important that it should not be made a part of a plan of another man to be Governor of the State. Many think that the office of mayor of New York City is a bigger job than that of Governor of the State of New York. Whether it is or not, no New York municipal campaign should be manipulated by Republican politicians at Albany or elsewhere up-State for their political benefit next year. Do not believe it when you hear the Republican bosses tell you that it just happened that Judge Goldstein was selected for their nomination. It was a dictated nomination and it was dictated from Albany. In a way I am glad that next year's State campaign has been introduced into this municipal campaign, because it gives me a chance to tell you that we Democrats intend next year to resume our rightful place in Albany. We were there for a long time. Nothing that has happened in the last 3 or 4 years induces me to think that the Republicans can continue to control the State administration. And in common with other interested Democrats, I intend to have a say as to what happens next year.

I am going to talk for a moment directly to Governor Dewey, who is scheduled to talk on the radio tonight.

You present yourself as an exemplar of good government, Governor Dewey. You like to picture yourself as the foe of gangsterism. You like to have yourself called the greatest opponent of corruption in office. Very well, then, Governor Dewey.

Why do you not look into Nassau County? Why do you not appoint an independent investigator, one not of your own political faith. By so doing you can make public the truth as to the shameful conditions in Nassau. All of your predecessors were quick to do this because they realized it was a primary obligation of the Governor to stop corruption and malfeasance in office.

Let us look at the record, as another Governor used to say:

Nassau County is riddled from top to bottom with graft, according to the public reports, with which you must be familiar. The boss of Nassau, and one of the prominent bosses in this State, is Russell Sprague.

Governor, Mr. Sprague is your own political mentor; he is your political adviser, as stated by your own headquarters in the last Presidential campaign. With your influence he was elected Republican national committeeman from New York. No man is stronger with you, Governor, than is Russ Sprague, according to public reports.

We have seen shake-ups in the police departments of the various townships; in the central staff of the county itself. We have seen shifts in the district attorney's office. We have heard of graft earned out of gambling concessions.

Why not have a completely nonpolitical investigation, Governor Dewey? Are you afraid of the outcome? Are you afraid that one of the two biggest Republican counties will not be as strong for you after an investigation as it has been in the past? Why not give us

some action instead of a lot of words, Governor? In so doing, you will be following the example General O'Dwyer has set.

It is General O'Dwyer's courageous actions which prompt me to support him.

The election of General O'Dwyer will give this city a fine mayor, a man of character, unbossed, and filled with ideas for our welfare. His election will give a setback to the complicated Republican plans laid by the Albany high command. I was for many years at the head of Democratic affairs in this State, and I cannot say that I regard such a setback with anything but relish.

I warn those of you who have been with me in the Democratic Party and you independents who are interested in the views which I hold of General O'Dwyer that a vote for either of the other two candidates merely takes you into a futile civil war within the Republican Party. Therefore, vote for General O'Dwyer, one of the best qualified men who has ever offered himself for mayor in all the city's history.

## Full Employment and Human Rights

EXTENSION OF REMARKS

OF

### HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Tuesday November 6, 1945*

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the enlightening testimony of Rt. Rev. Msgr. John O'Grady, secretary, National Conference of Catholic Charities, before the Senate Committee on Banking and Currency on the full employment bill, S. 380, Seventy-ninth Congress, first session, August 31, 1945:

FULL EMPLOYMENT AND HUMAN RIGHTS

After our very remarkable success in mobilizing our resources for war it is inconceivable that we should fail to mobilize them for peace. But we shall never succeed in this effort until we realize that we are living in a changed world. We can no longer be satisfied with the economic philosophy of 25 years ago. While we must continue to make the fullest use of the remarkable genius of the American people we must also have a considerable amount of planning.

UNCULTIVATED POWER RESOURCES

In the pioneer days the people of the United States were able to emerge from depression because there were vast and uncultivated resources to be explored. We still have vast unharnessed resources in our river valleys all over the country. We should be able to repeat in these river valleys what has already been done in the Tennessee Valley and along the Columbia River. I am very much interested in the proposed Missouri Valley Authority. I am interested in it not only because of the vast power resources that it will make available in many States, and because of what it will mean in flood control, but also because of what it will mean in the reclamation of land. I see vast numbers of farmers given an opportunity of owning a home on the land. I can see in this proposed Missouri Valley development a very important step in the revival of the family farm in the United States. I see it as one of the basic hopes of our democratic institutions. I see the Missouri Valley Authority not as a great engineering development, but as a great social institution. In the Missouri Valley and in other river valleys there are vast opportunities for new economic developments. We have in these proposed authorities new economic frontiers, new opportunities for investment, new wealth-producing resources, and new social resources.

HOUSING AND CITY PLANNING

Another very large field for after-the-war investment, for improving the standard of life of the people and providing new development opportunities will be found in the field of housing and city planning. In writing about the situation in Great Britain, Sir William H. Beveridge says, "Adequate and healthy housing presents the largest single objective for desirable outlay after the war and affords the largest scope for raising the standard of life, health, and happiness." (Full Employment in a Free Society, p. 163.)

In a recent bulletin of the National Housing Agency, Mr. John Blandford states, "It is estimated that during the first 10 years after the war, construction of 12,600,000 nonfarm dwelling units will be needed in the United States. The great majority of these units should be provided through new construction, the remainder through conversion of existing structures." (P. 4, Housing Needs.) If the housing program envisaged by Mr. Blandford is carried out it will represent an investment of seven to eight billion dollars a year.

The development of the housing program which will include units built through private enterprise and public low-cost housing, if properly handled, should have a great amount of influence in stabilizing the construction industry. It will perform a very essential service in rebuilding large sections of American cities.

I need not call the attention of the committee to something that has already been emphasized several times before Senator TAFT'S committee on housing, and also before the Committee on Postwar Economic Policy and Planning of the House of Representatives, namely, the process of deterioration that is under way in American cities. The so-called slum areas have a high degree of infant mortality, high delinquency rates, tax rates are rapidly falling off, and maintenance costs are mounting. As a result, many cities are being reduced to economic and social bankruptcy. It is inevitable that the blighted areas of American cities should be made over. This calls for a large investment of funds, both public and private. It must be a planned investment. We have learned a great deal about these areas in recent years. We have made statistical studies of administrative costs of housing, of health, of delinquency in these areas. We are pretty much in agreement as to what should be done. But we are not going to make over these blighted areas by a few housing projects here and there. It calls for large-scale planning, not only on the part of local governments but also on the part of the Federal Government. We cannot isolate private from public housing in the rebuilding of our cities. They are a part of the same program. We cannot isolate housing—public or private—from city planning, from transportation, from public utilities.

If we could only stabilize our residential construction through long-term planning we would have taken the most important step toward stabilizing our whole economy. At a recent hearing before the House Committee on Postwar Economic Policy and Planning, Mr. Blandford emphasized the extremely fluctuating and unstable character of the house-building industry. During the 10-year period from 1920 to 1929, the average annual number of units started was 703,000, at an annual cost of $3,000,000,000; while during the 10-year period 1930–39, the average annual number of units started was only 273,000, at an annual cost of slightly over a billion dollars. To sharpen the contrast all the more, he points out that there were 937,000 units, costing almost $4,500,000,000 started in 1925 and only 93,000 units, costing only about $285,000,000 started in 1933. It is clear, therefore, that if we can only level off the residential-construction industry on a fairly high plane in the postwar period we shall have taken the most important step toward a full-time employment program. And, it should be remembered, that this will not call for any vast expediture of public funds—it will be a stabilized private investment. According to Mr. Blandford's estimate we can build one and one-quarter million nonfarm residential units, and not more than 1 in 10 shall be public low-cost housing units. Housing and city planning will therefore constitute a most important element in our postwar economy and in the development of a program of full employment.

HIGHWAY CONSTRUCTION

One of the most encouraging signs pointing to a program of full employment is the very intelligent plan for highway construction under the Bureau of Public Roads of the Federal Works Agency. Under this plan $500,000,000 a year has been authorized for the first three postwar years. These funds are to be matched by the States and local communities. The program will include work on city streets, feeder roads, primary roads, rural free delivery roads in and out of cities of 5,000 or less. With the releasing of the frozen Federal funds for highway construction, and the additional funds to be expended by the States, cities, and counties, highway construction of one kind or another during the next year will involve an expenditure of approximately $3,000,000,000. This is most encouraging to those who are interested in public works as a method of dealing with unemployment because in the past in many respects it has been the most effective form of public work. Geographically it has reached various sections of the country to a greater degree than any other form of public work. In the providing of direct and indirect employment it has used a great variety of skills One of the greatest difficulties about highway construction during the last depression was that States and local communities reduced their expenditures in the same degree to which the Federal Government increased its expenditures. We hear on all sides at the present time that States, counties, and cities are sitting back and waiting to see what the Federal Government will do. They remember what happened in the early thirties. They went ahead and expended their money and later they found that the Federal Government was willing to take up the whole load.

DISTRIBUTION OF LABOR SUPPLY

The new highway program requires cities and localities to put up 50 percent of the cost. This may look like a rigid system in dealing with some States but once the Federal Government deviates from it there appears to be no stopping point.

Everybody who has done any thinking about full employment knows that there are difficulties in the way. Sir William H. Beveridge figures that we shall always have a certain percentage—he sets it at 3 percent—of unemployment so long as we have a free economy. This amount is needed to provide an opportunity for workers to move around in order to improve their condition. But even in reducing unemployment to this low level we shall undoubtedly have difficulties. Everybody who has observed the efforts of the country to secure an adequate distribution of its labor supply during the war knows something of the problems involved. Certainly, we shall never have any adequate method of distributing the labor supply if we turn the Employment Service back to the States. It will mean that we shall have the same condition that we have had during the war—every town will be competing with every other town and employment offices in areas with low-wage standards will refuse to permit workers to move to other localities in which there is a demand for their labor. This is what happened during the war. When the

country was confronted with certain critical situations the Army and the Navy moved in very quickly and secured the labor they needed. Those who talk about States' rights in dealing with the labor supply are not talking in terms of realities. It must not be assumed for a moment that by any mechanism that Government sets up labor can be made completely mobile and it will therefore be in a position to respond to demands in any section of the country. After all, labor becomes rooted in certain communities. While extreme mobility may be desirable from the standpoint of industry it involves many other problems. It involves the stability of family life; it involves housing; it involves community facilities of all kinds including churches, schools, community centers, cultural traditions, etc.

By reason of the relative immobility of labor it is necessary to give adequate thought to the location of investments and new enterprises so that employment opportunities may be provided where they are most needed. This is essential not only in private but also in public enterprise.

COOPERATION BETWEEN GOVERNMENT, LABOR, AND INDUSTRY ESSENTIAL

In order to secure a high level of production and of consumption there must be the closest working relationships between government, labor, and private industry. All the elements must work as part of a team. It should be kept in mind that the fullest utilization of our resources calls for teamwork. It calls for acceptance of a new and wider responsibility of the state but it also calls for constructive private enterprise. The state must assume the leadership but it must be a state which at all times is subject to the influence of free democratic thinking. As the state comes to assume a larger part in the life of the country there is need for closer collaboration between the state and private effort. There is need for a thorough revitalization of all the democratic forces of the Nation. These forces must be banded together on the local community basis. The various elements in community life must learn to work together more closely. We must everywhere have a revival of the spirit of the old-time neighborhood. There must be a new emphasis on adult education. Every citizen must recognize more seriously his responsibility for participating in common affairs. There must be spread abroad everywhere a new concept of the sacredness and integrity of the individual, of the sacredness of family ties. There is a new call for a moral leadership that will guide men's minds from the cruelties of war back again to the brotherhood of man and the sacred ideals of charity and justice.

"SOCIAL BUDGET" CALLED FOR

In the testimony before this committee, I am sure that there has been a very complete description of the type of budget for which the full employment bill calls. It really calls for the "social budget," for as accurate a statement as possible in regard to expenditure and investment—public and private—during the forthcoming year, and also in regard to the total labor supply. If investment and production is not sufficient to maintain the labor supply, then the deficit will have to be made up by stimulated private effort or presumably by governmental effort.

WORKERS' RIGHT TO A LIVING WAGE

The basic principle of the bill is the right of the citizen to employment. "All Americans able to work and seeking work have the right to useful, remunerative, regular, and full-time employment, and it is the policy of the United States to assure the existence at all times of sufficient employment opportunities to enable all Americans who have finished their schooling and who do not have full-time housekeeping responsibilities freely to exercise this right." (Sec. 2 (b) of the bill).

Before the 1890's there was quite a wide chasm between economics and ethics in the field of labor. Up to that time it was assumed that the wage earner received what he had added to the product. There was a recognition, of course, of some economic friction, but there was general opposition to what was regarded as the natural law of supply and demand. Now during the nineties, under the influence of a new group of economists, there was a new emphasis on what is known as the "standard of life." People had a right to a certain standard of life. Contrasts were soon established between theory and practice. It was found that under existing conditions large numbers of people were not receiving sufficient to maintain a minimum standard of life. The leaders of American labor claimed that the securing of this standard was one of the basic purposes of the labor movement. It was the basic philosophy of labor that the worker, by positive economic action, could improve his status, could secure high wages and better working conditions. Beginning about 1910 there was a recognition of the fact that organized labor alone could not do the whole job of lifting the standard of life of the people. It had to be implemented by legislation. We therefore had a minimum-wage movement. Designedly at first it was limited to women and child wage earners. Its purpose was to secure a minimum income for all women wage earners. It was not applied to men at first because of the fear of adverse court action. This legislative program did not work out in an ideal fashion. It represented a gradual uphill struggle toward an ideal.

BEGINNINGS OF SOCIAL INSURANCE LEGISLATION

The same development that was applied to minimum rates of pay has also applied in the field of industrial accidents. In this field it was necessary to apply a social remedy. The costs of industrial accidents came to be recognized as part of the responsibility of industry. This meant that the workers had a right to compensation for industrial accidents. The ideal was not reached immediately, but very important steps were taken. It was said many times in the beginning that wages could not be regulated by law; that the social principle of compensation for industrial accidents could not be embodied in law. More recently we have had a recognition, through the Social Security Act, of the fact that workers have a right to compensation against the hazards of temporary unemployment and old age. We have not yet reached this ideal for all workers but by legislative action we have taken important steps in this direction.

When various forms of social insurance were first developed they were an extension of a pattern that had already grown up in a number of industries. The workers in those industries had recognized that they could not through their wages alone or through the sale of their products protect themselves against all the hazards of life; that they needed some sort of mutual insurance for this purpose. Therefore it is that we find that some of the early unions were basically friendly societies. There were also many other types of friendly societies. It was quite natural that the first efforts of government in this field should be to stimulate the existing developments so that they might secure wider coverage. The basic idea, however, was that of a basic and balanced insurance program, of a program that was fully self-liquidating.

WORKER'S RIGHT TO A JOB

Side by side with this insurance program there has grown up another concept, namely, that of the responsibility of the state to provide certain basic services for individuals and families. We find the recognition of this responsibility in the field of health, in the field of education, in the field of recreation. It has also found its way into social insurance so that while we still have the thought of a system that is supported in part by industry and in part by the worker, we also have a recognition of the basic responsibility of the state to secure certain minimum standards for the citizen. We have had a great deal of experience in the application of state action to the securing of certain minimum-wage standards and the securing of a definite amount of protection for workers against the hazards that cut off their wages and their source of livelihood.

While we have had considerable success in implementing the individual's right to a living wage, to protection against the hazards that cut off his wages, we have not given very much thought to his basic right to a job. Now this right is just as fundamental as his right to a living wage or to protection against industrial hazards, or to assistance if he is no longer able to work and does not come within a social-insurance program. We have devoted comparatively little thought to implementing this right. The growing hazard of unemployment, however, is forcing us to give more serious thought to ways and means of implementing the citizen's right to work. The alternative is mass unemployment. We know very well that during the thirties unemployment was our most serious social problem. The depression of the thirties was the severest that America had ever experienced. The time has therefore come to devise ways and means of implementing the individual's right to a job.

There is no use in implementing his other rights if we overlook this basic right. The citizen has a right to the things that are necessary for life. For the ordinary wage earner this means a full-time job. In the last analysis, he must look to Government to protect this right for him. Many people claim that this will undermine individual initiative. The same has been said about other reforms. In the minimum-wage movement one used to hear about the inefficient workers. The problem was attacked and it has been worked out. We heard the same about old-age pensions and about unemployment compensation. There are individuals who will abuse it—some malingerers—but they are few.

RESPONSIBILITY OF GOVERNMENT

There is no social program that does not have some undesirable consequences but we have to think about the things that are necessary for the welfare of all the people. Government is not going to assure full-time employment without taking many important steps and it will probably make many missteps. That does not excuse Government from trying and using every effort possible to develop new investments, to reach out for new sources of wealth and for income, so that so far as is humanly practical every citizen will have an opportunity of engaging in remunerative and productive employment.

## Byrnes' Word on Russia Nothing New

EXTENSION OF REMARKS
OF
**HON. GEORGE G. SADOWSKI**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. SADOWSKI. Mr. Speaker, under leave granted me to extend my remarks, I present for insertion in the CONGRESSIONAL RECORD an article entitled "Byrnes' Word on Russia Nothing New," which appeared in the Washington Post on Sunday, November 4, 1945, written by Ernest Lindley:

BYRNES' WORD ON RUSSIA NOTHING NEW
(By Ernest Lindley)

Secretary Byrnes neither set a new policy or modified an old when he said that the

United States recognizes the Soviet Union's special security interests in central and eastern Europe and promised that "America will never join any groups in those countries in hostile intrigue against the Soviet Union."

The same assurances have been given many times during the last 4 years. The late President Roosevelt and former Secretary Hull tried to make that clear to the Kremlin. President Truman and Secretary Byrnes have followed the same line.

At the same time, American officials have sought to convince the Kremlin that: (1) Russia, like other nations, must find her ultimate security in a strong United Nations Organization and (2) Russia's special security interests in eastern and central Europe do not require that she control the internal affairs of those nations.

MINORITY IN CONTROL

The United States has consistently recognized that Russia is entitled to have friendly and cooperative neighbors, that any attempt by the western allies to build a tier of anti-Soviet buffer states in eastern Europe would surely destroy the United Nations and the hope of a long peace. But it is a long jump from this to complete Russian control of central and eastern Europe.

It was perhaps only natural for the Russians to rely, in the first instance, on the Communist Parties in that part of the world.

But, with Russian backing, Communist minorities in some countries seem to have been trying to liquidate or intimidate leaders of parties and groups unquestionably democratic but unwilling to accept Communist domination.

It is easy to call anyone who will not accept Communist dictation or cooperate with a Communist-controlled puppet government either pro-Nazi or anti-Soviet. Many peoples of eastern and central Europe had no love for the Russians, even prior to the Bolshevik revolution. Wise leaders in some of these countries realized, however, that they would have to learn to live and work as friendly neighbors of the Soviet Union. Unfortunately, methods adopted by the Russians have added new fears and hates to old. It has become increasingly difficult for the western allies to support democracy in eastern Europe without appearing to be anti-Soviet.

DANGER FORESEEN

Roosevelt and many others foresaw this danger. At Yalta, Stalin, Roosevelt, and Churchill reached agreements concerning Poland, specifically, and the rest of liberated Europe, more generally. It was agreed that these countries were to have provisional governments representative of all democratic elements and that these governments were to hold free elections. It was agreed in substance, also, that the Soviet Union, Britain and the United States should deal jointly with the problems of liberated European nations.

It was difficult to reconcile subsequent Russian performance with the pledges. Roosevelt, before his death, was disturbed by the failure, or tardiness, of the Russians. Harry Hopkins, as President Truman's personal envoy, managed to obtain from Stalin partial performance of the Yalta pledge concerning reorganization of the Polish provisional government.

Secretary Byrnes has been trying to give life to the Yalta agreements concerning liberated Europe generally—because the agreements were sound. They are no more anti-Russian now than they were when Stalin subscribed to them.

They do not challenge Russia's special security interests. On the contrary, they outline the only way in which these interests can be safeguarded within a framework of international security and close and friendly collaboration among the great powers—and probably the only way in which Russia can hope to have friendly peoples, as distinct from compliant governments maintained by force and terror, as her neighbors.

Russians have clung so long to the wrong path that it may not be easy for them to change. But the longer they delay, the worse their difficulties seem likely to become. Their best hope is to invite the help of major allies in extricating them from a predicament. They can rely on Secretary Byrnes' pledge. Any attempt to violate that would obviously be ruinous to major objectives of American policy, which center around a secure peace.

---

## Italian Military Armistice and Other Agreements and Related Papers

EXTENSION OF REMARKS
OF
## HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following papers and documents pertaining to the armistice with Italy, including the following:

1. Italian military armistice, September 3, 1943.
2. Additional conditions of the armistice with Italy, November 9, 1943.
3. Letter of September 29, 1943, from Gen. Dwight D. Eisenhower to Marshal Pietro Badoglio.
4. Memorandum of agreement on employment and disposition of the Italian Fleet and Mercantile Marine (Cunningham-de-Courten agreement), September 23, 1943.
5. Amendment to the agreement on the employment and disposition of the Italian Fleet, November 17, 1943.
6. Statement of Admiral de Courten November 17, 1943.
7. Aide memoire of February 24, 1945, to Italian Government by acting president of Allied Commission.
8. Commentary of the British and American Governments on the armistice terms and the Cunningham-de-Courten agreement.

1. ITALIAN MILITARY ARMISTICE

SICILY, *September 3, 1943.*

The following conditions of an armistice are presented by Gen. Dwight D. Eisenhower, commander in chief of the Allied Forces, acting by authority of the Governments of the United States and Great Britain and in the interest of the United Nations, and are accepted by Marshal Pietro Badoglio, head of the Italian Government:

1. Immediate cessation of all hostile activity by the Italian armed forces.
2. Italy will use its best endeavors to deny, to the Germans, facilities that might be used against the United Nations.
3. All prisoners or internees of the United Nations to be immediately turned over to the Allied commander in chief, and none of these may now or at any time be evacuated to Germany.
4. Immediate transfer of the Italian Fleet and Italian aircraft to such points as may be designated by the Allied commander in chief, with details of disarmament to be prescribed by him.
5. Italian merchant shipping may be requisitioned by the Allied commander in chief, to meet the needs of his military-naval program.
6. Immediate surrender of Corsica and of all Italian territory, both islands and mainland, to the Allies for such use as operational bases and other purposes as the Allies may see fit.
7. Immediate guaranty of the free use by the Allies of all airfields and naval ports in Italian territory, regardless of the rate of evacuation of the Italian territory by the German forces. These ports and fields to be protected by Italian armed forces until this function is taken over by the Allies.
8. Immediate withdrawal to Italy of Italian armed forces from all participation in the current war from whatever areas in which they may now be engaged.
9. Guaranty by the Italian Government that if necessary it will employ all its available armed forces to insure prompt and exact compliance with all the provisions of this armistice.
10. The commander in chief of the Allied Forces reserves to himself the right to take any measure which, in his opinion, may be necessary for the protection of the interests of the Allied forces for the prosecution of the war, and the Italian Government binds itself to take such administrative or other action as the commander in chief may require, and in particular the commander in chief will establish Allied military government over such parts of Italian territory as he may deem necessary in the military interests of the Allied Nations.
11. The commander in chief of the Allied Forces will have a full right to impose measures of disarmament, demobilization, and demilitarization.
12. Other conditions of a political, economic, and financial nature with which Italy will be bound to comply will be transmitted at later date.

The conditions of the present armistice will not be made public without prior approval of the allied commander in chief. The English will be considered the official text.

DWIGHT D. EISENHOWER,
*General, United States Army, Commander in Chief of Allied Forces.*
By WALTER B. SMITH,
*Major General, United States Army, Chief of Staff.*
Marshal PIETRO BADOGLIO,
*Head of the Italian Government.*
By GUISEPPE CASTELLANO,
*Brigadier General, attached to the Italian High Command.*

Present: Rt. Hon. Harold MacMillan, British resident minister, AFHQ; Robert Murphy, personal representative of the President of the United States; Royer Dick, commodore, R. N., chief of staff to the commander in chief in the Mediterranean; Lowell W. Rooks, major general, United States Army, assistant chief of staff, G-3, AFHQ; Franco Montanari, official Italian interpreter; Brigadier Kenneth Strong, assistant chief of staff, G-2, AFHQ.

2. ADDITIONAL CONDITIONS OF THE ARMISTICE WITH ITALY (AS MODIFIED BY THE PROTOCOL SIGNED NOVEMBER 9, 1943)

Whereas in consequence of an armistice dated September 3, 1943, between the United States and the United Kingdom Governments acting in the interests of all the United Nations on the one hand and the Italian Government on the other hand, hostilities were suspended between Italy and the United Nations on certain terms of a military nature;

And whereas in addition to those terms it was also provided in the said armistice that the Italian Government bound themselves to comply with other conditions of a political, economic, and financial nature to be transmitted later;

And whereas it is convenient that the terms of a military nature and the said other conditions of a political, economic, and financial nature should without prejudice to the continued validity of the terms of the said armistice of September 3, 1943, be comprised in a further instrument;

The following together with the terms of the armistice of September 3, 1943, are the terms on which the United States, United Kingdom, and Soviet Governments acting

on behalf of the United Nations are prepared to suspend hostilities against Italy so long as their military operations against Germany and her allies are not obstructed and Italy does not assist these powers in any way and complies with the requirements of these Governments.

These terms have been presented by Gen. Dwight D. Eisenhower, commander in chief, Allied Forces, duly authorized to that effect;

And have been accepted unconditionally by Marshal Pietro Badoglio, head of the Italian Government, representing the supreme command of Italian land, sea, and air forces, and duly authorized to that effect by the Italian Government.

1. (A) The Italian land, sea, and air forces wherever located hereby surrender. Italian participation in the war in all theaters will cease immediately. There will be no opposition to landings, movements, or other operations of the land, sea, and air forces of the United Nations. Accordingly, the Italian Supreme Command will order the immediate cessation of hostilities of any kind against the forces of the United Nations and will direct the Italian navy, military, and air forces authorities in all theaters to issue forthwith the appropriate instructions to those under their command.

(B) The Italian Supreme Command will further order all Italian naval, military, and air forces or authorities and personnel to refrain immediately from destruction of or damage to any real or personal property, whether public or private.

2. The Italian Supreme Command will give full information concerning the disposition and condition of all Italian land, sea, and air forces, wherever they are situated and of all such forces of Italy's allies as are situated in Italian or Italian-occupied territory.

3. The Italian Supreme Command will take the necessary measures to secure airfields, port facilities, and all other installations against seizure or attack by any of Italy's Allies. The Supreme Italian Command will take the necessary measures to insure law and order, and to use its available armed forces to insure prompt and exact compliance with all the provisions of the present instrument. Subject to such use of Italian troops for the above purposes, as may be sanctioned by the allied commander in chief, all other Italian land, sea, and air forces will proceed to and remain in their barracks, camps, or ships pending directions from the United Nations as to their future status and disposal. Exceptionally such naval personnel shall proceed to shore establishments as the United Nations may direct.

4. Italian land, sea, and air forces will within the periods to be laid down by the United Nations withdraw from all areas outside Italian territory notified to the Italian Government by the United Nations and proceed to areas to be specified by the United Nations. Such movement of Italian land, sea, and air forces will be carried out in conditions to be laid down by the United Nations and in accordance with the orders to be issued by them. All Italian officials will similarly leave the areas notified except any who may be permitted to remain by the United Nations. Those permitted to remain will comply with the instructions of the Allied commander in chief.

5. No requisitioning, seizures or other coercive measures shall be effected by Italian land, sea, and air forces or officials in regard to persons or property in the areas notified under article 4.

6. The demobilization of Italian land, sea, and air forces in excess of such establishments as shall be notified will take place as prescribed by the Allied commander in chief.

7. Italian warships of all descriptions, auxiliaries, and transports will be assembled as directed in ports to be specified by the Allied commander in chief and will be dealt with as prescribed by the Allied commander in chief. (NOTE.—If at the date of the Armistice the whole of the Italian Fleet has been assembled in Allied ports, this article would run—"Italian warships of all descriptions, auxiliaries, and transports will remain until further notice in the ports where they are at present assembled, and will be dealt with as prescribed by the Allied commander in chief.")

8. Italian aircraft of all kinds will not leave the ground or water or ships, except as directed by the Allied commander in chief.

9. Without prejudice to the provisions of articles 14, 15, 28 A and D below, all merchant ships, fishing or other craft of whatever flag, all aircraft and inland transport of whatever nationality in Italian or Italian-occupied territory or waters will, pending verification of their identity and status, be prevented from leaving.

10. The Italian Supreme Command will make available all information about naval, military, and air devices, installations, and defenses, about all transport and intercommunication systems established by Italy or her allies on Italian territory or in the approaches thereto, about mine fields or other obstacles to movement by land, sea, or air, and such other particulars as the United Nations may require in connection with the use of Italian bases, or with the operations, security, or welfare of the United Nations land, sea, or air forces. Italian forces and equipment will be made available as required by the United Nations for the removal of the above-mentioned obstacles.

11. The Italian Government will furnish forthwith lists of quantities of all war material, showing the location of the same. Subject to such use as the Allied commander in chief may make of it, the war material will be placed in store under such control as he may direct. The ultimate disposal of war material will be prescribed by the United Nations.

12. There will be no destruction of nor damage to nor, except as authorized or directed by the United Nations, any removal of war material, wireless, radiolocation, or meteorological stations, railroad, port, or other installations or in general, public, or private utilities or property of any kind, wherever situated, and the necessary maintenance and repair will be the responsibility of the Italian authorities.

13. The manufacture, production, and construction of war material and its import, export, and transit is prohibited, except as directed by the United Nations. The Italian Government will comply with any directions given by the United Nations for the manufacture, production, or construction and the import, export, or transit of war material.

14. (A) All Italian merchant shipping and fishing and other craft, wherever they may be, and any constructed or completed during the period of the present instrument will be made available in good repair and in seaworthy condition by the competent Italian authorities at such places and for such purposes and periods as the United Nations may prescribe. Transfer to enemy or neutral flags is prohibited. Crews will remain on board pending further instructions regarding their continued employment or dispersal. Any existing options to repurchase or reacquire or to resume control of Italian or former Italian vessels sold or otherwise transferred or chartered during the war will forthwith be exercised and the above provisions will apply to all such vessels and their crews.

(B) All Italian inland transport and all port equipment will be held at the disposal of the United Nations for such purposes as they may direct.

15. United Nations merchant ships, fishing and other craft in Italian hands wherever they may be (including for this purpose those of any country which has broken off diplomatic relations with Italy) whether or not the title has been transferred as the result of prize court proceedings or otherwise, will be surrendered to the United Nations and will be assembled in ports to be specified by the United Nations for disposal as directed by them. The Italian Government will take all such steps as may be required to secure any necessary transfers of title. Any neutral merchant ship, fishing, or other craft under Italian operations or control will be assembled in the same manner pending arrangements for their ultimate disposal. Any necessary repairs to any of the above-mentioned vessels will be effected by the Italian Government, if required, at their expense. The Italian Government will take the necessary measures to insure that the vessels and their cargo are not damaged.

16. No radio or telecommunication installations or other forms of intercommunication, ashore or afloat, under Italian control whether belonging to Italy or any nation other than the United Nations, will transmit until directions for the control of these installations have been prescribed by the Allied commander in chief. The Italian authorities will conform to such measures for control and censorship of press and of other publications, of theatrical and cinematograph performances, of broadcasting, and also of all forms of intercommunication as commander in chief may direct. The Allied commander in chief may, at his discretion, take over radio, cable, and other communication stations.

17. The warships, auxiliaries, transports, and merchant, and other vessels and aircraft in the service of the United Nations will have the right freely to use the territorial waters around and the air over Italian territory.

18. The forces of the United Nations will require to occupy certain parts of Italian territory. The territories or areas concerned will from time to time be notified by the United Nations and all Italian land, sea, and air forces will thereupon withdraw from such territories or areas in accordance with the instructions issued by the Allied commander in chief. The provisions of this article are without prejudice to those of article 4 above. The Italian supreme command will guarantee immediate use and access to the Allies of all airfields and naval ports in Italy under their control.

19. In the territories or areas referred to in article 18, all naval, military, and air installations, power stations, oil refineries, public utility services, all ports and harbors, all transport, and all intercommunication installations, facilities and equipment and such other installations or facilities and all such stocks as may be required by the United Nations will be made available in good condition by the competent Italian authorities with the personnel required for working them. The Italian Government will make available such other local resources or services as the United Nations may require.

20. Without prejudice to the provisions of the present instrument the United Nations will exercise all the rights of an occupying power throughout the territories or areas referred to in article 18, the administration of which will be provided for by the issue of proclamations, orders, or regulations. Personnel of the Italian administrative, judicial, and public services will carry out their functions under the control of the Allied commander in chief unless otherwise directed.

21. In addition to the rights in respect of occupied Italian territories described in articles 18 to 20—

(A) Members of the land, sea, or air forces and officials of the United Nations will have the right of passage in or over nonoccupied Italian territory and will be afforded all the necessary facilities and assistance in performing their functions.

(B) The Italian authorities will make available in nonoccupied Italian territory all transport facilities required by the United Nations including free transit for their war material and supplies, and will comply with instructions issued by the Allied commander

in chief regarding the use and control of airfields, ports, shipping, inland transport systems and vehicles, intercommunication systems, power stations and public utility services, oil refineries, stocks and such other fuel and power supplies and means of producing same, as United Nations may specify, together with connected repair and construction facilities.

22. The Italian Government and people will abstain from all action detrimental to the interests of the United Nations and will carry out promptly and efficiently all orders given by the United Nations.

23. The Italian Government will make available such Italian currency as the United Nations may require. The Italian Government will withdraw and redeem in Italian currency within such time limits and on such terms as the United Nations may specify all holdings in Italian territory of currencies issued by the United Nations during military operations or occupation and will hand over the currencies so withdrawn free of cost to the United Nations. The Italian Government will take such measures as may be required by the United Nations for the control of banks and businesses in Italian territory, for the control of foreign exchange and foreign commercial and financial transactions, and for the regulation of trade and production, and will comply with any instructions issued by the United Nations regarding these and similar matters.

24. There shall be no financial, commercial, or other intercourse with or dealings with or for the benefit of countries at war with any of the United Nations or territories occupied by such countries or any other foreign country except under authorization of the Allied commander in chief or designated officials.

25. (A) Relations with countries at war with any of the United Nations, or occupied by any such country, will be broken off. Italian diplomatic, consular, and other officials and members of the Italian land, sea, and air forces accredited to, or serving on missions with, any such country or in any other territory specified by the United Nations will be recalled. Diplomatic and consular officials of such countries will be dealt with as the United Nations may prescribe.

(B) The United Nations reserve the right to require the withdrawal of neutral diplomatic and consular officers from occupied Italian territory and to prescribe and lay down regulations governing the procedure for and methods of communication between the Italian Government and its representatives in neutral countries and regarding communications emanating from or destined for the representatives of neutral countries in Italian territory.

26. Italian subjects will pending further instructions be prevented from leaving Italian territory except as authorized by the Allied commander in chief and will not in any event take service with any of the countries or in any of the territories referred to in article 25 A, nor will they proceed to any place for the purpose of undertaking work for any such country. Those at present so serving or working will be recalled as directed by the Allied commander in chief.

27. The military, naval, and air personnel and material and the merchant shipping, fishing, and other craft and the aircraft, vehicles, and other transport equipment of any country against which any of the United Nations is carrying on hostilities or which is occupied by any such country, remain liable to attack or seizure wherever found in or over Italian territory or waters.

28. (A) The warships, auxiliaries, and transports of any such country or occupied country referred to in article 27 in Italian or Italian-occupied ports and waters and the aircraft, vehicles, and other transport equipment of such countries in or over Italian or Italian-occupied territory will, pending further instructions, be prevented from leaving.

(B) The military, naval, and air personnel, and the civilian nationals of any such country or occupied country in Italian or Italian-occupied territory will be prevented from leaving and will be interned pending further instructions.

(C) All property in Italian territory belonging to any such country or occupied country or its nationals will be impounded and kept in custody pending further instructions.

(D) The Italian Government will comply with any instructions given by the Allied commander in chief concerning the internment, custody, or subsequent disposal, utilization, or employment of any of the abovementioned persons, vessels, aircraft, material, or property.

29. Benito Mussolini, his chief Fascist associates, and all persons suspected of having committed war crimes or analogous offences whose names appear on the lists to be communicated by the United Nations and who now or in the future are on territory controlled by the Allied Military Command or by the Italian Government, will forthwith be apprehended and surrendered into the hands of the United Nations. Any instructions given by the United Nations for this purpose will be complied with.

30. All Fascist organizations, including all branches of the Fascist Militia (MVSN), the Secret Police (OVRA), all Fascist youth organizations will insofar as this is not already accomplished be disbanded in accordance with the directions of the Allied Commander in Chief. The Italian Government will comply with all such further directions as the United Nations may give for abolition of Fascist institutions, the dismissal and internment of Fascist personnel, the control of Fascist funds, the suppression of Fascist ideology and teaching.

31. All Italian laws involving discrimination on grounds of race, color, creed, or political opinions will insofar as this is not already accomplished be rescinded, and persons detained on such grounds will, as directed by the United Nations, be released and relieved from all legal disabilities to which they have been subjected. The Italian Government will comply with all such further directions as the Allied commander in chief may give for repeal of Fascist legislation and removal of any disabilities or prohibitions resulting therefrom.

32. (A) Prisoners of war belonging to the forces of or specified by the United Nations and any nationals of the United Nations, including Abyssinian subjects, confined, interned, or otherwise under restraint in Italian or Italian-occupied territory will not be removed and will forthwith be handed over to representatives of the United Nations or otherwise dealt with as the United Nations may direct. Any removal during the period between the presentation and the signature of the present instrument will be regarded as a breach of its terms.

(B) Persons of whatever nationality who have been placed under restriction, detention, or sentence (including sentences in absentia) on account of their dealings or sympathies with the United Nations will be released under the direction of the United Nations and relieved from all legal disabilities to which they have been subjected.

(C) The Italian Government will take such steps as the United Nations may direct to safeguard the persons of foreign nationals and property of foreign states and nationals.

33. (A) The Italian Government will comply with such directions as the United Nations may prescribe regarding restitution, deliveries, services, or payments by way of reparation and payment of the costs of occupation during the period of the present instrument.

(B) The Italian Government will give to the Allied commander in chief such information as may be prescribed regarding the assets whether inside or outside Italian territory of the Italian state, the Bank of Italy, any Italian state or semi-state institutions, or Fascist organizations or residents in Italian territory and will not dispose or allow the disposal, outside Italian territory of any such assets except with the permission of the United Nations.

34. The Italian Government will carry out during the period of the present instrument such measures of disarmament, demobilization, and demilitarization as may be prescribed by the Allied commander in chief.

35. The Italian Government will supply all information and provide all documents required by the United Nations. There shall be no destruction or concealment of archives, records, plans, or any other documents or information.

36. The Italian Government will take and enforce such legislative and other measures as may be necessary for the execution of the present instrument. Italian military and civil authorities will comply with any instruction issued by the Allied commander in chief for the same purpose.

37. There will be appointed a Control Commission representative of the United Nations charged with regulating and executing this instrument under the orders and general directions of the Allied commander in chief.

38. (A) The term "United Nations" in the present instrument includes the Allied commander in chief, the Control Commission, and any other authority which the United Nations may designate.

(B) The term "Allied commander in chief" in the present instrument includes the Control Commission and such other officers and representatives as the commander in chief may designate.

39. Reference to Italian land, sea, and air forces in the present instrument shall be deemed to include Fascist Militia and all such other military or para-military units, formations or bodies as the Allied commander in chief may prescribe.

40. The term "war material" in the present instrument denotes all material specified in such lists or definitions as may from time to time be issued by the Control Commission.

41. The term "Italian Territory" includes all Italian colonies and dependencies and shall for the purposes of the present instrument (but without prejudice to the question of sovereignty) be deemed to include Albania. Provided however, that except in such cases and to such extent as the United Nations may direct the provisions of the present instrument shall not apply in or affect the adminstration of any Italian colony or dependency already occupied by the United Nations or the rights or powers therein possessed or exercised by them.

42. The Italian Government will send a delegation to the headquarters of the control commission to represent Italian interests and to transmit the orders of the control commission to the competent Italian authorities.

43. The present instrument shall enter into force at once. It will remain in operation until superseded by any other arrangements or until the voting into force of the peace treaty with Italy.

44. The present instrument may be denounced by the United Nations with immediate effect if Italian obligations thereunder are not fulfilled or, as an alternative, the United Nations may penalize contravention of it by measures appropriate to the circumstances such as the extension of the areas of military occupation or air or other punitive action.

The present instrument is drawn up in English and Italian, the English text being authentic, and in case of any dispute regarding its interpretation, the decision of the control commission will prevail.

Signed at Malta on the 29th day of September 1943.

DWIGHT D. EISENHOWER,
*General, United States Army, Commander in Chief, Allied Forces.*

Marshal PIETRO BADOGLIO,
*Head of the Italian Government.*

2. LETTER OF SEPTEMBER 29, 1943, FROM GEN. DWIGHT D. EISENHOWER TO MARSHAL PIETRO BADOGLIO

SEPTEMBER 29, 1943.

His Excellency Marshal PIETRO BADOGLIO,
*Head of the Italian Government.*

MY DEAR MARSHAL BADOGLIO: The terms of the armistice to which we have just appended our signatures are supplementary to the short military armistice signed by your representative and mine on September 3, 1943. They are based upon the situation obtaining prior to the cessation of hostilities. Developments since that time have altered considerably the status of Italy, which has become in effect a cooperator with the United Nations.

It is fully recognized by the governments on whose behalf I am acting that these terms are in some respects superseded by subsequent events and that several of the clauses have become obsolescent or have already been put into execution. We also recognize that it is not at this time in the power of the Italian Government to carry out certain of the terms. Failure to do so because of existing conditions will not be regarded as a breach of good faith on the part of Italy. However, this document represents the requirements with which the Italian Government can be expected to comply when in a position to do so.

It is to be understood that the terms both of this document and of the short military armistice of September 3 may be modified from time to time if military necessity or the extent of cooperation by the Italian Government indicates this as desirable.

Sincerely,

DWIGHT D. EISENHOWER,
*General, United States Army, Commander in Chief, Allied Forces.*

---

OFFICE OF COMMANDER IN CHIEF,
MEDITERRANEAN STATION,
*September 23, 1943.*

3. MEMORANDUM OF AGREEMENT ON THE EMPLOYMENT AND DISPOSITION OF THE ITALIAN FLEET AND MERCANTILE MARINE BETWEEN THE ALLIED NAVAL COMMANDER IN CHIEF, MEDITERRANEAN, ACTING ON BEHALF OF THE ALLIED COMMANDER IN CHIEF AND THE ITALIAN MINISTER OF MARINE

The armistice having been signed between the head of the Italian Government and the Allied commander in chief under which all Italian warships and the Italian Mercantile Marine were placed unconditionally at the disposal of the United Nations, and H. M. the King of Italy and the Italian Government having since expressed the wish that the Fleet and the Italian Mercantile Marine should be employed in the Allied effort to assist in the prosecution of the war against the Axis Powers, the following principles are established on which the Italian Navy and Mercantile Marine will be disposed.

(A) Such ships as can be employed to assist activity in the Allied effort will be kept in commission and will be used under the orders of the commander in chief, Mediterranean, as may be arranged between the Allied commander in chief and the Italian Government.

(B) Ships which cannot be so employed will be reduced to a care and maintenance basis and be placed in designated ports, measures of disarmament being undertaken as may be necessary.

(C) The Government of Italy will declare the names and whereabouts of (i) warships, (ii) merchant ships, now in their possession which previously belonged to any of the United Nations. These vessels are to be returned forthwith as may be directed by the Allied commander in chief. This will be without prejudice to negotiations between the governments which may subsequently be made in connection with replacing losses of ships of the United Nations caused by Italian action.

(D) The Allied naval commander in chief will act as the agent of the Allied commander in chief in all matters concerning the employment of the Italian Fleet or merchant navy, their disposition and related matters.

(E) It should be clearly understood that the extent to which the terms of the armistice are modified to allow of the arrangements outlined above and which follow are dependent upon the extent and effectiveness of Italian cooperation.

2. Method of operation: The commander in chief, Mediterranean, will place at the disposal of the Italian Ministry of Marine a high-ranking naval officer with the appropriate staff who will be responsible to the commander in chief, Mediterranean, for all matters in connection with the operation of the Italian Fleet, and be the medium through which dealings will be carried out in connection with the Italian mercantile marine. The flag officer acting for these duties (flag officer, liaison) will keep the Italian Ministry of Marine informed of the requirements of the commander in chief, Mediterranean, and will act in close cooperation as regards issue of all orders to the Italian Fleet.

3. Proposed disposition of the Italian Fleet:

(A) All battleships will be placed on a care and maintenance basis in ports to be designated and will have such measures of disarmament applied as may be directed. These measures of disarmament will be such that the ships can be brought into operation again if it so seems desirable. Each ship will have on board a proportion of Italian naval personnel to keep the ships in proper condition and the commander in chief, Mediterranean, will have the right of inspection at any time.

(B) Cruisers: Such cruisers as can be of immediate assistance will be kept in commission. At present it is visualized that one squadron of four cruisers will suffice and the remainder will be kept in care and maintenance as for the battleships but at a rather greater degree of readiness to be brought into service if required.

(C) Destroyers and torpedo boats: It is proposed to keep these in commission and to use them on escort and similar duties as may be requisite. It is proposed that they should be divided into escort groups working as units and that they should be based on Italian ports.

(D) Small craft: MAS, minesweepers, auxiliaries and similar small craft will be employed to the full, detailed arrangements being made with the flag officer (liaison) by the Italian Ministry of Marine for their best employment.

(E) Submarines: In the first instance submarines will be immobilized in ports to be designated and at a later date these may be brought into service as may be required to assist the Allied effort.

4. Status of Italian navy: Under this modification of the armistice terms, all the Italian ships will continue to fly their flag. A large proportion of the Italian Navy will thus remain in active commission operating their own ships and fighting alongside the forces of the United Nations against the Axis Powers.

The requisite liaison officers will be supplied to facilitate the working of the Italian ships in cooperation with Allied forces. A small Italian liaison mission will be attached to the headquarters of the commander in chief, Mediterranean, to deal with matters affecting the Italian Fleet.

5. Mercantile marine: It is the intention that the Italian mercantile marine should operate under the same conditions as the merchant ships of the Allied Nations. That is to say, all mercantile shipping of the United Nations is formed into a pool which is employed as may be considered necessary for the benefit of all the United Nations. In this will naturally be included the requirements for the supply and maintenance of Italy. The system will be analogous to that used in north Africa, where the North Africa Shipping Board controls all United States, British, and French shipping under certain agreements which will have to be arranged in detail insofar as Italian ships are concerned. While it may be expected that a proportion of Italian ships will be working within the Mediterranean and to and from Italian ports, it must be appreciated that this will not always necessarily be the case and ships flying the Italian flag may be expected to be used elsewhere as is done with the merchant ships of all the United Nations. Italian ships employed as outlined in this paragraph will fly the Italian flag and will be manned by crews provided by the Italian Ministry of Marine.

5. AMENDMENT TO AGREEMENT BETWEEN THE NAVAL COMMANDER IN CHIEF, MEDITERRANEAN, ALLIED FORCES, AND THE ROYAL ITALIAN MINISTER OF MARINE WITH RESPECT TO THE EMPLOYMENT OF THE ITALIAN NAVY

The aforementioned agreement is amended as follows:

The following phrase to be added to the preamble:

"It is understood and agreed that the provisions of this agreement as to immediate employment and disposition of Italian warships and merchant ships do not affect the right of United Nations to make such other dispositions of any or all Italian ships as they may think fit. Their decisions in this respect will be notified to the Italian Government from time to time."

Final sentence of last paragraph to be amended to read: "will be manned so far as possible by crews provided by Italian Ministry of Marine and will fly the Italian flag."

The present instrument is drawn up in English and Italian, the English text being authentic, and in case of any dispute regarding its interpretation the decision of the control commission will prevail.

Signed on the 17th of November 1943 at Brindisi.

For the naval commander in chief, Mediterranean, Allied forces:

R. MCGREGOR, *Rear Admiral.*
AMM. R. DE COURTEN,
*Ministro della Marina,*
*Flag Officer Liaison, Italy.*

6. STATEMENT OF ADMIRAL DE COURTEN

By order of His Excellency, Marshal Badoglio, Chief of the Government, I have signed the clauses added to the preamble and to the last paragraph of the Cunningham-De Courten Agreement, which were requested by the Allied Governments as conditions of the signature of the amendments to the armistice.

In signing, I request that note be taken of the following statement: "I believe it my duty to make clear that the request for insertion of these clauses, put forth less than 2 months after the meeting with Sir Andrew Cunningham, then commander in chief of the Allied Mediterranean Fleet, alters the spirit of the agreement concluded between Admiral Cunningham and me. The clauses of this Agreement had been put forward in accordance with the armistice, by Admiral Cunningham himself, who invited me to examine them and make known to them my observations and comments. Inasmuch as there was complete agreement in regard to the text presented by the Allies, and as the Agreement has up to now been carried out in the widest and most complete manner without opposition either in letter or spirit, I did not and do not have any reason to believe it should be modified and completed by a subsequent safeguarding clause. This clause seems to be at odds with the active collaboration given up to now by the Italian Navy and with the visible demonstration of the loyalty with which the Italian Fleet is contributing to the utmost to the conduct of the war against the common enemy in the spirit of existing cobelligerency."

Brindisi, November 17, 1943.

(Signed) Admiral DE COURTEN,
*Minister of the Navy.*

7. AIDE-MÉMOIRE TO THE ITALIAN GOVERNMENT BY THE ACTING PRESIDENT OF THE CONTENTS OF THE NEW DIRECTIVE ON THE FUNCTIONS OF THE ALLIED COMMISSION

In accordance with the declaration of the President of the United States of America and the Prime Minister of the United Kingdom of Great Britain, the Allied Governments propose to relax the control of the Italian Government under the armistice in the matter of day-to-day administration and only to exercise such control when Allied military interests require.

2. The political section of the Allied Commission is being abolished as of March 1, 1945. The Italian Ministry for Foreign Affairs will deal with the Chief Commissioner on matters of major policy, and on matters of minor policy and routine business it will address itself to whatever section (economic or civil affairs) of the commission may be appropriate to the subject involved. Matters involving the travel of diplomatic and other public officials will hereafter be dealt with on behalf of the commission by the office of the Executive Commissioner.

3. The Italian Government will continue, as at present, to have direct relations with foreign diplomatic representatives accredited to the Quirinal. The Allied Commission should be kept generally informed by the Italian Government of any negotiations in which they engage with other governments. Facilities for the use of secret bags will be granted to the Italian Government for use in correspondence with their diplomatic representatives abroad. Undeposited cipher facilities cannot be allowed for the present.

Insofar as these negotiations have to do with economic and financial matters, the Economic Section and its Finance Subcommission should be kept informed of their progress.

It would be convenient if the Italian Government would furnish a periodic summary of all negotiations completed or pending with other governments.

4. The Allied Commission will limit its dealings with respect to territory under the jurisdiction of the Italian Government to consultation with and advice to the ministers of the Italian Government.

5. The advisory functions of the Subcommissions of Education, Monuments and Fine Arts, Local Government, Legal and Labor in territory under the jurisdiction of the Italian Government will be performed only when requested by the Italian Government.

6. It will no longer be necessary for the Italian Government to obtain the approval of the Allied Commission for decrees and other legislation enacted by the Italian Government in the territory under the jurisdiction of the Italian Government.

Nevertheless the Allied Commission should be informed of proposed decrees sometime before their enactment, in order to enable the chief commissioner to consult with the Italian Government as to their application to territory under the jurisdiction of Allied Military Government (A. M. G.), and to lay plans for their effective implementation in such territory when appropriate.

7. It will no longer be necessary for the Italian Government to obtain approval of the Allied Commission for Italian appointments, whether to national or local offices, in territory under the jurisdiction of the Italian Government except with regard to the attached list of positions having military significance. The Italian Government will have the right to alter appointments made previously by A. M. G. authorities.

8. The Allied Commission officers stationed in the field in the territory under the jurisdiction of the Italian Government will be withdrawn. As a first step it is intended to abolish by the 1st of April 1945, the regional offices of the Allied Commission for Sicilia, Sardegna, Southern and Lazio-Umbria regions. Representatives of the Allied Commission will, however, be sent into territory under the jurisdiction of the Italian Government when necessary, and certain specialist officers with economic functions will remain in such territory for a limited period.

9. It is the desire of the Allies to encourage free trade in knowledge and learning with the Italian people. Arrangements will be facilitated for the flow between Italy and the United Nations of books and other publications of a scientific, political, philosophical, and artistic nature, and for the movement of scholars, artists, and professional men between Italy and the United Nations.

10. The Allies welcome the decision to hold local elections in territory under the jurisdiction of the Italian Government as soon as may be.

11. The Allied Nations desire to make concessions with regard to Italian prisoners of war now or hereafter held in Italy, other than those captured since the armistice was signed. Provided that arrangements can be made for the services of such persons to continue to be made available on terms satisfactory to the Supreme Allied Commander, their status as prisoners of war will be terminated.

12. It is essential that the Italian Government formulate and implement appropriate economic controls and take all other steps possible both in order to ensure that maximum production and effective and equitable distribution and control of consumption of local resources possible under existing conditions be secured and as a prerequisite to increased economic assistance.

13. In the joint programme of essential Italian imports, now being prepared by the Inter-Ministerial Committee for Reconstruction and the economic section of this commission, there will be some supplies for which the combined United States-United Kingdom military authorities will assume responsibility for procurement (category "A") and other supplies for which they will not assume responsibility (category "B"). A definition of the supplies which fall into category "A" follows:

(a) Those quantities of agreed essential supplies necessary to prevent disease and unrest prejudicial to military operations, such as food, fuel, clothing, medical, and sanitary supplies.

(b) Those supplies, the importation of which will reduce military requirements for the import of essential civilian supplies for the purposes referred to in this paragraph, such as fertilizer, raw materials, machinery, and equipment.

(c) Those materials essential for the rehabilitation of such of the Italian communication facilities, power systems and transportation facilities as will directly further the Allied military effort.

14. The program for which the military authorities assume responsibility will be maintained for the duration of combined (United States-United Kingdom) operations in Italy. For this period, and within the limits defined in paragraph 13, Italy will be treated as a whole. The date of the termination of military responsibility will be fixed by the Allied Nations.

15. In addition to the program of supplies for which the military assume responsibility for procurement (category "A") the Allied Commission will assist the Italian Government in the preparation of programs of supplies designed to rehabilitate Italian industry. Such programs, referred to as category "B," will be handled under procedures already notified. The purchasing of supplies in category "B" programs will be undertaken immediately without reference to the present difficult shipping position in order that the supplies so purchased may be called forward as and when shipping space becomes available.

16. The Allies desire that industrial rehabilitation in Italy be carried out by the Italian Government to the fullest extent permitted by Italian resources and such supplies as it may be possible to import under the terms of paragraphs 13, 14, and 15 above, and subject to the limitation in paragraph 19 below. The sole exception to this principle is to be made in the case of industries involving the production or repair of munitions or other implements of war, which will be rehabilitated only to the extent required by the Supreme Allied Commander in the discharge of his military mission, and to the extent necessary to further the Allied military effort in other theaters. The priority order in which Italian industry will be rehabilitated (after the rehabilitation of industries essential for Allied military purposes) will be determined by the Italian Government, with the assistance and advice of the Allied Commission.

17. The prime responsibility for the control of inflation in Italy, including the imposition and administration of the appropriate financial controls and economic controls, and appropriate utilization of supplies, rests with the Italian Government. In this connection, as in others, the Allied Commission stands ready to advise and assist.

18. The extent to which exports are to be stimulated and the development of machinery to handle export trade are for determination by the Italian Government. For the time being, the Italian-export programme will necessarily be limited by certain shipping, military, financial, and supply factors. The applicability of these factors to individual programmes will be worked out between the Italian Government and the economic section of the Allied Commission along the lines already discussed by the economic section with the Interministerial Committee for Reconstruction.

19. Nothing contained in the above should be taken as constituting a commitment by the Allied Nations with respect to shipping. Any supplies to be imported into Italy must be transported within such shipping as may be allocated from time to time by the Allied Nations.

HAROLD MACMILLAN.

FEBRUARY 24, 1945.

---

List of Italian Government appointments requiring prior approval by the Allied Commission:

Minister of War.
Minister of Marine.
Minister of Air.

Any other Minister of Armed Forces who may be created.

Under-Secretary for Telecommunications.
Director of Railroads.
Director-General of Pubblica Sicurezza.
Commanding General, CC. RR.
Chief of Staff, CC. RR.
Commanding General, GG. FF.

Appointments in the Army, Navy, and Air Force in accordance with current practice.

8. COMMENTARY ON THE ARMISTICE TERMS AND THE CUNNINGHAM-DE COURTEN AGREEMENT

The extent to which certain articles of the agreement have been implemented or modified is indicated in the following comment. The remaining articles, on which no comment is given, have either been superseded by events and are therefore dormant, or are still in force.

Articles 1 to 5 were complied with.

Articles 6 to 12: With the cooperation of the Italian Government, the Italian armed forces have been used to the maximum useful extent in the service of the United Nations and have contributed materially toward the liberation of Italy and final victory. The Italian Navy has operated with Allied warships in the Mediterranean and elsewhere, and since the cessation of hostilities has largely been employed in the Italian interest in minesweeping and the transport of displaced persons.

The Army fought alongside Allied formations during the campaign in Italy and the

air force took its place with the Allied Air Forces.

Article 14: While Italian merchant ships have been employed in the general interests of the United Nations they have been primarily employed in the Italian interest. Italian inland transport and ports have now been largely returned to Italian administration except insofar as redeployment and maintenance of Allied Forces has had to be effected.

Article 15: The provisions of this article, as regards small vessels and craft, have not been fully satisfied owing to the difficulty of locating and identifying the vessels and craft concerned.

Article 16: Control of radio has been returned to the Italian Government. All military and rehabilitated civilian telecommunications are being handed over to the Italians as military requirements decrease. Internal censorship has been abolished in the areas under Italian Government control.

Article 18: The second sentence of this article has never been invoked, except in two frontier areas, i. e., on the Franco-Italian frontier and in Venezia Giulia.

Article 19: Care has been taken to conserve wherever possible Italian resources for the use of the civil economy and to utilize local goods and services only when military necessity demanded. The Allied Forces Local Resources Board, on the committee of which Italian representatives have sat, was established as the allocation agency.

While the legal rights of the Allied Forces under this article have not been modified, in practice it has been administered with as much regard as possible for Italian needs.

With the redeployment of Allied troops from Italy, the utilization of local resources and facilities is diminishing rapidly. In addition, large quantities of food, coal, clothing, and other commodities have been imported into Italy by the United Nations largely in United Nations ships to supplement local resources and to alleviate distress.

Article 20: Allied Military Government was rigorously enforced in combat zones for obvious operational reasons. This was progressively relaxed as the battle moved forward until territories were handed over wholly to Italian administration.

Article 21: As Allied Forces are redeployed facilities are progressively being handed back to Italian control.

Article 22: With the declaration of war upon the Germans by the Italian Government in October 1943, and the cooperation and loyalty of the Italian people to the Allied cause, there has never been any necessity to invoke this article.

Article 23: The Italian Government has been informed that the Allied Commission will no longer intervene in Italian internal financial affairs (except in cases of Allied military necessity) and that, with certain exceptions in Italy's own interest, the Italian Government need no longer obtain the approval of the Allied Commission prior to the execution of external financial transactions. The Italian Government is now free to fix or negotiate exchange rates for the lira without prior consultation with the Allied Commission.

Article 24: Private export trade may now be resumed and all types of commercial and financial correspondence may now go forward from Italy to the nonenemy world, subject to the Italian Government putting into force certain trade-control measures similar to those employed by the United Nations against enemy interests.

Article 26: This article is no longer enforced, and provided an individual has the necessary civil documents, such as passport, visas, et cetera, there is nothing to prevent his leaving Italian territory, subject of course to the immigration laws and regulations of the countries of intended destination.

Articles 30 and 31: The Italian Government has of its own volition done all that would have been required.

Article 32: This article has been complied with and is, in the case of clauses A and B, no longer applicable. As regards clause C the Italian Government has cooperated loyally in carrying out such instructions as have been given concerning the preservation and administration of United Nations property in Italy, previously sequestered by the Italian Government.

Article 33: The part of clause B that deals with the disposal of foreign assets has been modified in favor of the Italian Government (see under article 23).

Articles 36 and 37: The execution of these articles has been modified by the MacMillan Aide Mémoire of February 24, 1945.

Article 41: In practice the armistice conditions have not been applied to Albania or to any former Italian territories overseas.

With respect to the Cunningham-De Courten Agreement, the following general comments show the extent to which certain articles have been implemented or modified.

1. As explained in the document this agreement was produced in modification of the armistice terms so that the Italian fleet and merchant marine could assist in the prosecution of the war against the Axis Powers.

2. The additions to the agreement were inserted at the Allied request after the original agreement had been concluded and were accepted on the Italian side in view of an amelioration of certain articles in the original terms of the armistice. Signature was accompanied by the formal statement by Admiral de Courten printed above.

3. The provisions of this agreement have been carried out and those provisions that remain operative with the cessation of hostilities and change of circumstances are still being carried out. Furthermore, many Italian warships are undertaking work of direct benefit to the Italians themselves, for example, transport of displaced persons.

4. While the employment of Italian ships has been of use to the United Nations, it is pointed out that considerable United Nations resources have been expended in Italy and elsewhere to help the Italian Government in keeping the Italian ships running and their crews fed and clothed.

5. In addition to the use of Italian mercantile shipping under this agreement a number of the smaller Italian merchant ships has been returned to the control of the Italian authorities.

## Poland Lies at Russia's Feet

EXTENSION OF REMARKS

OF

## HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, the cause of Poland should have the attention of responsible officers in our Government. President Truman has, in my opinion, a direct responsibility to the end that equity and justice prevail in the relationship between Poland and Russia. When the history of this situation is written, it will be to our eternal shame unless we now take action to correct the gross inequities that now exist between those two countries. As champions of the rights of smaller nations, we should immediately see that a free, untrammeled election and a representative government is chosen by the Poles themselves, and not by the Russian Government. I am submitting herewith a letter addressed to President Truman by the Polish-American Congress to be incorporated in these remarks:

POLISH-AMERICAN CONGRESS, INC.,
*Chicago, Ill., October 20, 1945.*

HARRY S. TRUMAN,
*President of the United States,*
*White House, Washington, D. C.*

MR. PRESIDENT: A recent Associated Press dispatch reports that Red army units, with the sanction of the Stalin-appointed Polish Government, are being sent to each of the 17 provinces of Poland. This is being done under the guise of protecting the country from an "epidemic of banditry."

Catherine the Great offered exactly the same kind of protection before she took over Poland.

Russian headquarters in the capital of every province with Russian generals in command of all army units everywhere in Poland.

This grim news comes out of martyred Poland at the very moment when Mr. Wincenty Rzymowski, foreign minister of the Moscow-conceived Government of Poland, is conferring with our State Department, which is still upholding, in words, the traditional American policy of nonrecognition of governments that do not represent the free will of free people.

As Poland's independence is being strangled by a Soviet military noose, there is not a single word of protest from our Government.

This silence only intensifies the heart-tearing mental, physical, and spiritual anguish of the people of Poland.

America's staunch ally, Poland, is a victim of ingratitude, injustice, and deception without parallel in history.

Not only was this friendly republic deprived at Yalta of one-half of its ancient lands, where barely 1 percent of the prewar population was Russian, but the sovereignty of what remains of Poland was destroyed by the imposition of an illegal government.

But Poland was not the only country sold into Soviet slavery at the Yalta market place. There were others. Ten nations with a total population of 120,000,000 human beings—men, women, and children with the same love of freedom Americans have—met the same tragic fate.

While we are not lacking in appreciation of your expression of friendship for Poland in your speech after the Potsdam Conference, we are keenly disappointed to learn that injustices against Poland and other Soviet-held countries were not corrected at that historic gathering. It was a sad commentary on American diplomacy to learn that even Poland's reparations were placed in the exclusive custody of the Kremlin.

Victim of German and Russian aggression during war, Poland is likewise a target for plunder, murder, hunger, disease, and poverty during peace.

A member of the UNRRA Commission in Poland, Clifford H. Nillson, reports Poland is undergoing the most terrible ordeal in its history.

Representatives CORDON (Democrat, Illinois) and RYTER (Democrat, Connecticut), members of the Foreign Affairs Committee, after a tour of Poland, formally protested to you, Mr. President, that Russia is using the United Nations Relief and Rehabilitation Administration for political purposes.

We quote briefly from Representative CORDON'S observations:

"The Russian occupation army is behaving very badly (in Poland). We saw their arrogance and unfairness in taking advantage of the poor people of the city (Warsaw). We saw the nearby highways jammed with hundreds of heads of cattle, horses, and farming implements, being taken out of Poland by the Russians and going farther east.

Pillaging of the shops on the street was going on most freely and the snatching of purses from Polish women is a daily occurrence. There also exists a wholesale raping of the Polish women. When resistance would be given, the Russian soldier would use his weapons of war and kill."

To conceal his intentions, Stalin juggles words cleverly. Repeatedly, he has stated he wants a strong and independent Poland. If he really wants such a Poland, he can have it. If he wanted a strong Poland, he would not have annexed one-half of it. If he wanted an independent Poland, he would not have imposed upon it a puppet government of Moscow-trained Communists.

Can anyone explain why Germany, an enemy, is under joint Allied occupation while Poland, an ally, is under exclusive Russian control?

If Russia would only withdraw its armies and stop interfering in Poland's internal affairs Poland's troubles would come to a swift end.

The United States could and should have avoided recognizing the Communist-dominated Polish Government until free elections were realized and not merely promised.

The attitude of our Government toward friendly Poland is in sharp contrast to our constructive intervention in hostile Bulgaria, where we flatly refused to recognize the undemocratic government installed by Moscow.

The American Nation is not bound by the secret agreements of Teheran and Yalta, made without the knowledge or approval of the Congress or the American people.

The Constitution of the United States invests in no one, no matter how exalted his position, the authority to consent to the mutilation of free nations, to the destruction of their legal governments, and to the condemnation of millions of decent and law-abiding people to the yoke of a despotic foreign power.

Our responsibility to right the wrong caused by secret agreements, violating the laws of God and man, is inescapable.

Hitler is gone, Mussolini is gone, and yet there is no freedom in Europe.

The dangers against which the Polish-American Congress, representing 6,000,000 Americans of Polish descent, has consistently warned our Government are now leading to a tragic climax.

As a result of blind appeasement, all gains made after the First World War have been wiped out. Nations freed by the First World War have all been enslaved by the Second World War. Stalin, who entered the war in 1939, not as Hitler's enemy but as his ally, is out to finish the task begun by Hitler—the domination of the world.

With efforts to bring freedom to all nations being nullified by Russia, granting credit to Russia indiscriminately would be foolhardy, especially until Russia withdraws to prewar frontiers and proves by actions it has no selfish aims of aggrandizement or desire to destroy democratic civilization.

In view of the ever-growing chain of slave nations, releasing the secret of the atomic bomb to Russia would spell the doom of America. This secret should be guarded carefully, for it is the only safeguard our country has against further Russian expansionism.

America's security and the peace of the world depend upon the correction of political blunders made during the war.

Unless there is a reversal in our foreign policy, it is folly to talk about liberty, democracy, and peace.

As the shadows of despair are deepening over the world, this is not the time for silence.

For freedom's sake, Mr. President, please urge independence for Poland and for all our allies. Do not assist in the crucifixion of the people of Europe. They want to live as we Americans do, not to suffer and die.

This war was fought to protect nations from aggression.

Precious American blood was spilled to purchase freedom and not tyranny for the world.

For the Polish-American Congress:

CHARLES ROZMAREK, *President.*
HONORATA B. WOLOWSKA, *Secretary.*
JOHN J. OLEJNICZAK, *Treasurer.*

## Amendment of the Fair Labor Standards Act

EXTENSION OF REMARKS
OF
## HON. STEPHEN PACE
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. PACE. Mr. Speaker, I invite the attention of the Members to the following statement by Hon. Tom Linder, commissioner of agriculture of Georgia, which I have found most interesting:

STATEMENT BY TOM LINDER, COMMISSIONER OF AGRICULTURE, STATE OF GEORGIA, ON S. 1349, A BILL TO PROVIDE FOR THE AMENDMENT OF THE FAIR LABOR STANDARDS ACT OF 1938 AND FOR OTHER PURPOSES, BEFORE SUBCOMMITTEE OF SENATE COMMITTEE ON EDUCATION AND LABOR

The National Association of Commissioners, Secretaries, and Directors of Agriculture is a nonprofit membership organization comprising the commissioners, secretaries, and directors of agriculture of the 48 States.

The constitutional and statutory duties of the members of the National Association, in addition to a general supervision of agricultural crop yields and the processing and marketing of agricultural productions, have largely to do with financial, social, and other economic benefits which can be effected in behalf of farmers, planters, processors, and agricultural industries within their respective States.

I am a member of the National Association and am in close contact with the activities of that organization. I am appearing before you as commissioner of agriculture of the State of Georgia, but, by reason of my contact with the national association, will say that I am confident that the views which I am expressing here are in accordance with those of the other 47 members.

The rights of labor are the same whether that labor is an organized group or an unorganized group.

The rights of labor are the same whether that labor consists of physical effort, mental effort, or a combination of both.

There is no difference under or Constitution between the rights of different labor groups. What appears to be a difference in their rights is simply a difference in their ability to enforce their rights.

Indeed, it is very easy to confuse the rights under the Constitution of a group with their power to enforce their demands.

Every American is supposed to subscribe to the oath of allegiance to the flag of the United States:

"I pledge allegiance to the flag of the United States of America and to the Republic for which it stands, one nation, indivisible, with liberty and justice for all."

This does not say justice for any particular group. It does not say justice for those who are organized strongly enough to enforce their rights. It does not limit justice to those who labor in any particular field of industry. It does not limit justice to those who contribute to the Nation's economic welfare in any particular manner, but it provides justice for all.

I also want to make it perfectly clear that we are not opposed to that portion of labor that is organized; on the other hand, we are their friends. We stand ready at all times to go to bat to see that they are not denied full justice in every way under our national economic set-up.

I also wish to make it clear that I am not appearing in any sense in opposition to labor and its demands at this time.

I believe without going into any discussion of the merits or demerits of what has already been done, that our Nation is faced today with an economic condition that makes it vitally necessary for all labor to receive high wages in terms of money.

I believe it is equally necessary, from the standpoint of the Nation's welfare, for all white-collar workers, professional people, school teachers, etc., to receive high salaries in terms of money.

Likewise, I believe it is most essential for all farm crops to bring high prices in terms of money.

This necessity is brought about by reason of tremendous national debts and other public debts which will prove a crushing load on the taxpayers unless very high incomes are to be had, together with a very large national income which will make it possible to refinance and carry this tremendous load of debt until it can be reduced and a sufficient part of it retired to leave only a manageable balance.

I have, I hope, made it perfectly clear that we are not antagonistic to any other groups. I would like to proceed to demonstrate to the members of this committee just where the American farmers now stand in the overall picture of our American economy.

From governmental sources I have prepared certain tables of figures, which will demonstrate in a very concise way the picture of the farmers' present condition. I believe that unless this picture is materially changed, that a tremendous economic upheaval in this country, and perhaps worldwide, is inevitable.

Since this hearing is concerned with industrial wages, I shall make comparison between the farmers' condition and industrial labor.

Let us go back to the years that the Democratic administrations have chosen as the base years. Let us assume that during these years the farmer was on an equality with business and industry. Let us compare his prices during that period with factory workers' pay during that same period; then, let's compare the price that the farmer gets for his crops today with factory wages today and see just how the farmer has fared for the last 35 years.

If farm prices today bore the same relation to factory workers' wages that they did during the base period, then the farmer today would be getting the following prices for basic farm products and crops:

For cotton, he would receive 52.20 cents per pound.

For corn, he would be receiving $3.30 per bushel.

His wheat would be bringing $4.45 per bushel.

Hogs in Chicago would be 38 cents per pound.

The average price of beef cattle in Chicago would be 39½ cents per pound.

HOW MUCH OF A FARMER'S CROP SHOULD PAY FOR AN HOUR OF FACTORY LABOR?

All figures used here are from United States Government statistics, authority for which I will cite at the close of this statement.

During the 5-year period of 1911–15, the average wage of factory workers was 21.73 cents per hour. During the year 1944 the average factory wage was 1.01½ per hour. This is an increase of about 500 percent.

From 1911–15 to 1944 the net change in the price of the farmers' five basic commodities was as follows:

| 1911–15: | *Cents* |
|---|---|
| Cotton, per pound | 10.44 |
| Corn, per bushel | 66.10 |
| Wheat, per bushel | 89.00 |
| Hogs, per pound | 7.60 |
| Beef cattle, per pound | 7.80 |
| 1944: | |
| Cotton, per pound | 20.51 |
| Corn, per bushel | 112.00 |
| Wheat, per bushel | 141.00 |
| Hogs, per pound | 13.20 |
| Beef cattle, per pound | 10.74 |

The following table shows the increase from 1911–15 to 1944 of the number of pounds of these five basic commodities required to pay for 1 hour of factory labor:

| 1911–15: | *Pounds* |
|---|---|
| Cotton | 2.08 |
| Corn | 18.40 |
| Wheat | 14.70 |
| Hogs | 2.80 |
| Beef cattle | 2.70 |
| 1944: | |
| Cotton | 4.95 |
| Corn | 50.75 |
| Wheat | 43.20 |
| Hogs | 7.70 |
| Beef cattle | 9.40 |

Further on in this statement I will submit tabulations which show how this change came about during the years.

For the benefit of any who might wish to make a party issue out of these facts, I would like to call attention of this committee to the fact that for either political party to try to make a party issue out of these facts would simply be a case of the pot calling the kettle black.

According to these governmental statistics the national administration in 1926–30 made the following increases in the number of pounds of each of these five basic commodities that were required to pay for 1 hour of factory labor as compared to the period 1911–15:

| 1911–15: | *Pounds* |
|---|---|
| Cotton | 2.08 |
| Corn | 18.40 |
| Wheat | 14.70 |
| Hogs | 2.80 |
| Beef cattle | 2.70 |
| 1926–30: | |
| Cotton | 3.61 |
| Corn | 40.30 |
| Wheat | 32.90 |
| Hogs | 5.40 |
| Beef cattle | 4.70 |

The next table shows the increase in the number of pounds of these five basic commodities that were required to pay for 1 hour of factory labor during the period of 1936–40 as compared with the period of 1926–30:

| 1926–30: | *Pounds* |
|---|---|
| Cotton | 3.61 |
| Corn | 40.30 |
| Wheat | 32.90 |
| Hogs | 5.40 |
| Beef cattle | 4.70 |
| 1936–40: | |
| Cotton | 6.48 |
| Corn | 57.90 |
| Wheat | 49.00 |
| Hogs | 7.80 |
| Beef cattle | 6.30 |

In passing, I would like to call the committee's attention to the period of 1931–35, which was partly Republican and partly Democratic.

Let us compare this period of 1931–35 to the base period of 1911–15.

The following table will show the number of pounds of each of these five basic commodities required to pay for 1 hour of factory labor during these two periods:

| 1911–15: | *Pounds* |
|---|---|
| Cotton | 2.08 |
| Corn | 18.40 |
| Wheat | 14.70 |
| Hogs | 2.80 |
| Beef cattle | 2.70 |
| 1931–35: | |
| Cotton | 5.46 |
| Corn | 57.50 |
| Wheat | 51.08 |
| Hogs | 8.90 |
| Beef cattle | 6.70 |

LABOR LAWS MUST BE BUILT UPON THE SAME BASIS AS ALL OTHER LAWS IN A DEMOCRATIC SOCIETY—EQUALITY OF ALL BEFORE THE LAW

There is no difference in the principle of enacting laws to guarantee labor a minimum wage and a law to guarantee the farmer a minimum price for his crop in line and on an equality with such labor wage.

In fact, the price which the farmer receives is the farmer's wage for his labor.

There is no difference in the principle involved. There is, of course, a marked difference in the position of the two groups. One group is in position to demand. The other group can only ask for justice at your hands.

One of the remarkable signs of the times is the fact that some of the labor leaders today are demanding higher wages for their own organized groups and are at the same time demanding lower wages for the farmer—the unorganized group.

There is a persistent and insistent demand, largely Government inspired, to force the American farmer to accept wages on the same basis as is now paid in other countries of the world.

They propose to force the farmer to accept low world-standard wages by forcing him to sell his crops in competition with and at world prices.

The very basis and foundation of our national economic policy is symbolized by the Smoot-Hawley Tariff of Act of 1930.

The reason that I say the Smoot-Hawley Tariff Act symbolizes the basic thinking of America is because it was passed by the Republican administration and has been kept in force by the Democratic administration since March 1933, more than 12 years.

The very foundation rock is protection of American producers and American labor against cheap wages and cheap commodities in the world market.

Suppose that the farmers of America were strongly organized as a group.

Suppose that such a farm organization should demand very high prices for farm products in the United States. Suppose that such farm organizations at the same time demanded a cut in industrial wages to the world level.

If this were the case, I presume that almost everyone would say that the farmers making such demands were unfair and unreasonable to the other working people of the country.

Is it not obvious to every person that it is equally unfair and unreasonable to expect the farmer in the United States to labor for a wage that is in line with the world level?

The American farmers cannot produce at world prices or even at the present United States prices of farm products and maintain decent American living standards.

THE AMERICAN MARKET FOR THE AMERICAN PRODUCER

We have never had a substantial surplus of farm products in the United States in the last 25 years.

What we called surpluses were imported.

Over a period of the last 15 years we have consumed the equivalent of 35,000,000 bales of cotton more than we have produced.

Had it not been for imports of rayon, jute, wool, cotton, and cotton and wool manufactures and semimanufactures, America would have consumed every bale of cotton produced even if there had never been any crop control.

From 1931 to 1941, according to Government figures, we imported the equivalent of 33,000,000 bales of cotton and cotton substitutes.

They tell us that farm mechanization will reduce the cost to the farmer of his crops.

Modern improvements and mechanization in cotton mills have not reduced the cost of a yard of cloth.

Modern improvements and mechanization in garment factories have not reduced the price of garments.

Modern improvements and mechanization have not reduced the cost of transportation or of communication.

Is it reasonable to suppose that modern improvements and mechanization will reduce the per unit cost of farm products? I say it is not to be expected.

While I represent a State in the old Cotton Belt the figures that I have presented make out a case equally well for other farm sections.

COTTON

Cotton is not the problem alone of the South. It is equally the problem of the balance of the country.

In the South lies the natural market for tremendous amounts of industrial goods.

In the South lies the potential for the production of vast quantities of meat, dairy products, poultry, eggs, fruits, and vegetables.

Every time that a cotton farmer is forced to abandon cotton it means additional production of corn, wheat, meat, etc., to compete with the farming States of the West and the Middle West.

Every time a cotton farmer is forced to abandon cotton it means a decreased supply of food, feed, and fiber for the national economy.

Whatever you do, be fair.

Whatever you do be fair with regard to industrial wages. Be fair to the farmer. Be fair to the unorganized groups. Be fair to yourselves and be fair to America. Feed us all out of the same spoon.

Respectfully submitted.

TOM LINDER,
*Commissioner of Agriculture,*
*State of Georgia.*

OCTOBER 15, 1945.

NOTE.—All figures used herein are taken from or based on Statistical Abstract of the United States of 1943, Crops and Markets, of the USDA, July 1945, and Information Relating to Cotton Problems issued by USDA, November 1944.

## Murray Full Employment Bill

EXTENSION OF REMARKS
OF
**HON. NOAH M. MASON**
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. MASON. Mr. Speaker, S. 380, the Full Employment Act of 1945, is both an illusion and a snare. It is an economic mirage painted to create false hopes. When carefully analyzed the bill promises an economic utopia, but it does not even attempt to set up the machinery to create this much to be desired utopia. The preamble of the bill expresses a pious purpose to which everyone, employers and employees alike, gladly subscribes. But how is full employment, this desired utopia, to be established and maintained? That is the rub.

From the dawn of civilization to the present time mankind has been misled time and again by false prophets who promised the millennium. Karl Marx, away back when, offered a plan to bring about full employment. He has had his followers. Stalin, Mussolini, Hitler, all followed in the footsteps of Marx. Stalin says—in the Communist constitution for Russia—"Citizens of the U. S. S. R. have the right to work, the right to receive guaranteed work with payment for their work in accordance with its quantity and quality." Hitler told his followers, "We shall banish want; we shall banish fear. National socialism is the revolution of the common man." Mussolini said, "It is only when private enterprise is inadequate that the state intervenes." Do we want to follow in the footsteps of Italy, Germany, or Russia? Do we want to exchange our conditions, imperfect as they may be, for the conditions that are prevalent today in either Italy, Germany, or Russia—conditions brought about as a resu't of following false leaders?

Mr. Speaker, Sir William Beveridge is the direct father of the Murray full-employment bill. He is the man that sold our late President on the idea of 60,000,000 jobs, full employment for all. Henry Wallace, Mordecai Ezekiel, and F. D. R. swallowed the full-employment bait held out by Beveridge, but ignored or overlooked the hook embedded in the bait. Now our labor leaders, both William Green and Philip Murray, have swallowed the bait, but they also have overlooked the hook. What did Beveridge mean when he said, "The state cannot undertake the responsibility for full employment without full powers. If trade unions under full employment press wage claims unreasonably, maintenance of a stable price level will become impossible; and wage determination will become a function of the state"?

In plain English, Beveridge's statement means that workers will be told where they must work, what hours they must work, and what wages they must work for. That is exactly where the followers of Mussolini, of Hitler, and of Stalin finally landed. It happened in Italy, in Germany, in Russia; and it can happen here—if Congress obeys the order contained in the Communist Party statement filed with the Senate Labor Committee, "Congress must adopt this legislation."

Considering the statement from the Communist Constitution for Soviet Russia guaranteeing full employment for all, and the brazen order of the Communist Party of America given to our Congress, "Congress must adopt this legislation," can there be any question as to what is the Communist Party line on Murray's full employment bill? Should Congress follow the Communist Party line in this matter?

"FULL EMPLOYMENT" MEANS WHAT?

"Full employment" does not mean that every citizen of the United States is going to be guaranteed employment in the job he wants to do, at the factory he wants to work, in the city or village where he prefers to live. To insure full employment our workers must be willing to work at jobs where and when they become available. The author of the full employment plan, Sir William Beveridge, in his book, Full Employment in a Free Society, places special emphasis upon the need for labor mobility, the need to shift workers from one place to another when and where needed. Therefore any full employment plan would bog down if workers staged a sit-down strike and insisted upon the right to work at their own job, in their own plant, in their own community.

## Peace Advocates Should Watch the Present London Conference

EXTENSION OF REMARKS
OF
**HON. KARL E. MUNDT**
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. MUNDT. Mr. Speaker, without fanfare or flourish of trumpets, there convened in London, England, on November 1 an international conference which in the long pull may well achieve more in the direction of maintaining permanent peace than all the conferences which have preceded it. I refer, sir, to the United Nations Educational Conference, which has as its objective the establishment of an International Organization of Educational and Cultural Affairs.

Members of this session of Congress will follow with special interest the deliberations and decisions of the present London Conference in view of the fact that it was their action in passing the so-called Mundt resolution (H. Res. 215) which started the processes by which the present Conference has eventuated. When I introduced House Resolution 215 early last spring I was gratified no end by the great response which welled up throughout the country in support of the proposals which it contained for the international cooperation of educational and cultural leaders, working through an appropriate organization, in the development of codes of conduct and patterns of thought which would tend to preserve the peace.

The favorable action of the San Francisco Conference of the United Nations in including provisions for educational and cultural groups in the San Francisco Charter provides further testimony that the peace advocates of the world have come to recognize that in the final analysis it is imperative that the hearts and minds of mankind be dedicated to the ways of peace if the scourge of future war is to be averted.

In this connection, Mr. Speaker, I call attention herewith to a recent editorial appearing in the New York Times which sheds additional light on the program now getting under way at the London Conference:

UNO'S CULTURAL WING

An undramatic but important UNO agency will make its bow in London tomorrow, when the United Nations Educational Conference opens. Even so, some elements of controversy will be present. Russia has held aloof so far, on the ground that the conference should have been called by UNO's Social and Economic Council, under whose roof it will ultimately reside. The French go little further than the general objectives of developing better cultural relationships among the nations and raising the standards of education. They think the new organization should "endeavor to enter into contact, in all countries, with the press, the broadcasting authorities, and all the other elements which contribute to the formation of public opinion." In countries with a censorship and an official propaganda line this function would be a delicate one. But the fact that the conference may get into a wrangle or two is not disquieting. What would be disquieting would be the spectacle of a group of polite gentlemen not taking education and culture seriously enough to argue about them.

Of course, these are really the most exciting subjects in the world. The evil sort of education produced Nazis, Fascists, and State Shintoists; it produced bullies, sadists, and murderers. The destructive varieties of culture glorified tyranny and war. The antidote is not a neutral and negative education and culture but one which will, in the words of Sir Alfred Zimmern, enable "the countries of good will to enter into closer relations." There can be an exchange of ideas through print, film, and radio; an exchange of teachers and students between countries; a sharing of the fruits of research; a growth of interest in those very differences in tradition which enrich our civilization. On such a basis it can be hoped that the Russians will overcome their original reluctance and come along in.

## Poles Wait Soviet Exit Impatiently

EXTENSION OF REMARKS
OF
**HON. GEORGE G. SADOWSKI**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. SADOWSKI. Mr. Speaker, under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I include the following article, Poles Wait Soviet Exit Impatiently, by Mr. J. Emlyn Williams, staff correspondent of the Christian Science Monitor, under date of November 2, 1945:

POLES WAIT SOVIET EXIT IMPATIENTLY

(By J. Emlyn Williams)

WARSAW, November 2.—No conversation between a foreigner and a Pole continues long before the inevitable question arises: "When are the Russians going to leave our country—when are we going to be free to live our own national life again?"

It is understandable that any people want to be masters of their own state, especially individualistic people such as the Poles, who have endured untold hardships and humiliations as a nation during the past 6 years. Anybody, for example, who has spent some time in France, Belgium, and Holland since VE-day could say the peoples of those countries also are longing for the time when the Americans and British depart from their soil, though these peoples are not quite so vociferous in their desires as the Poles.

Naturally, it is harder for the Poles to tolerate their situation, since the Russians played a significant role in the fourth partition of Poland in September 1939, and also since the Russian Army, unlike the American and British Armies, lives off the land and therefore is an expensive luxury, especially if the part Russia played in the later liberation of this country is forgotten.

HOW MANY RUSSIANS?

It cannot be ignored also that the behavior of many of these Russian troops, especially those demobilized in Germany and moving homeward across this country, has greatly exasperated the Polish countryside.

Despite many inquiries, it is impossible reliably to estimate the number of Soviet troops not only throughout Poland, but also in any given command or city. The Russians themselves are extremely vague when questioned, while the Poles do not know or give exaggerated figures, valuable more as an indication of their fears or dislikes than from the standpoint of accuracy.

At the same time, traveling through the greater part of Poland during the past month, I encountered Russians in almost every town, large and small, often not in large numbers, but sufficient to make their presence felt if desired.

There must be thousands of Soviet troops throughout the length and breadth of this country. A large number form garrisons essential to maintenance of supply routes across Poland to the Russian zone in Germany. How many are here for other purposes, such as to influence internal affairs in Poland, is another question impossible to answer. In towns like Warsaw, Krakow, and Stettin many members of the Russian security police, with blue bands around their military caps, are seen about the streets.

Much looting and other similar crimes have been attributed to the Russian troops by Poles, but the extent to which these are due to troops actually doing duty inside this country, to demobilized Russian soldiers, or to displaced persons returning to Russia often is most difficult to determine. Often acts are ascribed to Russians for which unruly Polish elements are responsible.

SPECIAL POLICE

But that these demobilized Russians have been a pest and terror for the Polish countryside none can deny. In fact, early in October this was tacitly admitted by a Russian higher officer (with the rank of general) attached to special provincial forces whose duties are defined as fighting marauders—interpreted as all those who "willfully steal cattle, corn, etc., and those participating in bandit raids."

In some quarters, there is a tendency to interpret this new development as a move to intensify the Soviet grip on Poland, but there is evidence that Russian military commanders themselves are much concerned about the damage to their armies' prestige from such wild actions. An interesting result of what has happened has been that the Polish peasant often has developed a sense of superiority against the Russians which is not without its political significance, since the Pole considers the present provisional government largely a Moscow creation.

The largest proportion of hundreds of horses and cattle which I have seen driven eastward along the roads of west Poland probably are Russian booty from Russian-occupied Germany or such booty as the Russians claim is theirs from parts of the new Poland which formerly were included in the Reich.

SELL BOOTY IN CITIES

It is difficult, however, for the impoverished Polish peasant to believe this when what little he has left is stolen by these marauding bands as they pass his small holding or village. Many of these Russian ex-soldiers get rid of their booty by selling it when they reach the large cities, especially as the Polish zloty is exchangeable for the Russian ruble at an equal rate and there are a number of reports that they are not permitted to take such booty across the Polish-Russian frontier.

Complaints also are heard against Russian soldiers stationed here that they are guilty of some looting, though generally most of their activities are much circumscribed in the many towns where they are confined to the barracks most of their free time. One of the main difficulties appears to be that here, as elsewhere, the Russian soldiers act as if the only orders they must obey are those issued by their own unit commanders.

So long as Russian troops remain in Germany, some part of Poland must continue to be a transmit area for their movements in and out of Russia. At present, the Russians have a specially reserved broad-gage railroad across the southern region, roughly via Katowice, Krakow, Tarnow, and Lwow.

How long this will continue remains to be seen, especially as this also is the route for transporting upper Silesian coal to Russia, much of which is going now as reparations.

OFFICERS SPEAK POLISH

A more important question is the extent to which the Soviet is influencing Poland's internal affairs. Of course, this is more difficult to answer, since information on such an issue is always hard come by. At the same time, some facts are outstanding. Many high officers in the present Polish Army speak only Russian, being Poles resident in the Soviet Union before the present war and who early joined the forces organized by the Lublin Provisional Government.

The extent to which their sympathies would be Russian rather than Polish in case of any issue is impossible to say. The fact that they are Russian speaking, however, does increase prejudice among the more patriotic Poles and gives plenty of opportunity for talking about Russian influence in Poland's affairs.

Another significant fact noticeable is that when a person calls a Polish Government department on the telephone, he often is answered by a person who is unable to speak any Polish—only Russian. Whether such persons actually are Soviet citizens or belong in the same class as the army officers just referred to would take much investigation to establish.

Clarification of this issue of Russia's influence on Poland's affairs probably will only come after elections indicate the trend in Polish politics. It also would be easier to determine the extent to which unruly Russian or Polish elements are responsible for much rowdiness presently in Poland were it not mixed up so much by vodka drinking and the befuddled actions resulting therefrom.

## A Returned Veteran Offers Timely Suggestions on Universal Military Training Legislation

EXTENSION OF REMARKS
OF
## HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. JOHNSON of Oklahoma. Mr. Speaker, within the past several days I have received many letters, especially from Oklahoma, for and against universal military training. A considerable number of such letters take an extreme view, either for or against such proposed training.

On the other hand, I am pleased to find, judging from sentiments expressed by those who have written me on the subject, that the public well understands the issues involved, and can be depended upon to take a sane, fair and practical view of this important problem as concerning all public questions.

I am also firmly convinced that not only the enlisted men but the fathers, mothers, wives, children, and other loved ones of our gallant young men and courageous young women who have served in the armed forces are equally as interested in the welfare of our country as are the high-ranking Army and naval officers of the Nation.

Judging from the rather voluminous mail I have received on the subject of universal military training, most citizens have not so soon forgotten how hopelessly unprepared we were during the past couple of decades and are determined that never again shall the Nation be caught off guard and asleep at the switch.

It is also significant, however, that many of our citizens who are strong believers in preparedness are very definitely opposed to conscription. Others say they have no objection to any reasonable form of military training, but are unwilling to turn over the education of our 18-year-old boys to the United States Army. It has been surprising to note how many such letters have come from young men and boys who have served in some branch of the armed forces during the recent war. Typical of those letters is one from Ray L. Smith, a well-known young war veteran who has returned to finish his education at Oklahoma's Agricultural and Mechanical College, at Stillwater, Okla. The letter in question presents food for thought. It follows:

STILLWATER, OKLA., *October 24, 1945.*
Congressman JED JOHNSON,
*Washington, D. C.*

DEAR MR. JOHNSON: I am writing to you, after having read the President's address on military training. I agree that some training should be given every young man that is physically fit. But it seems unwise to me to place the boy in some training camp just as soon as he has completed his high school work.

I am a returnee, now attending Oklahoma A. and M. College, and having been away from school now for several years I am finding it rather hard to settle down to the routine of the classroom. Others with whom I have talked are finding it the same way.

If the young students are not allowed to continue their education after completion of high school, they will not go on after being released, as many of the returnees are now doing (it is a small percentage of the veterans that are going back to school). Most of our colleges have ROTC units on the campus and require four semesters of the various types of military training. There are some boys, however, that would choose to go into training rather than go to college.

I feel that criticizing a plan is not worth very much unless something better is offered so here is my suggestion:

1. Register every boy as he becomes 18.

2. Upon completion of his high school allow him a choice of (1) going to a training camp for 1 year or (2) attending a college (where ROTC is required) for 4 semesters.

3. The boy would be sworn into the ROTC as a private, or apprentice seaman, and would be furnished at Government expense: (1) his books and tuition; (2) his uniforms; (3) a suitable subsistence allowance (for room and board). There would be no monthly salary for the boys taking advantage of this plan.

4. The one requirement would be that the boy must pass at least 12 credit-hours each semester or serve the remainder of service

in a training camp (giving each semester the equivalent of 3 months in the regular training).

I feel that this type of training, if handled properly would prove more satisfactory than requiring every boy to go to a training camp for a period of 1 year. I hope that, after reading this, you will feel the same as I, that our boys thus trained would be more ready for the task that lies ahead of them.

Sincerely,

RAY E. SMITH.

## Twenty-Year Sugar Quota for the Philippines

EXTENSION OF REMARKS

OF

### HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, we have before this Congress H. R. 4185, a bill to provide the Philippines with a flat 20-year quota of 850,000 long tons of sugar, duty free. This quota is similar to the quota given to the Philippines before the war. Senator TYDINGS has also proposed a quota for a 20-year period, qualified by a provision that duty is to be applied on an increasing basis until full duty is paid at the expiration of 20 years.

Proposals are being made to take care of Cuba on a less than full duty basis and a guaranty that Cuba would be assured 40 percent of the American postwar sugar market. Cuba's share of the American market was set at 28.6 percent in the 1937 Sugar Quota Act. The continuing acts carried the same figure. This new 40-percent Cuban quota proposal not only gives that foreign country an 11.4-percent additional cut in our domestic market but the supporters ignore the fact that Cuba's share of our market has been steadily increasing even under the 28.6-percent basis.

Enactment of the above proposals would result in American sugar-beet producers being in an even more uncomfortable position than before the war. Such legislation would not only necessitate curtailment of domestic production, but it would actually block any possibility for expansion of sugar production in this country.

Sugar is one crop in the category of farm commodities of which we have never produced more than a small fraction of our requirements. However, if the market of sugar is to be handed to foreign countries, what chance has the present grower of the crop in future years.

On this question I vigorously protest the present proposal to guarantee the future economy of Cuba at the expense of the American farmer. How long must the policy be pursued of sacrificing American lives, money, and resources to assure peace in the world, only to be followed by a policy of sacrificing the domestic markets of American farmers? What has Cuba done that she should be rewarded by a flat guaranty of any certain percentage of the American sugar market?

Let us take the case of the Philippines. Is it not reasonable that instead of encouraging the islands to go back to an economy based on sugar, that the time is at hand to serve notice on them that as an independent nation they must build a diversified economy?

Our sugar policy has been largely dominated by the free traders and interests with heavy financial investments in Cuban and Philippine sugar production, as well as by those owning the coastal refineries in this country. Are these groups going to be allowed to thwart the ambitions of the unorganized farmers of this Nation? Such will be the case unless we, the United States Congress, belligerently expose these selfish interests and mistaken ideas today expounded as to what is best for our own agricultural welfare.

## "Stalining" State Department

EXTENSION OF REMARKS

OF

### HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. SHAFER. Mr. Speaker, we have heard a good deal recently about streamlining the State Department. But I would say that what is actually taking place is the "Stalining" of the State Department. For those who may be mystified by this unusual term, let me define it as the process of making changes in personnel and policy with a view to their acceptability in the eyes of Joseph Stalin.

It would seem that we are no longer masters in our own house. Like the Soviet-dominated puppet governments of eastern Europe, we have chosen to grovel and curry favor with a dictator who owes much of his present power to our help and support and so important a policy-making agency of this great Republic as the State Department is no longer an independent instrument of the American people. The American people did not sacrifice their blood, sweat, and tears during the past war in order to surrender their sacred birthright as a free Nation. They have not been told of the significance of the changes which have taken place, nor have they ever approved of this line of action. They have a right to know the true facts.

In presenting these facts I have no desire to disparage the work of Secretary of State James F. Byrnes, who conducted himself with such marked statesmanship and courage at the recent Council of Ministers Conference in London. I have the feeling that full responsibility for the changes I will describe rests elsewhere with those who are more concerned with petty, partisan advantage in this or that election campaign, than with the security of our Nation. I am certain that recent appointments and policy changes will tend to disintegrate, nullify, and vitiate all efforts to set America on the road toward a far-sighted and sound foreign policy of intelligent self-interest.

To fully understand the picture, one must appreciate the nature of the Soviet squeeze-play tactics. On the one hand we have the hard-boiled Soviet diplomacy operation within the United Nations Organization supplemented by the undemobilized might and unilateral tactics of the Red army. On the other we have Stalin's foreign legion, the Communist Party of the United States threatening increasing internal disorder—witness the recent dock strike in New York, Kelsey-Hayes wheel strike in Detroit, the film strike in Hollywood, mass demonstrations of unemployed, and so forth—and controlling enough votes to hold a balance of power in such important areas as New York, Detroit, California, and a number of larger industrial cities. Those who would scoff at the few hundred thousand Communist voters throughout the country, should bear in mind Lenin's instruction to his followers to take hold of that particular link in the chain by which the rest of the chain may be controlled. Thus 200,000 Communist-controlled American Labor Party votes may be enough to decide an election in New York City, which controls the balance of electoral power in New York State, which is in turn a pivotal State in national elections. That is how the tail wags the dog. Now let us get down to cases.

On June 5, 1945, the Democratic Party of New York City picked William F. O'Dwyer as its candidate for mayor in that city. After considerable haggling, the Communist-controlled American Labor Party endorsed Mr. O'Dwyer on June 12, 1945. Communist endorsement had, however, long been assured. On June 1, 1945, the Daily Worker hailed O'Dwyer as the popular Kings County district attorney. On August 21, the Communist New Masses urged its readers "to throw every ounce of effort in the campaign behind the Democratic-ALP slate." At its twenty-sixth anniversary on September 18, in Madison Square Garden, the Communist Party, through its president, William Z. Foster, urged its followers to support O'Dwyer. Since nobody would hazard the ridiculous charge that O'Dwyer is a Communist, and since Communist support was not therefore based upon any ideological sympathy or kinship, the natural question is, What was the price of this strange political deal in which Bob Hannegan and the national committee of the Democratic Party could not disclaim their interest.

The key to the mystery of the Red endorsement of Tammany Hall, long anathema to the Communist Party and its principles, and to the strange deal behind this endorsement, lies perhaps in the very nature of this party. It lies in the fact that the Communist Party is primarily concerned at all times and in all its maneuvers with the advancement of the interest of the Soviet Government. It will be remembered that American Communists opposed American entry into the war until the Soviet Union was attacked, when they became foremost in their demand for a second front. Communist interest in the State

Department, its policies and personnel, should therefore be understandable to all. Permit me to illustrate this with a few quotations and the developments that followed.

On June 2, 1945, the national board of the Communist Political Association, now the Communist Party, adopted a resolution containing the following peremptory demand: "Remove from the State Department all pro-Fascist and reactionary officials." In plainer language this means, of course, the removal of all officials whom the Soviet Union considers unacceptable for the advancement of its purposes.

The Communists were not satisfied with this general demand, however, and proceeded to name specific individuals whom they held in disfavor. Chief among them were Assistant Secretary of State Joseph C. Grew and his associate, Julius Holmes, who pressed the indictment of six individuals charged with the "illegal and disloyal conveyance of confidential and secret information to unauthorized persons." Phillip J. Jaffe, alias J. W. Phillips, editor of the Communist magazine, Amerasia, and a heavy financial contributor to the Communist Party, was the recipient of these documents. The Daily Worker, on June 9, saw in this case a policy shift in the State Department, "revealing its own changeover to a reactionary diplomacy in the Far East."

The subsequent exoneration of three of the defendants, the public apology to John Stewart Service, one of the defendants, by Assistant Secretary of State Grew, followed by his resignation, have been described in detail by my good friend, the Honorable GEORGE A. DONDERO, of Michigan, in his speech of October 10. Assistant Secretary of State Julius Holmes also resigned. Throughout this case the disapproval of Dean Acheson, Assistant Secretary of State, was evident. Small wonder that on June 7, Adam Lapin, Washington correspondent of the Daily Worker, hailed him as "one of the more forward-looking men in the State Department." On August 13, 1945, Mr. Acheson offered his resignation. On August 16, 1945, Mr. Acheson accepted the post vacated by Mr. Grew. We do not know the basis of this adjustment. We do know that practically all but two of the "espionage" cases have since been liquidated, in one case involving a fine for journalistic irregularity, nothing more.

The satisfaction of the Communist press was undisguised, as was to be expected. In the Washington Notes column of the Worker of October 7, 1945, we find the following gratified comment:

> With the assistant to Assistant Secretary of State James C. Dunn, Eugene Dooman, who was chairman of SWINK, the powerful interdepartmental committee representing State, War, and Navy, and former Acting Secretary Joseph Grew out, the forces in the State Department which were relatively anti-imperialist were strengthened.

For "anti-imperialist" one must, of course, read pro-Soviet appeasement. The knowledge of the internal workings of the State Department displayed by the two Washington correspondents of the Worker in this article is truly remarkable. Eugene Dooman, by the way, has been with the Department for over 30 years and is looked upon as one of the leading international experts on the Far East. His loss is irreplaceable.

But the Communists were not satisfied with these initial successes in their attempt to make the State Department into an adjunct of the Soviet Foreign Office. They continued their fire against every individual who showed a spark of courage in resisting their machinations. On June 7, 1945, Adam Lapin reported in the Daily Worker that—

> Truman is thinking seriously of a drastic shake-up in the State Department, involving the removal of Stettinius, Rockefeller, and Assistant Secretary James Clement Dunn * * * Dunn has long been one of the most ardent anti-Sovieteers in the Department.

Lapin explained further that Assistant Secretary Rockefeller had committed the horrible crime of reporting to a House appropriations subcommittee that his agency should be maintained for Latin America because he believed it was "essential to combat communism."

"To our mind," declared the New Masses of June 26, 1945, "one of the best indexes as to how well the administration intends to work with the U. S. S. R. in the interest of world peace would be found in the retirement of these men," referring to Averell Harriman, James Clement Dunn, and Nelson Rockefeller. The Daily Worker on June 2 had previously called attention to an alleged statement by Mr. Harriman, quoted by none other than the pro-Soviet radio apologist named Johannes Steel, that the "interests of the United States and the Soviet Union are irreconcilable." What was the result of this barrage?

The subsequent resignation of Mr. Rockefeller brought forth the following laudatory comment from the New Masses of September 11, 1945:

> The removal of Nelson Rockefeller from his post as Assistant Secretary of State in charge of Latin-American affairs is a public repudiation by the State Department of the policy it pursued from the Chapultepec meeting through UNCIO.

The fruits of this change were far reaching. We proceeded immediately to become embroiled with Argentina and to alienate the Latin-American countries which had stood by us so loyally throughout the recent war and throughout the United Nations Conference. We practically torpedoed the good-neighbor policy by calling off the Rio de Janeiro conference without consulting our Latin-American neighbors. In the meantime, the Soviet Foreign Office was reaping a harvest by establishing new ties throughout Latin America. It is not without significance to point out in this connection that the Communist Party of Ecuador has blocked the granting of aviation bases to American interests, that the Communist Parties of Argentina and Brazil have been legalized, and that our attack on Peron has been repudiated by the Argentinian people.

On July 9, 1945, James Clement Dunn and Edward R. Stettinius, Jr., were assigned to take charge of the apparently still-born United Nations Organization in London. Mr. Dunn has for many years been the sheet anchor of the State Department. He has provided that element of experience and continuity so necessary to the formulation of a sound foreign policy. He has been taken out of his important policy-making post to fight windmills in London. That makes two more down for the Communists.

Others are slated for the ax if the Communists continue to have their way. The New Masses of August 14, 1945, demands "the removal of Admiral Leahy from his post as President Truman's personal chief of staff." The reports are that the admiral is slated to resign as of January 1, 1946.

One must really read what the left-wing press has to say to know what is actually going on. Here, for example, is the statement of Blair Bolles, who was one of the foremost defenders of Communist Marshal Tito and who was a leader in the campaign to defame Mikhailovitch. In an article in PM of October 7, 1945, he says:

> STATE DEPARTMENT TO FOSTER LEFTER U. S. S. R. TIES—BYRNES SEEKS LIBERAL AIDES TO DEVELOP MORE INTELLIGENT POLICY
>
> What the Government seeks now is to develop a diplomacy based on better appreciation of what the Soviet wants. That explains in part the search for liberals. The various assistant secretaries are soliciting their acquaintances for names of possible appointees of progressive tinge. The pay rolls of OSS, OWI, and OIA include names of many liberal thinkers, who previously have disturbed the most conservative elements in the State Department and their transfer to the Department is turning the balance of opinion in their direction. The decision of General Eisenhower to dismiss General Patton as chief of occupation in the eastern area of the American zone in Germany came after prodding from the State Department.

Let no one be deceived by such terms as "liberal" and "progressive," which are merely Mr. Bolles' way of designating his pro-Soviet confreres. The foregoing comment on General Patton should be judged in the light of a New Masses statement of October 2, 1945, which says:

> Gen. George S. Patton should be removed at once as head of the military government in Bavaria.

It should be judged also in the light of the widespread campaign of disparagement and slander carried on by Soviet agencies and the American Communists against outstanding representatives of the American armed forces. Of which, more anon.

Some of the recent State Department appointments bear out Mr. Bolles' predictions, although there have been a number of sops to keep the conversatives quiet. Among them we find Alfred McCormick placed in charge of State Department Intelligence and of coordinating the OSS and the OWI forces into the Department. He has been associated for a number of years with Assistant Secretary of War John J. McCloy in the law firm of Cravath, DeGersdorf, Swain & Wood. Mr. McCloy stoutly defended granting commissions to Communists in his testimony before the House Committee on Military Affairs on February 27,

1945. Mr. McCormick was in full agreement with Mr. McCloy on this policy and acted accordingly while he was with Military Intelligence prior to his present appointment.

Mark Etheridge, general manager of the Louisville, Ky., Courier Journal, has just been appointed as special representative of the State Department to investigate conditions in the Balkans. On April 15, 1940, he was chairman of a meeting of the Southern Conference for Human Welfare, described as a well-known Communist front organization in the South. A speaker at this meeting was John P. Davis, executive secretary of the Communist-controlled National Negro Congress, a man with a long Communist record. Mr. Etheridge has been designated in the Daily Worker of July 27, 1944, as one of the initiating sponsors of the Independent Voters Committee of the Arts, Sciences, and Professions, which is closely interlocked with the National Citizens' Committee of the PAC. Both of these committees have had the open support of the Communists. It is rather curious that Mr. Etheridge's appointment was immediately hailed by the Rumanian pro-Soviet puppet, Premier Groza. I have no means of knowing how he became acquainted with the talents of Mr. Etheridge. But I can guess. According to a New York Times dispatch of October 19 by Sam Pope Brewer, "Communists are spreading the word that this visit is intended to pave the way for recognition of the Groza government."

On October 15, the State Department announced the appointment of Ralph McGill, editor of the Atlanta (Ga.) Constitution, as a special adviser and consultant. Mr. McGill has been a sponsor of the Southern Conference for Human Welfare, which followed the line of the Communist Party completely on foreign policy. He was comptroller of the National Citizens Political Action Committee during the 1944 campaign.

Among those appointed to attend the London Conference of the Educational, Scientific, and Cultural Organization of the United Nations, are Archibald MacLeish, former Assistant Secretary of State, poet and supporter of numerous Communist front organizations; Prof. Harolow Shapley, chairman of the conference of the Independent Citizens Committee of the Arts, Sciences, and Professions held in New York City on June 22–23, 1945, a Communist front publicized in the Worker of June 3, 1945, page 7. Shapley organized a recent delegation of scientists to the Soviet Union. He has stoutly advocated giving Russia the secrets of the atom bomb. He has been a member of the Citizens Committee to Free Earl Browder. The technical secretary of this conference will be Bryn J. Hovde, of the State Department, who was a character reference for James Hulse Dolson, internationally known Communist agent, in 1937.

I have already pointed out that these appointments have paid the Soviet Union fruitful dividends. I have already mentioned the applause with which the Communist press greeted them. As Virginia Gardner and Art Shields admitted in the Worker of October 7, 1945, these appointees "were able to push through certain directives which had been held up in committee theretofore." Let me enumerate.

First:

The recent rebuke to Gen. Douglas MacArthur's policies given by Assistant Secretary of State Dean Acheson was the culmination not only of a split in the State Department but in the War Department itself. (Worker, October 7, 1945, p. 2.)

Second:

The set of directives for treatment of Japan which the White House recently released were even better than the original directives which had been flown over to MacArthur and apparently lay ignored somewhere on his desk or thereabouts. Among those most alarmed and exercised by the MacArthur policies and the complete lack of carrying out of directives from the State Department was Assistant Secretary of War John J. McCloy. In fact, McCloy is said to be determined that the new directive shall be carried out even if he has to go over to Japan and take a look-see himself. (Worker, October 7, 1945, p. 2.)

Please note that the attack on MacArthur by Acheson preceded a later attack by Soviet Minister Molotov.

Third. When former Secretary of the Treasury Henry Morgenthau's plan for dealing with Germany was made public, it was received with wide-spread condemnation by the press and by Congress. It has never received congressional approval. Nevertheless, the State Department issued a directive to General Eisenhower on October 17, 1945, incorporating the main features of Mr. Morgenthau's plan. This plan had the hearty approval of the American Communists and the Soviet Union. It may, in fact, have been originally drawn up by Harry D. White and Gregory N. Silvermaster, of the Treasury Department, both of whom have Communist records.

It is high time to call a halt to this alarming disintegration and infiltration of our most important Government department. It is high time to call a halt to a policy of appeasing dictators, which has never borne any but ar evil fruit. It is high time for the appointment of men of principle, who cannot be corrupted, who will fight for American democracy regardless of the consequences to themselves. It is high time that some of us here at home emulate the spirit of courage, idealism, and self-sacrifice displayed by our boys on the field of battle. It is high time that we set ourselves to the noble task of defending, come what what may, the Nation they did so much to safeguard and preserve. It is time for high-minded, intelligent Americanism.

## What Willkie Said on Colonialism

EXTENSION OF REMARKS

OF

### HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. SADOWSKI. Mr. Speaker, the St. Louis Post-Dispatch under date of November 1, 1945, printed excerpts from the radio address of October 26, 1942, delivered by Wendell Willkie, after he returned from his world tour. It appears to me that the statements made by him at that time are even more pertinent and important today. Under leave to extend my remarks I wish to include in the CONGRESSIONAL RECORD the article from the St. Louis Post-Dispatch.

WHAT WILLKIE SAID OF COLONIALISM—LATE REPUBLICAN LEADER WARNED 3 YEARS AGO THAT AMERICA WOULD LOSE ITS "RESERVOIR OF GOOD WILL" ABROAD IF IT DID NOT INDORSE SUBJECT PEOPLES' ASPIRATIONS FOR LIBERTY; FOUND MILLIONS IN EAST DETERMINED TO END IMPERIALISM; URGED THAT WE JOIN IN CONDEMNING INJUSTICE

[From radio address by Wendell Willkie, October 26, 1942, after his world tour]

This world we live in has become small, not only on the map but also in the minds of men. All around the world, there are some ideas which millions and millions of men hold in common, almost as much as if they lived in the same town. One of these ideas has tremendous significance for us in America; it is the mixture of respect and hope with which the world looks to this country.

I bring back to you this clear and significant fact: that there exists in the world today a gigantic reservoir of good will toward you, the American people.

I was amazed to discover how keenly the world is aware of the fact that we do not seek—anywhere, in any region—to impose our rule upon others or to exact special privileges.

All the people of the earth know that we have no sinister designs upon them. They know that in this war we are not fighting for profit, or loot, or territory, or mandatory power over the lives or the governments of other people. That, I think, is the single most important reason for the existence of our reservoir of good will around the world.

Now, as I see it, the existence of this reservoir is the biggest political fact of our time. No other western nation has such a reservoir. Ours must be used to unify the peoples of the earth in the human quest for freedom and justice.

A LEAKING RESERVOIR

The preservation of this reservoir of good will is a sacred responsibility not alone toward the aspiring peoples of the earth but toward our own sons who are fighting this battle on every continent. For the water in this reservoir is the clean, the invigorating water of freedom.

I bring you the assurance that this reservoir exists. I also bring you the warning that it is leaking. It is leaking dangerously. It is leaking at a thousand points. It is leaking through steadily spreading cracks and holes.

These holes have not been punched in the reservoir by Hitler. They have been punched by us. All the leaks in this priceless reservoir are of our own making. For the very existence of this reservoir is built on confidence in us, in our integrity of purpose, our honesty in dealing, our ability in performance.

Doubts were expressed to me in simple, unmistakable questions. "Is there to be a charter only for the millions of the Western Hemisphere?" they asked. "Is there to be no charter of freedom for the billion people of the East? Is freedom supposed to be priceless for the white man, or for the western world, but of no account to us in the East?"

People of the East who would like to count on us are doubtful. They cannot ascertain from our Government's wishy-washy attitude toward the problem of India what we are likely to feel at the end of the war about all the other hundreds of millions of eastern peoples. They cannot tell from our vague and vacillating talk whether or not we really do stand for freedom, or what we mean by freedom.

In Africa, in the Middle East, throughout the Arab world, as well as in China and the whole Far East, freedom means the orderly but scheduled abolition of the colonial system. The rule of people by other peoples is not freedom, and not what we must fight to preserve.

THEY INTEND TO BE FREE

I am talking about the colonial system wherever it exists, under whatever nation.

Not all the peoples of the world are ready for freedom, or can defend it, the day after tomorrow. But today they all want some date to work toward, some guaranty that the date will be kept. For the future, they do not ask that we solve their problems for them. They are neither so foolish nor so faint-hearted.

They ask only for the chance to solve their own problems with economic as well as political cooperation. For the peoples of the world intend to be free, not only for their political satisfaction, but also for their economic advancement.

Men and women all over the world are on march—physically, intellectually, and spiritually.

After centuries of ignorant and dull compliance, hundreds of millions of people in eastern Europe and Asia have opened the books. Old fears no longer frighten them. They are no longer willing to be eastern slaves for western profits. They are beginning to know that men's welfare throughout the world is interdependent.

WESTERN WORLD ON TRIAL

They are resolved, as we must be, that there is no more place for imperialism within their own society than in the society of nations. The big house on the hill surrounded by mud huts has lost its awesome charm.

Our western world and our presumed supremacy are now on trial. Our boasting and our big talk leave Asia cold. Men and women in Russia and China and in the Middle East are conscious now of their own potential strength. They are coming to know that many of the decisions about the future of the world lie in their hands. And they intend that these decisions shall leave the peoples of each nation free from foreign domination, free for economic, social, and spiritual growth.

These peoples of the East want us to join them in creating a new society, global in scope, free alike of the economic injustices of the West and the political malpractices of the East. They want us neither hesitant, incompetent nor afraid. They want a partner who will not hesitate to speak out for the correction of injustice anywhere in the world.

## Palestine and the Jews

EXTENSION OF REMARKS

OF

### HON. FRANK T. STARKEY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. STARKEY. Mr. Speaker, it seems to me that no fair-thinking man or woman should be in doubt in regards to the Palestine question. Without attempting to trace the lengthy history of the Jewish "rights" to Palestine, the home of their shrines, the fount of their religion, the Promised Land which they sought in their long journey through the wilderness, I need only call attention to the Balfour Declaration of 1917 which gave the Jews the opportunity to establish a homeland in Palestine if they so desired at the conclusion of World War I.

The Jews desired to establish a homeland, and they have turned this ex-desert, formerly used for grazing, into an agricultural productive country that today supports almost twice as many persons as it supported 25 years ago. And it is worthwhile noting that as the Jews demonstrated that this land could be made productive the Moslems began returning to it so that in the years 1922 to 1942 almost as many Moslems settled or rather resettled in Palestine as Jews.

I do not know all of the intricacies of international diplomacy in the Near East, but on the surface this seems to me very much as though somebody sold me a chicken and then sent his poor relations over to help me eat it. The British captured the land from Turkey, a German ally in World War I. A mandate of the League of Nations gave the governing of this land to Great Britain. Great Britain, in the Balfour Declaration and its implementation in the 1920's, gave the Jews an opportunity to establish a homeland. The Jews came in and bought the land—I repeat, bought—from the Moslem owners who knew they were getting a very high price for it. After all, grazing land is only worth a couple of dollars an acre. The Jews paid an average price of more than $200 an acre, and many Moslems sold their land and retired rich.

But the Jews brought in modern equipment and methods, new farm machinery, electricity, roads, modern dams, irrigation pumps, and all the comforts and labor-saving devices of modern life. Soon Palestine had the highest standard of living in Arabia.

The result was that the Arabs became envious. Many returned to live in Palestine and enjoy some of these modern comforts. Other held on to their land, upping the prices outrageously, and brought in relatives and friends to live with them. After all it was better than the desert where the poor are little better than slaves.

Here, I believe, we have the crux of the matter. Arabia is land poor. Years of grazing and wind have blown almost all the good top soil away—save for some few valleys. The climate is dry and good for only limited habitation without irrigation and reclamation. The Jews come in, buy the land, and, using modern methods and modern knowledge, make it productive. The Arabs become jealous and wish they had land as fruitful as the land the Jews are farming. When they had it they used it for sheep raising, but now suddenly they see the fields of grain, the citrus orchards, the grape arbors, the pleasant homes of the Jewish farmers, and they want that land back, forgetting the millions of idle acres they own.

The higher standard of living in Palestine arouses envy on the part of the poor Moslems, but it also arouses fear in the hearts of some of the local Arabian princes. They see the worker in Palestine paid wages far beyond any they intend to pay to their followers. They see their retainers dissatisfied with the conditions under which they must live and envious of the Jews. What is easier than to turn this dissatisfaction into anti-Jewish activity. And soon some alarmist writes that the entire Arabian world is seething with unrest and likely to rise in arms and drive the British into the sea.

What foolishness. No Arab horseman is going to charge a British tank. No sheik and his followers are going to sneak up on a squadron of Spitfires. The Moslems are too intelligent to pick a fight which can have but one outcome, particularly as there is no occasion to fight. The Jews want to return to their homeland. They want to buy land from the Arabs at a price which is not only fair but munificent. In spite of all the smoke screens thrown over the situation, I suspect that many Arabs want to sell. I also know that the vast numbers of ordinary Arabian people want to raise their standard of living however well satisfied some wealthy prince may be with his.

I have then this suggestion to make: That Palestine be immediately opened to unrestricted Jewish immigration; that the Jews be allowed to purchase and improve land; that the Arabs be recompensed for this land at a price equal to the average Palestine acreage cost between 1922 and 1942 plus what would be a fair present-day mark-up; that the United States and Great Britain jointly offer to the Arabian nations financial and technical aid enabling them to improve their land, their agriculture, and their standard of living.

We have the knowledge and the tools to loan to the Moslems, enabling them to build dams, roads, and reclamation projects of their own, and once they become content and prosperous on their own land they will not spend so much time envying their neighbors.

If this project does not come under one of the new international loaning agencies which we are establishing, I believe that the United States Government itself should make a special long-term interest-bearing loan to Great Britain to be reloaned in turn to Moslems for agricultural rehabilitation. We would, of course, supervise the expenditures under this loan, and we would hold Great Britain responsible for it, taking, if necessary, a lien on certain British oil rights in the Near East.

In closing I want to urge upon every Member of Congress to join me in asking President Truman and Secretary of State Byrnes to request Great Britain to remove the restrictions on Jewish immigration to Palestine immediately and to join with the United States in any program that will enable the unhappy persecuted refugees of Europe and other Jews who wish to join them find a haven in the land they have so long sought.

At present there are press reports of outbreaks of violence against Jews in the Near East, of looting of shops, of assaults against peaceful men and women. These disorders must be checked at once. If we are going to maintain world-wide peace let us start by maintaining order in the lands of the peace-loving nations of the world. There is need for urgency on this matter. We must act at once. Prime Minister Attlee is visiting this country as the guest of President Truman. I strongly recommend that the American position be made clear to him, and that he be made to realize that we

want no compromises or appeasements. Palestine must be opened to unrestricted Jewish immigration and the promises of the civilized world redeemed.

## When Are Our Troops in China Coming Home?

EXTENSION OF REMARKS
OF

### HON. ALBERT J. ENGEL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 5, 1945*

Mr. ENGEL of Michigan. Mr. Speaker, while in China in the early part of September as a member of the War Department Subcommittee of the Appropriation Committee, we held a number of conferences with Army officials. Naturally the question came up as to just when we could get our troops out of China and send them home now that the war is over. We were told at one of these conferences that the job could and would be finished by December 15; that they expected to fly the troops from Kunming, China, across the Hump to Karachi, India, where they would embark for the States. We were further told that all China wanted was a military mission and were given to understand that the Chinese divisions would take care of the Japanese prisoners of war.

That night in passing through the Red Cross at Kunming, where we stayed, I was approached by a number of the soldiers with the usual question, "When do we get home?" The morale in China was very low. China was shut off from all supplies except what came over the Hump by air. Fresh vegetables could not be used without cooking, the water had to be boiled even for cleaning teeth, and there was very little, if any, entertainment. Naturally, when these boys asked me I told them what I had been told and that we expected to get them out by December 15 for the States. The story was published in the China Lantern. To my amazement and surprise I was sent a copy of another issue of the China Lantern, which I am attaching hereto, in which General Wedemeyer stated that they expected to keep the troops in China to assist in repatriating and deporting approximately 2,000,000 Japanese soldiers to Japan.

On October 17, I wrote a letter to the Honorable Robert P. Patterson, Secretary of War, and on October 29, I received his reply, copies of which I am including in my remarks. I was pleased to learn that the War Department stated that our assistance to the Chinese will principally consist "in movement to reoccupational areas of Chinese Armies, and contacts on a staff level concerning the repatriation and deportation of 4,000,000 Japanese." The Secretary of War further states that "relatively few Americans are involved in this operation and they will be withdrawn continuously and returned to the United States."

I want to add however that I am very much alarmed at the activity of the American Army in China. You cannot help to move troops in a country that is at war, and China does have civil war, without becoming involved on one side or the other. Selling China war materials is one thing, helping to maneuver her troops into a position where she can defeat those with whom she is at war is another, and is actually taking part on one side of the civil war in China. The American people will not tolerate any action on the part of our Government which will involve them in another war in the Orient. Every American and I think every Member of Congress wants these men brought out of the China-Burma-India theater as soon as possible now that the war is over.

The matter referred to follows:

[From the China Lantern]

WEDEMEYER SCOTCHES DECEMBER DEPARTURE DATE

CHUNGKING.—GI's in China will be returned to the United States as quickly as possible, Lt. Gen. A. C. Wedemeyer promised, but the theater commanding general declared emphatically that the rumored setting of December 15 as "target date" for redeployment "conveys a commitment that I am unable to meet." The general's statement was made in answer to a request from the China Lantern that he shed further light on the question—topmost in GI's minds—"When are we going home?"

General Wedemeyer previously had stated that the bulk of American forces would be out of China by the spring, if their jobs were completed on schedule and if sufficient transportation facilities were available.

Since then, a touring Congressman, quoting unidentified Chungking sources, said GI's would be out of China by December 15 at the latest and November 15 if the transportation system could absorb them.

The China Lantern printed the Congressman's statement without comment and appealed to General Wedemeyer to clarify the situation.

His answer scotched the December 15 date, pointed out the tasks still to be completed before the Yanks can sail States-ward, and promised that "contingent upon our ability to accomplish our assigned tasks and restricted further by the availability of transportation, personnel in the China theater will be returned as rapidly as possible to the homeland."

STATEMENT

General Wedemeyer's statement:

"To officers and enlisted men of the China theater:

"I regret exceedingly that due to a misunderstanding a statement was attributed to military authorities in Chungking to the effect that all GI's in China would be out of the China theater by December 15.

"It has been my policy since assuming command of the China theater last October to observe carefully the interests and well being of the officers and men. I have called upon them to make unstinted sacrifices, endure hardships, and work long, arduous hours at their respective tasks. They have responded magnificently throughout, and I am justifiably proud of the commendable record attained.

"I appreciate the strong desire to return to loved ones and friends in the United States. In previous issues of the China Lantern it was clearly indicated that every effort will be made to facilitate the early return of the officers and enlisted men.

BIG JOB

"However, it was further pointed out that the China theater still has a definite task, prescribed by the War Department, to assist in the repatriation and deportation of approximately 2,000,000 Japanese to Japan. Our comrades in the occupational forces in the Pacific have similar objectives which may require several months to fulfill.

"Contingent upon our ability to accomplish our assigned tasks and restricted further by the availability of transportation, personnel in the China theater will be returned as rapidly as possible to the homeland.

"I have never misrepresented conditions in China, no matter how depressing or distasteful, and feel that the above-mentioned report that appeared in the China Lantern—indication that 'all GI's will be out of China by December 15'—conveys a commitment that I, as theater commander, am unable to meet.

"I repeat, American personnel in China will be evacuated to the United States as rapidly as possible in consonance with instructions issued by the War Department."

OCTOBER 17, 1945.

Hon. ROBERT P. PATTERSON,
*The Secretary of War,*
*War Department, Washington, D. C.*

MY DEAR MR. SECRETARY: While in China with our subcommitte we had a conference with various War Department officials and I think it was at Kunming, China, where we were told that the job could and would be finished by December 15 and that they expected to fly troops from Kunming across the hump to Karachi, India. They stated they were trying to close up the China theater by December 15. We were told that all China wanted was an American military mission and that the Chinese would take care of Jap prisoners of war.

The same day I talked to a group of servicemen. I never saw the morale lower than it was there. They wanted to get home and I didn't blame them. In trying to boost their morale I said we had been informed they would probably be out by December 15. The China Lantern, a paper published there, a copy of which I am enclosing, had a story about it and I was amazed to read General Wedemeyer's statement. Particularly was I amazed to read that part of the statement on page 2 which reads in part as follows:

"However, it was further pointed out that the China theater still has a definite task, prescribed by the War Department, to assist in the repatriation and deportation of approximately 2,000,000 Japanese to Japan."

I would like to have you either verify or deny the statement made by General Wedemeyer. I would like a full statement as to the War Department's policy and mission in China with particular reference to our mission and responsibility in assisting in the repatration and deportation of approximately 2,000,000 Japanese to Japan.

I certainly shall not support an appropriation to keep our boys there to repatriate the Japanese Army in China. I think we ought to get out of China, India, and every other allied country at the earliest possible moment. Our occupational troops should be confined to Germany and Japan and the taxpayers' money should not be spent in keeping troops in China, India, or any of the Allied countries.

Your personal attention is requested.

Most sincerely,

ALBERT J. ENGEL.

Hon. ALBERT J. ENGEL,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. ENGEL: I have received your letter of October 17, concerning the evacuation of the China theater, and have just completed a very thorough study of the situation.

The information given to you in Kunming, apparently was intended to apply only to West China, and was correct, as we hope to have most of the personnel out of that area by December 15. General Wedemeyer's statement in the China Lantern is also correct as

his remarks applied to the complete evacuation of the entire China theater.

You will be glad to hear, I am sure, that the evacuation of American troops from West China, which includes the Kunming area, is proceeding exceedingly well. Our men are being returned to the United States as rapidly as units are released and transportation over the hump is available. By December 15, United States personnel in West China will be reduced to less than one-tenth of its top strength, which is the minimum necessary to protect United States property and materiel which it is not feasible nor economical to remove. Just as soon as suitable arrangements, now under way, can be completed by our Government for the disposition of the above property, our remaining troops will be brought out.

The accomplishment of our present plans will furnish the over-all strength of United States troops in the China theater to 6,000 by January 1, 1946. This reduction is dependent upon the early conclusion of arrangements for the disposal of surplus property, authority for an American Advisory Mission to China, as well as availability of shipping. Assistance to the Chinese is principally in movement to reoccupational areas of Chinese armies, and contacts on a staff level concerning the repatriation and deportation of 4,000,000 Japanese. Relatively few Americans are involved in this operation and they will be withdrawn continuously and returned to the United States.

Our directives to General Wedemeyer have required the evacuation of United States military personnel from his theater at the earliest practical date, consistent with the protection of our country's interests there.

It is my hope that the above information will satisfactorily clarify the situation for you. I shall be very glad to answer any further questions you may have in the matter.

Sincerely yours,

ROBERT P. PATTERSON,
*Secretary of War.*

## The Full Employment Bill

EXTENSION OF REMARKS
OF
### HON. JOHN W. GWYNNE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. GWYNNE of Iowa. Mr. Speaker, we are hearing a great deal every day about the so-called full employment bill. The following editorial from the Clear Lake Reporter, of Clear Lake, Iowa, is such a good exposition of the fallacies and dangers of the proposal, that I am making it a part of the RECORD.

The editorial is as follows:

SHALL GOVERNMENT ASSUME ALL RISKS?

We know of no one who is not in favor of full employment. There is nobody opposed to the general idea of everyone who wants to work having the opportunity to do so and to receive for such labor an adequate and even a generous compensation.

But—and if space permitted we would put that word in luminous letters at least a foot high. But—just what is involved when government, meaning all of us as represented by our Federal administration, undertakes to guarantee everyone a job? Just what does it mean for us to declare it as our fixed policy to provide those jobs, not as a favor but as a definite right of every citizen?

Shall we also guarantee a good job or a satisfactory job, or shall we just declare that if anyone wants to work we will see that he or she works? Certainly, if we are going to accept full responsibility for seeing to it that everyone works, will it not naturally follow that we will also through our national administration assume the direct responsibility for deciding what he shall do and what he shall receive for his labor?

Has this ever been done before? Oh, yes. It has been done for many years in Russia. It was done for several years in Germany under Hitler. It can be done here—but, only if we—the Government—have full power and authority to say just exactly what each person shall do and what, how, and when he shall be paid.

Do you think Government can guarantee every bricklayer or carpenter or plasterer or cabinetmaker or any other craftsman a continuous job at his particular kind of work? Will these skilled workers be entitled to liberal unemployment pay if they decide not to work unless the job is suitable?

Well, what do you think? If you and the rests of us guaranty the right of everyone to work, are we also going to guaranty his right to choose the kind of work he is to do and to decide whether he wants to do it or do nothing?

Just where would labor unions come in on this kind of a program? Well, we have definite and convincing answers in those countries where the right of everyone to work has been recognized during the last decade or two. It might even be suspected by those who read history that the right to work might easily be construed to mean the obligation to work at whatever task is assigned to you if you want to eat.

Without going into such matters as the obviously great cost or any of the features of the proposed bill other than its opening declaration of policy, and without questioning the good intentions of those who propose such a declaration, we have no hesitation in saying that such a guaranty will inevitably result in the end of individual choice as to jobs and wages, for only if we collectively control these conditions of employment can we possibly make good on our guaranty.

With those controls in our hands just what type of country will we be creating? You ought to be able to answer that question without any suggestion or help.

## The President's Address

EXTENSION OF REMARKS
OF
### HON. RICHARD B. WIGGLESWORTH
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial appearing in the New York Times of November 4, 1945, entitled "Wages, Prices, and Controls":

WAGES, PRICES, AND CONTROLS

The President's talk on wages and prices last week was a well-meant effort to please everybody that ended by pleasing few. There were sentences in it that could be cited by unions to prove that large increases should be granted; sentences that could be cited by employers to show that substantial wage increases could not be granted, at least without substantial price increases; sentences that could be used to prove the need of an indefinite prolongation of Government controls, and sentences that could be used to show that the Government ought to get out of the business of trying to control wages and prices as quickly as possible. The speech, in short, contained ammunition for everybody because it contained so many assertions that contradicted each other and because it contained both truths and fallacies.

What the President seemed to say on net balance, however, was that prices should be held where they are but that hourly wage rates should be raised substantially. This is a self-contradictory policy that cannot be made to work. The arguments used by the President in support of it are not convincing. What the speech failed sufficiently to take into account was that the wages to war workers to make wartime products paid for by the Government cannot fairly be compared with wages to make peacetime products to be paid for by the people as private consumers. Industry was making peacetime products at peacetime prices and wages when it went into the war. It has emerged from the war with hourly wage rates much higher. These wage rates can be paid only if there is a corresponding increase in the prices of these peacetime products, or if, alternatively, there has been an increase in labor efficiency to compensate for the higher hourly wage.

It has yet to be demonstrated that this increase in efficiency has taken place. A recent study of 25 civilian industries by the Bureau of Labor Statistics showed that there had been very little increase in labor productivity between 1939 and 1944. In nine of these industries output per man hour had actually declined. As wage increases had taken place in all of the industries, there were only two in which unit labor costs had fallen. In the rest they had increased anywhere from 17 to 69 percent.

The President's new policy, unless it is modified, seems likely to give rise to even more industrial strife than that of recent months. This is precisely because of the ambiguities in the President's talk. Certain groups of workers—those who feel themselves to be in the wage categories included in the President's amended order—have been told in effect that they are entitled almost as a matter of right to an increase in wages. But all labor groups have been encouraged to make new demands, provided only that these demands are "reasonable"—though that word is not defined in percentage terms. Employers are urged to grant these "reasonable" demands, even if, apparently, they do not know whether they will continue to be able to make ends meet. If they cannot make ends meet, they are in effect urged to go on producing anyway, and to wait at least 6 months before they are granted any price relief.

The President rightly declared at one point in his talk that "we must get away as quickly as possible from Government controls, and that we must get back to the free operation of our competitive system." But the policies he is now pursuing move away from that goal, not toward it. The rigid control that OPA is still assuming over tens of thousands of prices forces the administration to adopt a "wage policy" in order to maintain this "price policy." But the effort to do this means that it must revive agencies like the War Labor Board to pass on wage demands. In order to continue price control the Government is forced to resume wage control. The kind of formula with which it is seeking to solve this relationship forces the Government, again, to de facto profit control, and profit control is the ability to say whether a given industry or firm will be permitted to live and grow or be forced out of existence.

Thus by trying to hold on to price control too long the Government is forced to impose a regimented economy and to try to solve problems of the interrelationship of thousands of wage rates to each other, of thousands of prices to each other, and of thousands of wage rates to thousands of prices—a problem that is utterly insoluble by anything but a free competitive market economy.

The reason the Government gives for not beginning rapidly to take the controls off prices is that it would lead us to "inflation."

But the chief cause of inflation is the continuation of the Budget deficit. This is the real problem that the administration should strive manfully to solve. But when with its right hand it keeps injecting new purchasing power, new bank credit, new money into the economic system through a Budget deficit, and adds to this by encouraging wage advances, and then with its left hand tries to offset the inevitable effects of its own policies by holding down prices, it merely wipes out profit margins, causes unemployment and industrial strife, and demoralizes production.

The right road for the administration is clear. It should not try to frame any "wage-price policy"; it should put the Government finances in order, and move toward the restoration of a free competitive economy.

## Warning to Government Officials

EXTENSION OF REMARKS
OF
### HON. HENRY C. DWORSHAK
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 5, 1945*

Mr. DWORSHAK. Mr. Speaker, millions of young Americans have won a military victory over the Axis Powers. Throughout the war, billions of dollars and the resources of our country were lavishly expended. Hostilities have ceased, but there are many public officials who still believe that the way to win the peace is to destroy our economic security.

Billions of dollars are being expended under the lend-lease program, although the President on August 17 issued an Executive order terminating this program. Russia, Britain, and other Allies are intent upon securing additional billions of dollars under various programs in order to maintain the solvency of their respective governments. Millions of Americans, including war veterans, are beginning to wonder how long such policies can be continued before the United States itself becomes bankrupt.

Mr. Speaker, under leave to extend my remarks in the Appendix, I am inserting a warning to Government officials made by the Reverend Dallas F. Billington, of Akron, Ohio, in the Washington Star. Will this warning be heeded?

II Kings 20: 12–18: "At that time Berodach-baladan, the son of Baladan, King of Babylon, sent letters and a present unto Hezekiah: for he had heard that Hezekiah had been sick.

"And Hezekiah hearkened unto them, and shewed them all the house of his precious things, the silver and the gold and the spices and the precious ointment and all the house of his armour, and all that was found in his treasures: there was nothing in his house nor in all his dominion that Hezekiah shewed them not.

"Then came Isaiah the prophet unto King Hezekiah, and said unto him, 'What said these men? and from whence came they unto thee?' And Hezekiah said, 'They are come from a far country, even from Babylon.'

"And he said, 'What have they seen in thine house?' And Hezekiah answered, 'All the things that are in mine house have they seen: there is nothing among my treasures that I have not shewed them.'

"And Isaiah said unto Hezekiah, 'Hear the word of the Lord.

"'Behold, the days come, that all that is in thine house, and that which thy fathers have laid up in store unto this day, shall be carried into Babylon: nothing shall be left, saith the Lord.

"'And of thy sons that shall issue from thee, which thou shalt beget, shall they take away; and they shall be eunuchs in the palace of the King of Babylon.'"

Mr. President, Senate, and the House of Representatives, how many of you in some lodge or church have said your faith was in God?

This being true and your faith being well founded, how can you as leaders of America deny all the teachings of God?

Are you now willing to do as the foolish king did, show the atomic bomb and its secrets, the bomb sight, our poison gas, and all that God has permitted the wise men of our country to find out? These have been given to us for our protection.

Now shall we be as foolish as some ancient king and call in all the foreign countries and show them our secret weapons, our treasures, the way we operate our factories, and the way we do things?

Are you aware of the fact that God said in the Bible all these things were written for our learning?

I repeat, Mr. President, Senate, the House of Representatives, take warning for God's sake, don't sell our country, permit our boys to be carried off to a foreign country, by revealing to them all the treasures and secrets of the United States and the Stars and Stripes.

If God used prophets in days of old, why not let our own Nation come back and listen a little more to some of the ministers of the gospel rather than listen all the time to the college professors and many others who deny the teachings of Almighty God?

I beg you in the name of the Lord Jesus Christ, please take warning and save our Nation from having the foreign countries come in to take away our treasures and our sons and daughters.

## American Veterans of World War II (AMVETS) Principles, Constitution, and Bylaws Adopted At Its First National Convention, Chicago, Ill., October 1945

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. DOYLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I am pleased to insert the constitution and bylaws and a list of the officers elected by the AMVETS:

CONSTITUTION OF THE AMERICAN VETERANS OF WORLD WAR II—AMVETS

PREAMBLE

We the American Veterans of World War II, AMVETS, fully realizing our responsibility to our community, State, and Nation—associate ourselves for the following purposes: To uphold and defend the Constitution of the United States of America; to safeguard the principles of freedom, liberty, and justice for all; to promote the cause of perpetual peace and good will among nations; to maintain inviolate the freedom of our country; to preserve the fundamentals of democracy and Americanism; to perpetuate the friendship and associations of the Great War of Liberation, and to dedicate ourselves to the cause of mutual assistance, this by the Grace of God.

ARTICLE I

The name of this organization shall be "American Veterans of World War II, AMVETS."

ARTICLE II

The aims and purposes of this organization are as follows:

1. To serve our country in peace as in war; to build and maintain the welfare of the United States of America toward lasting prosperity and peace for all of its inhabitants.

2. To encourage, in keeping with the policies of our Government, the establishment of a concrete plan to secure permanent international peace, and to assist in the maintenance of international peace.

3. To inspire in our membership a sense of responsibility, and to develop leadership, for the preservation of our American democratic way of life.

4. To help unify divergent groups in the over-all interest of American democracy.

5. To train our youth to become purposeful citizens in a democracy with full knowledge of the responsibilities as well as the privileges of citizenship.

6. To cooperate with all duly recognized existing veteran organizations in the furtherance of the aims of World War II veterans.

7. To insure the orderly return of the veteran to civilian life by protecting his rights as an individual while he is still in uniform.

8. To expedite and assist in the rehabilitation of the veteran by maintenance of employment services, sponsoring educational opportunities, and providing counsel on insurance, housing, recreation, personal problems, hospitalization, and veterans' benefits.

9. To act as a liaison agent between the veteran and the Government.

10. To provide an organization to encourage fellowship among all veterans of World War II.

11. To keep the public forever reminded that the veterans of World War II fought or served to preserve peace, liberty, and democracy for their Nation.

ARTICLE III

*Organization*

SECTION 1. The American Veterans of World War II, AMVETS, shall be organized with a national headquarters, State and territorial departments, and under these departments, local posts. Intermediate administrative groups may be created by the national executive committee where such action is deemed advisable.

SEC. 2. The national headquarters shall be composed of officers hereinafter described; one department representative from each department, and such other members as the national convention shall specify. It shall be the duty of the national officers to advance the cause of the American Veterans of World War II, AMVETS, carry out their aims and purposes, provide the machinery of organization and carry out the national policies and plans of the entire organization, as established by the national convention.

SEC. 3. The State departments shall be organized in a manner similar to the national organization, and shall be composed of officers and representatives selected by post delegates to a department convention. It shall be the duty of the department to aid in organization and maintenance of local posts and to carry out the policies and plans delegated to it by the national headquarters, and to adhere to the provisions of this constitution.

SEC. 4. Local posts shall be chartered by the national headquarters and administered by the department headquarters, but shall be governed locally by their own officers chosen according to its constitution and bylaws. The policies, activities, and actions of the local posts must never be at variance with

those prescribed by the national headquarters.

ARTICLE IV

*Membership*

SECTION 1. Any American citizen, male or female, shall be eligible for membership in the American Veterans of World War II, AMVETS, who was regularly enlisted, inducted, or commissioned, and who was accepted for, or was on, active duty in the Army, Navy, Marine Corps, or Coast Guard, of the United States; or our allies, on or after September 16, 1940, and who served between this date and the date of cessation of hostilities, as established by the Government of the United States. Service with the armed forces must have been terminated by honorable discharge or honorable separation from the service, provided, however, that persons otherwise eligible for membership who are on active duty, or who must serve after the cessation of hostilities are eligible.

SEC. 2. There shall be but one form of membership and that shall be an active, regular membership, except, however, honorary members shall be admitted on the following basis:

(a) Not more than one honorary member per post per year.

(1) Only persons performing outstanding service to the Nation or veterans shall be eligible. Nothing herein shall abrogate existing membership.

SEC. 3. No person shall be a member of more than one post at any one time. No person expelled by one post shall be eligible for membership any other post without the consent of the expelling post or the consent of the department executive committee after hearing on appeal.

SEC. 4. Dues shall be payable annually or for life.

ARTICLE V

*National convention*

SECTION 1. A national convention shall be held annually at a time and place fixed by the previous convention and shall constitute the legislative body of the American Veterans of World War II, AMVETS.

SEC. 2. The members of the convention shall consist of department and post delegates. The department shall choose its delegate and alternate at its convention held at least 3 weeks prior to the national convention. Each local post shall have a delegate and alternate elected to attend the national convention.

SEC. 3. Each delegate shall be entitled to one vote. The vote of an absent delegate may be cast by an alternate. Alternates shall have all the rights and privileges of the delegates, except that of voting.

SEC. 4. The department representative to the executive committee shall be chosen at the department convention and by such election shall become one of the delegates to the national convention, without vote, for that department.

SEC. 5. Sixty percent of the voting delegates shall constitute a quorum.

ARTICLE VI

*Officers*

SECTION 1. The national convention shall elect a national commander, first, second, third, fourth, fifth, and sixth national vice commanders, one of whom shall be a woman, a finance officer, adjutant, judge advocate, and provost marshal. No two vice commanders shall be chosen from the same department. The commander and vice commanders shall not succeed themselves in office.

SEC. 2. All the elective officers shall be members of the national executive committee, but the commander shall vote only in the event of a tie.

SEC. 3. Elective officers and the departmental representatives of the national executive committee shall convene immediately following the close of the national convention and transact all necessary business that may come before the committee.

SEC. 4. The national commander, with the consent and approval of the national executive committee, shall appoint a chaplain, historian, two national service officers, one of whom shall be a woman, a national executive secretary, a public-relations officer, surgeon general, and a legislative director.

ARTICLE VII

*National executive committee*

SECTION 1. The administrative power between national conventions shall be vested in the national executive committee, which shall be composed of the national commander, vice commanders, and other national elective officers, and one national executive committeeman from each State, to be elected by the respective State departments. An alternate shall be selected by each department to act in the absence of the committeeman.

SEC. 2. The term of office of each national executive committeeman and alternate shall be 1 year. The term of office of each national executive committeeman and alternate shall commence immediately upon adjournment of the department convention after his election.

SEC. 3. Members of the national executive committee shall be delegates to the national convention without vote.

ARTICLE VIII

*Department organization*

SECTION 1. Each State or Territorial area of the United States shall constitute a department, which shall be organized in a manner similar to the national organization. The department shall have an executive committee and shall conduct its own convention, to be held not less than 3 weeks before the annual national convention, at which time it shall choose delegates to the convention and the national executive committee.

SEC 2. The departments shall be chartered when application has been made to the national headquarters and approved by the national executive committee.

SEC. 3. The departments shall have the authority to create intermediate administrative groups for the handling of the local posts should they deem such action advisable.

ARTICLE IX

*Local posts*

SECTION 1. Local posts may be formed by any 10 eligible individuals by making application to its local department, and if there be no department, directly to the national headquarters. If the department approves, the application shall be forwarded to the national headquarters and a charter shall be issued. Each charter shall be signed by the national commander and national adjutant, and countersigned by the department commander and department adjutant.

SEC. 2. Local posts shall be subject to the jurisdiction of the national headquarters and the department headquarters and any provision of a department constitution or a local post constitution conflicting with or contrary to the provisions of the national constitution, the provisions of the national constitution shall prevail.

ARTICLE X

*Finances*

SECTION 1. All finances of the American Veterans of World War II, AMVETS, shall be under the control of the finance officer, who shall make an annual report at the national convention. Revenue shall be derived from annual dues and other sources approved by the executive committee. Regulations of annual dues shall be by a majority vote of the delegates in annual convention.

SEC. 2. An annual budget shall be submitted for approval at the first annual meeting of the executive committee. It shall be prepared by the retiring finance officer, who shall have received national departmental budgets from the other retiring officers and shall have consolidated the same. In the event that the budget is not approved, a finance committee consisting of five members of the executive committee shall be appointed by the new national commander to prepare the budget.

SEC. 3. Each local post shall remit annually to the national headquarters the sum of $2 for each member of the post, and remit annually to the department headquarters the sum of $1 for each member of the post. The post shall retain the balance of the annual membership fee. The annual membership fee for each member shall not be less than the sum of $4.

ARTICLE XI

*Discipline*

SECTION 1. Disciplinary rules relating to local posts shall be prescribed by the Departments.

SEC. 2. The National Executive Committee, after notice and hearing before a subcommittee, may cancel, suspend, or revoke the charter of any department for good and sufficient cause to it appearing. Procedure for such action shall be prescribed by the judge advocate.

SEC. 3. In the event of such action the National Executive Committee is empowered to take over the operation of the department, but is bound by the constitution and bylaws thereof. At the next department convention new department officers must be selected to carry on the work of the department.

ARTICLE XII

*Post transfers*

Any member in good standing may change his post or department, and may join a new post without paying the current annual dues.

ARTICLE XIII

*Auxiliaries*

SECTION 1. The American Veterans of World War II, AMVETS, recognize the organization known as the "Auxiliary of AMVETS, American Veterans of World War II."

SEC 2. Membership in the auxiliary is limited to the mothers, wives, daughters, and sisters of regular members of American Veterans of World War II, AMVETS, and mothers, wives, daughters, and sisters of deceased veterans and mothers, wives, daughters, and sisters of all men and women who served in the armed forces of the United States between September 16, 1940, and the date of cessation of hostilities as fixed by the United States Government.

SEC. 3. The auxiliary shall be governed in each State department by such rules and regulations as may be prescribed by the National Executive Committee and approved by such department.

ARTICLE XIV

*Sad Sacks*

SECTION 1. The American Veterans of World War II recognizes a subsidiary organization known as "Amvet Sad Sacks" of American Veterans of World War II.

SEC. 2. Membership in Sad Sacks shall be limited to members in good standing of American Veterans of World War II, AMVETS.

ARTICLE XV

*Amendments to constitution*

SECTION 1. This constitution may be amended at any national convention by a majority vote of the total authorized delegates present. Proposed amendments must be submitted through the national adjutant to the several departments and members of the national executive committee by mail at least thirty (30) days prior to the convening of the next national convention. This constitution may, however, be amended at any convention without notice, by unanimous vote.

SEC. 2. No proposed amendment shall be submitted through the national adjutant unless it shall be submitted by a department

convention, department executive committee, or the national executive committee.

BYLAWS OF AMERICAN VETERANS OF WORLD WAR II—AMVETS

ARTICLE I

*National executive committee*

SECTION 1. In case of death, resignation, or removal by his respective department of any national executive committeeman or alternate to the national executive committee, the successor shall be selected as such department shall determine and shall serve for the remainder of such unexpired term.

SEC. 2. The national executive committee shall meet within 24 hours after the adjournment of the national convention and shall also meet immediately preceding the holding of the succeeding national convention. Special meetings may be held upon reasonable notice at the call of the national commander. The national commander shall call a meeting of the national executive committee upon the written request of the national executive committeemen from 15 or more departments.

SEC. 3. A majority of the members shall constitute a quorum of the national executive committee.

SEC. 4. The national commander shall name such committees as he shall deem advisable, subject to ratification by the national executive committee, at its next meeting succeeding the appointment.

SEC. 5 The national commander shall appoint, subject to approval by the national executive committee, the following standing national committees: Finance committee, membership committee, rehabilitation committee, hospitalization committee, program committee, legislative committee, liaison committee, family welfare committee, and convention committee.

The number of members to serve on any national committee, except the finance committee shall be determined as outlined in section 6 (B).

SEC. 6. (A) The national finance committee shall consist of three members, appointed following the first national convention, and shall serve for 1 year.

The national commander, national finance officer, and the national executive secretary shall be members ex officio of the national finance committee.

The national finance committee shall be charged with the preparation of the yearly budget and the handling of funds under that budget and such other duties as shall be prescribed by the national commander, subject to the approval of the national executive committee.

(B) The national membership committee, program committee, legislative committee, liaison committee, family welfare committee, rehabilitation, hospitalization and convention committees shall consist of such a number of members as shall be designated by the national commander with the approval of the national executive committee, and their duties shall consist of the usual prescribed duties for such committees, as well as any further directives given by the national commander and/or the national executive committee.

The term of office of the members of such committees shall be 1 year.

SEC. 7. The national executive committee shall provide for the appointment and employment of such subordinate officers and employees as may be needed for the administration of the affairs of the American Veterans of World War II (AMVETS), and prescribe their duties and compensation.

SEC. 8. Any national officer may receive compensation for his activities on behalf of the organization. The amount of such compensation shall be fixed by vote of the national executive committee.

SEC. 9. All questions affecting the eligibility for office and conduct of national officers shall be referred to and determined by the national executive committee. All questions affecting the eligibility for office and conduct of the national executive committeemen, department officers, or members of department executive committees, shall be referred to and determined by the executive committee of the department involved, which shall be the final authority. However, no candidate for nomination or election to any remunerative elective public office shall be eligible to serve as national executive committeeman, or as alternate national executive committeeman, except upon the approval of the department executive committee by unanimous vote.

ARTICLE II

*Duties of officers*

SECTION 1. National commander: The national commander shall be the executive head of the American Veterans of World War II, AMVETS, with full power to enforce the provisions of the national constitution, national bylaws, and the will of the national convention. He shall be the chairman of the national convention and the national executive committee. He shall appoint all necessary committees, where not otherwise provided, subject to the ratification of the national executive committee, and shall perform such other duties as are usually incident to the office.

SEC. 2. National vice commanders: The national vice commanders shall act as representatives of the national commander in all matters referred to them by him, and shall upon his request preside over the meetings of the national convention or national executive committee, and perform such other duties as are usually incident to the office.

SEC. 3. National executive secretary: The national executive secretary shall be charged with the administration of the policies and mandates of the national convention, the national executive committee, and the national commander. He shall perform such other duties as are usually incident to the office. His tenure of office shall at all times be subject to the will of the national executive committee.

SEC. 4. The national finance officer: The national finance officer shall be the custodian of the funds of the national organization. He shall sign all checks disbursing the funds of the national organization, and shall make reports upon the condition of the national treasury when called for by the national commander or national executive committee. The national treasurer shall furnish a surety bond as hereinafter prescribed. He shall perform such other duties as are usually incident to the office.

SEC. 5. National judge advocate: The national judge advocate shall advise the national officers and the national executive committee on all legal matters, including the construction and interpretation of the national constitution and bylaws, and shall perform such other duties as are usually incident to the office.

SEC. 6. National service officer: The national service officer shall be the welfare officer of the national organization. He shall be directly concerned with all matters pertaining to the social and material welfare of members, and shall particularly be concerned in the assistance of all members in securing all rights and privileges accorded them by law. He shall act as liaison officer between the national executive committee and Federal agencies charged with veterans' affairs, and shall also act in direct assistance to department and post service officers. His tenure of office shall at all times be subject to the will of the national executive committee.

SEC. 7. Public-relations officer: The national public-relations officer shall keep the public informed relative to the activities of the national organization, in order to build and maintain good will toward the organization. He shall be directly responsible for national convention plans and activities. His tenure of office shall at all times be subject to the will of the national executive committee.

SEC. 8. National chaplain: The national chaplain shall perform such divine and nonsectarian services as may be necessary, adhering to the appropriate ceremonial rituals.

SEC. 9. National historian: The national historian shall compile from year to year all records of historical value and interest for the national headquarters of the American Veterans of World War II. He shall also assist department and post historians so as to coordinate and unify the work of these officials, and shall perform such other duties as the national executive committee shall prescribe.

SEC. 10. National provost marshal: The national provost marshal shall maintain order at all meetings and conventions. He shall distribute, collect, and count ballots and shall announce the result of voting. He shall perform such other duties as may be requested by the national commander.

ARTICLE III

*Charters*

SECTION 1. A department executive committee may suspend, cancel, or revoke a post charter. The action taken by a department executive committee shall be final and conclusive, unless an appeal is taken to the national executive committee within 30 days from the date of said suspension, cancellation, or revocation. The action taken by the national executive committee, upon appeal, shall be final.

SEC. 2. Any post failing to meet the obligations imposed upon it by the constitution and bylaws, or ceasing to function for 6 months as a post of the American Veterans of World War II (AMVETS), or voluntarily ceasing to function as a post, or merging with one or more other posts, or refusing, or failing to pay the department and national per capita dues, or under such other conditions as might make such action necessary, shall upon order of the department executive committee, surrender its charter. Upon failure to surrender such charter, immediate steps may be taken for its revocation, suspension, or cancellation.

SEC. 3. Upon revocation, cancellation, or suspension of the charter of a post in any department of the American Veterans of World War II, AMVETS, said post shall immediately cease operations, and upon revocation or cancellation, shall turn over its charter to its department commander or department executive committee. The department executive committee is authorized, empowered, and directed by and through its duly authorized agent to take possession, custody, and control of all the records, property, and assets of said post: *Provided, however*, That nothing herein shall be construed as requiring any department to take over or assume any financial responsibility as to such property. Said department executive committee may provide for the transfer of the members in said post to other posts of their choice, subject to the approval of such other posts.

SEC. 4. The national executive committee shall provide a uniform code defining the procedure to be followed in the revocation, cancellation, or suspension of post charters, a method of appeal and further, a code of procedure for the revocation, cancellation, or suspension of post charters with continuing power to revise said code: *Provided, however*, That the procedure now in effect shall continue until such code is so adopted.

ARTICLE IV

*Discipline of posts and post members*

SECTION 1. Each post of the American Veterans of World War II, AMVETS, shall be the judge of its own membership, subject to the

restrictions of the constitution and bylaws of the national organization.

SEC. 2. Members may be suspended or expelled from the American Veterans of World War II, AMVETS, upon a proper showing of cause. Charges shall be based upon disloyalty, neglect of duty, dishonesty, and conduct unbecoming a member of the American Veterans of World War II, AMVETS.

SEC. 3. Any member who has been suspended or expelled has the right of appeal to his department executive committee, or to the department convention, according to the provisions in the bylaws of such department. The decision of the department shall be final.

SEC. 4. A member whose dues for the fiscal year have not been paid by January 1 shall be classed as delinquent. If his dues are paid on or before April 1 he shall be automatically reinstated. If he is still delinquent after April 1 his membership in the American Veterans of World War II, AMVETS, shall be forfeited. A member so suspended or whose membership has been so forfeited may be reinstated to active membership in good standing by a vote of the post and payment of dues for the year in which reinstatement occurs.

ARTICLE V

*Membership*

SECTION 1. Membership in the American Veterans of World War II, AMVETS, is membership in the national organization of the American Veterans of World War II, AMVETS, by affiliation with posts.

ARTICLE VI

*Moneys and collections*

SECTION 1. All national, department and post officials handling moneys of the American Veterans of World War II, AMVETS, shall be properly bonded with a good and solvent bonding and surety company as acceptable to the United States Treasury, as surety to cover double the average amount of money handled in a single year. In case of delinquencies in the payment of amounts due department or national headquarters, action shall be taken at once by the proper officials to bring about an immediate and complete settlement. The bonds provided by national officials shall be approved by the national judge advocate and the national executive committee, and those provided by department and post officials shall be approved by the department judge advocate and the department executive committee.

ARTICLE VII

*Transfer of posts*

SECTION 1. Posts of the American Veterans of World War II, AMVETS, which may transfer from one place to another, and which are organized under the department in which they are then located, may transfer to another department in a manner similar to the transfer of individuals from one post to another.

SEC. 2. Any existing post in the territorial or insular possessions of the United States or in foreign countries, and not under the jurisdiction of a present existing department, shall, within 1 year following the adoption hereof, unless extended by the national executive committee, request the national executive committee to place it under the jurisdiction of a department to be selected by such post. Said request shall have attached thereto the formal consent of such department. Should a post fail or refuse to make such request or be unable to obtain the consent of a department, then the national executive committee shall designate the department.

ARTICLE VIII

*Definitions*

SECTION 1. The word "he" wherever it shall appear in either the constitution or bylaws of the American Veterans of World War II, AMVETS, shall be construed as referring to both sexes.

ARTICLE IX

*Restricted use of organization*

SECTION 1. The American Veterans of World War II, AMVETS, or any component part thereof, shall not be used to promote the interest of any individual who is a candidate for public office, or to promote otherwise, any individual, organization, political party, faction, or product. Any violation of this provision shall be sufficient cause for the suspension or revocation of any post or department charter.

ARTICLE X

*Meetings*

SECTION 1. All meetings of the American Veterans of World War II, AMVETS, shall be conducted under Robert's Rules of Order.

ARTICLE XI

*National flower*

SECTION 1. The national flower shall be the fourleaf white clover, meaning "think of me."

ARTICLE XII

*International affairs and peace division*

SECTION 1. There is hereby created the international affairs and peace division of AMVETS, American Veterans of World War II. The division shall be composed of three directors, one of whom shall be the executive director and the other two shall be associate directors. The directors shall be appointed by the national commander with the consent of the national executive committee.

SEC. 2. The directors shall serve subject to the will of the national executive committee.

SEC. 3. It shall be the duty of the directors to be informed on matters of international affairs, perform research and investigation in such affairs, inform the national executive committee and the membership of the organization of all matters found to affect the peace, and make recommendations thereon, and provide representation at any peace conference, subject to the approval of the national executive committee.

Funds shall be provided upon approval of the executive committee for the operation of this division.

ARTICLE XIII

*Accounting for moneys*

SECTION 1. All moneys received by this organization shall be strictly and accurately accounted for, and a public report shall be made annually, showing the source of all such income and the expenditure thereof. Such accounts shall be audited monthly by a nationally known firm of public accountants.

ARTICLE XIV

*Amendments*

SECTION 1. These bylaws may be amended at any national convention by a majority vote of the total authorized representation thereat, provided that the proposed amendment shall have been submitted through the national executive committee by mailing or delivering the same to it at least 30 days prior to the convening of the next national convention; and provided further, it may be amended by unanimous vote at any convention without notice prior to the national convention.

SEC. 2. No proposed amendment shall be submitted through the national executive committee or considered by the national convention, as provided in section 1 of this article, unless said proposed amendment shall have been first submitted by a department convention through the department executive committee.

---

Following is the list of officers of AMVETS elected Sunday, October 14, 1945:

National commander: Jack W. Hardy, Title Guaranty Building, Los Angeles, Calif.

First vice commander: Dr. Gerald I. Cetrulo, 234 Mt. Prospect Avenue, Newark, N. J.

Second vice commander: Dr. Clyde Longstreth, Atlantic, Iowa.

Third vice commander: Mrs. Beatrice Wade, care of 125 Fourth Street, Reading, Pa.

Fourth vice commander: Henry Simpson, 506 Olive Street, St. Louis, Mo.

Fifth vice commander: Edward A. Trudell, 88 Tremont Street, Boston, Mass.

Sixth vice commander: Frank T. Ross, Milwaukee, Wis.

Judge advocate: Anthony R. McGrath, 530 William Penn Place, Pittsburgh, Pa.

Adjutant: Jess Curtis, 807 North Third Street, Phoenix, Ariz.

Finance officer: Carl Freudenberg, 1208 Michigan Avenue, Cincinnati, Ohio.

Provost marshal: Fred F. Nimz, Glendale, Ariz.

The AMVETS are dedicated to the development of a sound American program to promote the cause of perpetual peace and good will among nations.

The declared principles and objectives of this organization of distinguished veterans of the recent World War II, cannot help but inspire and encourage and strengthen the hearts, minds, and souls of every reader thereof. I specifically call to your attention the preamble and then to article 2, in which article sets forth the 11 highly patriotic and strengthening aims and purposes of this significant organization.

I say to these AMVETS—good luck and God bless you!

I know each Member of this House joins me in sincere good wishes. It is a pleasure and an honor for me to be asked to present this constitution and bylaws to your attention and to have it officially placed in the CONGRESSIONAL RECORD.

If my own son, who was first lieutenant in the Army Air Corps had survived this war, he no doubt would have been identified with these other distinguished AMVETS and their high purposes. So, for him who made the supreme sacrifice—and with hundreds of thousands of others who did likewise—I bespeak your cooperation to the end that this timely and appropriate group of distinguished Americans may realize the most prompt and possible fulfillment of their high ideals.

Certainly these distinguished men have selected their leaders for the first year from the length and breadth of our great Nation.

Their officials were elected at their first national convention in Chicago, and their national headquarters are at 1507 M Street NW., Washington 5, D. C. (National 6651), and their executive offices at 725 South La Salle Street, Chicago 5, Ill.

## Demobilization of the Armed Forces

---

EXTENSION OF REMARKS

OF

### HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. JOHNSON of Indiana. Mr. Speaker, one of the sad blights of the war's aftermath is the manner in which the Army and Navy are treating the GI's in the matter of demobilization. This

really amounts to a national scandal. The inequalities and injustices of the Army and Navy demobilization plans and actions have been repeatedly called to attention. True, liberalization and some action has been had, as a result of continual protests by the public and by Members of Congress, but it has been very little.

Many bills have been introduced to speed up demobilization and to get the boys home with their families. Of course, we realize that introducing a bill accomplishes nothing unless the administration's majority in Congress will permit the bill to come before Congress for consideration. The people know that the administration has a majority in both branches of Congress and a majority on every committee, and, through this majority, it is keeping these bills bottled up in committee, thereby preventing action by Congress.

I ask the majority leadership, "How long are you going to continue holding these bills in committee? When are you going to give these boys just treatment? These boys who left homes and families, who left their schools and careers and fought and bled, and many died, in order to win the war—I ask again, When are you going to give them justice now that the war is over?"

Again I beg the administration majority to permit legislation to come before Congress that will get these heroes returned to their families and loved ones without further delay.

The following letter, written to the editor of the Terre Haute Star, vividly expresses the feeling of the GI's and this matter should have immediate action:

EDITOR TERRE HAUTE STAR,
*Terre Haute, Ind.*

DEAR SIR: Inclosed you will find a copy of a letter sent to the Star and Stripes by 120 enlisted men and officers. I would like very much if you could find space to print it in your paper.

I am from Terre Haute and have been in the Army over 3 years. Have been wounded in Germany. I would like most of all to get back to my wife and daughter the same as all these other GI's in the same fix I am in. I thank you.

Yours truly,

CLYDE JOHNSON.

---

"HEADQUARTERS TWO HUNDRED
AND FIFTY-SECOND E. A. GROUP,
*"Camp Boston, France, October 15, 1945.*

"EDITOR B-BAG, STARS AND STRIPES:

"It is a sad and shameful reflection on the sorry state of world affairs when thousands of American soldiers go home—if they ever get there—nurturing a feeling of bitterness and disgust against everything military and political—thoroughly fed up with the shabby way in which they have been kicked from pillar to post in the recent maelstrom of broken promises, blunders, paper snafu and just general inefficiency.

Here in our AAC camp, and in every other camp in the Reims area, are thousands of GI's whose morale has reached a new all-time low, and whose memories will forever be tainted with reflections of this final chapter of their checkered Army careers.

Our particular outfit has been stagnating here for three long weeks and this is only the beginning. We are now calmly told that we probably will be marooned here for six more interminable weeks. We left Germany under the moronic impression that we were headed for home. We so advised our loved ones, raising their hopes and seemingly bringing to an end months of weary waiting; we tabbed all incoming mail to be returned to sender—and as a consequence we are now unaware if our folks at home are alive or dead, nor will we for weeks to come. We could easily have remained at our comfortable stations in Germany where all processing could have been completed with a minimum of effort, and the outfit headed directly for the port. Instead we are jammed in a camp together with teeming thousands of equally dissatisfied, disappointed men whose nerves are constantly at a tension and who are rapidly becoming more hopeless and bewildered.

As every GI knows, the most abject failure in all military history was the so-called point system. Men with from 80 to 100 points are still dreaming of home, while in the States 60 pointers, including, of course, all movie stars and big-name athletes, are being discharged—men who never left the United States; while men who went through combat and have sweated out at least 18 months without seeing their families are still wondering what happened to the scales of justice.

"And then one fine day we read the following: 'Giant ships transferred to British'—'Reconversion of ships far below schedule'—'Longshoremen's strike ties up ships'—(Why not an orientation course at Dachau or Belsen for them?) The greatest country, with the most powerful Navy in the world—the Nation which invented the atomic bomb—depends on England for transportation to get their men home. All the average GI knows is that 'They got us over here fast enough!'

"Yes; the war is over now. Well we know it. Once more 'the world is safe for democracy'. Big fortunes were made while our buddies died. And now things aren't looking so good in the States due to homecoming servicemen strangely desiring jobs; there aren't enough jobs—so why not let them dawdle around in Europe a while longer to keep them out of the way? Sure, we did our job. The greatest job in the history of the world. And already, within a few short months, we are forgotten, just as our fathers were after World War I—a faithful horse gone blind in the service of its master. During the war, a hero. After the war, a bum. The only people who give a damn about our future are our immediate families, a few honest politicians, and some square officers in high places who are giving this thing an honest try—to them we doff the battered hat and say, 'Thanks.' Meanwhile, in a situation ridiculously and tragically enmeshed in a hopeless quagmire of inefficient and careless administration, the loud-speaker comfortingly croons at least once a day—'I'll be home for Christmas!' Amen.

"FED-UP FA JOES."

---

## Fail in This and Another War Is Certain and Fairly Soon

EXTENSION OF REMARKS
OF
## HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I include an editorial by W. D. Archie, editor of the Evening Sentinel, Shenandoah, Iowa. Mr. Archie is a veteran of World War I and World War II. This editorial proves he has given much earnest thought and study to the future as well as meeting the problems of the present with forthright thinking and expression:

ALONG THE BANKS OF THE NISHNA
(By W. D. Archie)

In a New York address General Marshall not only asked, he pleaded, for a quick decision as to the future size of our Army, Navy, and Air Corps. He feels the security of the world depends on a strong armed force in our Nation. That the time to have it is now.

I thoroughly agree with him. We have emerged from this war as the strongest nation in the world. Russia is in second place. Britain a poor third. We cannot avoid the situation. It is there, whether we wanted to attain it or not. Now having arrived at the top we will find the position difficult to maintain. Everyone who gets to the top finds it hard to stay there.

In order to maintain face with the other nations of the world. In order to retain respect with our neighbors on the north and south and in South America we must have a strong army and navy. Our planes must be the best, our ships of the latest design, the Army modern in every respect, this will be the best selling argument we can present for peace in this world. Backed by the atomic bomb, we should be able to preserve peace for a century at least, if we carry out such a plan.

General Marshall himself has weakened his own position in the past by proposing compulsory military training, and doing away with the National Guard. Compulsory training for youth is no answer to the problem. We need professional soldiers, millions of them. We need trained pilots ready for instant use. We need a Navy already at sea ready for instant use. The citizen Army is not the answer today.

Give us the necessary men and equipment and we can have a powerful Army and Navy and we can maintain peace. Give us a strong National Guard and we can keep the citizens trained and ready to assist when needed.

It is a costly program that I favor, but it must be done. The men who enter the service must be better paid than they are now. Officers salaries are sufficient, but the pay of privates is a pitiful sum. Fifty dollars per month, with all the nice things of life going only to officers, is no inducement for building a strong Army or Navy. We must prepare to pay salaries comparable to that obtained in industry, and get good men. We must be prepared to pay for equipment and ready to discard obsolete guns and ships every year.

But the cost is cheap. Peace is what we can purchase. Outlaws can be stopped before they get a chance to start. At least every nation will understand that when they start a war the strongest country of them all stands ready to fight. With such a force General Marshall thinks this war could have been avoided and no doubt he is right.

When the atomic bomb dropped on Japan we entered a new age in warfare. It is the most terrible weapon ever used by man. It does not twist the steel in buildings like other bombs; it disintegrates them and returns the steel to dust. A bomb dropped on Shenandoah would leave nothing but dirt. There would be no ruined buildings. Nothing would remain. It is a difficult thing to imagine.

We must now be prepared to act instantly. Hours may mean the complete destruction of our Nation in the next war. No longer can we stop to raise a citizen army. No longer can we hold off the enemies while factories are completed. The war will have ended, in all probability, before any of these things could be done. Our planes must take to the air in hours or minutes. Our ships must be on the move. Hesitation might mean a ruined Detroit. Only a blot would tell us where Chicago had been. Thinking must change to keep pace with this terrible invention.

Pacifist thinking of today is treachery. It may be inspired by Communists, who are

still trying to make our country weak and Russia strong. It may be inspired by other enemies of our democratic form of government. It cannot be allowed to continue. We must not return to the old ideas. Preparedness is now the only answer. There is no other.

Congress should act as General Marshall requests. They should act now. They should be the leaders in the movement for preparing our Nation. Army men have been whipped by the pacifist thinkers for years, and are now afraid to make constructive proposals for preparedness, for fear they will get nothing, like they had in the late twenties. It is up to the Nation and to Congress to push them boldly along the only road to peace left.

Fail in this and another war is certain—and fairly soon.

## Bring the Boys Back Now

EXTENSION OF REMARKS
OF
## HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, under previous leave granted to me, I am inserting herewith a copy of a letter received from a constituent regarding high-point men who are overseas. This letter was written from Leyte, in the Philippine Islands, and indicates the seriousness of conditions among our men who should be home.

Also, as part of these remarks, I am inserting several news clippings from the Daily Pacifican:

LEYTE, P. I.

Hon. LAWRENCE H. SMITH,
*House of Representatives,*
*Washington, D. C.*

DEAR MR. SMITH: As a qualified voter of the First Wisconsin District (Whitewater, Walworth County), I am taking the liberty of sending you the enclosed clippings from recent issues of the Daily Pacifican regarding the mythical shortage of shipping and the delays in shipping men from the Pacific theater to the States. The views expressed are mainly of conditions on Luzon. Here they are as bad, if not worse.

I have been overseas more than a year, in active service for almost 3 years, but have only 46 points. I don't expect to get home just yet, but I fully realize that until something is done about getting overage and high-point men home my chances of getting home are pretty slim. A month and a half after the 38-year-olds were "immediately eligible" to go home we got orders to send our men down to the replacement center. The 80-point men and 35-year-olds went down 2 days sooner, but still a month after they were eligible. Two days difference in arriving at the center may make a difference of 2 or 3 weeks in getting on a boat. These men left us better than 2 weeks ago and are still sitting down there with 10,000 other men, waiting for a ride home. There are men there who've been sitting there for more than a month.

Some time ago the War Department announced that 70,000 men had left the Philippines for home during the month of September. About 3 days ago they decided that it was only 51,000. What happened to the other 19,000 men? Our men waiting at the center were told that not a man left Leyte during the month of September to go home for discharge. Yet there have been dozens of ships sitting in the harbor town of Tacloban that haven't lifted their anchors in about 2 months. Our men have been told that they won't leave this island before November 4.

There's not a man out here who will believe that the War Department wants to get us home or is making any special effort to get us home. We read of Army big shots testifying before congressional committees but never do we hear of them offering any proof of their statements (they never give the same figures twice) nor of any of the committeemen asking for any proof. These of us who have been in the Army know that when the Army says one thing it means another of opposite extreme. The Army has the country in the palm of its hand. What is Congress going to do about it? Or are you going to let them continue till we end up like Argentina?

---

[From the Daily Pacifican]

STATEMENT WANTED

EDITOR: It would seem to me that a statement explaining the reasons for not using Liberty and cargo ships for moving troops back to the States, would help clear up some of the recent gripes appearing in Mail Bag I, too, spent a good number of days on the decks of a Liberty on the Leyte invasion where 400 men had to climb through deck-loaded earth-moving equipment to get from one end of the ship to another.

Malicious rumors have been spreading regarding the reason for not utilizing these ships for troop transports. These malicious rumors are doing nothing but spreading lack of confidence, and a statement explaining the reasons for not using these ships will do a great deal to help the morale of men at this base.

T/4 WILLIAM M. SMITH, APO, 75.

---

EDITOR: It cost the United States a million dollars to keep these FW's for 30 days or approximately 26 cents per day per man. If the Government is so desirous of saving money, wouldn't it be less expensive to use the 12 Liberty ships required for the Japs to transport several thousand men back to the States for discharge and keep the Japs here for reconstruction work on the ruins of Manila?

T/Sgt. DALE H. ADAMS, APO 714
(And eight others).

---

LEFT BEHIND

EDITOR: My deepest and most heartfelt sympathy to Corporal Blatt and her fellow Wac's who are going to return to the States with a bitter taste in their pretty mouths because they haven't had a chance to see Tokyo as yet.

There are about 1,000 of us sitting here on Luzon doing nothing. We want to go to Tokyo also, and perhaps we have a slightly better reason. We are the boys who were fortunate enough to remain on Luzon while our division was the first to enter Tokyo. We were supposed to follow with supplies and equipment only a few days after the rest of the outfit left but we have been sitting here for 2 months now, waiting for those ships to take us to Tokyo, and there are no prospects of our leaving in the near future either.

We don't want to go to Tokyo just to see the scenery but our records happen to be up there and we can't go home without them. There are hundreds of us here who have more than enough points to go home. It isn't unusual here to see some GI walking around mumbling to himself and tearing his hair out because he has over 100 points or is 39 years old and still hasn't any prospects of leaving for the States.

Pfc JOHN BRESCH, APO 201.

---

ENDORSEMENT

EDITOR: I, and 600 officers and men of the One Thousand Two Hundred and Eighty-ninth Engineer (C), Bn., ETO and SWPA veterans heartily endorse Lt. Col. C. H. Davidson's cry in the wilderness of outfitting Liberty ships as troop transports.

Apparently the Army doesn't think Liberty ships are good enough to be used as troop transports for they are not as comfortable as the *Queen Mary* or the *Lurline*. Who cares about comfort if a little discomfort means we will get home weeks or months sooner? The Liberty ships were comfortable enough to be used as transports during wartime when the chips were down, so why should be good enough in peacetime. The men in this theater don't care how much discomfort a few weeks aboard a Liberty ship demands just so they get home a few weeks or months sooner.

If Colonel Davidson needs any volunteers to convert Liberty ships, there are thousands of men sitting around Manila more than willing to work hard to get the high pointers home so that the rest of us can leave this hellhole.

Lt. J. E. WILBURN, APO 75.

---

EDITOR: Congratulations on today's story, Altered Liberty Troop Ships Feasible. Now I believe that the Army paper's opinions are unbiased. Many thanks for this story from myself and all the men in the unit.

It certainly is gratifying to note that there are still officers that are not afraid of expressing their opinion.

T/4 WILLIAM M. SMITH, APO 75.

---

EDITOR: We, the undersigned, heartily concur with the articles in today's Pacifican and wish to volunteer our services to help build troop accommodations on cargo vessels.

T/5 ALFRED FELLER, APO 75
(And 47 others).

---

MORALE FACTOR

EDITOR: Some several thousand of us 80-odd pointers have been fighting the battle of the Twenty-second Repple Depple for over a month now in a vain effort to reach the home front. The majority of us, veteran SWPA men, established a "bridgehead" at the Twenty-second about the middle of last month, ostensibly for a week of processing and staging for the final hop back home. Thus far, all we have met with are delaying tactics, excuses and rumors.

And our morale lowered considerably when we hear of our old outfits and others getting 70 and 60-point men ready to go home as a unit. Moreover, the inquiries we made about this at higher headquarters confirmed the additional fact that these lower point men will have priority.

After VE-day, every GI who saw the WD movie on demobilization figured that seniority would rule, that the WD would stick to its guns in this point system as to shipping priority of higher point men on down.

My particular group or priority have had two dry runs since the first of the month; i. e., we were on shipping orders twice, but the orders were cancelled or "postponed" for some indefinite reason. And there has been no clarification either on the bulletin board or otherwise.

It may shock you to know that there are still some 90-pointers around as well as 80-pointers. I, myself, have 89 points and 5 years in the Army, including 2 years overseas.

I think this matter should be brought to the immmediate attention of all Army authorities responsible without delay. My cosigners and I will gladly cooperate to furnish any additional information desired as to the facts set forth in this letter.

Corp. JOE BERONSKY, APO 925
(And 20 others).

---

EDITOR: Perhaps you could shed some light on why 60 pointers should be shipping homeward while 80-, 85-, and 90-pointers are still

sitting here waiting for transportation home. In the practical working of the point system, someone seems to have butchered it beyond all semblance of fairness in getting the highest-point men home first.

Why is it that we're periodically belabored yith estimates and statements about how many they're going to ship this month and next month, and next year? It seems that when things bog down, there is always a new statement and a new set of figures. Why?

I've been in this Army for over 4 years, 2 of them overseas, and I'm sick of the waiting and excuses. To put it bluntly, I'd like out—and not behind a bunch of 60-pointers. Is asking for a square deal being presumptuous?

Sgt. HENRY DOERMER, APO 320.

---

EDITOR: Usually Mail Bag carries a small notice insisting that writers stick to one subject. To me and a few others, there just happens to be one.

How lovely to see in today's issue of the Pacifican that four ships have sailed with 60-pointers of a famous division. We men with 92 points get a bang from it. We'll try and make it an even 5 years before we take off.

Sgt. DOANE MICHAEL, APO 320.

---

REVERSE PRIORITY

EDITOR: The Thirty-eighth Division has sailed for the United States of America as a unit, including all their men with 60 points or more.

The point system has been severely criticized since its inception. The War Department has constantly maintained that its system is the best one possible. Even though we have greatly disagreed with the equitability of the system, we realized there was nothing we could do about it and hoped that at least it would be fairly administered.

The critical ARS was reduced to 70 points October 1. All of us have over 70 points and many of us have over 80 points. If the War Department arbitrarily deems that the point system is correct, why do they not have the firmness of their convictions in its administration, and why are 60 pointers going home before us?

We are not discrediting the valiant work of the Eighth-eighth Division, but we, too, are in the same Army and many of us are seasoned combat veterans who were redeployed without benefit of furlough.

We have stated the plain facts as we understand them. If there is a legitimate explanation we respectfully ask that it be promptly presented through these columns; otherwise we shall be obliged to draw our own conclusions.

Staff Sgt. GUY H. MARTIN
(And 15 others).

---

EDITOR: I recall in one of your September issues of the Pacifican the headlines "Seventy points eligible for discharge October 1," "Sixty pointers eligible for discharge November 1," and several other promises which were never kept and were almost impossible to keep. The reason I say they were impossible to keep is because there has been no attempt to get us down to replacement depot to even get ready to be sent home, and there are many boys down here with 90 and 100 points still sweating it out.

What we would like to know is why our hopes are continued to be built up for a big let down.

If the promise cannot be carried out, why make them? I'm sure that the Joes would think better of our country if the War Department would carry out their promises or else discontinue to make them.

Pvt. KENNETH LANPHER, APO 928.

---

EDITOR: We note with interest in the Pacifican of October 17 an article about the Thirty-first Division returning to the States with 60-point men. This is the second time this month that a division has returned 60-point men to the United States. We would like to know how come.

Not long ago we sat through a film called "Two Down and One to Go," which explained how high point men would be substituted for low-point men in outfits returning to the United States. Can anyone say why 60-point men are returning, while 85-point men are still waiting to go to disposition centers?

If we are to believe what the Government tells us, men with 60 points are eligible for discharge the first of November. If the Army has forgotten, this is still October.

Cpl. ROBERT D. REGIER, APO 75
(And 25 others).

---

EDITOR: It is time the Army sent all of its 80-point men home before the papers print optimistic stories about the 70- and 60-point men. Many of us with over 80 points were optimistic too when we came to the Twenty-second Replacement Depot to wait for a ship to carry us home.

It doesn't help our morale when the 70-point men in our old outfits start processing to go home as a unit and chide us "casuals" that they'll probably beat us home to the States. It doesn't sound fair or logical that lower point men will get a ship before 80 pointers if the point system is carried out to the letter and spirit.

Cpl. JOE RANDALL, APO 925
(And six others).

---

EDITOR: What point system do they use that 60 pointers are now being sent home? Are the high pointers going to sweat it out until all the 60 pointers are gone?

Here we are in the Twenty-ninth Replacement Depot, waiting our turn for shipment, when we read about this in your daily paper. That saying, Golden Gate in '48," looks true for us.

Corp. FRANK M. SUCHANEK, APO 75.

---

EDITOR: After sweating out 22 days at this replacement depot, together with other men with 80 to 95 points, you can imagine our shocked surprise to learn through your paper that men of the Thirty-eighth Division with 60 points have departed stateside.

Are we to understand that no shipping is available because it is being used to get 60-point men home? I think you'll agree that an explanation is in order.

Another thing that has me puzzled is the seemingly unending stream of "combat fatigue" men who process here and ship out ahead of men with high points. Is someone pulling a fast one?

M/Sgt. M. B. ABRAMS, APO 714.

---

DEMOCRATIC FROOF

EDITOR: While stationed at the Twenty-ninth Replacement Depot from August to October it was my duty to oversee a group of Filipino girls at the depot tailor shop. The girls could all speak good English, and I found them to be good-natured, cooperative, and of a very kindly nature.

When the shop closed the girls conferred among themselves and planned a farewell party as a parting gesture for their former employers and their new friends. As at any good farewell party, there were tears and there were speeches. And then there was dancing and singing until the evening had worn away.

If I have profited from this experience, I have certainly learned not to sympathize with prejudice. Rather, I am more certain that the racial issue is founded on ignorance, that a man who denounces another color denounces himself, and that where there is wisdom there is peace and love.

Corp. ADELMO FABRIZIO, APO 238.

---

TRIPP TRAPPINGS

EDITOR: I predict the University of Georgia Bulldogs will win the mythical national football championship in a walk. With wholehearted support from the outfit that whipped Germany and Japan, how can they lose?

Perhaps Mr. Patterson, with a little pressure from South Carolina Senators MAYBANK and JOHNSTON, could round up some football talent (preferably rugged young 40-point men) for my little alma mater, Wofford College, in Spartansburg.

Sgt. JAMES W. CROCKER, APO 707.

---

SHIPPING SPACE

EDITOR: It seems that the buck-passing from the higher-ups on down is the two words, "shipping space."

I realize that PW's are first and hospital cases next, but having seen the Pacific anchorages recently, I refuse to listen to that escape route, "no shipping space."

On the way over from Europe to Manila, we passed through three huge anchorages, Ulithe, Eniwetok, and Batangas. At Eniwetok we sailed for 3 hours before we lost sight of ships anchored there, at Ulithe the same, and at Batangas there were over 100 ships.

Give orders to those thousands of empty cargo ships, let the boys sleep on decks, let them figure out their latrine systems, they'll get home O K.

Nobody worried much in the jungles; why worry about them on a 2-week voyage? We're able to take care of ourselves. How about the Army and Navy port commanders getting together?

Pfc H. SCHIER, APO 75.

---

EDITOR: According to a tiny article in the October 10 Pacifican, the transport *Monticello* sailed for Italy with 6,000 PW's.

We, the undersigned, waiting for shipment home, have been continually lectured on the point that the heads of the Army and Navy are doing their best to get us home. Only an idiot would believe that PW's are more important to Italy than we combat veterans of the ETO and SWPA are to our homes. This is a disgrace and should be remedied so that no other ship will sail again under those premises until all veterans have been returned home.

It is getting very tiresome seeing so few of us going home every day. This piece of news made us blow our tops.

T/4 LEONARD EPSTEIN, APO 320
(And 92 others).

(The return trip from the States to Italy would undoubtedly have been made empty by the *Monticello* had these Italian PW's not been taken. No United States veteran had his return home delayed, and the Government is saving money on the upkeep of these PW's by returning them.—EDITOR.)

---

EDITOR: It is time that a few pertinent questions were addressed to the powers that be; most of them have been more or less touched upon in Mail Bag, but I would like to summarize them.

Why, with enough air and sea transportation available in the Pacific to move at least 500,000 troops per month, is the homebound stream a mere trickle yet, 6 weeks after the war ended? We have (or had) at least 1,000 B–29's over here. At a conservative estimate of 80 men apiece, three round trips per month, they can carry 90,000 men home each month. In addition, we have thousands of other planes, bombers, and transports; we have literally thousands of ships, transports, aircraft carriers, etc. Not one of us, officer or enlisted man, will object to discomfort or inconvenience if it means a speed-up in our return.

Our job is done; now get us home as fast as possible. Give us no more talk of shipping shortages.

Lt. R. H. FOLKMAN, APO 75.

---

EDITOR: How can there be a shortage of ships to get us home when our Navy is the largest in the world and they have just an-

nounced that we have a surplus of 2,700 Liberty ships, which is twice the amount needed to get all the high-point men home? I, for one, would appreciate it if they would stop kidding us with promises and give us action instead.

Sgt. AL. SHREIBMAN, APO 925.

## The Artificial Limb Scandal and the Veterans' Administration

EXTENSION OF REMARKS

OF

### HON. ELLIS E. PATTERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph Leib, service officer, past vice commander, Costello Post, No. 15, the American Legion:

Recently numerous charges have appeared in the press to the effect that soldiers with amputations are not getting the best artificial limbs that science can devise. These accusations have been met with immediate denials by certain Veterans' Administration officials, as well as by agents representing manufacturers producing these appliances. Although the tune of some of these dissents is now undergoing a slight modulation—these basic charges are still being challenged in some official quarters. Because these conflicting statements and sweeping contradictions are confusing the public, is it not time that the truth be told so that Congress and the American people can be fully apprised of the ugly facts surrounding this nauseating and disgraceful situation?

I believe that I can speak with some authority on this matter. Soon after I had appeared before the Senate Military Affairs Committee early in 1942, pleading for an investigation of the alarming service air crashes (which resulted in the scandulous Curtiss-Wright and Consolidated-Vultee reports), I received letters from amputees urging that I forget aircraft accidents and devote my time in an endeavor to clean up the artificial limb scandal. One person went so far as to send me parts of an artificial leg pointing out the defective material and poor construction of the appliance. At the time I was more concerned in seeing that the armed forces were getting the best possible aircraft, I nevertheless called these complaints to Members of Congress, Government officials, and veteran leaders. Many individuals were acquainted with this situation long before it came to my attention, but it seemed that only a few appeared willing to do something about it.

Then in September 1942 the American Legion national convention adopted a Michigan department resolution demanding extensive research and indicated that improvement in manufacturing artificial limbs were not keeping pace with mechanical progress shown in many other phases of engineering.

This petition was passed on to General Hines, the Administrator of Veterans' Affairs, who in turn referred the resolution to Chester C. Hadden, president of the Association of Limb Manufacturers of America. Under date of November 14, 1942, Hines propounded these questions to Hadden:

"1. As to the sort of research which is mentioned in the said resolution, may I trouble you to let me know whether each of the manufacturing firms who are members of your association do conduct research of this kind, and finance their own research?

"2. Or does your association conduct research from its funds, and with the thought of turning over to all of the members of the association such new ideas in materials and in the fabrication of the finished products as are so developed?"

Sixteen days later Hadden's reply consisted of three pages pointing out that the American Legion resolution was not based on facts. Said he:

"I believe it is pretty generally accepted that the improvement in the manufacturing of artificial limbs has not only kept pace with mechanical progress shown in many other phases of engineering, but actually has exceeded mechanical progress shown in a great many other fields."

Then Hadder added:

"In conclusion it appears to me that the resolution referred to is completely contrary to the known facts. It would appear that there is absolutely no necessity for the allocation of any Federal funds for research in this field at the present time but rather it would appear to us that this association and its members are well qualified to meet this problem."

And here an amazing thing happened. Based solely on this ridiculous inquiry and reply, General Hines sat down and advised T. O. Kraabel, national director of rehabilitation of the American Legion, on December 14, 1942, merely 2 weeks later, that "after careful consideration to this matter and giving due regard to the position of the organization whose members consist of those individuals and firms engaged in the manufacturing of artificial limbs in America, it is not believed to be proper for the Veterans' Administration to initiate the establishment of research facilities of this character."

That ended that. Kraable and the American Legion for some reason muffed the ball, for they refused to press the matter.

However, the Limb Association suddenly reversed itself and organized a subsidiary known as the Research Institute Foundation, advising its membership that it needed funds badly for research work, disregarding the fact that it had notified General Hines that it had able finances.

The prospectus of the newly formed subsidiary read:

"The most important factor to carry on the research work successfully is the need of sufficient funds. The Research Institute Foundation to start with one plastic engineer, but would also like to have a draftsman and a machinist."

Two years later on May 21, 1945, Mr. F. O. Peterson, treasurer of this group, advised this writer:

"The research work is progressing slowly due to insufficient funds. However, several details have been accomplished with only the help of one plastic engineer."

This startling fact was repeatedly brought to the attention of the Veterans' Administration yet General Hines refused to take proper action.

Ironically enough, Lt. Col. Albert N. Baggs, national medical consultant for the American Legion, told a House Labor subcommittee on October 26, 1945 that the maimed veterans of our wars "had to accept artificial arms and legs in which there had been no basic improvements for 50 years or more."

Again, I repeat—few persons seemed willing to help clean up this startling scandal. It was an uphill battle. On a number of occasions I sought copies of the previous quoted Hines-Hadden-Kraabel correspondence, but my requests were in vain. Then I called upon Representative MORRISON, one of the best friends the veterans ever had, for assistance, but General Hines excitedly rushed his special assistant, William C. Murray to the Congressman's office to advise that the letters "were too hot" to give out. I then solicited the aid of a Member of the Senate, and after I had advised him what had transpired, he went all out and demanded the entire correspondence. After further procrastination the file was released. The Senator was ready to make a speech about the scandal but General Hines got to him and persuaded the gentleman to accept a brand new veterans hospital instead.

This did not stop the complaints. Day after day veterans poured out their resentment to deaf ears. The Antitrust Division of the Department of Justice finally became aroused because of price-fixing and cartel charges and they undertook to prove the scandal.

Rumors began to leak out in official Washington and they reached the interested ears of Douglas Smith, Staff writer for the Scripps-Howard newspapers. He called upon the Justice Department for information but officials there referred him to the Senator mentioned above who in turn referred him to me. Out of this incident came a number of articles and editorials that helped the cause along.

During this same period the Surgeon General of the Army—not the Veterans' Administration—called a conference in Chicago, Ill., to standardize artificial limbs, and as a result of this meeting a committee on prosthetic devices was organized within the Division of Medical Sciences and the Division of Engineering and industrial research of the National Research Council.

A climax of this scandal came during the last weeks of October 1945, when kindly Representative PATTERSON of California charged:

"I do not want to see profiteering in artificial limbs. I do not want to see anyone, serviceman or civilian, subjected to exorbitant prices due to excessive profits. However, in the case of veterans, I am more concerned with seeing that they get the best possible artificial legs and arms, whatever they cost."

Yes, ladies and gentleman, that was more than 3 years after a few of us were pleading that something be done to correct this great injustice.

But the whopper of all these sudden excuses and alibis came on October 14, 1945, when Lobbyist Hadden, of the Association of Limb Manufacturers, who had so misled General Hines, appeared before a Disabled American Veterans committee and had the audacity to openly charge that the Army was responsible for this deplorable situation.

There is no time for further denials or alibis. It is time for immediate action. We must no longer allow special interest or greed to dominate this scene. Our Government has a moral obligation to see to it that those who lost part of their body fighting in defense of this great Republic should not undergo further hardship or pain because of a few warped individuals whose only concern is high profits.

In the Washington Times-Herald, on November 5, 1945, there appeared a dispatch quoting Dr. Paul E. Klopsteg, director of research at the Technological Institute, Northwestern University, and chairman of the committee on prosthetic devices of the National Research Council, to the effect that there are seven major faults in artificial limbs now being supplied to our war heroes.

This eminent authority pointed out that limbs today are of excessive weight, have a susceptibility to breakage, especially at the knee and ankle joints, and to moisture and water, which causes parts of the limbs to corrode and glued surfaces to come apart. Other major faults he pointed out is in joint weaknesses, and that limb surfaces, made of wood, metal, or plastics, are hard and not natural to the touch.

Dr. Klopsteg ended his statement by predicting that it would be 2 or 3 years before the new improved prosthetic appliances would be available to our veterans.

Imagine—2 or 3 years to wait.

Thanks to General Hines and his blind cohorts.

## Mexican Interpretations of the Water Treaty

EXTENSION OF REMARKS

OF

**HON. HARRY R. SHEPPARD**

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. SHEPPARD. Mr. Speaker, when the water treaty with Mexico was before the Senate for ratification, the State Department negotiators told the Senate Committee on Foreign Relations that, with respect to the Colorado River, the treaty obligated Mexico to accept water regardless of quality, even though it might be so salty as to be unusable; and that the so-called extraordinary drought clause of the treaty would relieve the United States from furnishing the guaranteed quantity of 1,500,000 acre-feet per year if the drought occurred in any portion of the basin in the United States and resulted in the curtailment of usage, and that it would not have to occur simultaneously in all portions of the basin to entitle us to relief.

There has recently been brought to my attention the interpretation given to the Mexican Senate by the Mexican negotiators of the treaty on these same two points, among others. Their interpretation is exactly opposite to that given the Senate by our State Department. As to quality of water, the Mexican negotiators reported that the water must be of good quality for irrigation, of the same quality as that delivered to American projects. As to extraordinary drought, the Mexicans reported:

> The amount guaranteed to Mexico can only be reduced in cases of extreme drought and only if that extraordinary drought should bring about the reduction of all consumptions in the United States.

These, among others, were exactly the ambiguities which opponents of the treaty pointed out during debate. Now that these ambiguities have been so definitely established, certainly in the interests of proper relations with our neighbor, Mexico, and to obviate future misunderstandings or bitterness which might come from forced arbitration, and also so that the people of our Colorado River Basin States may know definitely the burdens which they must assume, under the treaty, the State Department is under the deepest obligation to remove them by exchange of notes before the treaty is made effective by exchange of ratifications, and certainly before this House appropriates money to implement the treaty. A deficiency bill containing money for this purpose is before the House Appropriations Committee at this moment.

For the information of the Members, as more will be heard of this grave matter in the near future, I am placing in the RECORD a full translation of the text of the report to the Mexican Senate by Engineer Adolfo Orive Alba, executive chairman of the National Irrigation Commission of Mexico.

The statements of Engineer Adolfo Orive Alba are taken from a prepared report which he submitted to the Foreign Relations Committee of the Mexican Senate on July 31, 1945. This committee was, at the time, holding hearings on the water treaty with the United States concerning the Colorado and Tijuana Rivers and the Rio Grande, which had been ratified by the United States Senate.

Engineer Adolfo Orive Alba is executive chairman of the National Irrigation Commission of Mexico. This Commission is under the Department of Agriculture and Development and is in charge of all irrigation and reclamation work in Mexico. It corresponds in Mexico to the Bureau of Reclamation in the United States and Engineer Orive Alba holds a position corresponding to that of Mr. Harry Bashore, Commissioner of the Bureau of Reclamation.

Engineer Orive Alba has been in charge of irrigation works on both the Rio Grande and Colorado Rivers. He speaks from intimate knowledge of both rivers and his statement is made officially in his capacity of executive chairman. Moreover, he was one of the negotiators of the Treaty which gives his interpretations and statements even greater weight. He closes his report with this statement:

> The above considerations reach the conclusion that the treaty technically is beneficial for the country, and I express this in the name of the National Irrigation Commission and as a participant, in my character of executive chairman, in the technical aspects of its negotiation.

This brings to light the different attitude of the Mexican Government from that of our Government in the treaty negotiations. It is evident that Mexico recognized the value of including the executive chairman of its National Irrigation Commission as a participant in treaty negotiations in order to secure the detail knowledge which the Commission had acquired relative to the rivers in question. On the other hand, our State Department did not even consult Commissioner Bashore during the negotiations much less have him participate in those negotiations. Commissioner Bashore testified that he knew nothing of the treaty prior to its being signed in February 1944 and that he had never been consulted by our State Department in regard to it.

The full text of Engineer Orive Alba's statement is as follows:

[From El Universal, Mexico City, of August 1, 1945]

THE WATER TREATY OF THE COLORADO RIVER AND RIO GRANDE FAVORS MEXICO

Engineer Adolfo Orive Alba, executive chairman of irrigation, made a well-founded defense of that document before the Senate.

In the exposition which Engineer Adolfo Orive Alba, executive chairman of the National Irrigation Commission, made yesterday before the Foreign Relations Committee of the Senate, on the International Water Treaty recently signed by Mexico and the United States, that official, with obvious knowledge of his subject, maintained that the arrangements made between the two Governments not only merit the ratification of the Mexican Senate, but represent valuable advantages for the Nation.

He destroyed one by one the charges and objections which have been formulated against said agreement, making a documented study before the Senators of the channels of the Colorado River and Rio Grande, of their courses through American and Mexican territory, and of the conditions under which the waters of the two rivers were and still are used, without the benficial provisions which the international treaty establishes subject to ratification.

Concretely, the executive chairman of the National Irrigation Commission affirmed that the maximum possibilities of areas irrigated without the treaty would reach at the highest to 360,000 hectares, that is, that the concrete advantage which Mexico obtains with that international instrument is that of counting on a volume of water sufficient to irrigate 445,000 hectares (1,000,000 acres) more than it could irrigate without the approval or existence of the treaty.

The exposition of the executive chairman of the National Commission of Irrigation constitutes, without doubt, a historical document which dissipates any doubt or suspicion which might have arisen regarding the international arrangements on the waters of the Colorado and Rio Grande Rivers, and punctually, as it has great importance, we transcribe it below just as Engineer Orive Alba read it, interrupting his reading only in order to make it more explicit with clarifications made on maps and diagrams fastened to the walls, which the senators, deputies, and the public in general could consult freely.

---

STATEMENT OF ENGINEER ADOLFO ORIVE ALBA, EXECUTIVE CHAIRMAN OF THE NATIONAL IRRIGATION COMMISSION [1]

HONORABLE SENATORS: I am highly grateful for the kind invitation which you have given me for appearing at this round table, both in my character as executive chairman of the National Irrigation Commission and in that of participant, with that category, in the negotiation of the treaty.

The heated commentaries which this treaty has aroused, the importance that the Senate has given it in its study and this democratic form of discussing it before you, are undoubtedly not exaggerated, because the treaty is one of the most important that our country has signed since its independence and is the most important of its kind in the entire world.

The National Irrigation Commission is preparing a voluminous report on the treaty which it will present to the Senate officially, at the opening of the next period of sessions. This report will contain all the data, calculations, etc., which served as a basis for the treaty. It will contain, moreover, a detailed study, from the technical point of view, of each of clauses, of each of the phrases, and even of the words of the treaty, with the interpretation which the National Irrigation Commission officially gives to them.

But with the hope that you may receive in due time this report now in preparation and in attention to your kind invitation, I have come to make a brief exposition of the treaty with the object of clarifying many of its concepts and of commenting on the observations which have been made about it to date by the press, from the point of view of the National Irrigation Commission.

---

[1] The words and figures enclosed in parentheses, e. g., "445,000 hectares (1,100,000 acres)" and also the supplement table following table 1 are interpolations of United States equivalents of quantities expressed in Mexican units.

This exposition should be begun by a brief description of the Rio Grande, Colorado, and Tijuana Rivers.

I. THE RIO GRANDE (RIO BRAVO)

It rises in the United States and runs through said country to the south until reaching Ciudad Juarez, where it is converted into a boundary between the two countries for some 2,000 kilometers (1,200 miles) to its outlet into the Gulf of Mexico.

The International Water Treaty of 1906, signed by the United States and by our country, distributed the waters of the Rio Grande up to the place called Fort Quitman, where the Juarez Valley terminates. The present treaty, therefore, is only occupied with the Rio Grande, from Fort Quitman to the Gulf.

From Fort Quitman to the Gulf of Mexico the impounding basin of the Rio Grande in the United States is 150,528 square kilometers (58,119 square miles) and in Mexico 211,177 square kilometers (81,536 square miles).

If there were no use of the waters either in Mexican territory or American territory, there would reach the Rio Grande as an annual average, from Fort Quitman to the Gulf:

| | Millions of cubic meters | Percent | Thousands of acre-feet |
|---|---|---|---|
| 1. Proceeding from the United States | 3,047 | 35 | (2,470) |
| 2. Proceeding from Mexico | 5,812 | 65 | (4,712) |
| Total | 8,859 | 100 | (7,182) |

The regimen of the Rio Grande, in spite of the dams that are constructed on its subsidiaries, both American and Mexico, is to this date very irregular. On numerous occasions each year the flow of the river is so reduced that it is not enough to satisfy the needs of irrigation on both banks. On the other hand, on other occasions great floods pass through the river, of short duration, which cause serious inundations of the bordering lands, and principally of Mexican lands.

II. THE COLORADO RIVER

It rises in the United States and its basin includes part of seven American States. It is 2,730 kilometers (1,696 miles) long, of which about 30 (19 miles) serve as the international boundary between Mexico and the United States, and the last 160 kilometers (100 miles) are totally within Mexican territory. It has no subsidiaries of any kind in Mexican territory. Its total runoff proceeds from the United States.

Before storage dams were constructed to regulate its current, its flow was highly irregular. Its current fluctuated from a few liters per second, which allowed it to be crossed on foot, practically without wetting the shoes, to imposing floods of 6,800 cubic meters per second (240,000 second feet). The average annual run-off of the Colorado River is estimated at 22,000,000,000 cubic meters (17,835,000 acre-feet), but this annual run-off, without dams, has fluctuated from 7,000,000,000 (5,675,000 acre-feet) to 28,000,000,000 cubic meters (22,700,000 acre-feet).

This very irregular flow of the river demonstrates the necessity of storing its waters so that they may be used for irrigation. In the United States there are numerous adequate sites for carrying out this storage. In our country, as the river is already in its deltaic zone, there is none.

III. THE TIJUANA RIVER

The Tijuana River is formed by two principal tributaries; the Las Palmas River which rises in Mexico and the Alamar River, which, rising in the United States, crosses the international line to enter Mexico and join with the Las Palmas River some 6 kilometers (4 miles) to the south of Tijuana. Both rivers together form the Tijuana River, which runs toward the northeast, again crossing the international line at Tijuana to enter American territory and empty into the Pacific three kilometers north of the frontier.

On the Las Palmas River our country has constructed the Rodriguez Dam and uses all of its waters. There are dams on the various American tributaries of the Alamar River.

The impounding basin of the Tijuana River is:

| | Square kilometers | (Square miles) |
|---|---|---|
| In the United States | 1,230 | (475) |
| In Mexico | 3,200 | (1,235) |
| Total | 4,430 | (1,710) |

Its run-off is even more irregular than that of the other international rivers, since the case has occurred in which the Tijuana River became completely dry for a continuous period of 7 years, and on the other hand, on other occasions it has carried floods of up to 2,000 cubic meters per second (70,000 second-feet). Its annual average run-off has been estimated at some 20,000,000 cubic meters (16,200 acre-feet).

IV. HISTORIC ANTECEDENTS

The treaties of 1848 and of 1853 between the United States and Mexico, with respect to the use of their currents, only considered the navigation of the Rio Grande and Colorado Rivers.

The active use of the waters of these rivers for irrigation only began at the commencement of the present century.

As these uses were increased and as both countries constructed irrigation works, the water commenced to become insufficient and the need of reaching an agreement between the two countries for the better use of the waters of these rivers became apparent.

In 1927 the United States and Mexico agreed to hold conversations for studying the problem of the international rivers. In 1928 the first of these conversations was held, it having been decided to gather the necessary technical data on the three rivers. In 1929, with this data collected by mixed commissions, conferences were held regarding the distribution of the waters of the Colorado and Rio Grande, but as there was not sufficient data about the Tijuana River and as this current has relatively small importance, it was decided to postpone its study until later.

The conferences of 1929 failed because the two delegations were not able to reach an agreement. It is interesting to note that the American delegation made a proposition which in summary was equivalent to the following:

1. That of the waters which reached the Rio Grande, there should be assigned in the first place to the United States the volume which had been in use in Texas of 1,168 million cubic meters (963,000 acre-feet), and to Mexico what it had been taking from the principal current, or 70,000,000 cubic meters (56,700 acre-feet), and the rest would be divided equally between the two countries. This was equivalent to assigning from the Mexican tributaries 935,000,000 cubic meters (793,500 acre-feet) to the United States.

2. In the case of the Colorado River, to assign to Mexico the maximum volume that it had used until then; that is, before the construction of Boulder Dam, a volume which was estimated at 925,000,000 cubic meters (750,000 acre-feet).

The Mexican delegation proposed that the waters of the Rio Grande should be divided in half between the two countries, which was equivalent to assigning to the United States 426,000,000 cubic meters (345,350 acre-feet) of water from the Mexican tributaries, since the latter carried more water to the Rio Grande than the American tributaries. In the case of the Colorado River the Mexican delegation asked that there be furnished sufficient water to irrigate the 600,000 hectares (1,492,600 acres), which were considered as irrigable on the Mexican side.

After the failure of the above conferences, it was not until 1943 when it was possible to again commence negotiations by engineers and lawyers of the two countries, which culminated with the signature of the present international water treaty, in the first part of 1944.

V. SIGNIFICANCE OF THE TREATY IN THE CASE OF THE RIO GRANDE

I am going to read the fundamental article of the treaty in the case of the Rio Grande:

"ART. 4. The waters of the Rio Grande (Bravo) between Fort Quitman, Tex., and the Gulf of Mexico are assigned to the two countries in the following manner:

"A. To Mexico:

"(a) The total of the waters that reach the principal current of the Rio Grande from the San Juan and Alamo Rivers, including the return water proceeding from the lands that these two rivers irrigate.

"(b) Half of the run-off from the principal basin of the Rio Grande below the lower main international storage dam, whenever said run-off is not assigned expressly in this treaty to one of the two countries.

"(c) A third part of the water which reaches the principal current of the Rio Grande proceeding from the Conchos, San Diego, San Rodrigo, Escondido, Salado, and Arroyo de Las Vacas Rivers, which third part shall not be less in total, on an average and in cycles of five consecutive years, than 431,721,000 cubic meters (350,000 acre-feet) annually. The United States will not acquire any right by the use of the waters of the tributaries mentioned in this clause in excess of the 431,721,000 cubic meters (350,000 acre-feet) mentioned, except the right of using the third part of the run-off which reaches the Rio Grande from said tributaries, although it exceeds the volume named.

"(d) Half of any other run-off in the principal basin of the Rio Grande, not assigned especially in this article, and half of the contributions of all the tributaries not measured—which are those not named in this article between Fort Quitman and the lower main international dam.

"In cases of extraordinary drought or serious accident to the hydraulic systems of the measured Mexican tributaries which may make it difficult for Mexico to allow to pass the 431,721,000 cubic meters (350,000 acre-feet) annually which are assigned to the United States as the minimum contribution from the Mexican tributaries mentioned, in clause 'c' of paragraph 'B' of this article, the amount lacking which may exist at the end of the following cycle (will be replaced) with water proceeding from the same tributaries.

"If the useful capacity assigned to the United States of at least two of the main international dams, including that located upstream, is filled with water belonging to the United States, a cycle of 5 years will be considered terminated, and all the charges totally paid, a new cycle beginning from that amount."

In the first place I desire to call your attention especially to this fundamental phrase which, if it had not been carefully determined, would have given rise to much confusion: "There is assigned to the United States (c) a third part of the water which reaches the main current of the Rio Grande * * *." Thus it is not a matter of assigning the third part of the virgin run-off of the Mexican tributaries which this clause mentions, but only the third part of the water which freely reaches the Rio Grande, that is, the surplus, after having made all the use possible of the waters of these tributaries within national territory.

Thus, having cultivated an average from 1900 to 1943 on our tributaries of a total area estimated at 127,000 hectares (313,800 acres) under the plans of the Commission there will be cultivated some 315,000 hectares (778,400 acres) in the future.

In effect, our country, through the National Irrigation Commission, before negotiation of the treaty, studied the form of making use within the basin of each Mexican tributary of the Rio Grande the maximum possible volume of the water of said tributary. For example, in the case of the Conchos River the following utilizations in detail actually exist:

| | Hectares | (Acres) |
|---|---|---|
| By direct intakes on the Conchos River, there are irrigated | 17,239 | (42,600) |
| On the San Pedro River, tributary of the Conchos | 5,000 | (12,400) |
| On the Florido River, with permanent irrigation | 10,000 | (24,700) |
| On the Chuviscar River | 3,150 | (7,800) |
| In the Delicias irrigation district | 33,371 | (82,500) |
| Total | 69,760 | (170,000) |

The Commission has made a study in order to make use of the waters of the Conchos River and its tributaries to the greatest degree possible, by the construction of numerous new dams which would permit regulation to the point where it is physically practicable of the torrential waters of the Conchos River and its tributaries, having found that the maximum utilizations which can be made are the following:

| | Hectares | (Acres) |
|---|---|---|
| Increase in the Delicias irrigation district with the Las Virgenes and Villalba Dams | 30,000 | (74,100) |
| Increase of 8,200 hectares by means of the dams projected on the Florido River and permanent irrigation of 2,450 hectares not considered in the area benefited at present but evidently to be irrigated | 10,650 | (26,300) |
| Increase by utilization of the waters of the Chuviscar River through the construction of the Los Adamas Dam | 2,100 | (5,200) |
| Irrigation in the Ojinaga Valley through the construction of the dam at "El Piguis" | 4,500 | (11,100) |
| Total possible increase | 47,250 | (116,700) |

But in spite of the above increase it will not be physically possible to make use, every year, of the total of the run-off of the Conchos River, because there will always be cases of extraordinary floods which are spilled over the dams and go to the Rio Grande, because there will always be return water from the irrigated lands which inevitably arrive at the river bed, etc., that is, in the case of the Conchos River as in the case of any other Mexican river in the center of the country, and to generalize even more, in the case of any river in any part of the world, there will always be surpluses, since it is never possible to use 100 percent of the current of the river. These future surpluses appear in estimates in the attached table, but it is necessary to state that the amounts given will be the average of numerous years, that is, there will be years in which the surplus from the Conchos River, which reaches the Rio Grande, will be almost nothing and on the other hand there will be abundant years in which, by spillings from the dams, large surpluses will reach the Rio Grande. The amount of 770,000,000 cubic meters (624,000 acre-feet) per year which is given, is the average of the future surpluses of many years.

In like form the National Irrigation Commission proceeded with the other tributaries of the Rio Grande, that is, without taking into account that they flow into the Rio Grande, it tried to make use of the total of its current in the irrigation of lands of the basin of these tributaries and thus determined the unavoidable surpluses to which we refer in the case of the Conchos River.

The attached table shows numerically the form in which the treaty will operate with respect to the Rio Grande. This table shows what the virgin current of the Rio Grande would be if no uses existed, the actual consumptions which diminish said virgin current, the total future consumptions which will diminish said virgin current even more, and the future surpluses which will result from deducting from the original amount of the current the future consumptions.

In its studies the National Irrigation Commission has not proceeded by methods, but analyzed the case month by month of each year and year by year, for a period of 45 years.

So then, having made all the imaginable utilizations of the waters of the tributaries of the Rio Grande, in the manner before explained, there still will reach the Rio Grande surpluses from these tributaries whose average volume for many years is that given by this table.

From these surplus volumes which reach the Rio Grande, proceeding from the six tributaries: Conchos, San Diego, San Rodrigo, Escondido, Salado, and Arroyo de Las Vacas Rivers, with an average total contribution of 1,423,000,000 cubic meters (1,153,600 acre-feet) per year, Mexico by the treaty assigns the third part to the United States. Mexico guarantees that the volume assigned to the United States from these tributaries will never be less than 431,000,000 cubic meters (350,000 acre-feet) which is an amount slightly inferior to the third part of the average volume of the surpluses before mentioned.

Why did Mexico assign this volume to the United States?

Because our country has always sustained the logical thesis that the waters which flow in the Rio Grande in its bounding section should be distributed by halves between the two countries, and the simple arithmetical operation made in this statement shows us that by means of the stipulations of the treaty the surplus water which runs in the Rio Grande is divided practically in half between the two countries. Please note that in 1929 our delegation made an equivalent proposition in the case of the Rio Grande and that the American delegation in that year asked for a volume three times greater than that which the present treaty grants it.

Moreover, it should be noted that the United States has been taking in all the latter years a large volume of water from the Rio Grande. Said volume is made up of water proceeding from the United States and of water proceeding from our country. It is calculated that the water proceeding from our tributaries and diverted by the United States is 922,000,000 cubic meters (747,400 acre-feet). The treaty, consequently, reduces the volume of Mexican waters used by the United States by half.

VI. SITUATION ON THE RIO GRANDE WITHOUT THE TREATY

Without the existence of this treaty, the situation of Mexico with respect to the Rio Grande would be the following:

(a) With respect to its tributaries, Mexico could develop the same projects which it can execute with the treaty, but not a single one more.

(b) With respect to the principal current of th Rio Grande during the first years, Mexico could continue to take the small volume which it uses by El Retamal for the irrigation of some 30,000 hectares (74,100 acres) The United States would continue taking in the first years a volume of 1,419,000,000 cubic meters (1,150,400 acre-feet) for the irrigation of 236,000 hectares (583,200 acres). But, and this is a decisive "but," the United States had already begun some gigantic works with the name of Federal Project No. 5, or Rincon, a project approved by the American Congress which would permit of carrying practically the total of the waters of the Rio Grande to American territory, with the very reasonable cost of $60,000,000. On the Rio Grande there has existed a "race" of utilizations on the part of the two countries. The United States commenced installing a large number of pumps for taking water from the Rio Grande. Mexico, in 1937, began the use of these waters by opening the small gravity intake of Retamal. The United States answered with the gigantic works of Federal Project No. 5, or Rincon. Mexico would not have recourses nor physical possibilities for making an answer to these works, which, as we say, would be equivalent to taking the Rio Grande to American territory. These works were suspended at the beginning of the present war, but could be renewed on its termination.

VII. SITUATION ON THE RIO GRANDE WITH THE TREATY

If the treaty is approved by the Senate and goes into effect, the situation of Mexico with respect to the waters of the Rio Grande will be the following:

I. With regard to the use of the current of all the Mexican tributaries of the Rio Grande, our country could carry out exactly the same projects which it would have done if there had been no treaty. That is, there is no injury to any of the States in which the basins of these tributaries are found.

II. With the treaty in effect it will be possible to construct international dams in the bed of the Rio Grande itself, which will regulate through their storage the surpluses which, with a very irregular regimen, flow and will flow in the future in the bed of the Rio Grande. Through the use of its waters, Mexico will be able to irrigate in the Mexican part of the delta of the Rio Grande, blessed with extraordinary fertile lands, an area estimated at 245,000 hectares (605,400 acres).

By means of the treaty, the danger for Mexico will disappear which was implied in the Federal Project No. 5, or Rincon project, which if constructed by the United States at the end of the war, will only be for carrying the part which corresponds to it of the waters of the Rio Grande, and not the total of said current.

The treaty will bring the following additional advantages for the two countries:

1. Thanks to the international dams, it will control the floods which now cause great destruction, principally on the Mexican side.

2. Energy will be generated which will be distributed equally between the two countries and which will permit on the one hand the amortization of part of the cost of the

international dams and, on the other, the industrialization of our frontier region.

VIII. PRINCIPAL OBJECTIONS MADE TO THE TREATY WITH REGARD TO THE RIO GRANDE

The great majority of the objections which I have read or heard about the treaty have been made through the lack of knowledge about it or of the technical data which served as a basis for it. For example, various opponents of the treaty have objected by stating that it assigns 60 percent of the water of our tributaries to the United States, which, as we have seen, shows a complete lack of knowledge of the treaty, or of the amounts of water which are really involved. I do not refer, therefore, to these objections since I am sure that those who made them will modify their opinion on better knowledge of the treaty and will revise it dispassionately with the correct data of the National Irrigation Commission. But if they still have some doubts, I will make the offer of hearing them in the Commission's office and giving them all the numerical explanations that may be necessary to convince them.

The National Irrigation Commission cannot refer to the objections which are derived from legal theories, and I will confine myself to considering the objections of a technical character. On the other hand, as engineers, the realities weigh more in our minds than the abstract theories.

With the above clarifications made, I am going to refer to the principal objections which it is our duty to remove for you.

1. Various opponents say that the treaty assigns the third part of the waters of our tributaries, the Conchos, San Diego, San Rodrigo, Escondido, Salado, and Arroyo de Las Vacas Rivers. We have already explained that the third part of the waters of said tributaries is not assigned, but simply the third part of the surpluses which reach the Rio Grande after having made all the possible developments in the basins of each one of said streams. The guaranteed amount of 431,000,000 cubic meters (350,000 acre-feet) is slightly less than the third part of the average surpluses which the National Irrigation Commission has calculated as the quantities which will reach the Rio Grande after having made all possible developments of the current of the six Mexican tributaries mentioned.

2. It is said that projects which now appear impossible to us could perhaps be carried out in the future, when some new powerful pump is invented, etc. The National Irrigation Commission has calculated that the average surpluses which will reach the Rio Grande from the six Mexican tributaries affected by the guaranty of the treaty will be 1,423,000,000 cubic meters (1,153,600 acre-feet) per year. As the treaty only guarantees to the United States 431,000,000 cubic meters (350,000 acre-feet) per year, there still remains to Mexico 992,000,000 cubic meters (747,400 acre-feet) per year to cover amply any project which might have been omitted as being impossible of construction at present. I believe it pertinent to call your attention to the fact that, in the case of the Colorado River, the American opponents to the celebration of the treaty with Mexico adduced exactly the same reasoning, that is, they say that the United States ought not to promise to Mexico a single drop of water of the Colorado River because all the water of that stream could be used in the future by the execution of projects which now are deemed impossible. I only desire to add that if for this reasoning, in one or the other of the countries, the treaty were to be rejected, it would surely be the United States, which by its economic potentialities would sooner be able to carry out those fantastic projects in the case of the Colorado River, in order not to leave a drop to Mexico.

3. It is objected that "a preferential right is given to the United States to the use of 431,000,000 cubic meters (350,000 acre-feet) from our tributaries which would bring it about that, in years of shortages, the permanent Mexican cultivations would be deprived of water and would die." The treaty clearly specified that Mexico guarantees that volume of 431,000,000 cubic meters (350,000 acre-feet) from any of its six tributaries and as an average in cycles of 5 years, therefore in 1, 2, or more years of scarcity, it would not need to give a single drop of water from one, various or all the six tributaries which the guaranty affects. Moreover, the treaty permits Mexico to pay the deficiencies of a 5-year cycle of scarcity in the following 5 years.

4. It is objected that "Mexico will bring quiet waters to the Rio Grande while the United States will bring floodwaters." This is not true and we have already demonstrated that the larger part of the surpluses of the Mexican tributaries in the future will be floodwaters. In any event, both the quiet waters of either country which reach the Rid Grande, and the floodwaters, will need dams to regulate them by their storage. The construction of these dams is something vital for the two countries, but principally for Mexico, which only can be realized by means of the treaty.

5. It is objected that "there appears to exist a lack of equity in the treaty, because it specifies that in the case of periods of extraordinary drought, Mexico must pay into the Rio Grande the shortages with respect to the volume guaranteed for a cycle of 5 years in the following cycle, while, in the case of the Colorado River, the United States, when such droughts occur, will not compensate Mexico for the volume lacking with respect to that guaranteed in the following year."

The difference is the following: In the case of the Rio Grande, Mexico does not agree to deliver the guaranteed volume in all and each one of the years—as, on the other hand, happens in the case of the Colorado River—but Mexico has the choice, according to the treaty, of giving the volume guaranteed in lesser or greater annual volumes, if the annual guaranteed volume is completed in cycles of 5 years. This, which is beneficial for Mexico, because it gives Mexico great elasticity in covering its obligations and which does not exist for the United States, in the case of the Colorado River, is compensated by the fact of having to pay the deficiencies in the following cycle of 5 years. On the other hand, in the case of the Colorado River, in which the United States, as we will see, is obligated to furnish us with exactly the volume guaranteed and even with the monthly distribution which our irrigation demand requires, there would be no object in having the deficiencies caused by extraordinary droughts compensated by paying us the water in the following years, since we would not have any place to store the excess volume of water from the abundant years to compensate for the dry ones, while, on the other hand, in the case of the Rio Grande the international storage dams are there.

6. It is objected that the cost of the international dams on the Rio Grande, which will be constructed in accordance with the treaty, will be so great (several hundred million dollars according to some, and a thousand million dollars according to others) that Mexico will not be able to defray its corresponding part, for which reason our country would have to be content with having a very small part of the capacity of these works.

It is estimated, by engineers of both countries, that the cost of the three international storage dams and of the necessary diversion works will be 430,000,000 pesos. The hydroelectric plants at the two upper dams will generate 330,000,000 kilowatt-hours per year of firm energy, with additional secondary energy. The firm energy, sold at a minimum price, will permit the amortization, besides the cost of the hydroelectric plants, of 80,000,000 pesos of the cost of the dams. Therefore, between the two countries there would have to be paid 350,000,000 pesos for all the works. Our country surely will be able to pay the part corresponding to it of the above total sum. I wish to remind you that the National Irrigation Commission has at present an annual budget of 155,000,000 pesos and that this annual budget has been increasing in geometric progression in the last few years. I also wish to remind you that the Commission is constructing various dams of similar magnitude to that of the dams that are planned for the Rio Grande.

We should note, in this respect, that the international works of the Rio Grande will have a very economical cost, per hectare benefited. In reality the unit cost for the item of irrigation works per each hectare benefited in conformity with this international project will be slightly lower than the average obtained by the works which the National Irrigation Commission is developing.

IX. TIJUANA RIVER

In the case of the Tijuana River, the treaty in article 16 reads as follows:

"With the object of bettering the existing uses and of assuring any practicable future development, the Commission will study, investigate, and submit to the two Governments for their approval:

"1. Recommendations for the equitable distribution between the two countries of the waters of the Tijuana River system.

"2. Projects of storage and control of floods in order to promote and develop the domestic, irrigation, and other practicable uses of the waters of this system.

"3. Estimates of the costs of the works proposed and of the form in which the construction of said works or their costs should be divided between the two Governments.

"4. Recommendations with respect to the parts of the works which should be operated and maintained by the Commission and the parts of the same that should be operated and maintained by each section.

"The two Governments, each acting through its respective sections of the Commission, will construct the works that both Governments propose and approve, will divide the amount of the work or its cost and will distribute the waters of the Tijuana River system in the proportions on which they decide. The two Governments agree to pay by equal parts the cost of operation and maintenance of the works assigned to it for said object."

This article leaves, then, for the future decision of the two Governments, the manner of developing the waters of the Tijuana River for the two countries, which river, as we said, originates in the two countries. Naturally, neither of the two Governments would agree to having that part of its waters that could be used in its respective country assigned to the other. In reality, there is only one development on the Tijuana River of an international character that can be realized, which the International Boundary and Water Commission should study in accordance with the stipulations of the treaty. This is the Marron Dam which will remain in the United States and partly in Mexico. This dam will be fed by Mexican and American tributaries and its extractions could be 15,000,000 cubic meters (12,160 acre-feet). This amount would be distributed equitably between the two countries.

Summarizing, the problem remains to be discussed in the future by the two Governments and therefore, as regards the

treaty, there cannot exist anything which would harm the interests of one or the other country, and even less when we take in account what was said above. On the contrary, the construction of this dam will permit a better development on the part of our country of the waters of the Tijuana River, which is naturally very important for Lower California.

X. SIGNIFICANCE OF THE TREATY IN THE CASE OF THE COLORADO RIVER

In order to understand better the enormous importance that the treaty has for Mexico with respect to the Colorado River, it is necessary to give a brief historical description.

At the beginning of this century a concession was given to an American company, organized for the purpose as a Mexican company, in order that it might construct a canal, the Alamo, which passing through Mexico would carry the waters of the Colorado River for the irrigation of the rich Imperial Valley in the United States. By this concession, Mexico has the right to use up to 50 percent of the water that flows through said canal.

The existence of this canal permitted the rapid development of the American lands of the Imperial Valley and the slower development of the Mexican lands of the Mexicali Valley, with our country using not 50 percent of the water of the Alamo Canal, a percentage which it never reached, but an amount in the majority of cases close to the third part of the volume that passed through the canal. While the Alamo Canal functioned for carrying water to the American Imperial Valley, the Mexican lands did not have any problem other than that which arose from years of low current in the Colorado River, in which case the American and Mexican lands suffered equally.

In order to be able to use to better advantage the waters of the Colorado River the United States projected and constructed: (1) a great storage dam, the highest in the world, Boulder Dam, a work that was terminated in 1935 and that permits the storage of the flow of 2 average years of the Colorado River; and (2) the All-American Canal, which runs exclusively in American territory.

We Mexican engineers, when we saw that these gigantic works were being executed, understood that there approached a critical moment for Mexico in which the lands of Mexicali Valley ran the danger of returning to their condition of one of the most inhospitable deserts of the world through lack of water, since our country would have to depend on taking water, in the manner that it might best be able to do it, from the Colorado River by using the occasional surpluses that might flow through said river.

In 1942 the All-American Canal entered into operation, that is, it was now no longer necessary to carry the water of the Colorado River through Mexican territory in order to irrigate American lands and therefore it was not possible for Mexico to take part of the 50 percent of the water in the Alamo Canal to which it had the right, and this canal remained abandoned for the exclusive service of Mexico, which already had in cultivation that year more than 120,000 hectares (296,500 acres) in Mexicali Valley.

The situation in 1942 showed us how well founded were our fears because that year, during several of the hottest weeks, there came from the great American dams constructed on the Colorado River only a small volume which did not permit of filling the requirements of irrigation in Mexico. And with this came the clamor of the public land holders, the small owners and colonists of our Colorado River irrigation district, who saw their crops lost for lack of water. But there is even more, for at the end of the summer, there came from Boulder Dam a great flow of water which overflowed in Mexico, inundating cultivated lands and ruining the crops of other thousands of hectares.

That is, even when it is true that the total volume of the surpluses which flow through the Colorado River will still be very great in many years, its current is from now on so irregular that it can be stated that, while during some weeks the Mexican lands of the Mexicali Valley can be dying of thirst, in the following weeks they may be choked and submerged by the inundations provoked by discharges from the American dams.

Under these conditions the agriculture of Mexicali Valley is in desperate condition. In order to better it, without the treaty, it has been necessary for the Mexican Government, in the years of 1943, 1944, and the present year, to be constantly requesting of the American Government that the discharges be now increased, that tomorrow they be diminished, that part of the water be furnished through the All-American Canal, etc.

This critical situation makes clear how unfounded is the opinion of some of our citizens who believe that Mexico should not be preoccupied in the case of the Colorado River and that the treaty was not needed, as it could always take the abundant water which inevitably flows in the Colorado River. We insist that, effectively, in the case of the Colorado River as in the case of the Mexican tributaries of the Rio Grande, there will always be surpluses which will flow in the beds of said rivers but these surpluses cannot be used in irrigation due to their eminently irregular regimen in present years and much less in future years. The only solution for using them would be to regulate them by a storage dam and we must remember that at the beginning of this exposition we said that in Mexico there is not the slighest possibility of storing the surplus water of the Colorado River, a possibility which exists for the surplus waters that flow in the Rio Grande.

For this and many other reasons we who know the problem of Mexicali Valley in its painful reality have always been convinced that there was no other solution than that which a treaty gives which guarantees water from the Colorado River for the irrigation of its lands.

The treaty which is under your consideration resolves this problem. Its article 10 reads:

"From the waters of the Colorado River, whatever their source, there are assigned to Mexico:

"(a) A guaranteed volume of 1,850,234,000 cubic meters (1,500,000 acre-feet) each year, which will be delivered in accordance with the dispositions of article 15 of this treaty.

"(b) Any other volumes which reach the Mexican points of diversion; with the understanding that, when in the judgment of the United States Section, in any year there is water in the Colorado River in excess of that necessary to supply the consumptions in the United States and the volume guaranteed annually to Mexico of 1,850,234,000 cubic meters (1,500,000 acre-feet), the United States is obliged to deliver to Mexico, in accordance with the terms of article 15 of this treaty, additional amounts of water from the Colorado River system up to a total volume not in excess of 2,096,931,000 cubic meters (1,700,000 acre-feet) annually. Mexico will not acquire any right, other than that which this clause confers, to the use of the waters of the Colorado River system for any purpose, in excess of 1,850,234,000 cubic meters (1,500,000 acre-feet) annually.

"In cases of extraordinary drought or of serious accident to the irrigation system of the United States, which might make it difficult for the latter to deliver the guaranteed amount of 1,850,234,000 cubic meters (1,500,000 acre-feet) per year, the water assigned to Mexico, per clause "a" of this article, will be reduced in the same proportion as the consumptions are reduced in the United States."

As is seen by the above article, Mexico is guaranteed by the treaty a volume of 1,850,000,000 cubic meters (1,500,000 acre-feet) as a minimum, a volume which in many years will be 2,097,000,000 cubic meters (1,700,000 acre-feet).

Now, then, before negotiating the treaty a precise estimate was made of the net area in Mexican territory irrigable with water from the Colorado River under economically practicable conditions. Accordingly this estimate found that there was an area of 200,000 net irrigable hectares (494,200 acres), equivalent to a gross area of 300,000 hectares. This gross area of 300,000 hectares (741,300 acres) is less than that estimated as irrigable by our engineers during the international conferences of 1929, to which we referred at the beginning of this report. The difference between these two estimates is that in the latter, great areas, considered in the estimate of 1929, are eliminated as being useless for agricultural operations due to the large amount of salts that the lands contain. For example, the basin of the Laguna Salada and the lands adjacent to the Gulf were eliminated. There were also eliminated some other areas of lands of poor quality where heavy pumping would be required.

Now then, for the irrigation of the net 200,000 hectares (494,200 acres) in accordance with the coefficient of irrigation observed as an average since the commencement of agricultural work in the Mexicali Valley (1.25 meters, or 4.1 feet), a volume of 2,500,000,000 cubic meters (2,026,700 acre-feet) would be needed.

This volume can be obtained with the amount guaranteed by the treaty of 1,850,000,000 cubic meters (1,500,000 acre-feet) in the minimum year or 2,097 cubic meters (1,700,000 acre-feet) in the majority of the years plus the water that is pumped from wells—similar to those existing on the Laguna—which will more than supply the deficiency between the quantity required and the quantity guaranteed by the treaty.

If the coefficient of irrigation in Mexicali Valley should be increased notably, it will be necessary to make a greater use of the abundant (freaticas) water which exists in the subsoil of Mexicali Valley. If on the contrary, as we hope, by a greater preparation of our farmers, the coefficient of irrigation diminishes, it will be practically possible to irrigate the whole of the 200,000 net hectares (494,200 acres) existing with the volume guaranteed by the treaty.

It is necessary to note that as Mexico did not have any place to regulate the waters of the Colorado River in order to distribute them day by day, during each year, according to the needs of irrigation, it was necessary to arrange by means of the treaty for the United States to deliver that water to us regulated to our wishes within certain limitations which do not impose on us any sacrifice for any plan of cultivation that is followed in Mexicali Valley. For this service of regulation of that water, our country does not have to pay a single cent. Besides this, on account of the topographical conditions of the lands to be irrigated on both banks of the Colorado River, it was necessary to arrange that the water of the Colorado River be delivered to us when desired by Mexico, compatible with the needs of the lands to be irrigated at three different points.

1. At Pilot Knob, in order to irrigate the high lands which are found adjacent to the Colorado River on its right bank;

2. At San Luis, Sonora, in order to irrigate the high lands which are found on the left bank of the Colorado River;

3. At the Colorado River in order that by means of the construction of an international dam at the site where Mexico may desire it the rest of the lands on both banks of the river can be irrigated.

Mexico even has the possibility, if it so desires, of obtaining construction by Arizona of a canal which would carry waters of the Colorado River from a diversion dam constructed on the section of the river bounding the lands of Sonora.

These are the advantages obtained by the treaty which cannot be relegated to a second plane, but which for our country have a fundamental importance because if it were not for them we would not be able even to use the annual volume that the treaty assigns to Mexico.

XI. ADVANTAGES OF THE TREATY WITH RESPECT TO THE COLORADO RIVER

By means of the treaty the critical fortuitous condition of the crops of 120,000 hectares (296,500 acres) farmed at present is eliminated (area times 4.1 feet=1,215,650 acre-feet present annual use).

The treaty permits of increasing the cultivated area to the total of the area that can be cultivated economically, that is, to 200,000 net hectares (494,200 acres).

The treaty provides for the construction of works by the two countries for defense against inundations, with which this great danger to Mexican lands will be removed.

Finally, the cost of these works is extraordinarily reasonable, since the storage dams which always constitute the heaviest part of the costs of all large irrigation works are not included in any of the costs for Mexico and of the cost of the diversion works Imperial Dam and All-American Canal we will only have to pay a part proportional to the use that we may make of them.

In closing this chapter I believe it convenient to note that Mexicali Valley is agriculturally the most important zone in all of Lower California, because in the rest of the territory there cannot be irrigated, in total, even the fourth part of the area of 200,000 hectares (494,200 acres) which the great Colorado River irrigation district will have.

XII. OBJECTIONS TO THE TREATY WITH RESPECT TO THE COLORADO RIVER

As in the case of the Rio Grande, we will only refer to the objections of a technical character.

1. It is objected that the water which is given us from the Colorado River can be of poor quality, either because it may contain an excess of silt or an excess of salts.

With regard to the silt, the reality is exactly the contrary. The American dams constructed on the Colorado River have served so that the silt which the current brings with it is deposited in them, for which reason the Colorado River actually passes through Mexico with a small percentage of silt, and is scouring the bed of the river instead of filling it with silt.

With respect to the possibility that the waters of the Colorado River which are delivered to us may be of poor quality, because they contain dissolved salts, we are able to affirm, based on reasons of legal and technical nature, that fortunately such a danger does not exist. In the official report to the Senate that the National Irrigation Commission is terminating this theme will be considered more fully, in order to do away with any doubt that may be had in this respect. It is not within the purpose and the time set for this report to do it as fully as is necessary, but we may point out at least the following reasons:

(a) The negotiations of the treaty on the part of the American delegation and later its approval by the American Senate, were made by taking as a fundamental basis the official document called the Santa Fe Agreement, which with the approval of the American Federal Government distributed, since 1922, the main stream of the Colorado River among the American States of the upper and lower basins, and specified that the waters assigned to Mexico should be taken from the excess which the average virgin volume of the river (22,000,000,000 cubic meters) (17,835,000 acre-feet) had over the volume distributed among the American States of the upper and lower basins (20,000,000,000 cubic meters) (16,213,600 acre-feet). Our assignment of 1,850,000,000 cubic meters (1,500,000 acre-feet) is included, then, within the 2,000,000,000 cubic meters (1,621,000 acre-feet) of the difference. The virgin waters of the Colorado River are of good quality. Besides this, even a superficial study of the treaty shows, from the introduction to the transitory articles with which it terminates, that it is inspired with the fact that "it is to the interests of both countries to take advantage of these waters in other uses and consumptions * * * in order to obtain its most complete and satisfactory utilization." This is a paragraph transcribed from the preface. In article 27 of the transitory articles it is clearly stated that the use to which these waters are to be put is that of irrigation. Therefore, in this treaty, as in any other of its kind, it is understood that the water must be of good quality. Mexico has the right to have the water that is assigned to it from the Colorado River proceed entirely from the virgin volume of the current, but knowing that this is physically impossible to obtain for any use of water downstream on any river fully utilized, as is the Colorado River, our country had no objection to receiving these waters the same as the other American users of the lower portion of the Colorado River, as long as they were of good quality for irrigation.

(b) The salinity of the return waters which may come in the Colorado River depends on the use that Arizona makes of the waters of the Colorado River that belong to it. If it constructs an irrigation project with a value of about $1,000,000,000 to carry the water to the center of Arizona, then a certain volume of return water with a high percentage of salinity might reach the bed of the Gila River, but even this volume could not reach the Colorado River as it would be absorbed, as happens at present, by the great dry bed of the Gila River which for some years has not brought a drop of water to the Colorado River. If Arizona employs these waters to irrigate its southwest corner, which would cost it at least the tenth part ($70,000,000), then the return waters would be of good quality. Whatever the project that it selected, it would not be totally developed for many years, probably at the end of the present century. The most pessimistic technical calculations show that even considering that Arizona would employ its water in its central region and that the return water with a high percentage of salinity would reach the Colorado River without being lost in the bed of the Gila River, these returns mixed with the rest of the assignment to our country of waters with very small percentage of salinity would give a mixture that our country would probably accept in accordance with what was said above relative to its undeniable right to receive waters of good quality.

3. It is objected that it is of no use to obtain water for Mexicali Valley because the lands of that valley are in the hands of foreigners.

Also in this case the reality is entirely opposite to that asseverated by the opponent.

4. That in a year of drought the treaty permits the volume guaranteed to Mexico to be reduced and that the treaty only promises to reduce the American volumes in an equal proportion, which would be very difficult to carry out in practice. A reading of the final paragraph of transitory article 10 shows that the objection is completely unjust since the case is entirely the contrary. The amount guaranteed to Mexico can only be reduced in cases of extreme drought and only if that extraordinary drought should bring about the reduction of all consumptions in the United States.

XIII. CONCLUSIONS

The international water treaty which has been brought up for consideration of the Mexican Senate is beneficial for our country for the following reasons:

1. Because in the case of the Colorado River it terminates the critical situation in which the 120,000 cultivated hectares (296,500 acres) in Mexicali Valley was found, a critical situation which existed since 1942 when operation of the All-American Canal was commenced. Under the treaty the net 200,000 economically cultivable hectares (494,200 acres) which exist on the Mexican side along both banks of the Colorado River may be cultivated.

2. It also ends the existing danger that through the construction of the Federal project No. 5, or Rincon project, all the usable surpluses which flow in the Rio Grande, proceeding from Mexico and the United States will be diverted for the exclusive use of irrigation of the American lands of the region of Brownsville, Tex., thus leaving in a precarious situation the Mexican lands which with great effort are being opened to cultivation in the zone of Matamoros, Tamaulipas. On the other hand, with the treaty, not only can the water of all the Mexican tributaries of the Rio Grande be used to their maximum, up to the cultivation with them of an area of 315,000 hectares (778,400 acres), but with our surpluses which flow in the Rio Grande, duly regulated by the international dams, it will be possible to irrigate 245,000 hectares (605,400 acres) of the fertile lands of the Mexican part of the delta of the Rio Grande, that is, the region of Matamoros, Tamaulipas.

The attached table shows synthetically the situation of our country with the treaty and without the treaty. This table, a summary of what has been said, shows that thanks to the treaty, Mexico will be able to irrigate 445,000 hectares (1,100,000 acres) more, and that this will be achieved without any harm to our country, that is, as we have demonstrated in this statement, without injuring the maximum possibilities of development of all and each one of our frontier States with water from the tributaries of the Rio Grande which pass through them.

The above considerations reach the conclusion that the treaty technically is beneficial for the country, and I express this in the name of the National Irrigation Commission and as a participant, in my character of executive chairman, in the technical aspects of its negotiation.

TABLE 1.—*Virgin regimen, actual and future consumptions, and future surpluses of the Rio Grande*

[Millions of cubic meters (see supplement to table 1)]

| Source | Virgin flow | Consumption | | Future surpluses | Percent |
|---|---|---|---|---|---|
| | | Present | Future | | |
| FROM MEXICO | | | | | |
| 1. Conchos River | 2,045 | 843 | 1,275 | 770 | |
| 2. Arroyo de las Vacas, San Diego, San Rodrigo, Escondito Rivers | 418 | 106 | 128 | 290 | |
| 3. Salado River | 925 | 562 | 562 | 364 | |
| I. Total, 6 tributaries | 3,388 | 1,511 | 1,965 | 1,423 | |

| Total for Mexico | 4,711.7 | 1,526.5 | 2,365.6 | 2,346.1 | 58 |
| I | 1,767.3 | 801.0 | 801.0 | 966.3 | |
| II | 702.9 | (1) | | 702.9 | |
| Total for United States | 2,470.2 | | 801.0 | 1,699.2 | 42 |
| Total for Rio Grande | 7,181.9 | | | 4,015.3 | 100 |

[1] Without considering the present use of 1,419,000,000 cubic meters (1,150,000 acre-feet) in the American agricultural zone of Brownsville, Tex.

[2] The 265,000,000 cubic meters (215,000 acre-feet) which as an annual average pass by Fort Quitman and which are distributed equally between the 2 countries are not included in this table.

TABLE 2.—*Distribution of future surpluses in the Rio Grande in accordance with the treaty*

TO MEXICO

| | Millions of cubic meters | (1,000 acre-feet) |
|---|---|---|
| (1) Two-thirds of the surpluses of the Conchos River, Arroyo de Las Vacas, San Diego, San Rodrigo, Escondido, and Salado Rivers | 949 | (769) |
| (2) One-half of the surpluses of the direct Mexican Basin | 434 | (352) |
| (3) One-half of the surpluses of the direct American Basin | 433 | (351) |
| (4) Total of the surpluses in the San Juan and Alamo Rivers | 604 | (490) |
| Total | 2,420 | (1,962) |

TO THE UNITED STATES OF AMERICA

| | | |
|---|---|---|
| (1) One-third of the surpluses of the Conchos River, Arroyo de Las Vacas, San Diego, San Rodrigo, Escondido, and Salado Rivers | 474 | (384) |
| (2) Total of the surpluses from the Pecos, Devils, Goodenough Springs, Alamito Terlingua, San Felipe, and Pinto Rivers | 1,192 | (966) |
| (3) One-half of the surpluses from the direct Mexican Basin | 433 | (351) |
| (4) One-half of the surpluses from the direct American Basin | 434 | (352) |
| Total | 2,533 | (2,053) |

SUMMARY

| | Millions of cubic meters | Percent | 1,000 acre-feet |
|---|---|---|---|
| To Mexico | 2,420 | 49 | (1,962) |
| To the United States | 2,533 | 51 | (2,053) |
| Total | 4,953 | 100 | (4,015) |

TABLE 3.—*Maximum possibilities of irrigated areas with treaty and without it*

| | With [without] [1] the treaty | Without [with] [1] the treaty | (Acres) |
|---|---|---|---|
| | *Hectares* | *Hectares* | |
| A. With the Colorado River | 0 | 200,000 | (494,200) |
| B. With the Rio Grande: | | | |
| (1) In the basin of the Mexican tributaries | 315,000 | 315,000 | (778,400) |
| (2) In the Mexican part of the delta of the Rio Grande (Reynose to Matamoros) | 0 | 245,000 | (605,400) |
| Total | 315,000 | 760,000 | (1,878,000) |
| Difference | | 445,000 | (1,100,000) |

## The Voice of America Abroad

EXTENSION OF REMARKS

OF

## HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable William Benton, Assistant Secretary of State in Charge of Public Affairs, before the Herald Tribune forum, grand ballroom, Waldorf-Astoria Hotel, New York City, Tuesday, October 30, 1945:

The Voice of America is a voice with 10,000 tongues. It is all that the people of other lands hear about us and all that they read about us. It is the American movies they see and the American GI's and tourists they meet.

I am glad we Americans speak with 10,000 voices. Some critics would call it a confusion of voices. But it is the democratic way of peoples speaking to peoples. The alternative way—the single voice—is the way of censorship and of ministries of propaganda.

My theme tonight is that the people of the United States, through their Government and their State Department, have a vital national interest in the Voice of America. Their national security may be at stake if this voice is inadequate or distorted—if it fails to represent us with reasonable fullness and fairness as we really are, our history and our culture, our faults and our fears, our hopes and our ambitions for our democratic processes and our free society.

Today, 38 short-wave radio transmitters, operating all over the world under the direction of our Government, are known to millions in Asia, Africa, and Europe by the name, the Voice of America. Here is an example of the new role of Government. The Voice of America radio programs supplement and help to clarify the message of America's 10,000 tongues. Further, they reach vast areas of the world which otherwise would be completely shut off from America.

There are people in Iceland, in China, Iran, the Argentine and the Balkans—millions of ordinary people all over the world who listen eagerly for America's voice. During the war these Voice of America broadcasts went out over the air every day in the year in 40 languages. Today, in the backwash of the war they go out in 18 languages. They give people in foreign lands straight, impartial news from America, news in their own languages, news untainted by special pleading or by propaganda.

The radio Voice of America was developed in war by the Government. Now before the American people and the Congress is the broad and inclusive question: "What role shall the Government play in America's voice abroad in peacetime?"

Is it enough, in the rapidly contracting world of today, for our people and our Government to be presented to the peoples of the world as a giant, completely equipped with battleships, superfortresses, and atomic bombs, but voiceless except for diplomatic exchanges and the erratic interplay of private communication?

There is one basis for judging the future information policy of the Government abroad upon which we can all agree.

Does an expanded peacetime role for Government help us to achieve national security? Is it worth while deliberately to explain ourselves to the rest of the world? Does this help give us willing and friendly allies, in times of crises as well as in peace? Is understanding also a force? Isn't it the kind of force we prefer? Suppose we had to choose between two investments in security—between a year's cost of the radio Voice of America and its rough equivalent, a year's cost of operating one battleship in a fleet of battleships?

These are new questions for America. They will be debated in the next few weeks and over the years to come. Battleships are the traditional symbols of our security. But to speak to the other peoples of the world about America—to speak through such new and miraculous channels as short-wave radio—to seek security through understanding rather than through force—that is a new role for our Government.

In the field of short-wave radio beamed abroad, we have not yet decided how best to operate or manage or control; we only

know that the Government must put up most of the money to underwrite the cost if a job is to be done.

The American people have deliberately chosen a policy of active participation in world affairs. As a people we are becoming aware of the danger inherent in that policy. We do not propose to forsake the policy, but we must realize that the danger is greater if America is misunderstood abroad. The next few years—perhaps the next few months—are crucial. The new United Nations Organization will be meeting its first tests. America will be trying to revive world trade on a sound basis. The time to build the kind of peace we want is now and in the years just ahead.

Yet the plain fact is that as we enter this crucial period America is neither fairly nor fully understood by the peoples of other nations.

America is a legendary country to most of the world. It has been a land of legend through most of its history. The legend has changed from time to time. In the seventeenth and eighteenth centuries, America was the land of freedom; in the nineteenth century, during the great waves of immigration, it was also the land of opportunity.

The American legend today is a curious and contradictory mixture. A legend can hardly be otherwise.

We are known to be immensely strong. Yet Axis propagandists found ready belief for the story that good living had made us so weak and spineless we would not and could not fight.

We are acclaimed as generous and open-handed with billions to spend on lend-lease and rehabilitation—a veritable Uncle Santa Claus. At the same time we are called Uncle Shylock.

We believe in freedom of speech for all, yet sinister capitalists are said to control the means of communication.

We stand for free enterprise, but our critics abroad stress our great combines and monopolies.

The Metropolitan Opera House is the goal of all foreign opera stars, but we are said to have no music except swing.

We believe in due process of law, yet the world pictures the gangsters shooting it out on the streets of Chicago.

Now, I am not going to suggest that any role that the Government can play abroad will clarify this picture readily or quickly. Like education, of which it is a part, information is a slow, laborious business that works no miracles and produces no millenium of understanding. It can, however, help to correct mistaken ideas. It can make available the facts about our actions and our policies, as they develop out of our customs, our laws, our institutions, and our politics.

A government information service abroad to strengthen America's voice should, in major cities include a room of three or four rooms or a building here the ordinary people of Amsterdam or Cairo or Chungking, for example, can go to find out about the United States. During the war we developed small United States libraries in many foreign cities. They were used by newspaper writers, school teachers, doctors, farmers, engineers, students, and people off the street. There is intense curiosity abroad about the United States. I am thinking of the long lines of anxious people who came to our American library of information in Melbourne on the day of President Roosevelt's death. They wanted to know what would happen to our Government. Would we have an immediate election? Who would succeed the President and how and why? Their concern was real and immediate. I am thinking of the foreign youngsters who stopped in at an American picture exhibit to ask why the boundaries of our States are so straight. I have in mind a doctor who stops in at the American library in Montevideo to search American medical journals for news of the latest treatment of infantile paralysis. It is a remarkable fact that the British Government's stationery office has printed and sold more copies of many American war documents than has our own Government Printing Office. An example is Target—Germany, the official report of the operations of our Eighth Air Force. British book shops sold several hundred thousand copies of this report.

A few weeks ago the veteran scholar and world traveler, Henry Seidel Canby, returned from Australia and New Zealand. He reported that our libraries there, I quote: "Have enabled the right people at the right time to learn for themselves, from books and not from propaganda, what America was, is, had, could offer, what we were thinking, and how we felt. They and all such institutions should be part of our permanent foreign policy," he said.

Far more important than the rooms, of course, are the books, periodicals and documents they house. Few of you can have any conception of what these mean, for example, to the liberated people whose only link with us for the past 5 years has been the radio Voice of America. Let me read a few lines from a letter that came to me from Athens just the other day. My correspondent is a stranger to me, Mr. Nicholas Chantiles. This is what he said: "I knew there was a whole treasure behind those library doors. Books and magazines full of that unrivaled American democratic spirit; books where the authors are free to express their ideas and beliefs whatever they may be." I confess I was moved by that letter.

In wartime we have discovered, too, the immense value of official American political documents to the newspapers, the scholars and opinion makers of other countries—documents which the commercial news services do not cable in full and which, therefore will be sent abroad only by the Government. Foreign editors ask for the complete texts of Presidential speeches, acts of Congress, reports such as General Marshall's on which to base their editorial comments and special articles.

Our Government documentary films have won appreciative audiences abroad. Just the other night I saw a small documentary that has gone overseas, about the jeep. It showed how American ingenuity produced for war a vehicle that has captured the fancy of the whole world. It was a simple but entertaining film. Millions of people in other lands have been instructed by it. It was a piece of information about Americans.

Finally, I should like to tell you briefly what a United States information program should be in terms of people. The bone and marrow of any good program are, of course, the people who run it. There is no substitute for face-to-face relationships. We need only a few hundreds of Government information people abroad, directed on policy by our ambassadors and available to foreign editors and broadcasters and others. They should be real Americans in the sense that they know America. Having homesteaded in Montana as a boy, I submit to this New York audience that I am personally partial to those who have deep roots and varied experience in rural and western and southern America. With such knowledge of America, they can represent America more faithfully in foreign lands.

Perhaps even more important people over the long pull are those we systematically exchange with other countries—the students, professors, technicians, scientists, and others. Here in the United States, such visitors see us as we are and take that story home. They become our friends and remain our friends. Those American students and experts we send abroad to foreign universities and governments go as representatives of our traditions and culture.

These are some of the materials available to the State Department in its efforts to represent the American people in the development of America's voice overseas. Such efforts need not compete with our private businesses operating abroad. They should only supplement and facilitate normal commercial and private communications. They should operate chiefly in those areas where private agencies will not or cannot function profitably. Nor should we conduct vague, well-meaning good-will campaigns. Our information program should be modest, realistic, and candid. America's voice should be neither the big stick nor the supersalesman. The Government's role will represent only a fraction of the great volume of communication between ourselves and our friends abroad—a fraction but a highly important and indispensable fraction.

Ultimately, there are only two roads to national security. One is sheer physical power. The other is mutual understanding with the other countries of the world. We now need to follow both roads. But we must hope that we shall need to invest less of our resources in military power as we invest more of our thought and attention in the task of mutual understanding.

In an atomic age—understanding, not bombs, is the last, best hope of earth.

---

## Preserve the American Form of Government

EXTENSION OF REMARKS

OF

### HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered by me before the Franklin County Republican Club, Chambersburg, Pa., November 2, 1945:

President Deihl, Congressman Gross, and members of the Franklin County Republican Club, this evening I want to point out some very dangerous trends those in charge of our Government have been following and where they may lead to unless there is a change in the leadership of our Government.

I shall attempt, briefly, by comparison, to refute the arguments of those who are determined to remake America, those who, whether they know it or not, are advocating state socialism.

The foundation stone of the American Republic, generally referred to now as a democracy, was based on the freedom and dignity of man.

This great and successful superstructure of government arose from this foundation preserving for him the inalienable rights of life, liberty, and the pursuit of happiness guaranteed to him under the Constitution of the United States, further protecting his rights and opportunities by the Bill of Rights and providing him the opportunity to establish representative government and courts of justice under the Constitution. It placed the conduct of his Government in the hands of him and the other citizens of our country and to protect his rights further, it prohibited the people from the enactment and enforcement of any laws contrary to the basic law of the Nation, the United States Constitution.

This Nation where the people have controlled their Government and where the greatest liberty has obtained and where the greatest progress in agriculture, industry,

science, and invention have developed has again returned to peacetime status after having saved the nations of the world for a second time from being conquered and oppressed by autocratic military governments.

The thing that worries many thinking people in America and the majority of the Members of Congress, is that today in view of our illustrious past as a Nation, there are those in this land who are raising a great hue and cry to remake America. Those who want to pattern it after governments in Europe which have stamped out freedom and liberty and the dignity of the common man. I do not want to alter or change our basic form of government. I am willing to improve this heritage of government if that be possible, but I do not want to trade it for a socialistic, communistic, fascist, or a totalitarian form of government.

For nearly 200 years governments in Europe have been trying to make socialism work. In every attempt there has followed in its wake poverty, the loss of liberty, jails crowded, the guillotine overworked, and ultimately nazism, communism, fascism, and world-wide wars. Our form of government during all this time, has given us happiness, peace, and contentment, liberty, an opportunity for growth and advancement, the elevation of our standards of living, and the protection of the dignity of the common man. Ours is the only government in the world that has approached in dealing with other nations and dealing among our own people, the Christian doctrine of the Golden Rule. So long as we maintain our form of government, "do unto others as ye would that they should do unto you," it will continue to be America's inspiration to the liberty-loving people of all the world.

THE POWER OF PROPAGANDA IS A THREAT TO THE NATION

The attacks against our present form of Government by those who hold alien ideas starts with the well-known use of propaganda. Irresponsible commentators through the columns of the daily newspapers and irresponsible radio commentators who can be hired for a price, for the past few years have lent themselves to the political ideology of the New Deal which has grown up in centralized government here in an attempt to control the thinking of the American people. In a subtle way, not content with regimenting and controlling the actions of the people, more important than that, they want to regiment the minds and the thinking of the people of America. This constant barrage by commentators in the press and over the air which has tried to destroy the confidence of the people in the Congress of the United States fits into the over-all general plan. They constantly try to mold your thinking on national and international questions.

Then comes the planners and the do-gooders. They hope to go here in America from planning to regimentation, to state socialism. State socialism is the twilight zone leading to fascism or communism. In fact, it is the threshold of communism, nazi-ism, or fascism. Germany and France tried it in real earnest after the French Revolution. Germany followed it under Karl Marx and up to Kaiser Wilhelm. It brought about World War I. The sad thing about it is that many well-intentioned people in the past have joined with the leaders of socialism in the hope of bettering their conditions, later to find out that as you begin to take power from the people to make socialism work you must take more power and more power and finally you must take all of the power from the people and place it in the hands of a dictator because as Lincoln said, "No government can live half free and half slave."

Many people in France, Germany, Russia, and Italy tried to turn back when they found they were on the wrong road, the road to destruction. When they finally saw that the power must be left in the hands of the people or given to a dictator.

It was too late. They were purged by the millions under the dictatorship of communism in Russia. Those who tried to turn back in Germany were murdered, driven into concentration camps where many of them starved to death during this war. The same rough and cruel treatment was the fate of those in Italy. Planning and socialism gave Europe communism in Russia, nazism in Germany, fascism in Italy. Liberty was completely wiped out in those three European governments. Hitler and Mussolini gave World War II to the people of the earth.

The United States Government, the one Golden Rule nation of the world, the Nation that has always defended the freedom, liberty, and dignity of the common man, this Nation that many glib-talking crackpots want to remake, threw its tremendous force and power back of its ideals into this war, defeating and leveling Germany, Japan, and Italy to lands of rubble and devastation; yet, there are those in America who cry out against our form of government and there are those in America who aid this alien-minded group in wanting to remake it. They are willing to start planning to regiment the people, to further establish centralized government, and bureaucracy, to travel down the road to serfdom, to socialism, and probably to communism or fascism in America.

We have had, during the war, and are having now, some socialistic controls. The Congress gave the authority for these controls in order to channel the effort of the people of America first into war production and into an all-out effort to win the war. The war has been won. Many controls have been lifted and more of them should be but the "planners" don't want to let loose.

Reconversion to peacetime production and peacetime jobs is the most important problem in America today. I want to charge that the maladministration, the regimentation, and control being exercised by the OPA is holding back reconversion in preventing the people from buying billions of dollars' worth of goods which they want and need by preventing the manufacturers and the retailers from making and distributing to the people these billions of dollars' worth of merchandise.

The policies of the OPA will keep millions of men from being employed—it is widening the gap between the goods the people want and the money available with which to buy them.

Money is piling up into the hands of the people faster than the goods are being manufactured thus widening the inflationary gap. There are a little less than 3,000,000 small business firms in America employing less than 100 persons each. These small business firms employ 45 percent of all the wage earners in the Nation in peacetime. It is they who must go ahead now to produce and retail goods and create jobs for former war workers and returning veterans.

OPA regulations are slowing down nearly all business recovery and also employment. They allow the manufacturer, in some instances, to raise the price of the manufactured article because it costs him more in wages and other overhead to do business. Then they say to the jobber, the wholesaler, and the retailer, even though these goods are costing you more from the manufacturer you cannot sell them at a higher price than you were selling the same type of goods in 1942. This is forcing little business concerns out of business all over the Nation and this policy prevents the retailer from hiring more help, hence contributes to unemployment.

Chester Bowles has predicted we will probably have 8,000,000 people unemployed during 1946 If this happens no one will have contributed so much to this unnecessary status as will have Mr. Bowles.

To show you how difficult it is for a centralized or socialized government to operate business, and how it holds back production and employment let me give you a few illustrations as to how the OPA operates.

I can only give you two or three because of the lack of time. These are not exceptions to the rule but are a fair sample of how the whole OPA set-up is being operated.

A crippled man over in Ohio, in an effort to make a living for himself, made a weeding tool which he could make at his home and sell for $2.50. He asked the OPA to allow him to increase the price to $2.85. The OPA compelled him to make out many papers and after many months waiting they told him if he did not sell over $55 worth of these weeding forks per month he could sell them for $2.85. In the meantime, under their rule, any new concern could come in and make the same tool and the retail price would not be based on the price of the old operator. In other words, the new concern would have no historical background which the OPA talks so much about.

In this case, a new man began to make the same type of tool that was being made by the old cripple in Ohio who was refused the right to sell at $2.85. The new dealer was promptly given the right to sell the tool at $3.50. What do you think of that? Is that holding prices down to the consumer?

A big concern in New York, whose name is synonymous with underwear, a concern turning out millions of dollars worth of goods and employing thousands of men, was selling a pair of shorts at the OPA ceiling of 60 cents. They wanted to get a slight raise in the wholesale price. They were denied. A new concern came into the market with a pair of men's shorts, not quite as good in quality as the 60-cent pair, and they were promptly given a ceiling price of $1.35. Now, the New York manufacturer who was not allowed a raise told a buyer who happens to be one of the Congressmen from California who is in the retail business in that State; that while they had many thousand pairs of these shorts they cannot ship them to merchants throughout America because they cannot comply with the map plan. You know, the OPA has maps telling people where they can sell and where they can't. Furthermore, that the OPA had ruled that they could not sell the 60-cent shorts at all unless they sold some shorts at 39 cents to balance against the 60-cent shorts. The firm could not buy the material to make the 39-cent shorts which would give them the right under Chester Bowles to sell some 60-cent shorts. In other words, here is a big concern with a hundred thousand dollars worth of men's shorts who can't sell them and, of course, if they can't be sold the people will have to go without them even though winter is approaching and, of course, laboring men will not be employed to make more new ones. In this case the OPA seems to be hitting below the belt.

Here is an illustration which will prove to the housewife that the actions of the OPA are raising the price of merchandise in many instances rather than holding it down.

A manufacturer of an old-established electrical iron selling at $2.75 retail, asked that he be allowed to raise the price 20 cents. The request was promptly denied. In the meantime a new manufacturer produced an iron, not nearly as good as the old reliable $2.75 iron, and the new manufacturer was promptly allowed a ceiling price of $5.50 per iron. In other words, the housewife cannot buy the better iron at $2.95 but has to take an inferior iron at $5.50.

Again, this is not an exception, it is more nearly the regular rule of OPA.

This illustration should be of interest to wool growers, textile manufacturers who employ more people than any one business in the United States and to the people who want underwear up here in cold Pennsylvania where winter is well on its way.

Mr. Chaney, of the Underwear Institute, recently pointed out that today the only woolen underwear you can buy in the United States is coming in from a country in South America. If the underwear manufacturers of the United States were permitted by the OPA to operate, he says, a better article could be sold to our people for one-half the price. This means less American wool, less textile men employed, less clothing for the people, widening the inflationary gap and encouraging inflation rather than helping to "hold the line."

The OPA has contributed more than any one other organization in America to undermining the health of the merchants. While I have no statistics they have probably driven more of them insane than all of the other troubles they have. The OPA has contributed to the paper shortage by using hundreds of thousands of tons of paper because of their long regulations and directives.

One manufacturer testified before the Smith committee in Congress that they had to rent a complete new building in order to have a place to store their OPA files.

Here is one that bounced the operator out of the frying pan into the fire. An energetic businessman had developed an improved and up-to-date frying pan. He had a cover on it to which was attached a little thermometer and extra vent for escape of steam. He rented a building, arranged for his raw material, hired his employees to start the business. So sure was he of success that he went to the Government and through one of its agencies was loaned $150,000. He was ready to start in a big way. It was a fine illustration of the old American spirit willing to risk what he had and borrow more, bringing venture capital in for the expansion of business and the employment of American workmen. The OPA approved his sale price of $1.59. He was sure of a profit and braced himself for a rapid take-off. He started going great guns. The customers liked his product, the factory was humming, his men were employed but a month or two later the control arm, the regimentation arm of OPA came down on him with such force that it staggered him in amazement. A former soda-counter jerker who had never made a success in anything had attached himself to the office of the OPA and catapulted himself up the ladder in a meteoric rise to the position of an economic analyst at $6,500 a year. This economic analyst, whose name I withhold, operating under the power of the OPA colossus, decided that he could not longer make the frying pan. He decided in his wisdom that the thermometer gadget was not necessary, that the steam escape gadget was superfluous because the operator of said pan could tilt the lid a little to let the steam off. He cut the price accordingly and put the man out of business.

The factory shut down, the men were laid off, the ambitious owner and his friends who joined with him in the experiment lost their money and, presumably, the Government will lose its money. Yes, the OPA "held the line" against production.

I could go on for an hour with such illustrations but time will not permit. The facts are that the OPA should be wiped off the statute books at once and immediately.

The strange thing about it is that our new President, in whom the people a few months ago had so much faith, is backing the OPA and Chester Bowles with greater enthusiasm than did the late President Roosevelt.

The Congress would stop this foolishness and in fact the Republican Members of Congress have tried to stop it but they have been voted down in almost every attempt through the power of the Administration coming down on its Members in both the Senate and the House demanding every time that OPA be extended without any amendments which would cure some of its many abuses. I am happy to report that your Congressman Goss voted to discontinue the OPA.

Now let me swing into a wider field of operation on price control and governmental control from the top.

The United States is the second largest wool-producing Nation in the world. Normally, our production is 400,000,000 pounds per year and our consumption has run about 600,000,000 pounds per year. During the war period we have consumed over 1,000,000,000 pounds per year. Notwithstanding this fact we have used mostly foreign wool and not disposed of our domestic production. Through the Commodity Credit Corporation purchasing all of the wool in our country we find that we now have overhanging the wool market 530,000,000 pounds of domestic wool in storage and with the June clip of next year which the Government will buy, we will have on hand nearly a billion pounds of wool.

The United States Tariff Commission, in a report of last January, stated, due to the increased costs of the production of wool, that at the Commodity Credit price of 40 cents per pound paid the wool growers by the Government, the producers of wool were losing 10 cents per pound. These figures may surprise some of you who are raising sheep for profit. I must confess it surprised me because on my farm I have been trying to make a profit on sheep.

You will remember we had a meat shortage last summer and that too was caused by the unwise policy of the OPA. Here is how they contributed to a shortage of mutton. The prices they set on wool and mutton were so low that the sheep growers have been liquidating since 1943, as the following figures will show. On January 1, 1943, we had on hand 45,000,000 sheep. On January 1, 1944, it dropped to 41,000,000 and it is estimated by Government statistics that today we have only 38,000,000 head of sheep in this country, which is the lowest number of sheep in America in 50 years notwithstanding our population has increased during that time by over 40,000,000 people.

The United Kingdom produces in New Zealand 350,000,000 pounds of wool a year, South Africa produces 250,000,000 pounds, Australia produces over a billion pounds of wool a year. Now, Great Britain has entered into an agreement with these dominion countries of hers to buy all of their output for a period of 13 years. Great Britain will control its market and ship the most of it into the United States under our lowered reciprocal tariff agreements to the dismay and destruction of the sheep and wool producers of America. The American producers will not be competing against a world price but against a control price set by Great Britain and, of course, she will set the price on wool low enough to flood the American market.

Let me give you a potent illustration of the cooperation the OPA is giving Britain today on the importation of wool fabrics.

You may not know it but under the rules of the OPA it is a fact that the big textile mills employing more men and women than any other one business in America are permitted to make only a small amount of what is known as the better woolen fabrics. For instance, the Botany Woolen Mills of New Jersey, making woolen fabrics that would provide fine suits for men for $50 per suit, are compelled to make the cheaper grades and only a small percentage of the better woolens. Now, on these imported woolens from England which are beginning to come into American markets in large volume, the OPA does not set any ceiling price, with the result that men's English-made woolen overcoats are being advertised in New York at $75 a garment whereas if the Botany Woolen Mills were allowed to use our best American wool and manufactured these same overcoats they could sell them to the American public for $55 a garment. What do you think of that?

These are not idle statements, they are facts beyond contradiction. The regulations of the OPA are forcing the people of America to pay $20 to $25 more for a suit or overcoat for English garments whereas if the American manufacturers were allowed to make these garments the American purchaser could save $20 to $25 on the price of the garment. Yet, the OPA shouts, "Hold the line."

Under the present administration which believes in free trade, which believes in throwing the American markets open to the markets of the world and which is silly enough to hope that we can maintain our standard of living, is in fact preventing reconversion, preventing millions of American workmen from having a job, is increasing the dangers of inflation and is dragging down the American standards of living.

The Congress and the administration will have to get rid of OPA and in my judgment under the present world condition will have to set a quota on how much wool can come into the American markets regardless of tariffs, and that quota should be set low enough that we can again place the sheep and wool grower in a position where he can make a profit on his production of mutton and wool. Unless this is done there will be less sheep and less wool grown in this country. Price control, regimentation, lower tariffs, all supported by this administration, unless corrected will bring us ultimately into a depression in this country which may wreck us financially and will probably result in a loss of our representative form of government.

A few months ago the people had hopes that President Truman would turn his party back and away from the road toward State socialism and centralized government. Their hopes were proven unfounded when he sent his message to Congress, which was an endorsement of, and an identification of, the New Deal policies of his late predecessor. He advocated and endorsed the enactment of the most radical and socialistic legislation ever offered to United States Congress, rather than a return to free enterprise, less centralization, and control in government and to a policy of real economy. He is a stranger to economy.

The recommendations carried in his message, if enacted into law, would launch out on a program of the greatest peacetime deficit spending in the history of our country.

With a debt approaching $275,000,000,000, the people are becoming alarmed. They are beginning to realize that adding to this debt rather than paying it off is endangering the bonds they hold, the property they own, and the life insurance they have carried for later protection in life. They are beginning to understand that the leaders of the New Deal have been promoters and spenders. They have been the wasters of the people's money to perpetuate themselves in power politically.

The people will decide to return to the Republican Party to save them economically and financially. They remember that the Republican Party took over at the end of the First World War when the country was $36,000,000,000 in debt. It reduced taxes right and left, encouraged free enterprises in the expansion of business, prevented a depression following the war and by the encouragement of business took in so much money in taxes they were able to balance the Budget each year and retire the national debt by $1,000,000,000 a year for 10 successive years.

That is the type of government the American people want and must have to save this country. They know now that President Truman and those in charge of the Government cannot be reelected if they stop the waste of the people's money, because the Communist and radical labor groups which they must have to continue in power will

not support them if they cut off special legislation and special privileges to Sidney Hillman and the PAC and to the radical groups in labor along with the two communistic leaders, as William Z. Foster and Earl Browder.

The people are beginning to realize that we must have a government in the future that will make certain the interest of the American people is taken care of first.

They want such rigid economy practiced in Government and such a tax program as will not only balance the Budget in the future but that will set aside a reserve each year for the retirement of the national debt. This can be done if 2,000,000 bureaucrats, who are leeches on the taxpayers, are taken off of the pay rolls and if every possible economy is practiced in government.

They want an honest, courageous Executive leadership that will quit playing one pressure group against another for political purposes, which has been done and is being perpetuated under the present administration.

They want a leadership that will establish mediation machinery which will help to decide disputes between capital and labor with economic intelligence in the interest not only of the disputants but also in the interest of the general public welfare of the Nation. This can be done by a courageous Executive and Congress which will forget politics in the framing of such legislation.

The present administration has given us 14 years of the New Deal in power; 14 years of centralization and socialization of our Government; 14 years of waste, extravagance, expense; 14 years of government by boards, bureaus, and the playing of one group of citizens against the other for political purposes; 14 years of political partnership with the Communist Party.

There is only one instrumentality to which the people of America can turn to reverse such dangerous trends in government, and that is the Republican Party. This party enacted the Budget Act and cleaned up the mess after the First World War, as I have previously shown. It can and will do it again if we can hold out until 1948. The people will put the welfare and the destiny of this country into the hands of the Republican Party when they have that opportunity at the next national election.

## Col. Howard A. Rusk

EXTENSION OF REMARKS

OF

### HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. COCHRAN. Mr. Speaker, Col. Howard A. Rusk, assigned to duty with the air surgeon, Medical Corps of the Army, has just been awarded the Distinguished Service Medal.

Colonel Rusk, a young man, was one of the leading physicians and diagnosticians in St. Louis at the time he voluntarily entered the Army. He was immediately assigned to Jefferson Barracks, which adjoins St. Louis, where the air surgeon had a hospital and convalescent center.

In order to get acquainted with his duties as well as his patients, Colonel Rusk made a tour of the hospital. In the second room where he visited, the patient, in reply to his question as to how he was getting along, said:

No place in the world could I get better treatment. There is no complaint whatsoever from my standpoint, but I wish I could find a way to occupy my mind while I am required to remain in bed. I can tell you how many cracks there are in the ceiling and how many nails in the ceiling. How much better it would be if I had something to do.

Then and there was born Colonel Rusk's program of rehabilitation. He inaugurated a plan that regardless of the disability the patient would have something to do. When the chief air surgeon on an inspection tour visited Jefferson Barracks, Colonel Rusk told him of the program he had inaugurated. The air surgeon was so impressed that he immediately ordered Colonel Rusk to Washington and made him the Chief of the Convalescent and Rehabilitation Branch of his office. Colonel Rusk visited every Air Corps hospital and convalescent center in the country and his program was installed at each. For this he received the Distinguished Service Medal.

Mr. Speaker, I am quoting the citation for the Distinguished Service Medal issued by the War Department. It follows:

Col. Howard A. Rusk, Medical Corps, O166916, from March 1943 to October 1945, bore the heavy responsibilities of Chief of the Convalescent and Rehabilitation Branch, Professional Services Division, and Chief of the Convalescent Service Division, Office of the Air Surgeon.

Given the difficult assignment of pioneering the organization of a convalescent services program in each Army Air Forces hospital, he instituted procedures for physical reconditioning and educational training which utilized previously wasted convalescent time.

The results of this far-reaching program were extraordinarily successful. Hospital readmissions dwindled, the period of convalescence was shortened, sick leaves were reduced, the military and general knowledge and skills of the patients were increased, and tremendous improvement of morale in the hospitalized men was noted.

The outgrowth of Colonel Rusk's program was the Air Forces plan for the rehabilitation and convalescent care for returning overseas casualties. Through great vision, superior organizational ability, and wide experience gained in the practical application of his theories, Colonel Rusk accomplished a task which benefited thousands of soldiers and contributed in important measure to the success of the Army Air Forces' vast medical program.

Colonel Rusk has just been discharged from the Army. Rather than take his wife and children back to St. Louis and resume his private practice, he is so interested in the program now that he has accepted an assignment with a private organization with headquarters in New York that will assist private institutions to install a rehabilitation branch in all hospitals and convalescent homes.

I happen to have a personal knowledge of the work of Colonel Rusk and I can say without fear of contradiction that the rehabilitation program he arranged for Air Corps patients is the most outstanding of any in the Army or Navy. He has served his country well and deserves the recognition that has been accorded him.

## High-Point GI's Still Sweat It Out in Pacific

EXTENSION OF REMARKS

OF

### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two letters that I have received from men in the armed forces now serving in the Pacific theater of operations regarding demobilization:

MACHINATO, OKINAWA, *November 1, 1945.*

DEAR CONGRESSMAN PRICE: Have your letter of October; thank you. Here it is November. Yes; I'm still in the clutches of the Army and on Okinawa Island. Looks as if it will take 2 months or more before they get us 60-69 pointers processed and on transports headed State-side.

Suppose you have heard or read of Brig. Gen. Robert Berry, Assistant Personnel Chief, assertion that the points could be lowered to 50 by December 1. Wonder if it would interest him or you to know that on this island hundreds of 35-year-olds and thousands of 70 to 85 pointers are over here not even processed, and in their outfits sweating it out.

My information is first hand, for our company's project is the rebuilding of the Okinawa personnel center (leveled by the typhoon) and we have access to true lists and records.

The War Department and its demobilization program is certainly getting its share of unkind words spoken about it. Of course, General Berry's talk goes over big with the folks back home who aren't in the know.

It's entirely two different set-ups to have the "brains" in Washington, D. C., issue orders, then expect the officers to put the order in fast and efficient, for the majority of the big brass are rolling in more money, and having a better time, and life of ease than as civilians, and are in no great hurry to see the men go out from under their command. Any time you want verifications of my statements, or endorsements by many others in this organization as evidence, I would be more than glad to present same.

Very truly yours,

A GI CORPORAL.

MANILA, P. I., *October 24, 1945.*

DEAR SIR: Just a few lines from a disgusted soldier in the Pacific.

We certainly have been looking forward to seeing some action on returning the men from the Pacific. All we hear is a lot of figures which in a few weeks are changed to a somewhat lower figure.

At the present no man with less than 90 points will be accepted at the disposition center. That's a far cry from the 70 points which is supposed to be the critical score for October. If the higher point men are still kept here how can fellows like myself with 66 points expect to get home before Christmas of 1946.

Yes, we volunteered once back in 1940, but never again will the veterans with 4 and 5 years' service sign again. It will take a lot more than a $50-per-year bonus for enlisting. No son of mine will ever enlist in the service if I have anything to do about it, and I've talked to thousands of men who feel the same.

Yes, the men from the Pacific are coming back with a very bad taste that won't be easily forgotten. Unless something is done to clean this mess up I can certainly tell you men who are now the heads of the Gov-

ernment that you will have quite a fight on your hands the next time you run for office. This is the thought in many a man's mind down here.

It won't be necessary to send me one of the mimeographed specials that Government officials are using. We want action and an ex-servicemen like yourself should be out in the lead fighting. All we want is action and no fancy excuses.

Thousands of troops were redeployed here from the ETO and there certainly wasn't any bottleneck in the shipping. The boat we traveled on carried 4,300 men and officers of the Army besides the ship's crew. This same ship returned to the States a couple of weeks later with only 3,500 men and officers and civilians. Maybe the reason for the smaller amount going to the States was due to the fact that they carried a general back. There is a lot of difference between the distance from Manila to Marseilles and the distance from Frisco to Manila.

All we ask for is a little action, and I would like to see you leading the fight for that.

A VERY DISGUSTED SERGEANT.

## Plantation Parade

EXTENSION OF REMARKS
OF

### HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. HÉBERT. Mr. Speaker, I feel sure that you will concur with me when I rise with particular pride to call your attention, and that of my colleagues, to a book which has just been issued.

The volume is Plantation Parade, by a native of Louisiana and a former fellow worker of mine, Harnett T. Kane, of New Orleans. Mr. Kane, in a few brief years, has risen to a widely acclaimed place as one of the most important of the new American writers. His field is the South, which I represent in this House, and few men of this or any other day have received such general praise for his magnificent presentation of this region of America.

Mr. Kane is the author of three other national best sellers. Four years ago he wrote his first book, Louisiana Hayride, dealing in pungent and exciting fashion with Louisiana politics. This book broke all Louisiana book records, and won a place on the national best-seller lists. Shortly afterward came his superb book The Bayous of Louisiana, in an entirely different vein, a rich and warmly lovable volume about the unique Acadian people of the water-covered lower Louisiana. The Bayous of Louisiana exceeded Louisiana Hayride in public and critical acclaim. Last year Mr. Kane gave us yet another great book Deep Delta Country, dealing with the strange and beautiful land at the mouth of the Mississippi River. Like the one before it, it exceeded its predecessor in wide popularity.

This week brought the national publication of Mr. Kane's Plantation Parade; and this book has outstripped all of Mr. Kane's others. It has gone into several printings, made the national best-seller lists, and has broken every Louisiana book total, topping each of Mr. Kane's preceding volumes. Here is a striking instance of the fact that an American book cannot only be a richly, beautifully written one, but also win the general public applause. This, as I need hardly remind you, does not always happen.

Plantation Parade is a book that I call to your attention for a particular reason. It represents a new, novel approach to its subject. It is a superbly handled picturization of the days of the great cotton and sugar plantations of Louisiana. But it is not a gushy, moonlight and magnolia presentation of the type which has long afflicted the South. Mr. Kane, a man with a sharp sense of social values and of economic interests, does not moon an.' moan over the so-called wonders of the forgotten past. You have all heard the story of the colored mammy who told a northern visitor who admired the Louisiana moon, "Honey, the moon is sure fine tonight; but you should have seen it befo' de wah!"

Mr. Kane does not fall prey to such sirupy oversentimentality. Plantation Parade is, instead, a brilliant reenactment of the human life of the plantations. Mr. Kane offers the people and the place as they were—the truth that is often so much more strange and fascinating than the false and made up. Mr. Kane has steeped himself in his subject, investigating old records, checking court documents, interviewing survivors of the day, finding family diaries. He takes up in turn each of the white-pillared establishments of the State and tells their histories straight, from their beginnings to their present day, their triumphs and joys and tragedies. Its scenes are the Mississipi River, False River, the Opelousas region; Bayous Plaquemine, Teche, and Lafouche; Cane River, Baton Rouge, Donaldsonville, the Feliciana country; and other parts of Louisiana—a panorama of the State.

The result is a fabulously entertaining study. All of us, southerners and northerners alike, realize that the economy of that earlier day was based on a false and shifting base—the social injustice of human bondage, the enslavement of one group of men by another. Such enslavement is contrary to the teachings of all of our religions; and today we are all the better off because it has ended. A sounder economy, as Mr. Kane points out, is taking its place. In lieu of one man with an unchecked command over thousands of acres and thousands of men, the land has been broken up into truck gardens or other units. Crop diversification—so badly needed in the South—has been introduced; cattle and hogs, sweetpotatoes, and other crops have taken the place of the single staple crops. An interesting social contrast is offered, too, in the rise of the oil industry on the scene of the once great plantations.

But the life of those days had a certain gusto, a genuine merriment, a sense of identification with the place. The plantation day had its charms; and these, too, Mr. Kane realizes, while keeping them in their proper place. Few writers have ever given so entertaining, so finely readable account of this day. And wisely he stresses the fact that the plantation era in Louisiana, this plantation parade, gave America some of its finest architecture. In this parade of the castles was an indigenous building, fitted perfectly to the demand of its scene, West Indian-type residences and Greek revival homes with wide galleries, great windows and doors to admit every breath of wind, elevation to catch the passing breezes. We have begun to lose the fine principles of architecture which this early day fostered.

As Mr. Kane wittily puts it, these buildings were put up to "provide a maximum of comfort with a minimum of perspiration." For any Members who wish to see some of the most magnificent examples of home construction in America, I recommend a visit to Mr. Kane's plantation country, to see the lines of these buildings.

Plantation Parade is a book that could have been written only by a Louisianian with a deep sympathy and understanding of his place and people. I am proud to have worked on the New Orleans newspapers at the time that Harnett T. Kane did. Mr. Kane for 17 years was a star journalist, a correspondent and staff writer on the New Orleans Item, who won a reputation throughout the South for his fine writings. For a time, to, he taught at Loyola University. In recent years he has given his full time to his book and magazine writings. He is known to the readers of Collier's Magazine, Reader's Digest, Saturday Review of Literature, and American Mercury.

It is not often that we have opportunity to learn so much, while being so well entertained, as in the case of this book.

Mr. Kane tells in various chapters of the Louis XIV of Louisiana, who set up his American gardens of Versailles on the Mississippi; the Creole father who made sure his daughters married properly by picking out the young men himself and asking each, in turn, "Will you be my son-in law?"; and the 13-year-old Louisiana bride who received a doll for a wedding present, and found it stuffed with jewels.

Other rich characters in Mr. Kane's plantation tapestry are the Prince from Naples who established a plantation here, and astounded the neighbors with his odd liking for baked owls and stuffed snakes; and the Spanish beauty who strode her acres like a man, playing cards for plantations, and, once, shooting off the head of a man who threatened to rob her mansion. Still another is the gay Parisian who asked his 15-year-old wife to run the plantation while he had his slaves row him over the bayous in a brightly painted boat, strumming love songs all day long. They lived happily together all of their lives. In Plantation Parade, Mr. Kane weaves a story of the old South, with personages ranging from Spanish dons to Jefferson Davis, from pirates to revered patriarchs.

With his new work, Harnett T. Kane further cements his place as a leading American writer. The Times Picayune called Plantation Parade "not only Harnett Kane's best, but also one of the most brilliantly readable books to come out of the South in many years, with superb flavor, zest, chuckling humor, and beauty

bordering the poetic. It realizes magnificently the possibilities of a magnificent subject." The New Orleans States called it "absorbing reason" and used the words "shrewd, skillful, and fascinating." The New Orleans Item declared that Mr. Kane reveled pleasurably in Plantation Parade, writing with a gusto well nigh irresistible.

## Office of Price Administration Hinders Reconversion to Peacetime Economy

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. PITTENGER. Mr. Speaker, there are a number of things which hinder a return from wartime economy to a peacetime economy. I say "things" because in my opinion that is just about the right designation of the Office of Price Administration. It falls far short of being even an excuse for a going Government agency. We need price controls, but misfortune has come to the American people every time the Office of Price Administration has mixed into things. During the war, it followed the doctrine of scarcity and refused to permit food producers to make a profit on livestock or other food products. As a result, people quit producing food and everybody knows that you could not get meat and other foods on account of this wrong policy.

Now that the war is over the Office of Price Administration persists in making one mistake after another. One of our colleagues chanced to remark the other day that the greatest factor and obstacle in getting a return to peacetime production of almost everything was the OPA. He pointed out that OPA refused to permit a price ceiling, so that goods could be manufactured at a profit. As a result industry has no incentive to go ahead. Neither has small business. So they just simply are not producing. This means unemployment and the people who are going to be looking for jobs next year may just as well make up their minds now that OPA is doing and will continue to do everything it can to prevent any new industry, which means lack of jobs and unemployment, and to cripple existing business and industry. That also means lack of jobs and unemployment. Of course, this OPA outfit will claim that it is a friend of the workingmen, but the facts are that it is his worst enemy, and when we have breadlines, we can charge a good long part of the procession up to OPA and its false economy ideas.

SMALL BUSINESS COMMITTEE HEARING

I call to the attention of the House of Representatives a very important hearing that will start tomorrow morning and which will be conducted by the Small Business Committee of the House of Representatives. I expect to be present at that hearing and present the views of automobile and truck dealers in northern Minnesota. Many of them have either wired or written me requesting this procedure.

This situation is brought about by a notice that OPA officials served on the Automobile Dealers' Industry Advisory Committee on October 31. We all know that the manufacturers of automobiles want to increase the selling price. I do not question that right. But I do question the wisdom of OPA officials' statement to the Advisory Committee to the effect that small business dealers throughout the country would have to absorb that increase in price which the automobile manufacturers were going to charge the small dealers throughout the country who handle the retail end of the selling of automobiles and trucks. As I understand OPA officials' plan, the amount of discount to which the dealers were entitled, when they paid the manufacturer for the automobiles would be reduced to the extent of the increased price of the automobiles. This is just a simple way of saying that the dealers' profits on the retail sale of automobiles would be diminished to that extent. That is a fine bit of demagoguery to hand out to the purchasers of automobiles, because OPA will tell the purchaser that the price of automobiles and trucks to the public has not increased.

PRIVATE ENTERPRISE RESTS ON PROFIT

This proposed policy of OPA officials runs directly contrary to the fundamental principle that private enterprise is based on, the making of a profit. It is no crime in this country to engage in business with the hope of being paid for your services and your time. In the language of the street, this is what is known as making a little money. That is why people engage in a business enterprise and hire people to work for them and create pay rolls and create jobs.

It doesn't make sense to say that dealing in automobiles has to depend on love or hot air or some other intangible product of OPA imagination in order to make a living. If the dealer in automobiles and trucks cannot sell that merchandise at a profit, he will not have any money to pay rental for the store building he occupies, or to pay automobile salesmen, or to pay his taxes, or to pay the grocery bills at the end of the month in order that his family can live and eat. I am sure that the OPA never heard of this kind of a thing which is popularly designated as the American system of private enterprise.

NATIONAL AUTOMOBILE DEALERS ASSOCIATION PROTEST ACTION OF OPA

Naturally the National Automobile Dealers Association is opposed to the OPA program. So are the various people in my district who are engaged in the retail business of selling automobiles and trucks. I have a telegram from Art. L. Mattson, president, Automobile and Truck Dealers Association of Virginia, Minn., in which he says in part:

Any tampering with traditional discount would seriously jeopardize our future existence as dealers. By reason the public and our factories for many years past have set standards of service expected, making it impossible to do business on a smaller discount. If OPA imposes impossible cut in discount, it will result in complete break-down in automobile and truck transportation.

I have numerous other telegrams to the same effect and it would make the record entirely too long to set forth those different telegrams at this point. However, they are available in my office for examination by the Small Business Committee if it so desires.

## Demobilization

EXTENSION OF REMARKS
OF
### HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. D'EWART. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Helena, Mont.:

Congressman WESLEY D'EWART.

GENTLEMEN: Will you please explain to me why the Montana Representatives in Congress are making no effort in any way whatsoever to bring the Montana boys still overseas back home now?

I have two sons who have been overseas since last March, one in Okinawa and one in Burma; they were both forced to leave college to go into the service, both are extremely anxious to get back home, as I am, and back into school, as they have every right to do. It certainly is much more important for a young man to get back to school and finish his education than it is for him to be discharged from the service in order to come back and play football for his school. I refer to the football player from Georgia, whom the Senator from Georgia was able to have discharged so he could come back and play.

Not only are these boys being kept overseas unnecessarily but the conditions under which they are living, the food which they are getting, particularly in Okinawa, are worse now than they ever were during the war. My son in Okinawa writes me as follows:

"We get very little mail, we hear how easy it is for the fellows in the States to get discharges on low-point scores when we can't even get to the States, we hear about the strikes, the 81,000 unemployed veterans, we don't get decent food. * * * We feel that the people at home don't give a damn about us, that we are forgotten while you people no longer have wartime restrictions placed on your pleasures or rights. It was fine for the good old United States of America to ship us out here when we were needed—now that you have no more use for us leave us out here."

How would you men enjoy going through one typhoon after another, especially one like the last horrible typhoon which hit Okinawa in early October, in which many of our boys were seriously injured, some losing their lives, and all of them losing everything they had? It is nothing short of criminal for the Government, and Congress in particular, to keep our sons over there now that the war is over. Why aren't any of you doing your part and fighting to have Congress declare the war over, and demanding that our boys be brought back? I want my sons home and back in school, they want the same thing, and are entitled to it.

How dare you men sit back in Washington figuring out ways and means to increase your salaries 100 percent, saying the work you are doing for your constituents justifies the increase, when you are not doing one thing to get our boys back home, which is more

important to your constituents than anything else could possibly be? And no doubt in the face of your absolute indifference toward this one real important matter, you will all have nerve enough to come back and ask the people of Montana to return you to office. Employers have discharged employees for far less indifference to the job they were hired to do than you gentlemen are displaying toward your job, and I am very sure that the people, your employers, will do as much when you ask to be reemployed as their Representatives in Congress unless you do something, and at once, to correct the situation and bring our sons back home immediately

I might add that I do not care for the explanation, "there aren't enough ships to bring them back any quicker." There were plenty of ships to get them over there; let's not forget that. Also, if there is a shortage, which I doubt, why should 47 ships be tied up in the harbors of this country for a Navy Day celebration, which meant nothing whatever to the boys overseas, and the same to the parents of those boys. If such celebrations are going to delay the return of our sons, those celebrations should be dispensed with until these men are all home. The tying up of these ships not only delayed the bringing back of our sons, but has resulted in their not even getting mail from home or decent food to eat.

Do any of you have any explanation for your attitude in regard to these matters; if so, what is it?

Very truly yours,

(MRS.) VIRGINI TAYLOR.

---

## What the St. Lawrence Seaway Project Means to Wisconsin

EXTENSION OF REMARKS

OF

### HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a radio address by Harry C. Brockel, municipal port director, city of Milwaukee, from radio station WHA, Madison, Wis., and affiliated stations, Tuesday, October 23, 1945:

The St. Lawrence seaway is again in the news. President Truman has recommended the project to Congress for immediate action. Ten distinguished Senators of three political parties, including Senator LA FOLLETTE, of Wisconsin, have presented a joint resolution to carry out the provisions of our long-standing agreement with Canada for development of this great waterway. Congressman SABATH, the dean of the House of Representatives, has presented a similar resolution in the House. President Truman's unqualified support of the project, and its distinguished congressional sponsors, representing all major political parties, indicate that conditions are now more favorable to adoption of the project than in the past.

The State Department has given the St. Lawrence project first place in its international program, to demonstrate to the world that nations living side by side can peacefully develop projects whose benefits transcend international boundary lines. The State Department is convinced that the St. Lawrence project will prove to the world that America is determined to cement international relationships, and to build peace on a sound foundation by expanding trade and commerce between nations.

The St. Lawrence seaway has two great economic justifications—the justifications of low-cost water transportation, and of low-cost hydroelectric power development. I will touch briefly upon the power development features of the project. The power to be generated will be distributed to sections of Canada, New York, and New England, which are badly in need of it. The St. Lawrence River is the gretest undeveloped source of hydroelectric power in North America. Two million two hundred thousand horsepower of electrical energy are constantly running unused into the Atlantic because of our past failure to harness this tremendous energy.

Our national consumption of electrical energy has increased from 14,000,000,000 kilowatt-hours in 1914 to 240,000,000,000 kilowatt-hours in 1944. President Truman, in his message to Congress, cited the important role which hydroelectric power in the Pacific Northwest and in the Tennessee Valley played in the development of the atomic bomb. He emphasized that the whole economic and military future of the United States will require further development of our power resources, and urged that the vast potential energy of the St. Lawrence River be harnessed without delay.

The St. Lawrence seaway project is of interest to Wisconsin because of its transportation aspects. By extending ocean shipping to Wisconsin, our farms and industries will be able to take advantage of water transportation on a scale hitherto impossible. Our industries can then import raw materials in large quantities, at a minimum of cost, by substituting a water haul for costly rail transportation and by eliminating transshipment costs. Wisconsin agriculture and industry will be able to tap new markets abroad by utilizing direct shipping service.

There is nothing new or experimental in the St. Lawrence waterway development. For more than a hundred years Wisconsin has been shipping into world markets via the Great Lakes and the St. Lawrence River. As early as 1700, shallow canals were built around the Lachine Rapids of the St Lawrence River. It is more than a century since the Erie Canal and the first really practical locks of the St. Lawrence canals were dug.

The Great Lakes area was discovered, explored, and colonized by water transportation. The growth of our civilization in this region has followed the watercourses, and the growth of our waterways has paralleled the expansion of the Middle-West until it is one of the wealthiest and most productive sections of the Nation.

The seaway is not an inland waterway or an artificial waterway. It is a sea road into the heart of the North American Continent. Fundamentally, it belongs in a class with the river approaches to a dozen or more of the great ocean ports. It differs from these only in the greater distance it projects ocean carriage inland, and in the great extent of territory and the large number of people it will serve.

The seaway is essentially not a canal project. From the head of Lake Superior to the Atlantic Ocean, a distance of more than 2,000 miles, there will be but 16 locks and 40 miles of canal section. More than 90 percent of the route will be through open water or through channels no more restricted than the entrance channels to most ocean ports. The time lost by ships in traversing these locks and canals will be negligible.

The seaway project does not contemplate the creation of a new transportation route, but will increase the usefulness of an important existing route, which has served the United States and Canada for over a hundred years. The waterway is already substantially complete. The agreement between the United States and Canada affects only 115 miles out of a total of 2,339 miles in the great waterway stretching from Duluth to the Gulf of St. Lawrence.

Although the Middle West contributed its full share to the cost of the Panama Canal, it is without a doubt the only section of the entire world which did not benefit by its construction and which has, on the contrary, actually been handicapped by it. The Panama Canal brought our eastern and western seacoasts much closer to one another in terms of transportation. Long water hauls are far cheaper than other forms of transportation. A short rail haul to a seaport plus a long water haul means relatively cheap transportation. A rail haul of half or two-thirds the distance across the continent means high transportation costs.

The two coastal areas, using the long water haul via the Panama Canal, have found interchange of business easy and economical. The Midwest manufacturer and farmer is confronted with a long rail haul in order to reach his markets, and is unable to take advantage of the cheap water transportation made possible by the Panama Canal. The Middle West can be restored to equality in competition by bringing tidewater to this area.

With the seaway the Great Lakes would become an estuary of the Atlantic. Our Great Lakes shore line would become a seacoast. The seaways will remake the transportation map of the world. It will reveal and develop new markets and new commerce, will add value to the product of our agriculture and industry, and will increase the purchasing power of 40,000,000 people around the Great Lakes.

The seacoasts of the United States and the Great Lakes region will be brought into closer business contact. The waterway will bring ocean shipping to their Great Lakes terminal ports and will confer upon our western railroads the same privilege of direct access to the Atlantic which the eastern railroads now enjoy.

While the seaway is amply justified by the twin advantages of cheap power and cheap transportation, World War II has forcefully brought home to us its military and naval potentialities. It is a national misfortune that the seaway was not developed before the war. Had it been available, Midwest industry and agriculture could have made a more forceful and effective contribution to the war effort, and much treasure and perhaps many lives could have been saved. I would like to discuss briefly some of these national-defense considerations

In a shipbuilding effort unprecedented in history, this country has, within 4 years, turned out 60,000,000 tons of new merchant vessels to meet the shipping needs of a global war. Vast additional tonnages have been constructed in the form of thousands of naval and military craft of all types. The combined shipbuilding production of the past years—merchant and military—probably exceeds 75,000,000 tons.

Only about 2 percent of this tonnage has been constructed on the Great Lakes although we have sheltered harbors, vast industries, the great bulk of steel production, and a great reservoir of skilled workmen. A few score of small-type ships have been constructed in lake ports and sent into ocean service through the Illinois and Mississippi Rivers, only at great labor and expense. The shipbuilding potentialities of the Great Lakes area have hardly been scratched. The bottleneck has been the difficulty of getting ships to tidewater once they are built.

Had the St. Lawrence seaway been developed with a 30-foot channel to the Atlantic Ocean, we could have constructed in sheltered lake harbors escort carriers, cruisers, destroyers, and merchant ships of 10,000 ton size. These ships could have been loaded in lake ports with foodstuffs, munitions and all the material of war—and if this seems like mere speculation, let us remember that Detroit was ranked as America's No. 1 arsenal and was closely followed in volume of war production by Great Lakes industrial

centers such as Buffalo, Cleveland, Chicago, and Milwaukee.

Convoys could have been assembled in the sheltered waters of the St. Lawrence River and sent to European ports with an ocean crossing 1,609 miles shorter via the St. Lawrence than from our North Atlantic ports. The submarine hazard would have been reduced by one-third, in terms of distance; and the great burden of shipping losses, naval escort requirements and similar military considerations could have been reduced in proportion to the reduction in ocean mileage by use of the St. Lawrence.

Our tremendous war effort has depleted our natural resources to a very considerable extent. We have used lavishly our forests and our minerals. We find ourselves with rapidly dwindling supplies of iron ore, petroleum, manganese, copper, lead, and many other strategic materials absolutely necessary to us in war and in peace. A strategic stock-piling program is now being developed based upon future industrial requirements and national-defense considerations. These critical materials should be transported and stored as effectively and economically as possible. They should be brought to sheltered interior locations, and to the area which will use them in great volume, which means, of course, the industrial area surrounding the Great Lakes.

Considering the exposed position of our coasts in terms of naval and air attack, it would be sound national policy to encourage the location of strategic industry in the sheltered interior of this country. We have the opportunity to locate strategic industry in the sheltered heart of the Nation and at the same time to provide these industries with all the advantages of ocean transportation by extending deep-draft shipping into the Great Lakes.

The seaway development is essential to check the drift of population from the Middle West to the seaboard. In recent years there has been a mushroom growth of new industry along the seaboard, particularly along the Gulf of Mexico and the Pacific coast. The employment opportunities offered by these new industries have encouraged great numbers of people to migrate from the Middle West to the seaboard areas. The result has been a rapid growth of population around the seacoasts of the United States and a gradual decline of population in the interior. During the 10 years from 1930 to 1940, many Midwestern States actually lost population. This trend has been accelerated during the war period.

Twenty of the 23 States showing population decreases during the war are within the transportation and trading area of the Great Lakes. Every State tributary to the Great Lakes with the exception of Michigan has suffered a marked loss of population during the war period. The seaboard States have uniformly shown a strong population growth, reflecting the growth of industry and the trend of population toward these areas. The St. Lawrence seaway is absolutely essential to permit industry and agriculture in the Great Lakes area to meet the competition of industry and commerce on the seaboard.

The economic effects of a continued loss of population are obvious. A declining population means reduced levels of manufacturing, reduced wholesale and retail trade, decline of building construction, reduced transportation, reduced food consumption, and a general lowering of economic vitality.

Obvious economic conclusions are presented when we find the majority of the Midwestern States declining in population while States like Florida, in a single decade, gain 29 percent in population; Nevada, 21 percent; Washington, 19 percent; Oregon, 11 percent; and California, 22 percent. The St. Lawrence seaway can do much to check this trend by giving to us in the Midwest the same economic advantages which are attracting industry and population to our sister States on the seaboard.

Wisconsin has a great stake in foreign trade. Wisconsin products which move into world markets in great volume include wheat, rye, canned goods, tractors, automobiles and parts, meats, silk hosiery, leather, machinery, iron and steel, dairy products, motorcycles, wood, paper, and electrical equipment. Many phases of Wisconsin industry and agriculture are interested in world trade, and every citizen of our State is, or should be, concerned with its potentialities.

In normal times the city of Milwaukee alone shipped into export markets goods with an average value of about $50,000,000 a year, to practically every country on the globe. A large part of this business would seek the most economical route available, meaning the St. Lawrence. In normal years States tributary to the Great Lakes account for about 35 percent of our total national exports.

On any impartial or logical basis the merit of the St. Lawrence project cannot be challenged. Nevertheless, there is strong opposition. The principal objectors to the improvement are seaboard ports, which fear the loss of transfer business between ship and rail, and the eastern trunk-line railroads.

There is also opposition from utility interests who object not to the St. Lawrence power development, but to the fact that the distribution of the new power will be through public agencies rather than through private utilities.

This opposition can only be described as short-sighted and selfish. As the Middle West prospers and expands, all sections of the Nation will share in that expansion and prosperity. Increased production and purchasing power in the Middle West means that the people of this area will do more business with the seaboard and with the world.

The cost of the St. Lawrence seaway will be shared equally by Canada and the United States. The entire cost of the project to the United States would be less than 1 day's war expenditures. At the peak of our war effort, expenditures were running at about $275,000,000 a day. Our share of the seaway project would be about the same. If the United States every day, year in and year out, could find $275,000,000 for purposes of destruction, certainly it should be able to find an equivalent amount for development of one of our great natural resources.

American postwar planning is geared to a philosophy of expansion—greater production, full employment, expanded foreign trade, and an enlarged merchant marine. The St. Lawrence development will help us to obtain every one of these objectives. An expanded foreign trade will cement friendly relations with other nations. We need new trade routes and new traffic to support our merchant marine, which will be the largest in the world. The objectives of full employment and full production obviously must be geared to a greater volume of commerce and transportation. No project before the American people today will do more to accomplish these objectives than will the St. Lawrence seaway.

Wisconsin's inland communities, like our port cities, will share in the benefits of improved distribution and cheaper transportation made possble by the seaway. Our great ports of Superior, Ashland, Marinette, Green Bay, Manitowoc, Sheboygan, Milwaukee, Racine, and Kenosha will enjoy new shipping and commerce, with resulting increases in employment and revenue. It has been estimated that the seaway project will create in Wisconsin from 15,000 to 25,000 new jobs.

A score of Midwestern States will share the benefits of the seaway project, and Wisconsin should be foremost among them. The opening of the St. Lawrence ship channel will mark the beginning of a new era for the Great Lakes region and for our own State of Wisconsin.

## St. Lawrence Seaway

EXTENSION OF REMARKS

OF

### HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. WASIELEWSKI. Mr. Speaker, earlier in the day I introduced a House joint resolution authorizing the completion of the St. Lawrence seaway and water-power project. I shall not take up the time of the House to enumerate the broad benefits of this project, they have been concisely stated in the message of President Truman, which is printed as House Document No. 302, and is available to every Member.

Mr. Speaker, every President since Woodrow Wilson has favored this project, and in the past 20 years active efforts have been made to realize the construction of this, the world's greatest engineering undertaking. It is now high time that we begin work on this important development. The delay in the fulfillment of the program is a reflection on the ability of our democratic system to overcome the obstruction of a few misguided and selfish minority interests. We cannot let it be said that we allowed the national interests to be sacrificed for unworthy sectionalism. What difference does it make where a project is located if its benefits are Nation-wide? It is our country and we cannot handicap any one section without dragging down other sections, and it must be realized that an improvement in one section benefits all others.

Within the past several weeks resolutions on this subject matter have been introduced in both branches of Congress. Mr. Speaker, I was disturbed to find a report in the Pathfinder magazine of November 7 that the committee to which the subject matter was referred in the other body is said to have "no plans for the seaway measure." I must reluctantly point out that this is not exactly responsive to the President's request for speedy enactment, or to the wishes of the people. It must be equally plain that we can ill afford to sit down on this proposal if we are to ask for the continued confidence of the people. The people of my State are plain-spoken and sincere. They ask, and have the right to know, why a project which has been proclaimed as the greatest project in the world by a succession of six Presidents is being delayed to death by an administration that claims to be the people's party, and I am proud to belong to it. The St. Lawrence seaway and water-power project will directly have broader and more far-reaching benefits than any project this country has undertaken since the completion of the Panama Canal. It is one of the few remaining undeveloped frontiers that will contribute vastly to the further growth and prosperity of our Nation. I therefore plead with you, my colleagues, from every part of the country to get on with the business of this Nation and to build the St. Lawrence seaway as a shining example of democracy at work.

## Grand Jury Investigation of International Hod Carriers Union at Yonkers, N. Y.

EXTENSION OF REMARKS
OF
**HON. ROBERT F. RICH**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

APRIL 1944 GRAND JURY,
*White Plains, Westchester County, N. Y., November 5, 1945.*

The Honorable ROBERT F. RICH,
*The House Office Building,*
*Washington, D. C.*

DEAR MR. RICH: In April 1944 the grand jury of Westchester County undertook an investigation into the activities of the officers of Local 60 of the International Hod Carriers Building and Common Laborers Union of America, located at Yonkers, N. Y. This investigation continued for a period of upward of 6 months and resulted in a series of indictments against James Bove, international vice president of the aforesaid union and secretary-treasurer of the local. Mr. Bove has since that time been convicted on 74 counts of grand larceny and forgery. Other officials of the local union have either pleaded guilty or are awaiting trial.

It was the sentiment of the grand jury at the conclusion of its long investigation that steps should be taken to prevent the recurrence of the conditions which were shown to exist in this case, and to protect labor and the general public. As a result, the grand jury appointed a committee to draft recommendations to be forwarded to the President of the United States, Members of Congress, the Governor of New York, and members of the New York State Legislature. We enclose a copy of these recommendations, and we urge your cooperation in enacting these recommendations into the Federal and State laws.

Sincerely yours,
DAYTON EDWARDS HERRICK
(For the Grand Jury).

---

The April 1944 grand jury, of Westchester County, N. Y., having conducted a lengthy investigation in the affairs of Local 60, of the International Hod Carriers' Building and Common Laborers' Union, of Yonkers, N. Y., returned an indictment in October 1944 against five officers and members of the executive committee of the local union charging grand larceny and forgery. The results of that indictment to date have been as follows.

James Bove, formerly vice president of the international union and secretary-treasurer of the local, has been convicted by a jury in the Westchester County court on 74 counts of grand larceny and forgery. Two other defendants have pleaded guilty. The remaining two are awaiting trial.

We, the members of the aforesaid grand jury, feel that our work would not be complete without some attempt on our part to protect labor union members and the general public against the conditions which were discovered in this case and which have been known to exist in other instances. We believe that members of labor unions are entitled to protection against faithless union officials bent solely upon self-enrichment. We believe that the public is entitled to the same kind of accounting from officers of labor unions that the law demands from business and other groups in which the public has a legitimate interest. We are convinced that protective legislation is the only feasible solution, and we, therefore, earnestly recommend that our legislators, both State and national, introduce and support legislation embodying the following principles:

1. All national and local unions should be required to file copies of their constitutions and bylaws and amendments thereto.

2. All national and local unions should be required to file an annual financial report, containing detailed information as to income and expenditures and particularly the salaries and expense accounts of officers. Copies of such reports should be furnished to all members in good standing of the unions involved.

3. Officers charged with the custody and disbursement of union funds should be required to furnish indemnity bonds for the faithful discharge of their financial duties.

4. An annual audit of the books of account of all national and local unions should be required under the supervision of appropriate Federal or State departments.

We believe that such a legislative program would not only promote the welfare of labor itself, but would also lead to better understanding and increased cooperation between labor, industry, and the public in general.

Sincerely yours,
THE APRIL 1944 GRAND JURY
OF WESTCHESTER COUNTY, N. Y.,
By H. KNAUSS,
DAVID DAUK,
DAYTON EDWARDS HERRICK,
*Committee.*

## St. Lawrence Seaway

EXTENSION OF REMARKS
OF
**HON. ANDREW J. BIEMILLER**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Common Council of the City of Milwaukee on October 29, 1945:

Whereas President Harry S. Truman, following in the great tradition of his predecessors, Presidents Taft, Wilson, Harding, Coolidge, Hoover and Roosevelt, has recommended to Congress the early enactment of legislation to complete the St. Lawrence power and navigation project; and

Whereas the development of the St. Lawrence seaway will extend the benefits of ocean shipping to the industrial heart of America, with resulting benefits to the Port of Milwaukee, the State of Wisconsin, and the entire Great Lakes area; will permit Milwaukee industries to import raw materials at low cost and to reach new foreign markets through direct ocean shipping service; will permit the generation of vast quantities of low cost hydroelectric power; and will enhance the economic prosperity and well-being of the Middle West and of the Nation; and

Whereas the recent world conflict has demonstrated the necessity for construction of the St. Lawrence seaway for the national defense and the military security of this Nation, by providing a safe and landlocked basin for strategic industries, for storage of vital materials, and for construction of naval and merchant vessels; and

Whereas this great unexploited power and transportation resource of North America should be authorized by Congress as the Nation's No. 1 postwar public-works project for the benefit of industry, agriculture, transportation, and foreign trade: Now, therefore, be it

*Resolved by the Common Council of the City of Milwaukee*, That we hereby commend President Harry S. Truman for his statesmanlike presentation of the St. Lawrence power and navigation project to the Congress of the United States; that we commend Senator LA FOLLETTE, of Wisconsin, and other Senators who have demonstrated their vision, enterprise, and statesmanship by joining President Truman in the determination to make this great project a reality; and that we urge all congressional Representatives from Wisconsin to support the President's recommendation to schedule the construction of the seaway as the Nation's No. 1 postwar project, thereby to assure adequate employment, expanded foreign trade, and the national defense; and be it

*Further resolved*, That copies of this resolution be transmitted to his honor, the mayor; to the board of harbor commissioners; to the Governor of the State of Wisconsin; to Senators and Representatives from the State of Wisconsin; and to the mayors of all principal port communities on the shores of the Great Lakes, with the request that neighboring States and cities join in the common effort to assure early completion of the St. Lawrence project, with its vast potentialities for the future welfare of the cities and States of the Great Lakes region, and the Nation at large.

---

## Put the Scientists in Charge

EXTENSION OF REMARKS
OF
**HON. WILBUR D. MILLS**
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. MILLS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

PUT THE SCIENTISTS IN CHARGE

The point at issue in the controversy over the organization of a foundation for scientific research in Washington is fundamentally whether the direction of its activities shall be dominated by the Government or whether, while integrated with the Government, it shall have the freedom to go ahead on its own which its purpose demands. More specifically, the battle before the Senate committee having the subject in charge lies between the proponents of the Kilgore bill and those to whom the Magnuson bill seems far preferable. The one measure would repose control of the agency in the hands of an administrator, appointed by the President, with the duty merely of consulting an advisory board. The other would center control in the board by giving it authority to name the director.

In the Magnuson camp are most of our distinguished scientists, including Drs. Conant, of Harvard; Compton, of the Massachusetts Institute of Technology; and Vannevar Bush, Director of the Office of Scientific Research and Development, the war agency which made such enormous contributions to victory. These gentlemen now have a champion and spokesman in the person of Mr. Bernard M. Baruch, who has just insisted to the committee that the science cabinet, as he calls it, should consist of a body of men selected solely for the contributions they can make to the advancement of science, that "full power and responsibility should rest with this board" under an executive director to be appointed by the President on the board's nomination.

This, it seems to us, is not only a sensible but an imperative program to follow if the foundation is to attract the services of our first-string scientists. It differs perceptibly from the Kilgore proposal and also from one put forth recently by Prof. L. C. Dunn, of Columbia. Dr. Dunn, properly impressed with the vital importance of the prospective foundation, urged that it be made a regular department of the Government with a director of Cabinet rank. But, obviously, this again would divorce its control from its scientific staff and open the door to its political manipulation. What the country needs is not a department of science to overlap the functions of all the other departments into whose operations science so largely enters but an independent agency of research, a clearinghouse of scientific discovery.

## Veteran at Battle Front Writes Home That GI Bill Is Not Adequate in Education Benefits for Man With Dependents

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Tuesday, November 6, 1945*

Mr. DOYLE. Mr. Speaker, the following letter from my young man friend, Bob, dated September 22, 1945, was forwarded me the other day by his mother. Bob is known to be one of the most able, ambitious young men in the community. As this letter to his mother makes some pretty definite and specific statements of such a citizen—still serving us in uniform on foreign shores—I commend it to your attention.

I have said it before—I repeat that the results of war are hellish and destructive enough—without us being slothful on the job of seeing to it that these GI boys are receiving their due respect, whatever is reasonably necessary to permit them, as promptly as possible, to reenter their educational program and to press forward and to get through it at the earliest practical date. I am in favor of increasing the amount of the GI bill for educational advantages to a reasonable point at which they feel they are being encouraged to complete their education; in an amount which will enable them to go straight through with diligence and application chiefly on their books. They should not, during this time of completing their schooling, have to worry about having enough bread and butter for themselves and their wives and children, and in many cases other dependents, too.

The paragraph in this letter in which my name is mentioned has reference to a very happy case when I had the high privilege of addressing a few remarks to several hundred men as they reclined to listen on the beautiful hillside where Fort MacArthur is situated, close by the Los Angeles-Long Beach Harbor.

SEPTEMBER 22, 1945.

DEAR MOM: After all the talk about how they are going to help the returning serviceman, we find out that one by one the benefits of the GI bill of rights are tied up with hidden clauses so that in many cases one is better off not to do business with the Government. Their help is more of a hindrance.

Take the educational benefits, for instance. Under the present laws I can have my tuition paid to school plus $75 a month living allowance. No one with normal intelligence could presume for one second that Beattie, Bobby, Jr., and myself could live on that. However, as I thought, it would be a good start, and that with a part-time job earning say $50 per month, we could get by.

Now I learn that any outside earnings would be subtracted from the $75. In other words, I'd have to have a job paying at least $125 per month in order to pay living expenses while at school. That is impossible. It is also impossible to live on $75 per month.

The very weak excuse is that a man in school hasn't time to work and still get the most out of his schooling. They already have one check on that. If a man doesn't keep up his grades he gets no more schooling at the Government's expense.

Of course, one could lie about his outside work and probably get by. That is not what I want to do, but may be forced to do.

The GI plan fits only those who have an outside income, and those are the ones who don't need it. I wasn't in school when I enlisted because Dad died and there was nothing to go to school on. So I am still on the same boat.

I am sure that men like CLYDE DOYLE wouldn't want the law to stand as it is. I can remember his talk to our CMTC outfit at Fort MacArthur in 1939, when he told us that too many people at that time thought too much of their own and other foreign ancestry, and lost sight of the fact that we are all Americans. I bet he is very satisfied now with the showing made by a mixture of bloods. Our unity of purpose has won the fight, but there are a lot of wrongs to be straightened out before we are the kind of a nation we should be.

Those who have lost loved ones must feel it even more of a personal duty to see that we build a nation as it should be built.

One of the biggest benefits would be to make it possible for every intelligent veteran to get proper schooling for a peacetime position to which he could do real justice.

I've taught for almost 3 years since I put on the uniform, and even in radio and radar work we found that a few months' good schooling made a more intelligent and flexible repair man than years of practical (or butt-your-head-against-the-wall) experience. If I can learn what has been found to work and what has been found not to work, those are lessons you don't need for yourself, and you are miles ahead.

With this kind of interpretation of the GI bill of rights, it looks as if the Government is either going to make a bunch of liars out of us, or going to discourage a lot of us from trying to better ourselves.

Even if they were to loan an additional $50 a month, that would be a help, although I'd rather earn it.

I am going to college—I have my choice of starving my family or getting a part-time job and not saying so. My family won't starve.

Perhaps they will liberalize the laws. I hope so.

Love from all of us,

BOB.

## Lithuania Suffers Under Red Fascism

EXTENSION OF REMARKS
OF
### HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. O'KONSKI. Mr. Speaker, it is quite generally known what conditions are in Yugoslavia, Poland, Austria, Hungary, and Bulgaria under the so-called new order in Europe. Appalling as these conditions are, they are nothing compared to the inhumanity which prevails in Lithuania.

To give the people of America a clear idea of what is taking place in Lithuania under the so-called new order in Europe, under unanimous consent, I insert in the RECORD a letter of the Lithuanian bishops in exile to the bishops of the Catholic world:

LETTER OF THE LITHUANIAN BISHOPS IN EXILE TO THE BISHOPS OF THE CATHOLIC WORLD, IMPLORING THEIR INTERVENTION FOR HELPING THEM TO RECOVER THE LIBERTY OF THE LITHUANIAN NATION

Most Reverend Fathers in God, in the name of Catholic Lithuania, which during this war has had to endure unspeakable ordeals and vexations, we, the spiritual shepherds of Lithuanians dare draw the mercifulness of your excellencies and, through you, the comprehension of the leading authorities of your blessed countries to the great hardships and unmeasurable needs of our people.

The Lithuanian nation, well known by its history, was since nearly a thousand years a free state in that part of the European northeast it now occupies. During the fourteenth to seventeenth centuries, Lithuania was great and powerful, and extended from the Baltic Sea down to the Black Sea. The Lithuanian people speak a distinct language, fully different from Slavic and German idioms, and enjoy their own history and peculiar genius.

After the dismemberment of Lithuania and Poland, toward the end of the eighteenth century, Lithuanians underwent the despotic Russian yoke during more than a century. But after that period of great sorrows and struggles, they succeeded in 1918, with the help of divine providence, in recovering their independence and political liberties, which are the only factors able to give birth to a favorable moral climate, and to the indispensable material conditions for an intense and flourishing religious activity.

In spite of its firm resolve and endeavors to keep a strict national and political neutrality, Lithuania was doomed during this Second World War to carry the full weight of three successive and ruthless occupations.

At the very outbreak of hostilities, Soviet Union, desirous to exploit the situation then created, became an accomplice of Nazi Germany in the division of Poland and enforced upon Lithuania, in October of 1939, a treaty of mutual assistance whereby our country was compelled to billet Soviet garrisons.

Eight months later, on June 15, 1940, under the pretext of fallacious accusations and in violation of the treaty of mutual assistance and all the others still in force, the Soviet Government, irrespective of all its solemn promises, addressed an ultimatum to an irreproachable Lithuania, ordered the occupation of the country by a strong contingent of troops, enforced the dissolution of the legal government, and abrogated the sovereignty of the nation and within a few weeks, perfidiously annexed Lithuania to the U. S. S. R. together with the other two Baltic republics. Even before the incorporation of Lithuania into the U. S. S. R., Moscow unilaterally allowed the revocation of the concordat between Lithuania and the Holy See, so that the Apostolic Nuncio was obliged to leave Lithuania.

Soon thereafter the prisons threw their doors wide open and new jails were erected to keep pace with the steady flow of thousands of Lithuanian prisoners. First came the turn of prominent people, laymen and clergy, members of former governments, and all those in charge of some important commitment in public life and even in the cultural and religious organizations. All were

committed to prison. The declarations emanating from the propaganda services of Moscow, tending to prove that Lithuania had entered the Soviet Union of its own free will, are unfounded. We ourselves lived in Lithuania at that time and, together with our people, endured the terror of persecutions, vexations, and humiliations. Nobody cared in the least about the real desire of the Lithuanian people and all was being disposed of with the help of the Red Army, the Soviet emissaries, and the secret police: GPU-NKVD.

One must confess that there were Communist collaborators in Lithuania, but their number was really insignificant. The great mass of Lithuanians never cared about dealings with the Communists. The real expression of the will of the whole nation was evidenced during the general insurrection of June 22–26, 1941, against the Soviet invaders, when a new Lithuanian Government was constituted by representatives of all patriotic parties. The Government proclaimed the restoration of state sovereignty and disavowed the Soviet regime. Unfortunately, the first occupation was soon followed by that of Nazi Germany, which immediately suppressed the newly formed Lithuanian Government and introduced its own administration under the title of "Generalbezirk Litauen" (General District of Lithuania).

Although the Soviet occupation did not last long (June 15, 1940–June 22, 1941), it proved to have been quite sufficient to disrupt the life of our people and to ruin the religious, cultural, social, economic, and political life. This evil year of terror will forever remain despicable by its toll of human losses: thousands of Lithuanians were literally slaughtered, imprisoned, or banished to distant regions of the Soviet Union. Within the space of 3 days, i. e., between June 14 and 17, 1941, nearly 40,000 persons were deported, irrespective of their age, profession, or health. Children and old people, women and men, all were crammed and shut into freight cars without food or water. A large number of these poor wretches died while still in Lithuanian railroad stations, where the cars stayed for several days. The fate of the survivors is still unknown. Some rare letters which reached Lithuania informed us that men were confined to concentration camps, women were sent into factories or to collective farms, and the children, separated from their parents, were entrusted to Soviet orphanages.

Thus, the methodical extermination of the Baltic peoples premeditated by the U. S. S. R. was in full swing. According to secret documents found intact after the abolition of the Soviet regime, it appears that Moscow had planned and ordered the deportation, in the shortest possible time, of about 700,000 Lithuanians to the farthest regions of the Soviet Union.

Although the 3 years of German occupation (1941–44) did not seemingly prove to be ruthless, they were notwithstanding a real way of the cross for our people. Stubborn opposition to Nazi ideology and the new order, unflinching resistance to the repeated summons to declare war and to collaborate on political grounds with Germany were savagely retaliated. Catholic Lithuanians made new acquaintance with prisons and concentration camps; more than 100,000 of them were deported to Germany and enslaved. However, all these hardships did not in the least diminish our passive resistance. The promises of liberty uttered in favor of all the small nations and states and boldly shouldered by the great western democracies upheld the Lithuanian people in its determination to set forth in an unequal battle for liberty and political independence.

In July of 1944 our nation was once more visited by a new scourge, as Soviet-German forces were fighting on our soil and the Red Army for the second time overflowed and occupied our fatherland. Countless cities and villages were completely destroyed. During their retreat German troops set fires as far as they had time to do so to all that was met on their passage. Twice the front was stabilized in Lithuania and, each time, the Germans, like the Soviets, evacuated the population of the occupied regions. Thus, thousands of Lithuanians were constrained to leave for Germany, where a great number had to live under extremely difficult conditions and to toil together with war prisoners in sectors of military operations. The Soviet authorities did the same with the Lithuanians caught by them.

A certain number of Lithuanians, fleeing from the Soviet terror, extermination, prisons, and deportation, willingly left for Germany. Among them may be reckoned some thousands of Lithuanians who had already languished in Soviet jails in 1940–41, for a mere inculpation of not being Communists and their unwillingness to adhere to the Communist Party. Their flight to Germany explains itself by the nearness of that country and the hope of finding temporary rest and shelter there. The number of Lithuanians deported, evacuated, or fleeing to Germany may be estimated at about 200,000—the majority of which are intellectuals. Among them may be found three bishops and approximately 250 priests. All the Lithuanian refugees are Catholics of all ages, professions, and occupations.

Lithuanians, Latvians, or Estonians who succeeded in escaping from the Soviet grasp are concentrated in the territories occupied by the American, English, and French armies. They fear to return to their countries as long as these are ruled by Soviet Communists.

From our own experiences we know what bolshevism means and we cannot help it if our opinions strongly diverge from those formed in certain spirits under the influence of Soviet propaganda.

As far as we can judge, it does not appear that the western United Nations have foreseen the presence in Germany of foreigners unable to return to their Soviet-occupied countries, a fact liable to aggravate considerably the fate of our distressed brethren bereft of their fatherland. We, their pastors, and constant witnesses of their great misery, deep sorrow, and afflictions, can only express our most serious apprehension to Your Most Reverend Excellencies and to the whole Catholic world.

If we are unaware of what is actually going on in our occupied fatherland, now resembling a huge prison closely guarded by the Russian state police (NKVD), we know perfectly well that atheistic communism has in no way improved and still remains on the stage of 1941. Now, as heretofore, all books and newspapers, unless they are communistic, are prohibited and the whole country is hermetically shut to every communication from abroad.

During the first Soviet occupation the so-called religious liberty that we were permitted to enjoy in Lithuania consisted in the closing of all the cultural associations and putting down of all fellowships and brotherhoods. The new authorities were moreover urging priests to sign an engagement whereby they would pledge themselves to discontinue teaching catechism either privately or in churches. Furthermore, they were strictly forbidden to enter schools, where up to that time, religious instruction was obligatory. An embargo of printing was put on prayer books, catechism, or Catholic publications. The best and rarest religious editions found in stores or in the nationalized libraries were confiscated and, without exception, destroyed. Imprisonments, tortures, and other means of terror aimed at intimidating the priests and compelling them to join the NKVD services as informers was the common practice. Seminaries were closed and all the bishops, together with a conspicuous number of priests, were evicted from their residences and dwelling places without any chance to settle down elsewhere in decent abode.

This was, roughly described, "the religious liberty" we personally experienced under the Soviet regime of 1940–41.

In spite of all our rights and in opposition to the sacred laws of justice and humanity, our fatherland, Catholic Lithuania, lays under the threat of becoming legally and politically recognized as an integral part of the Soviet Union. At any rate, we solemnly declare before God the Almighty and our Saviour, His Son, that Lithuanians are firmly decided to recover their national and political liberty and to re-create a real free state. Lithuanians will never consent to become a colony of Russia, against which they struggled in the past centuries in order to maintain their existence, culture, and Catholic faith. This is why every Lithuanian rebels against any and all suggestions that he undergo the atrocious yoke of atheistic Soviet communism.

We dare now point out to Your Most Reverend Excellencies that the World War seems to be over. Victorious and vanquished nations are looking forward to peace in conferences and congresses. Leaders of nations are meeting with a view of setting down the terms of peace. Many a political discussion and deliberation refers to nations which have suffered aggression during this war and may expect repatriation, but whose liberty is in such a manner jeopardized that they require a new liberation. Among the nations never referred to, figure in the first place the three Baltic Republics, thereunder our most cherished Lithuania. This silence, in our view, looms as a burial of our political liberty. We dare not admit that the plenipotentiaries of the powers present at the San Francisco Conference did not keep in mind the above-mentioned nations as they were solemnly assuring the world that once the war is ended, liberty would be returned to all nations without any exception.

Today Lithuania is in such a state that it cannot even think of expressing publicly and openly its wishes. Therefore we dare to call on you, Most Reverend Excellencies, and entreat you to come to the rescue of our Catholic brethren. In tendering this short description of the afflictions which have visited and are still visiting our people, we beg to appeal to your mercifulness to enlighten through your pastoral word your faithful people on our dolorous fate and to intercede in the measure of your possibilities with your governments in favor of our distressed people, so that at the peace conference the delegates of the governments may intervene in favor of the rights of our people to reconstitute a free and independent life and not recognize nor ratify the attempted imposed incorporation of Lithuania into the U. S. S. R. as a reward for the Russian participation in the war against Germany.

If ever Lithuania, like the other nations partaking the same fate, were to be recognized at the peace conference as subject to the totalitarian and despotic Soviet regime, this would be an injustice crying for celestial vengeance, this would be the triumph of falsehood and brutality, the negation of the most natural human rights. This would be equal to a verdict of death for our whole nation, for deportations, and other well-known methods of extermination would in a short time achieve the annihilation of our people.

We kindly beg you, Most Reverend Excellencies, to take the necessary steps in order to put as soon as possible an end to this slaughter, which still continues under Soviet occupation.

For 5 years Lithuania is suffering under the yoke of occupation and witnesses the destruction of its national life. Hundreds of thousands of innocent people endure the hardships of exile in the far regions of the Soviet Union and in Germany. They all long

for a speedy return to their beloved fatherland, where they wish to live by their own means and labor for the welfare of their country and for humanity.

Therefore we once more appeal to all the bishops of the Catholic world, imploring them to help us in the achievement of this sacred, just, and lovable petition of our people. Moreover, the extreme misery with which the Lithuanians, scattered all over Germany, have to grapple compels us to ask for the benevolent intervention of Your Most Reverend Excellencies in order to promote an action in favor of all those victims devoid of clothes, food, and medical relief.

Fully confident in the divine providence and in men of good will guided by a spirit of justice and truth, we hope the moment is not far ahead when Catholic Lithuanians will be able to thank God and all those who by the grace of our Lord will have brought about the liberation of their country. We also foresee the time when the Lithuanians, once returned to their homeland, will become noble and zealous advocates of human justice, working for the realm of our Lord in that outpost of Catholicism in Europe, as defined by His Holiness, Pope Pius XII, in an answer to the Lithuanian Minister to the Holy See.

Hereby, we wish to express to all the bishops of the Catholic world our deepest gratitude for the moral and material aid they will deem advisable to bestow upon our Nation and we avail ourselves of this opportunity to express to your Most Reverend Excellencies our sentiments of profound respect and affection.

Your most faithful servants in Our Lord Jesus Christ:

JOSEPH SKVIRECKAS,
*Metropolitan Archbishop of Kaunas*
*Assistant to the Holy See.*
VINCENTIUS BRIZGYS,
*Auxiliary Bishop of Kaunas.*
VINCENTIUS PADOLSKIS,
*Auxiliary Bishop of Vilkaviskis.*

Written in exile, this 8th day of September, Festivity of the Nativity of the Blessed Virgin Mary, 1945.

## Use of Liberty Ships for Transporting Troops

EXTENSION OF REMARKS
OF
### HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. ANDERSON of California. Mr. Speaker, I wish to call attention to a newspaper article which appeared in the Daily Pacifican, the Army newspaper in the Western Pacific. If it is true, as indicated by Colonel Davidson, that Liberty ships can be easily altered and used for transporting troops home to the United States, it seems to me that no time should be lost in taking advantage of this proposal. We all know, of course, that literally hundreds of Liberty ships are lying idle at ports throughout the United States, rusting at their anchors while high-point men in every branch of the armed services are clamoring for transportation home. The time for talk has long since passed. Let us get busy.

The article follows:

MANILA.—Liberty ships capable of carrying 750 men to the States "in comparatively good living conditions" can be readied within 48 hours, according to Lt. Col. C. H. Davidson, superintendent of the water division, port of Manila.

Colonel Davidson, in reply to a query as to the practicability of using Liberty ships for transporting troops, said yesterday that it had been done before successfully and could be done again.

"If the ships can be allocated," he said, "I can have each one ready to carry 750 troops back to the States in comparatively good living conditions within 48 hours—if I have 50 men to work on each of them."

He stated that all equipment, with the possible exception of M37 ranges for cooking, is available to convert the Liberties so that they will be capable of carrying troops. "These ranges may be available," he stated, "but I haven't checked on them."

"These are facts," said the colonel, who was responsible for moving the First Cavalry and the Twenty-fourth, Thirty-second, and First Infantry Divisions out of Brisbane under similar conditions, "and they are indisputable."

Colonel Davidson said that the objection that Liberty ships could not be used because of cold weather encountered during the voyage was not based upon fact.

Most Libertys travel the Great Circle route, which passes near the Aleutians, between Manila and west coast ports, and cold weather is encountered during the greater part of the trip. The alternate route is by way of Honolulu, and at no time would a ship traveling this alternate route between Manila and San Francisco be more than 38 degre s north of the Lquator.

Although Liberty ships are without heating facilities below deck, the weather would create no problem as long as the Honolulu route were followed. Should an unseasonable cold spell be encountered, troops on board would not be uncomfortable because of the complete winter clothing issued at replacement depots before troops embark.

The Honolulu route is longer than the great circle route, but the added day or two would not extend the voyage to more than a total of 24 to 26 days.

Water Division, Second Major Port, is allocated ships by AFWESPAC. So far, Colonel Davidson indicated, no ships have been allocated for conversion into troopships. The colonel has, however, converted one Liberty ship for transporting 1,500 prisoners of war back to Japan.

"This same ship," he sa d, "could have carried 750 GI's to the States."

The only feature of actual discomfort for troops traveling on such converted Liberty ships would be the lack of bunks of any kind, for, Colonel Davidson said, "Cots would present a safety hazard." Since the cots are made of wood, they present a fire problem, and, in addition, there is no way of securing them.

The colonel said that he felt sure that any Liberty ship which he converted would pass the necessary inspection by officers from Troop Movement, Water Division, Port Surgeon, and Inspector General Departments.

## Caught With Points Down

EXTENSION OF REMARKS
OF
### HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, we have been hearing a great deal recently about the APA—Annapolis Protective Association—and under permission to extend my remarks, I am inserting herewith a poem apropos that subject:

CAUGHT WITH OUR POINTS DOWN, OR NOTHING COULD BE FINER THAN TO BE A FORTY-NINER IN THE MORNING

O, this is the law of the Navy;
O, this is the cross that we bear;
We find "the duration"
Is perpetuation.
We're sunk in the depths of despair.

What use is an overseas ribbon?
What good are the stars that we wear?
Our sons and our daughters
Are point-giving naughters—
The trade schoolers tell us it's fair.

We'll just have to grin and act happy;
We'll just have to sweat out the years;
Come hell and high ocean,
We'll prove our devotion
By bravely withholding our tears.

So let's lift a toast to the Navy—
To all the Annapolis clan—
We're caught in your clutches
Until we're on crutches—
From now on MacArthur's our man!

## Group Sanctions Against Racism

EXTENSION OF REMARKS
OF
### HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 1, 1945*

Mr. CELLER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article entitled "Group Sanctions Against Racism" by A. H. Pekelis and published in the New Republic of October 29, 1945:

GROUP SANCTIONS AGAINST RACISM
(By A. H. Pekelis)

A syndicated column by John O'Donnell, of the New York Daily News, charged on October 2, 1945, that "behind the successful drive to disgrace and remove Gen. George S. Patton from his army command in occupied Germany is the secret and astoundingly effective might of this Republic's foreign-born political leaders—such as Justice of the Supreme Court Felix Frankfurter, of Vienna; White House Administrative Assistant Dave (Devious Dave) Niles, alias Neyhaus; and the Latvian ex-rabbinical student now known as Sidney Hillman. * * * These boys and their pals decided to go out and get General Patton's hide and rank because—the columnist revealed—the soldier who got slapped by Patton in an Army hospital was of Jewish descent. "Then Patton proved himself a great leader and hero in France. But his foes here in Washington never forgot the Sicilian episode."

The story was made out of whole cloth; the soldier slapped by Patton was not a Jew, and no Jewish political leader had anything to do with Patton's transfer.[1] But the canard received wide publicity. The New York Daily News alone has a daily circulation of more than 2,000,000 copies. The Jews were shocked, then worried. The Jewish press charged that the Jewish organizations, instead of assuming a militant leadership, confined themselves to a letter to the editor.

Can't the Jewish organizations do better than that? It is easy to say "militant leadership," "war against neo-fascism," etc., but

[1] O'Donnell made a complete retraction in his column of October 19.—The Editors.

when war is declared, what form shall warfare take?

Among the weapons available in a society built upon the profit motive, there is that of economic action: refusal to patronize, picketing, boycott. Could not a defamed minority refuse to buy or advertise in a publication guilty of attacks which follow the classical pattern of Mein Kampf? Could not Jewish organizations ask all decent Americans to support them in their action? Or should they bring a suit for libel and try to get satisfaction through the courts?

The answer is—according to what may be described as legal tactics—that they cannot safely do any of these things. Legal dynamics, new trends, or straws in the wind, may point in the other direction. But the orthodox "law on the books" seems to be weighted against them. To begin with, in the eyes of the law the Jews do not exist as a group. They may be murdered as a group, but they may not complain about it as a group. They can be defamed as a sinister gathering of the Elders of Zion, or of ritual murderers, but there is no effective remedy against their defamation as a group. The harm done to each of them may be far greater than what he could suffer from personal defamation. But neither as a group nor as individuals are Jews entitled to ask that their defamer prove his assertions or be branded a libeler.

This is no accident. It is in keeping with the basic character of modern law which—after having been permeated by Rennaissance individualism—has become a law of relations among individuals and lost its feeling for collective rights or group responsibilities.

This attitude, which is based on the recognition of the value of human personality, has made for much progress in human relations. But in its blindness to group relations it fails to conform with reality. The course of our individual lives often depends more on the fate of the group to which we belong—family, union, class, or race—than on our own individual merits. Even if the trials of war criminals did not abandon the theory of individual guilt, expiation by the Germans, that is, loss of political or economic independence, had, by its nature, to be collective. When responsibilities are clearly collective, such as in the case of a lynching, attempts to allocate individual guilt lead inevitably to a break-down of justice.

Of course, an individual may stop reading, or advertising in, the News. But if a group decided not to patronize that paper, and tried to induce others to do likewise, the ghosts of criminal conspiracy, combinations in restraint or secondary boycott would be raised against them. This is what paralyzes collective action and reduces a number of organizations to the device—welcome to some and odious to others—of writing letters to the editor or to the sitting-down-at-lunch-with-the-colonel technique.

To lay those ghosts vision and courage are needed. At the cost of life and limb, American labor has laid the ghosts of conspiracy and boycott, and invigorating currents have penetrated the American political atmosphere. Those who are responsible for the honor and livelihood of the threatened minorities must persuade the popular, political, and legal opinion of the country that people singled out for attack as a group have the right to defend themselves as a group.

This principle has led, in industrial relations, to collective bargaining, and has provided a defense against conspiracy charges. The same principle can lead to equally important results in the field of ethnic relations. For instance, the enforcement of antidiscrimination laws should not be left to individual initiative only, but minority organizations should be given the power, analogous to that enjoyed by the unions under the National Labor Relations Act, to file charges of unfair practices.

Our present problem, however, does not require legislative intervention. Collective bargaining was granted to labor by statute. But its second basic right—to picket and boycott—was won by effecting a change of judicial attitude. This change has removed labor picketing from the inferno of criminal conspiracy, or the purgatory of disorderly conduct, to the constitutionally protected sphere of freedom of speech, and has put labor's right to picket and boycott beyond the reach of unreasonably restrictive municipal ordinances, State statutes, or congressional enactments.

This change in judicial attitude was not the result of the discovery of a new legal argument. As in all basic constitutional issues, the operative forces were ethical or political rather than strictly legal. It was the recognition of the moral and political importance of the economic issues that labor was presenting to the country. To say that the pickets or boycotters "just spoke" was not enough to afford them constitutional protection. Freedom of speech does not mean freedom to say whatever one pleases. A number of torts, misdemeanors, felonies, and even capital offenses can be committed through speech alone.

Suppliers of a commodity, for instance, could not picket a customer's store or otherwise discourage the public from patronizing him because he refused to pay the suppliers a fair price. But suppliers of labor have the right to picket the store of an employer who refuses to pay fair wages. In 1943, Texas declared that solicitation of union membership, like the solicitation of insurance, would be subject to prior licensing by the State. Some members of the Supreme Court argued that unions were business organizations and that the State could subject them to restraints similar to those usually imposed upon economic activities. But a majority held that the statute was unconstitutional. The reason for this decision lies in the recognition of the general value of the ideals for which labor fights, of the general public interest in the problem that it raises, in the need for the citizenship to be informed about the controversy and the opposing arguments. The political and the social value of the aim pursued make the use of the boycott weapon legal.

Do racial and religious tensions have a public importance similar to that recognized in industrial tensions? Does the public need to be enlightened about the various aspects of racial or religious unfairness, such as incitement to hatred or exclusion from employment and educational opportunities? Is not a fair settlement of ethnic relations as important for the general welfare of the country as the fair settlement of industrial relations? If so, then the right to appeal to public solidarity must be upheld even if the appeal results in an individual refusal to patronize or in a mass boycott. *Thornhill* v. *Alabama* was concerned with labor picketing only. But the language of the Court's opinion asserted "the liberty to discuss publicly and truthfully all matters of public concern without previous restraint or fear of subsequent punishment."

However, the recognition of the right of minorities to confront the American people with the problem of racial justice cannot come from a royal grant or a gracious judicial decree. Assertion must precede recognition. Like every other boundary, the line between lawful and unlawful acts is shaped by the forces active on both sides of the line. The boundary between incitement to boycott and the advocacy of social sanctions against violators of decency is variously drawn by society and its judges in various circumstances. And the result depends, to an overwhelming extent, on the way in which the action is conceived and felt by the actors themselves.

In theory, if a man has a right, he possesses it whether or not he is aware of it. In political reality, however, awareness and assertion of rights can become the condition of their existence. Secrecy and deviousness are incompatible with assertion. An act which is a manifestation of inalienable freedom if performed in a manner consistent with the dignity of a freeman, may become unlawful if performed surreptitiously. Concealed inducements to advertisers or subscribers to cancel their contracts is secondary boycott. An open appeal to the conscience of advertisers, subscribers, and the public at large, is exercise of freedom of speech. And this is as it should be. A public appeal states the issue, recites the accusation, affords an opportunity to refute factual falsehoods and logical fallacies or opposes an appeal to reason against an appeal to emotion. It transforms a base conspiracy condemned by the law into a trial by public opinion protected by the charter of freedom.

The answer to hatred and oppression is not mere debate, or legislation alone, or half-hearted pressure. Once again the history of labor affords a lesson—debate plus pressure, legislation plus picketing, individual protection plus group action offer the only chance of success. Nor is the ideal value of the struggle impaired by the injection of an economic motif. On the contrary, a community has the moral duty to see to it that, like any other crime, racial aggression does not pay.

Not that the task is easy. Racial exploitation, discrimination, and defamation have long been good business and their economic bastion is beyond the reach of minority snipers. Only public support can help them. But the recognition of their right to appeal for such support cannot come without an uphill fight. Assertion, we said, must precede recognition. But recognition does not always follow assertion, and almost never does so at once. If the minorities want to conquer the right to collective action they must be ready for financial and physical sacrifices, and for set-backs and defeats. No change can be accomplished with a previous license, and no revolution, however peaceful, with a declaratory judgment obtained in advance.

On the other hand, short-range defeats are often long-range victories. The defeat of a righteous cause in a court often becomes an impelling argument for legislative or social change and results in a political victory. Nor can it be expected that the courts will decide this issue without the usual distinctions. The advocacy of a boycott of an employer guilty of racial or religious discrimination may fall not only within the definition of a labor dispute for the purposes of the Norris-LaGuardia Anti-Injunction Act, for also within the scope of freedom of speech. On the other hand, it is conceivable that picketing and boycott may be outlawed as an answer to defamation. It could be that the only constitutional restraint on the defamers' constitutional freedom to advocate religious hatred—and the News in an editorial has claimed that right for O'Donnell—is not the freedom of the defamed to advocate a boycott of the defamers, but an action for libel. This, however, should focus attention on the failure of our law to provide the victims of group defamation with an adequate defense against libel and lead to a judicial or legislative reversal of the prevailing policy against group libel actions.

All this is within the realm of political and judicial probabilities. However, one thing is certain, the chances of success cannot really be determined in advance of action. To win or to lose may be a question of luck. But the game must be played according to rules. And the rules of the game now call for neither apologetic propaganda nor economic guerrilla warfare, which the loosely knit American minorities could not afford, anyway. The rules of the game and decent respect for American opinion call today for an open declaration of economic war against racial aggression and for a full statement of reasons to be submitted, in each individual case, to public opinion.

American minorities have no other force, no other weapon, and no other hope than America herself. To pit the economic power of the minorities against a powerful newspaper would be no more hopeful than to assume that a Fifth Avenue beauty parlor would go bankrupt if the members of the hairdressers' union stopped patronizing it. The essence of boycott is an appeal to the solidarity of all decent citizens. The American minorities have the right to launch such an appeal. The Jews—and the Negroes—have a right to picket the News and the newsstands and call for their boycott by all truth-loving men and women. The Negroes—and the Jews—have the right to picket the DAR's Constitution Hall and to ask all lovers of art and beauty not to cross their line. They have the right to picket and call for the boycott of those New York department stores which, in the teeth of the Ives-Quinn law, are today as lily-white as ever.

This kind of struggle is not without risks. But it is well to remember that those who voyage and take no risks are destined to perish

## Principles Adopted by AMVETS at National Meeting in Chicago

EXTENSION OF REMARKS

OF

### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. DOYLE. Mr. Speaker, yesterday, by unanimous consent, I was privileged to have incorporated in the Appendix of the CONGRESSIONAL RECORD the constitution and bylaws adopted by AMVETS—American Veterans of World War II. I am now privileged to insert therein the principles adopted by the AMVETS at their first national convention on October 12, 13, and 14, 1945:

THE AMERICAN VETERANS OF WORLD WAR II
DECLARATION OF PRINCIPLES

We, the American Veterans of World War II, believing that we bespeak the mind of the American men and women who bore arms, fought, and died for a free America and a free world, do hereby resolve that our national leadership must assert itself through cooperation with leaders of all nations who advocate and practice international peace as a national policy, to the end that not again shall any nation be permitted to breach the international peace.

And we do resolve that since Americans on the fighting front, supported by civilians on the home front, have made available to the world one last chance for the survival of humanity; and that since the cataclysm of another world war will result in the extinction of civilization; and since that we are determined that this final opportunity shall not be lost by individual or collective greed, ignorance, or indifference, we therefore pledge ourselves to develop mutual confidence and understanding within our Nation and between America and the other nations of the world to the end that all men may live in peace and be responsible members of an enlightened family of nations. We shall not fail this trust.

And we do further resolve that we accept our paramount obligations and duties as American citizens, and adopt the basic principle that the best interests of all the American people are superior to any group or organization within the national political, economic, or social structure. To this end, we rededicate ourselves to service to our Nation in peace as in war to insure that American ideals for which we and our countrymen have fought and died, may be preserved for us and posterity. We believe that the basis of world peace is founded upon the following truths and beliefs, which we do hereby declare:

1. INTEGRITY

National integrity is based upon the intergrity of the individual citizen and those who lead and represent him. To maintain our spiritual and political leadership in the world, individual and national integrity must exist as a fact and be practiced as a living philosophy. To this end, we further resolve that our national leaders cooperate with the leaders of all nations who accept world peace as a national policy, and to establish forthwith common principles for the settlement of all international problems and disputes, and to abandon the progressive tendency toward national self-interest and power politics on the world level. The objectives of the four freedoms must be made a living precept for all peoples and nations.

2. EQUALITY

We are representative of the membership of various political parties, races, faiths, and creeds, and our common denominator is that we are all Americans who have honorably served the Nation during time of war. We shall not discriminate between veterans because of rank, service, sex, race, creed, or political party affiliation. Our first demand is loyalty to the United States of America, and that the welfare of the Nation be placed above the interests of any individual, group, or organization. We shall endeavor to represent honestly and effectively the 13,000,000 men and women veterans of World War II, and we shall not front or permit our organization to be used as a front for any individual, group, party, movement, or "ism."

3. INDUSTRIAL RELATIONS

We believe that America's unparalleled industrial achievements during the war resulted from the combined efforts and cooperation of industry and labor. To attain our full potentialities as a nation, this effort and cooperation must be continued without interruption, and we believe that industry and labor are interdependent and that what harms one injures both, as well as the national welfare. We demand that both industry and labor clean house and establish responsible leadership and labor-management policies and procedures based on merited mutual confidence and integrity. We believe that both industry and labor have a paramount duty to the American people to reestablish their faith by denouncing and removing from their ranks and leadership professional racketeers labor haters, labor baiters, and agitators, regardless of what names they go by or what positions they occupy.

4. FREE PRESS

We believe not only in a "free" world press, but in an honest press. We believe that the honest, impartial, and unslanted dissemination of news can heal the internal wounds and strife between our racial and economic groups, and give all Americans a chance to know and understand more fully the problems and aspirations of others within our own country as well as those of other nations and their peoples.

5. RECONVERSION

American veterans of World War II do not want "charity" in any form. We believe that the American people feel a deep obligation to the men and women casualties of a war in which they fought for all Americans, and will do all things necessary and proper to care for and assist them so long as that care and help is necessary. Those who have served in the armed forces and have returned to civilian life or who will later return ask only that they be not prejudiced by their absence in the service. They demand a decent opportunity for employment so that they may establish themselves as thrifty, industrious, self-respecting, and worthy citizens of the American community.

6. LIVING MEMORIALS

We believe that the memory of those who gave their lives that a free America and a free world might survive, should be honored and preserved by living memorials in the form of additional educational and recreational facilities so that no American shall lack opportunity for adequate education, a healthy mind and a healthy body.

7. TECHNICAL RESEARCH

We deplore the wasteful extravagance of war in both human and material resources. We dedicate ourselves to the principle that these resources can be preserved by devoting part of our national income to the development of means by which future wars may be made impossible, to the extension of education and research in the sciences to the end that disease and ignorance may be abolished.

8. MILITARY PREPAREDNESS

We believe in the necessity of maintaining such military training programs, and adequately equipped active and reserve components of the armed forces as may reasonably be necessary to insure that this Nation shall never again be vulnerable to attack or invasion; that under Government supervision, such scientific research and personnel shall be maintained as may be necessary to insure that this country shall lead all peace-loving nations in such military and scientific techniques as may be required to preserve and maintain the peace against any future aggressor nation or nations.

9. ETERNAL VIGILANCE

We shall resist by whatever means are reasonably necessary any attempts by enemies from within or without to undermine or destroy the democratic principles upon which this Nation is founded. These must be maintained inviolate. Only by eternal vigilance on the part of all Americans can this, our heritage, be preserved for ourselves and posterity.

10. DUTY TO VOTE

We believe that public office is a public stewardship and trust, and must be administered as such; that it is our responsibility as citizens to exercise our voting franchise, and to elect, and maintain in office men and women of personal and public integrity; persons who will serve all the people instead of any bloc, organized minority, special or pressure group. AMVETS will stand with any man who is right, but part with him when he is wrong.

DEDICATION

The American Veterans of World War II believe in the America which we fought to preserve. We believe in the future of America and in the men and women who have made it great and who will make it greater. In this faith, we dedicate ourselves to the fullest development of the spiritual, mental, physical, economic, and human resources of the Nation.

To these ends, we resolve, and do dedicate ourselves to these ideals and pledge ourselves to their fulfillment.

## Full Employment Bill

EXTENSION OF REMARKS

OF

### HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following resolution adopted by the Common Council of the City of Milwaukee on October 15, 1945:

Whereas Congress is now considering the Murray-Patman full employment bill recommended by President Truman to avoid unemployment and to afford opportunity to those willing to work; and

Whereas it is necessary that the Federal Government assume this responsibility in order to avoid another depression: Therefore be it

*Resolved by the Common Council of the City of Milwaukee*, That it urges the passage of the Murray-Patman full employment bill recommended by President Truman now pending before Congress;

*Resolved further*, That a copy of this resolution be sent to all Wisconsin Members of Congress.

## United Nations Headquarters

EXTENSION OF REMARKS

OF

## HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 7, 1945*

Mr. CANNON of Missouri. Mr. Speaker, under leave to extend remarks, I include the following communication from the St. Louis Chamber of Commerce:

ST. LOUIS CHAMBER OF COMMERCE,
*St. Louis, Mo., November 5, 1945.*

MY DEAR CONGRESSMAN: I have today written Hon. E. R. Stettinius, United States representative, Preparatory Commission, United Nations, inviting the United Nations to locate headquarters in the State of Missouri. Hon. Phil M. Donnelly, Governor of Missouri, has authorized me to say that the selection of a location within the State of Missouri would have his full endorsement and that he would cooperate in every way to secure from the State legislature, which is now in session, any legislation necessary to bring the headquarters to Missouri. At a recent meeting of the Missouri Resources and Development Commission a resolution was unanimously adopted, inviting the United Nations to locate in the State.

At a meeting of the executive committee of the St. Louis Chamber of Commerce Friday, November 2, I was instructed to write Mr. Stettinius, calling his attention to a specific location which has many attractive features and advantages, making it an ideal location for the headquarters. I refer specifically to a tract of land owned by the Government, formerly occupied by the War Department and now declared to be surplus property, and known as the Weldon Spring Ordnance Plant.

This property, comprising approximately 27.7 square miles, lies along the north bank of the Missouri River, on high bluff land overlook the valley of the river, approximately 16 miles northwest of metropolitan St. Louis and 26 miles by high-speed superhighway from our union station.

Briefly stated, the salient features of this suggested location are:

1. Ample area: 17,699 acres, more or less, or 27.7 square miles.

2. Strategic location: Near the center of the United States, about midway between the center of population and the geographical center, and near a metropolitan city of approximately 1,400,000 population, with all of its attendant advantages—economical and cultural.

3. Single ownership: The land is wholly owned by the United States Government and is no longer required by it. Its acquisition by the United Nations would create no problems of expatriation, either by the State of Missouri or by the United States. No condemnation of property would be required and no existing population would be displaced, as the property was entirely cleared of population when acquired by our Government in 1940–41.

4. Immediate occupancy can be authorized.

5. Completely enclosed by fence and easily guarded.

6. About 15,000 acres completely vacant, the balance can be quickly cleared of Government-owned facilities.

7. Some buildings and 30 modern residences are immediately available for use as construction headquarters and for temporary offices and living quarters.

8. Water: A complete, duplicate, water system is installed with a daily capacity of 40,000,000 gallons of treated, potable water, sufficient to serve a community of about 200,000 persons and to provide a cooling system for complete air conditioning.

9. Power: There are two steam-power plants equipped with six boilers, each with a capacity of 100,000 pounds of steam per hour. Power-generating plant of 1,250 kilowatts is installed in one of the plants but was never used, as power was continuously supplied by the Union Electric Co. from high-tension lines, through two transformer stations located on the property.

10. An abundance of building stone can be quarried on the site. The Government opened and operated large quarries along the river front.

11. St. Louis is one of the world's most important telegraph and long-distance telephone communications relay centers. The site is connected by telegraph lines along the right-of-way of the Missouri-Kansas-Texas Railroad and by telephone cable direct to the exchanges of the Southwestern Bell Telephone Co.

12. Transportation: The site is served by 104 miles of motor roads and 22 miles of new standard-gage railroad, connecting with the main-line tracks of the Missouri-Kansas-Texas Railroad. It is bounded on the east by United States Highway No. 61, which gives direct access to the city of St. Louis, and lies about 7 miles south of United States Highway No. 40 and the main line of the Wabash Railroad. It is 18 miles west of Lambert St. Louis Municipal Airport. The Rock Island Railroad runs along the south bluffs of the Missouri River with station facilities about 4 miles from the site.

13. Topography The site is on the bluff lands about 150 feet above the valley of the Missouri River. The terrain is rolling, with numerous long level stretches formerly used as farm land. There are beautiful sites within the tract for residences, offices, parks, parade grounds, and for recreational areas. The bluff lands nearest the river are rugged. Locations are available either within the area or adjacent on which airport facilities can be erected, should a private field be desired. The river provides opportunity for use of hydroplanes.

The southern portion of the site drains into the Missouri River, although a larger part of it drains northeast into the Mississippi River.

14. The site is removed from all industrial activity of St. Louis.

We are now preparing a booklet setting forth in more detail the location and description of the Weldon Spring property. Because of delay in securing release of data from the War Department and the time required to prepare exhibits and reproduce them, it will not be ready to forward to Mr. Stettinius for some days. In the meantime, I have sent him some literature describing St. Louis.

Frankly, we know of no better, no more readily available and suitable site anywhere than Weldon Spring. Its location near the center of the country offers a strategic advantage of importance should this Nation ever be involved in another armed conflict. We devoutly hope that it will not be and are anxious to bring the United Nations quickly into being.

We thought it desirable that you know of our effort to secure the location at St. Louis and invite your sympathetic cooperation if there is any way you can help in the matter.

Very truly yours,

GEO. C. SMITH,
*President.*

## Commonwealth of Palestine

EXTENSION OF REMARKS

OF

## HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post by the Honorable Sumner Welles, entitled "Commonwealth of Palestine":

PROBLEM FOR UNO

(By Sumner Welles)

COMMONWEALTH OF PALESTINE

The Government of the United States is officially committed to the establishment of a Jewish national home in Palestine. Both major parties have, in their most recent platforms, endorsed this policy.

An independent Jewish commonwealth of Palestine represents to many millions of people throughout the world the symbol of their passionate conviction. The failure to provide assurance that this ideal is going to be realized will result in dangerously increased tension in an already gravely troubled world.

Unfortunately, this Government is as yet giving no sign that it is pursuing any clear and consistent policy which will facilitate the achievement of the objective to which it is pledged.

The President is urging the British Government to permit the immediate immigration into Palestine of 100,000 of the homeless and destitute Jews in Europe who are unwilling or unable to return to their former homes.

The rescue and resettlement of these pitiful survivors is a moral obligation which rests upon all free peoples. The President's humanitarian desire is altogether praiseworthy.

But so long as this Government continues to refuse to assume any responsibility for the security of the people of Palestine can his suggestion be regarded as constructive? For the British Government strongly maintains that an Arab uprising will take place if any large-scale immigration into Palestine is now permitted. British military and material resources have reached a low ebb. Vital British interests are involved.

Is Great Britain to be expected alone to keep the peace in the Near East if hostilities break out as the result of a step against which she has repeatedly warned?

Are the true interests of the Jewish people going to be advanced by an insistence upon measures which threaten discord between the Anglo-Saxon powers?

President Roosevelt never believed that the establishment of a Jewish commonwealth in Palestine was in any sense "hostile" to the Arab peoples. On the contrary, he believed that such a solution would prove beneficial to both Jews and Arabs. Moreover, he was

confident that the surest way of finding a just and permanent solution of the problem of Palestine was through negotiations in which both Jews and Arabs would be fully heard. Some of the ablest leaders of Zionism have also held that the best hope of success lay in negotiations in which Jewish and Arab leaders would take part.

If the present floundering continues, the hope of a peaceful solution will become increasingly remote. The antagonism of the Arab leaders is daily becoming more envenomed. As the Arab states become increasingly aroused, the position of some Jewish groups is becoming correspondingly extreme.

Certain facts seem by now to be plain.

The commonwealth of Palestine is not going to be established through any unilateral armed imposition on the part of the British Government.

It will not be created as a result of mere protestations of sympathy on the part of the United States.

The commonwealth will only come into being when the United Nations Organization decides, as it must, that the establishment of a Jewish commonwealth in Palestine is essential to world peace and to world stability. Unless the International Trusteeship Council to be set up by the United Nations Organization is charged with the obligation of carrying out such a decision, the commonwealth of Palestine will continue to be an ideal and not a reality. Only the United Nations Organization itself, representing the concerned determination of the free peoples of the world, will possess the necesary authority to achieve a final solution of the Palestine problem.

The British Government should, under article 77 of the United Nations Charter, transfer its mandate over Palestine to the International Trusteeship Council as soon as the Council is established. Until then, if large-scale immigration into Palestine is to be permitted, the United States should share in the task of keeping the peace in that area.

From the moment the Council assumes jurisdiction the United Nations Organization should make available whatever armed force may be required to give assurance of security to all inhabitants of Palestine.

The Council should thereupon summon representative Jewish and Arab leaders for consultation as to the most desirable solution.

Should it prove impossible for the International Trusteeship Council, after full consultation with both Jewish and Arab leaders, to obtain their agreement to whatever solution it considers most equitable and desirable, the United Nations Organization should nevertheless decree that its decision be carried out.

Once this step has been taken, the International Trusteeship Council should set up a broadly representative provisional government in Palestine and intrust it with all necessary authority until such time as free elections can be held and an independent and democratic government can commence to function.

As soon as the Council is intrusted with a trusteeship over Palestine, unrestricted immigration should be permitted. Immigration should thereafter be interrupted only if the International Trusteeship Council, or the future government of Palestine, decides that such restriction is temporarily required for economic reasons. Such authoritative surveys as Dr. Lowdermilk's admirable report prove that immigration can be greatly increased over the year if an intensive program of irrigation and of power developments is undertaken.

Unless the United Nations Organization immediately assumes the responsibility for finding a solution, the danger of an outbreak in the Near East is very real. Unless all the major powers share in the responsibility for the settlement to be reached, the whole of the Near East will become a fertile field for power politics.

No people in the history of mankind have suffered more grievously than the Jewish people. If a free and peaceful world is within our grasp they must receive something better than illusory promises—something more tangible than hollow assurances of sympathy.

The declaration issued by the World Zionist Conference at London in August of this year is poignantly true: "Any delay in the solution of the problem, any attempt at half measures, any decision which, however favorable, remains on paper and is not faithfully and speedily implemented, will not meet the tragedy of the hour and will only increase suffering among Jews and tension in Palestine."

## Veterans' Job Program

EXTENSION OF REMARKS

OF

## HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mrs. ROGERS of Massachusetts. Mr. Speaker, I am introducing a bill to establish a veterans' job and integrated national program to provide maximum work opportunities and careers for veterans. We will reach this objective under our free competitive enterprise system by integrating the present diversified efforts to aid the veterans on the part of industry, agriculture, labor, foreign trade, private agencies, State and local governments and the Federal Government. It is not intended to accomplish these aims by displacing other workers, but rather to create and take advantage of new opportunities for veterans by utilizing our unused capacities and undeveloped natural resources.

Ample Federal machinery is already set up for this purpose in the Retraining and Reemployment Administration, which was established under title III of the War Mobilization and Reconversion Act of 1944. We, in the Congress, had the foresight to set up such an agency, but we did not have the foresight to charge that agency with specific responsibility and objectives. This veterans' integrated national program completes that unfinished business on our part.

To state it in its simplest terms, this program will provide fuller employment of veterans and others toward an ever-expanding economy, and it will go far in counteracting the effects of recessions or depressions on employment. This program will knit together more closely in each community, the activities of the Federal, State, municipal and private agencies into a streamlined veterans' guidance and information service center. As this veterans' center in the community is developed to serve the veterans adequately, it can serve also as a permanent center for the benefit of all of the people in the community to enrich their lives.

The organization of this veterans job and integrated national program is not only a challenge to the Congress, to the States, and to the communities, but it is also a direct challenge to industry, to organized labor, and to the veterans' organizations. It is a challenge too, to the women of America, and finally, it is a challenge to all of us because we are at the fork of the road. We must make a choice. We must make that choice immediately. Eleven million men and women are presently returning from war to civilian life. For the good of the Nation they must be assimilated efficiently, promptly, and without causing unnecessary dislocation to other workers, professional people, and established businesses. I do not mean to say that the veterans should not compete vigorously with any and all people. It is through competition in private enterprise that our American people have raised their standard of living for the common man higher than any other people in the history of civilization. Furthermore, in this program we can open the way for more abundant opportunities for veterans without damage to those who have property rights and job rights, by utilizing the unused capacities of the Nation, and by utilizing more of the undeveloped natural resources of the Nation. Let us come down to earth.

We are still at war. This is the war after the war, or I should say the other half of the global war. We are now fighting the other half of the global war, which is the economic war. If we win the economic war now, we shall have gone far in preventing World War III. Can it be said that we will rise to our legislative responsibilities only through fear? Are we afraid of a technological unemployment of 10,000,000 people such as we had before the war? Have we the courage not to stand still, but to stimulate an ever-expanding national economy?

While it is the direct responsibility of the Federal Government to integrate the functions of the various Federal agencies concerned with veterans affairs, it is also the direct duty of the Federal Government to streamline these functions with the activities of the States and the communities. This program will promptly create better teamwork between the Federal Government, the 48 States, and the communities and the private agencies. We have passed 360 Federal laws concerning various veterans' affairs. The 48 States have enacted collectively over 3,600 laws pertaining to veterans. In most of the communities in the United States an increasing number of agencies, organizations, and individuals are attempting to serve the veterans. As a result of all of these diversified activities we in the Congress are receiving increasing complaints that the veteran is getting the inevitable "run around." You can believe it or not, but the Federal Government has not as yet issued a simple index and guide for the use of the hundreds of thousands of people in the Federal, State, community, and private agencies who are trying to serve the veterans.

Comparatively speaking, we have stood still since World War I in integrating and streamlining the functions of the Federal agencies, in order that they may assist the State, community, and private agencies in serving the veterans. Will it take another Pearl Habor—a depression—or a technological unemployment of

10,000,000 people to force us in the Congress and in the Government to rise to our legislative and organizational responsibility? We rose to the occasion in war. We must rise again to the occasion in making the winning of the peace worth it.

We have a potential new power in the 20,000,000 living veterans of our wars. We can double this power by counting on the power of the women who are interested in the 20,000,000 veterans. For each veteran there is usually a mother, a wife, a husband, a daughter, a prospective bride, or a sweetheart with hope in her breast. Most of the women in America will be directly affected and concerned with the success of this veterans' job and integrated national program. The women of America have the greatest opportunity since the emancipation of their sex. Following World War I, American women won the fight to vote. They became full citizens with full vocal and ballot rights. The women of America can help win World War III, in its incipiency by using ballots instead of bullets. If the women of America will put their full strength behind this veterans' job and integrated national program, they will exert far greater power on the distaff side than all of the male warmongers combined. The best insurance against World War III is the stimulation promptly of a vigorous, ever-expanding national economy which will provide maximum work opportunities and fuller employment. The best insurance for fuller employment for all of our people is to provide work opportunities and careers for the armies of returning veterans as early as possible. The fastest way and the surest way to accomplish that objective is to match the unused capacities of the veterans with our unused national capacities and our undeveloped natural resources.

There are at least 6,000,000 of our boys and girls presently becoming veterans, who have never worked before, who have no particular job to go to, or who have no security. The number of Americans who were disabled in World War II is larger than the total number of Americans who were disabled in all the previous wars in which the United States has been engaged. This program will give highest priority to our disabled veterans in aiding them to adapt themselves in occupations where they can become more self-reliant, more self-sufficient, and more important in our new postwar world. The women of America can strike a new note in applying their abilities in the community centers, and by using the ballot to make this program successful. This program is the stepping stone to a more abundant life for all of our people. Women have the courage to create life. Their courage and high-mindedness is now needed to help give birth to this veterans' job and integrated national program.

We men and women think in terms of economy in buying battleships, school houses, motorcars, shoes, bread, and butter. Our American economic development will depend upon how wisely we make our national investments in America now. As we sit in these Halls of Congress we are spending at the rate of $2,000,000 each week on veterans' adjusted compensation allowance. To put it plainly, that is a veterans' unemployment compensation. It is a natural tendency that one who is unemployed is less likely to be employed profitably than those who are employed, or those who are part of a well-organized program, such as this program which I am proposing. Idleness brings evil consequences. The veterans' adjusted compensation has so far amounted to $51,000,000, and we estimate through the fiscal year of 1947, it will total more than $1,000,000,000. These expenditures will be reflected in increased taxes. On the other hand, this veterans' job and integrated national program, immediately upon its enactment will transfer those mounting expenditures from a national liability into productive channels. This program will effect a reduction in taxes and contribute to general prosperity for all of our people.

We have already extended to the veterans of World War II a potential borrowing power of twenty to sixty billions of dollars. If these vast funds are wisely invested by the veterans, it will be an economic asset to the Nation. If the veterans, on the other hand, are not given well-organized information, and have no organized facilities to serve them, the veterans and the Nation will suffer.

According to business statistics 90 percent of all new businesses either fail or go out of business within 10 years. If the veterans go about their new life in a haphazard and unskilled manner, and if they are given the "run-around" in being battered from pillar to post, it can easily contribute toward inflation, subsequent deflation, and depressions. It will affect the purchasing power of real wages, the pensions of all widows and orphans, and the value of the dollar in stabilizing our economy.

It is our solemn duty to integrate all the activities of our Federal, State, community, and private agencies, to assist the armies of returning veterans to recapture those lost months and years, in which they served our Nation so gloriously. It is also our solemn duty to other workers who also helped to win the war, that these millions of veterans are not allowed to become a segment in any unemployed labor force.

To win the war we were obliged to integrate our scientific facilities and the capacities of the Nation, to select, to train, and to equip the individual men and women in our armed services. Now that these same men and women are veterans, we must turn these same national facilities and capacities toward providing them with the necessary facilities, guidance, and information to enable them to adjust themselves speedily into civilian life. We can thus demonstrate to our own people, and to the other peoples of the world that what we performed in building the arsenal of democracy for war, we can now perform in building the arsenal of democracy for peace. This veterans' job and integrated national program will be the first step in a fearless, ever-expanding national economy to give all our people increasing prosperity and security.

## The Responsibility of Victory

EXTENSION OF REMARKS
OF
**HON. SOL BLOOM**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Herald-Tribune of Sunday, November 4, 1945, entitled "The Responsibility of Victory":

THE RESPONSIBILITY OF VICTORY

There was a presence at the Fourteenth Annual Herald Tribune Forum on Current Problems last week which dominated every session. It was unseen, and only a very few of those who attended the forum, who heard the addresses broadcast, who read or will read the texts this morning, could clearly visualize its form. But the atomic bomb, because of its own dread performance, as a symbol of the scientific terrors of the war just ended and the far more terrible peril poised over the heads of mankind, stood as the primary responsibility of victory. That great disintegrating force integrated the complex problems of a world newly and dazedly returned to peace.

"Now we are in it all together," was Norman Corwin's dramatic interpretation of the forum's theme, which Paul Robeson brought to the audience at the opening session, and which Jay N. Darling expressed graphically for the readers of section IX in this newspaper today. That was the message of Dr. Vannevar Bush, himself a leader in the development of the atomic bomb. Each in his own way set forth the alternatives of suicide or a richer life, posed by atomic energy; each drove home the point that, confronting these alternatives, distinctions of race, nationality, economic status, become trivial. "Now we are in it all together."

On that basic concept, the structure of the forum was logically and inescapably reared. The messages of General Marshall, of General Eisenhower, of Mr. Robert P. Patterson, the Secretary of War, all emphasized the need for America to be strong within herself, to do her job in the world. Fear of war is not enough; it may be a positive incitement to war, "and," as General Eisenhower put it, "the words of the strong are weighty in the councils of peace."

A strong America, in this atomic world, must be a wise, a sympathetic America, conscious of the crowding problems that girdle the earth. It must view with new understanding the vast Pacific area, where, in Manchuria, World War II began and where it ended, that old region with its new potentialities for good and ill. It must learn to know Europe and the peoples who suffered under tyranny, until as in the song which Mme. Claude Alphand sang, they could breathe again in freedom. Above all, it must learn to know Russia, which, like the United States, lies like a link between Europe and Asia, a new land presenting a new challenge.

As Dr. Ernest J. Simmons phrased it, one of history's most reiterated commonplaces today is that the future peace and prosperity of the world depend largely upon relations between the United States and Russia. These two great agglomerations of power, if they move blindly behind a wall of mutual misunderstanding, could bring down the structure of world peace in one of the mightiest cataclysms of history—or, conversely, they could, working together, raise the earth's peoples to new levels of prosperity and security. Those speakers, American, Russian and British, who discussed this problem at the Forum were obviously moved by an earnest

recognition of its importance and by a determination to break down the wall, to assist in a fruitful interchange of knowledge and emotion between the United States and, to quote Dr. Gerold T. Robinson, "our Russian next-door neighbor across the strait in Alaska and across the street in Berlin."

Under the shadow of the atomic bomb, it was inevitable that the forum should soberly lay most of its emphasis upon responsibility rather than upon victory. The victory will be only transient and illusory, unless the responsibility is recognized and shouldered manfully. Yet no one who attended the sessions or who read the addresses can fail to sense that the atomic world offers exciting promise as well as dark threats. It was expressed most clearly in the remarks of the younger speakers, those who burned with a clean anger against intolerance and injustice, and with a great hope that these might be abolished in a new and united world. The simple and moving recital by Sgt. Ben Kuroki of the values for which, and the evils against which, he fought; Sgt. Bill Mauldin's wrath at the preachers of hate, who, in this country or in any other, stir men up to persecution and war; Mrs. Masha Scott's human and personal appraisal of the Russia of her birth and the America she has known—these are the very stuff of which men and women the world around build their hopes of a decent life.

And from the younger speakers, too, came the most provocative replies to the challenge of atomic energy. Gontran de Poncins spoke boldly of a new citizenship of the world; Lt. Cord Meyer, Jr., tested the old formulas of absolute sovereignty and found them wanting in an atomic age. The world can still hope, looking back at the pillar of smoke over Japan on August 6, that it may yet prove that cloud by day and pillar of fire by night which is to lead mankind out of the wilderness of fear, hatred, and oppression and into the promised land of universal good will.

## Full Employment for Veterans

EXTENSION OF REMARKS
OF

### HON. JAMES DOMENGEAUX

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

VETERANS' JOB AND INTEGRATED NATIONAL PROGRAM

Mr. DOMENGEAUX. Mr. Speaker, I am introducing a bill to establish a veterans' job and integrated national program. This program will enable us to provide full employment and careers for veterans under our system of private enterprise and without having to displace other workers. The program would be carried out through the combined efforts of industry, agriculture, labor, foreign trade, the service trades, private agencies, State and local governments, and the Federal Government. The Veterans' Administration would be charged with the administration of the law.

No interests are represented in introducing this bill other than the interests of the veteran and other workers as well. If any interests are represented in proposing this legislation, it is the interests of all the people of the United States for the very reason that 90 percent of the people selected 10 percent of the people and placed their faith in them to fight and to win their war. The 10 percent kept that faith magnificently and gloriously. It is our duty now to see that the 10 percent who are now veterans do not lose faith in the 90 percent. In addition to our memory of the dead who gave their lives, to our aid for the disabled who gave their flesh and blood, and to our help to the other veterans who made sacrifices, we can make this program a new asset to strengthen the Nation.

In wartime we charged the various agencies of Government and industry and labor with definite responsibilities. We charged them with the responsibility of backing up our military leaders. We charged our leaders in the war theaters with specific responsibilities. We gave our military commanders specific missions and we gave them the authority that they needed to accomplish their missions. That war program was accomplished successfully by our leaders at home and overseas with skill and efficacy. We not only gave them the power to do the job but we also told them specifically what we wanted them to accomplish.

During the war the Congress was farsighted enough to see that 20,000,000 veterans and war workers would be affected by the reconversion from total war to total peace. The Retraining and Reemployment Administration was created by the Congress to accommodate that load of 20,000,000 who would seek readjustment. We gave that agency ample authority but we did not spell out specifically what we expected that agency to accomplish. The early defeat of Japan caught us unprepared to meet this present emergency. It is the purpose of this veteran's job and integrated national program to charge the Retraining and Reemployment Administration with specific responsibilities as we charged other agencies of Government and our military commanders with specific responsibilities during the war. If we express to the Administrator of Retraining and Reemployment the will of Congress and back him up as we backed up General Marshall, Admiral King, Eisenhower, Nimitz, MacArthur, Halsey, Bradley, and our other illustrious leaders who accomplished their missions with traditional American vigor, skill, and efficacy, we shall have gone far in winning the economic war. After all, the military phase and the economic phase are both part of the one total war which we have been waging. That total war will not end shortly. This veteran's job and integrated national program will contribute vastly to prevent World War III. If the 90 percent of our people will now show faith to the 10 percent who fought for them, we can retain our leadership as a great Nation. We can thereby increase the standard of living for increasingly more of our people.

Let us assume for the moment that we in Congress are directors of a corporation who are elected by the stockholders. The stockholders of any corporation own the business. The stockholders in this case are the citizens of the United States who likewise own the United States. Like any corporation, a board of directors and a president are elected to devise methods and to administrate the affairs of the business toward a profitable return on the initial investment. Original investments in any enterprise come from the genius, the skill, the sweat and toil of those who accumulated savings to invest in it. Therefore, we in Congress are custodians of the job property right and the investment of the stockholders of this United States enterprise. We are charged by law with returning to our stockholders, who in this case are our constituents, the best possible return on their investment.

If we in Congress were to seek to find an immediate means to create an overexpanding national economy, what means would we employ? What new power could we possibly utilize that would cut across all geographical, political, and denominational boundaries? Would such a new power not be a veterans' job and integrated national program? The answer is "Yes." This program directly concerns most of the families of the United States. Most of the families in this country have as one of their members at least 1 of the 20,000,000 living veterans of our wars. Most every family has a father, son, brother, relative, or a sweetheart in whom they are personally interested, and, in most cases, upon whom they are dependent. If we as Members of Congress are as alert as the directors of our successful private corporations who represent their stockholders we will assert our legislative power and prerogatives. We can make use of this vast new power of our veterans and match it with the new opportunities now at hand to further develop the prosperity of the Nation.

Now that I have discussed our duty to the veterans and to our constituents, let us touch upon some of the high lights relating to the means of accomplishing the objectives of this program. We know why we should do it, now let us develop our thinking on how we are going to reach those objectives.

Those in industry, science, labor, the armed forces, and in the Congress were all surprised by accomplishing the seemingly impossible during the war. Our military leaders eliminated the word impossible from their vocabulary and raised us rapidly from a third-rate military power at the time of the attack at Pearl Harbor to the greatest military power the world has ever known. We also accomplished that miracle in wartime through our American organizing geniuses on the home front, by the skill of our American hands and through the leadership of Congress. We created out of myriad complexities an astounding national war machine. What we all demonstrated in war we can demonstrate in winning the peace. We can do it if we set our sights high now. As good businessmen, as legislators and as program planners we in the Congress can repeat that performance with one hand tied behind us, if we create promptly the proper moral climate to see this program through to its end. The veterans job and integrated national program has short range problems and it has long range problems to solve. If we do not plan for the long range problems promptly the short range problems will be our increasing problems in the future.

Specifically, the first step is to utilize the unused capacities of the Nation which we created during the war and much of which will be idle. We have untold natural resources which are crying for development and utilization. Our scientific genius and the skill of our workers have developed amazing new uses for old products and have developed vast new uses for new products. We have millions of untilled acres of land in the United States which are some of the finest in all the world. Paradoxically, we have millions of acres which need only water. On the other hand we have other millions of acres which need only to be drained. For example, there are millions of acres in the Northwest which are rich in natural fertilizers, are already clear and have available water to give those acres life. We have also lands in my own State of Louisiana and in other States of the South which have been enriched by the finest top soil and loam from the heart of the United States for many hundreds of thousands of years. These acres need only to have the water drained from them to make them some of the most productive in all the world.

We have new opportunities in the fishing industries in the South and on both coasts of the United States and in our possessions. These fishing opportunities will produce additional sources of food, vitamins, and minerals for our undernourished people and fertilizer for our undernourished soil areas. We have coastal and overseas trade and shipping opportunities for our veterans who know the sea and love it. The veterans can use some of our surplus marine and naval property, particularly in supplying feeder lines and in developing small business enterprises and trade routes without displacing present maritime personnel or other established enterprises. Furthermore, these feeder lines will contribute to an expansion of the coastal and overseas trade development of that industry.

We in the Congress who are charged with raising funds and making appropriations will immediately question the cost of this seemingly ambitious program. As intelligent businessmen, let us sharpen our pencils. Instead of costing our taxpayers additional amounts this program will reduce their anticipated taxes. Let us examine our national financial position at present and take into account how this veterans' job and integrated national program will reduce our cost of Government and increase our prosperity. We have already made an effort to reward the veteran by enabling him to borrow $4,000 to enter business, a profession, buy a farm, a home, or to handle old or new obligations. This borrowing power will be exercised by the veterans to an amount ranging somewhere between twenty and sixty million dollars under those specific loan provisions. This integrated program will give the veterans the best available information to prevent business or professional failures and to afford him expert guidance, information, and counsel. We have given him the benefit of a readjustment allowance or, plainly speaking, unemployment compensation which so far amounts to $51,000,000 and which through the fiscal year of 1947 is estimated at $1,000,000,000. Which will it be? Are we going to buy $1,000,000,000 worth of idleness or $1,000,000,000 worth of careers? After World War I the veterans had no other recourse than to ask for bonuses. Now following World War II there is a veterans' bonus sentiment growing rapidly, which according to estimates of veterans' organizations will probably amount to $30,000,000,000. A hurried adding-machine calculation of these sums will give us an amount approaching $50,000,000,000, which we are likely to expend in the near future. Adding this to the approximate national debt of three hundred billion we shall have a total national debt beyond all human comprehension and beyond the limits of management.

It is no extravagance to say that this is a situation of appalling gravity. In that direction lies inevitable disaster. Let us take note of what Alexander Hamilton said about government: "It must contain an active principle." This veterans integrated national program is that active principle which will be the first practical step with teeth in it toward fuller employment for increasingly more of our people. Let us follow the lessons in clear thinking and a logical pattern of government given us by Hamilton, Jefferson, Adams, Washington, and our other founding fathers. They gave us a system of government and of free enterprise which has proven out in the 150 years of the great American experiment.

If we provide the veterans with properly coordinated facilities in the communities, State and Federal agencies to afford them guidance and expert counsel, the veterans will benefit immediately. In the long run the veterans' fitness, moral power, borrowing power, and his new initiative will pour a new force into channels of prosperity for all the people as well as for the veteran.

Let us make a note of warning at this point. If we do not create promptly a veterans' job and integrated national program we are likely to have an abnormal inflationary movement. Following that we shall have the inevitable deflationary movement which could bankrupt the Nation and harm the veterans and other workers for years to come. The Commerce Department as early as 1943 estimated that in 1946 we could produce the same amount of goods that we produced in 1940 and still have 19,000,000 people unemployed in 1946.

The solution of the veterans' complex problem is simple. The solution is simple and clear for the simple reason that it is momentous and urgent. The eyes of the Nation are upon us. If we do not initiate this integrated program for the veterans we will be faced shortly with a crisis. We must meet this crisis head on by rising to our legislative and organizational responsibility.

This program will integrate our people. It will be a down payment for the veterans on prosperity and careers. This veterans' job and integrated national program will be the first installment on national unity, solvency, prosperity, and security for all the people.

## Pearl Harbor Whitewash

EXTENSION OF REMARKS
OF
**HON DANIEL A. REED**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. REED of New York. Mr. Speaker, one whitewash after another has characterized the New Deal administration. The Elliott Roosevelt's financial swindle, and now the ghastly holocaust at Pearl Harbor. Under leave to extend my remarks, I include an editorial from the Wall Street Journal of November 8, 1945:

PEARL HARBOR SECRECY

When Democrats in Congress ceased to oppose a Pearl Harbor investigation and took charge of it, putting the investigating committee under the chairmanship of the Senate Democratic leader, there was ground for suspicion that a whitewash was in the making.

When the committee engaged as counsel the able William D. Mitchell, Attorney General in the Hoover administration, there was some ground for hope that there would be an honest investigation and an honest report. Through no fault of Mr. Mitchell that prospect grows dim.

From Republican members of the committee there is coming a sordid story. Individual members are denied access to documents that would throw light on the subject under investigation. Some documents the committee has not been able to obtain. Some documents which were known to exist now cannot be found. There is a charge that witnesses have been tampered with and efforts made to have them change their testimony.

Now Republicans realize the political advantage that might come from a full account of Pearl Harbor and it is part of politics that they should exploit that advantage. One cannot take without question every statement made. But it is unlikely that they would say what they do without some basis and if a small part of what they say can be substantiated, the situation is pretty bad.

Of course anyone who has read the full Army and Navy reports on Pearl Harbor does not need to be told a great deal more than is contained in them.

Information of a Japanese attack was in the hands of the White House at 1 p. m. Washington time December 7, and high military personnel the night of December 6. 1 p. m. was dawn in Hawaii. Th Navy has in its files a memorandum which exactly outlined the possibility of a dawn attack on Hawaii. And in those circumstances nothing was done, at least nothing was done in time to avert the attack. The idea that the attack could not have been met by adequate preparation and considerable damage averted is blasted by Admiral King.

Washington had information but did not act. It failed adequately to inform the Pearl Harbor commanders. Even so they took no action which was commensurate with the seriousness of the partial information that they did have. Surely there is a chain of curious coincidences involving a number of people suddenly turning dull-witted in a serious situation. And on Sunday morning the usual practice was to have antiaircraft maneuvers at Pearl Harbor. On Sunday, December 7, they were not held.

On the evidence made public, it is simply impossible to believe that there was any intention except to let an "incident" occur. The surprise, and the only surprise, was the gravity of the incident.

## Burning the Books Again!

EXTENSION OF REMARKS
OF
**HON. BURTON K. WHEELER**
OF MONTANA
IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Burning the Books Again!" written by the Reverend John Haynes Holmes, one of the outstanding preachers of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Progressive of November 5, 1945]

BURNING THE BOOKS AGAIN!

(By John Haynes Holmes)

Would you believe it—that Germany, now in the hands of the guardians of civilization and the custodians of culture, is in the business of banning books again? Not burning them—not yet—though the blazing pyres of the printed page will probably follow in due course. But getting rid of books not liked, and thus doing what can be done to rebarbarize mankind.

What Hitler did in 1933 is perfectly well remembered. He made a long list of books that were considered hostile to the ideas of the Third Reich and dangerous to its interests. Many of the condemned books, perhaps most of them, were ancient and modern classics. They included some of the really great works of German literature—Goethe, Schiller, Lessing, Heine. But they were not selected because they were good or bad. The question was, did they fit into the philosophy of nazism? Would they help or hinder the acceptance of Hitler's notions of the "new order"?

The Fuehrer wanted to bind and fetter the German mind. He didn't dare to have this mind do any thinking or investigating for itself. This mind must be conditioned to one set of ideas, one fixed system of thought. To this end, it must be cut off from all contact with anything apart from Nazi dogma. So books by the thousand were listed and banned. And the logic of the whole process of blindness and stupidity was the heaping of these books in the public squares—the hoarded treasures of the universities, and the fresh wares of the busy book shops—and the burning of them in huge holocausts of flame.

Now the process is begun again, as Ernest Meyer told you in the Progressive last week. The destroyers and successors of the Nazis, the civilized rulers now in occupation of Germany, are going to do what the Nazis did. They, too, do not trust the human mind. They also are afraid of freedom. They would condition German thought in their own particular interest, as the Nazis did formerly in theirs, by binding it fast in the strait-jacket of preconceived opinion and idea. This is their conception, I suppose, of teaching the German people to know the blessings of democracy. We are going to show them how wrong the Nazis were, and how right we are in all the ways of life. And we begin by doing what the Nazis did—banning books.

Here is a special dispatch from Berlin to the New York Herald-Tribune, which tells the story. An index, or black list, of dead and living authors is being prepared, and will be issued in due course. The authors included in the list are those deemed not fit for German reading.

All Nazi writers, of course, are included, and some 2,200 other authors who, although not themselves National Socialists—most of them probably lived before national socialism was ever heard of—are yet considered dangerous to the new Allied regime. The writings of all these authors will be banned.

This action means that the books in question may not be published, sold in book stores, or given out into general circulation by libraries. The forbidden works will not be removed from the library shelves—there will be no searching or stripping of public institutions or private homes. But so far as is humanly possible, the books will be outlawed from all public use, and thus effectually banished from German life.

I have been interested in noting some of the particular titles involved in this sweeping act of condemnation, especially in relation to my own modest library. First on the list, of course, is Adolf Hitler's Mein Kampf. When I was in Germany in 1935 I took particular pains to get an authorized edition of this influential and historically important work. If I went to Germany today under United Nations auspices, I couldn't get a copy. Here on my shelves are two other editions of Hitler's book, both published in this country. Our American publishers apparently did a grossly reprehensible thing when they issued these books, and thus exposed the minds of our people to their foul contagion. I tremble as I look at my copies of Mein Kampf, and think of the damage they may have done to my mind.

Another banned author is Houston Stewart Chamberlain, the expatriated Englishman who wrote The Foundations of the Nineteenth Century, which popularized the superrace theory in Germany. I remember reading the two large volumes of this work in the early days of my ministry—they were published in London by the John Lane Co., highly respectable publishers, in 1910. I have kept them on my shelves here all these years. And right side of them stand the prodigious volumes of Chamberlain's masterpiece on Immanuel Kant. Here undoubtedly is the explanation or a part of the explanation, of the dangerously perverted condition of my mind.

Another name on the list of banished books in Berlin is Oswald Spengler, and the book responsible for his disgrace is The Decline of the West. Here it is in my library—two huge volumes. I can't honestly say that I have read these volumes through—much of their learning and elaborate argumentation were too much for me. But I read a good part of them, and the rest I got from Prof. Charles Beard's laudatory reviews. Spengler, one of the greatest scholars of his time, is described as "the philosophical precursor of nazism," and so he has to go.

Other authors? Well, Von Treitschke, the great nineteenth century nationalist historian of Germany. I can't seem to lay hands on my old Treitschke volume, but I remember reading it in 1914, and getting a lot of insight into the whys and wherefores of German militarism. So this man's writings are dangerous. Yes, perhaps so, for they came perilously near making me a Germanophobe of the worst order.

And here is Knut Hamsun, the great Norwegian novelist, and Nobel prize winner. What a writer he was! Here on my shelves is his masterwork, Growth of the Soil, and the other fine book of his, Hunger. There isn't any nazism in these noble writings. They are filled with profound compassion for the common people and a deep sense of human brotherhood. But Hamsun was foolish, or misled, in the early days of the war. He compromised himself by publicly expressing admiration for certain of the principles of nazism. So he must go. His books cannot stand on their own worth, but must be damned with their erring author. But I shall keep them here on my shelves all the same.

So my library wouldn't fare very well in Berlin these days. It would be almost as badly off as in the old bad days of the Nazis. Most of my library would then have been burned. Perhaps burning may again come in Germany. There is no sign of it yet. It is difficult to imagine Americans, Englishmen, or Russians dumping armfuls of books on raging bonfires and dancing about the flames like naked savages. But one never knows; once a thing like this is started. A month ago I would have said that the mere banning of books by the occupation forces was impossible. But here it is—with Avernus yawning not far away down the "swift descent."

It all goes to show that all men everywhere are much the same. Placed in the same conditions, exposed to the same temptations, they will be guilty of the same follies and the same crimes. Americans, English, Germans, Italians, Russians, Japanese, Indians, Negroes, Jews, Gentiles, Roman Catholics, Protestants—they are all built of the same fundamental substance of human nature. All are subject to the same physical, mental, and psychological ills. Why then divide men into angels and demons? Be careful, be careful. Condemn your enemy—and before you know it, you are yourself doing the very things that stirred your ire against him.

Yet we should know better. Conditions in this country and Europe are not the same. Temptations are not equal, or even similar. There is no imaginable excuse for us to repeat Nazi tricks, or follow Nazi precedents. Thrice shame to us if, on any excuse, we do these loathsome things.

## Statement by W. L. Mallon Before House Small Business Committee

EXTENSION OF REMARKS
OF
**HON. WILLIAM F. KNOWLAND**
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. KNOWLAND. Mr. President, there are approximately 35,000 automobile dealers in the country, a large number of whom are in California, who are greatly concerned over the OPA's proposal to change the established trade discount. This morning the House Small Business Committee held a hearing, at which Mr. W. L. Mallon, of Newark, N. J., president of the National Automobile Dealers Association, appeared and testified. I ask unanimous consent that a copy of his statement may be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF W. L. MALLON, NEWARK, N. J., PRESIDENT THE NATIONAL AUTOMOBILE DEALERS ASSOCIATION, BEFORE THE HOUSE SMALL BUSINESS COMMITTEE, NOVEMBER 8, 1945

I am William L. Mallon, of Newark, N. J., where I have been an active automobile dealer for the past 32 years. I am appearing as president of the National Automobile Dealers Association, in which capacity I draw no salary.

There are at present somewhere between 30,000 and 35,000 retail automobile dealers in the United States. Before the war, there were

more than 40,000. All factories are planning to greatly increase their prewar volume. The distribution of this increased number of units will not only require the return of the 10,000 dealers who have dropped out during the war period, but will necessitate an additional number of dealers. It must be borne in mind that a satisfactory and competent dealer establishment cannot be created overnight. It is reasonable to assume that factories, in their long-range planning, will be appointing additional dealers in the near future. Unless production promptly reaches the proposed increased volume, it is apparent that the number of units to be handled by the present dealer establishments will be reduced. Consequently, there is no guaranty as to the number of units that each dealer will handle during the coming 2 years.

These 35,000 dealers today are located in every county in the United States and in both large and small communities. Generally, they are small merchants. The average dealer sells less than a hundred cars a year. Many of them sell less than 25 cars in a year. In peacetime, when there were about 40,000 active dealers, less than 10,000 of them were large enough to be incorporated and pay income taxes. That put three-fourths of them, or about 30,000, definitely in the small-businessman class. That is the chief reason why we are here today to appeal to your Small Business Committee for help in a crisis which has arisen in our trade. We regard the House and Senate Small Business Committees as the outstanding protectors and defenders of small business in Government.

Retail automobile dealers have good reason to appreciate and rely on this House committee. When the war threatened to close our doors in 1942, it was your committee which promptly came to our rescue. Largely as a result of your inaugurating a fair-treatment program for automobile dealers through enactment of the Murray-Patman Act, 75 percent of the then active dealers have been enabled to remain in business. One fourth, or about 10,000 of them, were forced to close their doors. Almost to a man, however, these 10,000 are simply marking time in other lines of business and hoping that they may soon return to the sale and servicing of automobiles.

Contrary to a picture frequently presented nowadays, the retail automobile dealers are not about to step into a golden harvest of sales. Many and serious problems lie before them. They include refinancing, obtaining new and old cars to sell, manpower, and finally operating at a normal profit under OPA pricing and profit-control regulations.

It is a feature of this OPA profit-control program which brings us to you today. The dealers of the Nation are gravely concerned over a threatened slash in their established trade discount by OPA. Dealers believe such a cut as OPA proposes would prove ruinous to them. They have asked me to lay the facts which confront us before you in the hope that as friends of small business you will find a way to assist them to get a square deal.

First, let us understand just what the trade discount is and what OPA proposes to do to it. The discount is the long-established mark-up which the dealer is allowed by the manufacturer to put on his new cars. The prices of new cars are set at the various factories. Then dealers are given certain discounts, averaging about 24 percent on each car, and this is their gross profit before any expenses.

May I emphasize this point—that it required 25 years, in a highly competitive market, to increase the dealer discount from 18 percent to 25 percent. The manufacturers realized that 24 percent to 25 percent was the minimum discount required for the average dealer to continue business and that it would not permit of the dealer receiving excessive profits. From that average of 24 percent dealers paid a large part of their operating costs and other expenses.

This 24-percent gross profit may sound generous at first sight, but the net profit that results after expenses are paid is small. Accurate figures on just what dealers make are difficult to obtain, but the average for 3 years before the war, 1939–40–41, was somewhere between 1 percent and 2 percent. Should an industry-wide survey, which never has been made, show even a net return of from 1 percent to 2 percent, it could not be called a large or unreasonable profit. Certainly such a return would not justify a top slash of 50 percent in discount such as OPA now says is possible.

According to the Statistical Division of the Bureau of Internal Revenue during the 3 years immediately preceding the war, 1939–40–41, the net before income taxes averaged only 1.07 percent. The highest net profit after income taxes for any one year was 1.16 percent in 1941. The lowest was 0.29 for 1939. This low earning for 1939 is an important figure to remember because it appears quite prominently in the present pricing plan of OPA.

The whole situation in a nutshell, then, is that OPA officials have announced their intention of slashing the dealer discount to as low as 11 to 13 percent, or approximately half of what it has been, if necessary, in order to help absorb the increased cost of new car production. This would mean cutting the dealer gross earnings in half. Cutting the 1939–40–41 average of 1.07 percent in half would mean an average earning of about one-half of 1 percent. This is the extreme OPA cut, but it would be possible.

This trade discount cutting plan has been decided upon by OPA officials largely in star-chamber sessions. Contrary to repeated OPA promises to House and Senate leaders and representatives of the retail automobile dealers, OPA has not consulted fully with any or all of these groups before coming to a decision to reduce the dealer discount rate. The first definite announcement that OPA had decided to cut the discount was made at a meeting of the OPA Industry Advisory Committee October 31. The only information given at that time was that OPA experts had reached their decision after examining the earnings reports of only 300 dealers. Three hundred dealers constitute just about 1 percent of the active dealers in the country and probably would not constitute more than two-thirds of 1 percent of the full peacetime dealership whose prices and profits OPA now is planning to set.

I think it important at this point that you know in a little more detail of the many futile efforts of the retail automobile dealers of the country to induce OPA officials for practically 2 years to conduct their study of the trade discount situation in full cooperation and consultation with the dealers. Other NADA officials and I have been active in these efforts, and the details that I give you are amply supported by documentary evidence.

Reports that OPA officials were planning to lower the dealer trade discount became current as early as the fall of 1943. When the National Automobile Dealers Association convention was held in Detroit in January 1944, these reports had become quite persistent. Efforts to confirm them at OPA headquarters in Washington during the next year were futile. Inquiriers usually were told that OPA had not given consideration to this part of the pricing formula.

Suddenly, however, in March 1945, Administrator Bowles and James F. Brownlee, Deputy Administrator, appeared before the Senate Banking and Currency Committee and made clear their general pricing plan which included absorption by certain retailers of any increases in production costs. At that time, they indicated that special retailer cases would be given special consideration when increased cost absorptions were being allocated.

The manufacture of new cars ceased in January 1942. The vast majority of dealers had a limited number of new cars frozen in their stocks, and with few exceptions they have been without new cars for nearly 2 years. During the war period, dealers' costs of operation greatly increased and their personnel was drastically cut. In spite of this, the 30,000 dealers continued to render vital service to essential transportation. For these reasons, and many others, NADA felt that the retail automobile dealers constituted a special case. Hence, they made haste to contact OPA officials and register their desire to be given every opportunity to present their situation to OPA before any changes in the dealer discount rate were even contemplated by OPA.

In connection with this movement, I personally called upon Administrator Bowles on March 8, 1945, and in the course of discussing the general pricing policy for reconversion, he stated that some industries would be entitled to special consideration. As a result of this discussion I concluded that our industry was properly one of these. Therefore, on March 16, 1945, I promptly requested by mail that our industry be given ample opportunity to confer with representatives of OPA prior to issuance of any regulations to apply in the reconversion period. Under date of March 24 Mr. Bowles replied that it seemed appropriate that OPA should comply with my request and arrange for prompt consultation with representatives of the retail automobile industry.

Simultaneously, dealers and their representatives contacted congressional leaders and expressed their fears that OPA might suddenly subject them to a discount cut without proper consultation. It was thought that if this fear had any strong foundation legislation to protect special cases such as those of automobile dealers might be sought. Leaders on both sides of Congress upon contacting OPA officials were assured that before a discount cut dealers would be consulted fully as previously promised, and upon these assurances plans for legislation were abandoned.

No progress was made at the first meeting held on April 4 with the OPA Industry Advisory Committee and as it appeared that further conferences were indefinite the House Small Business Committee again made inquiry as to just what OPA proposed to do in the situation. OPA repeated its promise that it would consult not once but several times with the Industry Advisory Committee before acting.

Our efforts to come to an agreement with OPA on making its survey of dealer operations, continued to be marked by long delays in OPA. Finally, however, in May 1945, both OPA and NADA sent out questionnaires to dealers in this connection. We made a preliminary report on our replies during July and advised OPA that we could continue our studies and make available current reports when called for. We fully expected, of course, that when the time approached for OPA to make a decision on any possible changes in the dealer discounts, we would assemble all the figures they and we had gathered and go over them, as their promises to congressional leaders and NADA officials indicated would be done. All of our statistical work was pointed toward this end. Such a meeting we fully expected would take place shortly prior to the resumption of new-car production, possibly early this fall.

At the end of July, I made a progress report on NADA cost studies and some comments on the dealer-discount situation to a meeting held in Chicago of OPA representatives and the industry advisory committee for the motor vehicle retail trade. Nothing was said at that meeting to indicate any change in the discount rate. Simultaneously, the chairman of your House Small

Business Committee was reassured in a letter from James G. Rogers, Jr., Acting Administrator of OPA, that no policy would be applied to affect the dealers' profit margin without full consultation with the dealers' advisory committee or without notice to the chairman of your committee personally.

Again, on August 23, Administrator Bowles issued a press release promising that no action on dealer margins would be taken until the facts were in and the dealer groups had been consulted. Mr. Bowles also declared in that statement that he expected manufacturers generally to maintain 1942 price levels and that if this were followed, there would be no change in dealer discounts.

In the light of these many assurances and reassurances of OPA's intention to reach a decision on dealer discounts only after full congressional notice and dealer consultation, announcement on October 31, last, that a decision had been reached by OPA came with atomic speed and surprise. A meeting of the OPA industry advisory committee was called on October 26 for October 31 in Washington. Rumors that a decision had been reached on the dealer discount situation could not be confirmed, OPA officials evading both congressional and dealer inquiries. Confirmation first came when the advisory group assembled on October 31.

Members of the advisory committee were told at that meeting that a study of 300 dealer reports had convinced OPA that dealers could operate profitably under a discount range of from 11 percent to 13 percent. Therefore, it followed that any increased cost in new-car production, which manufacturers could not absorb would have to be absorbed by the dealers down to the 11 percent to 13 percent discount level. When asked for detailed figures upon which the decision was based, OPA officials refused to reveal them, saying that they were confidential.

Lee Moran, executive vice president of NADA, who was present at the meeting as an observer, went on record, representing the dealers, that we did not consider this satisfactory and not full consultation as promised by OPA.

Further, NADA officials knew their complete compilations on dealers' operating costs had not been considered. NADA still was compiling data daily in order to be able to submit the most current figures when OPA arranged its frequently promised consultation.

Likewise NADA has reliable information that OPA has not made a thorough study of manufacturer costs. In fact, in the face of the pending labor situation, it would have been impossible for OPA to have made an accurate manufacturer cost study at the time of the discount cut announcement.

What appears to have happened was that OPA statisticians had taken a mere handful of figures on dealer operating costs and a few scattered manufacturing costs and used them as a basis for a proposed discount rate change which might easily wreck the entire retail automobile trade structure.

Your committee was not, of course, in possession of all of these facts, but it was known to you that OPA had not kept its oft-repeated promises to consult the dealers fully and keep you advised. Very properly, therefore, you immediately called this hearing to determine the facts.

I must apologize for the somewhat lengthy review of our futile negotiations with OPA on this matter. It was necessary, however, in order to lay the groundwork for presenting to you important information about dealer operations which follows.

NADA has contended in all of its negotiation with OPA and now reiterates that insofar as possible official Government reports, such as those of the Internal Revenue Bureau, should be used in figuring dealer, manufacturer, and public earnings and cost absorption possibilities. Such statistics are not open to suspicion or question. They are a part of the official record on which the taxpayers have paid off.

Hence, in arriving at the prewar position of the dealer, it is fair to take his income-tax reports for the years immediately preceding the war, 1939-41, as a base.

A study of the income tax reports of approximately 9,400 dealers for this period demonstrates forcibly that the retail automobile business under the average 24 percent trade discount has not been a generally prosperous one. During 1939-40-41, combined net dealer earnings were only 1.07 percent before income taxes and only .71 percent or less than three-quarters of 1 percent after income taxes.

In 1939, more than 50 percent of the dealers reporting to the income tax bureau lost money. In 1940, more than 40 percent lost money, and in 1941, more than 25 percent lost money. Over the 1939-40-41 period slightly more than 38 percent made no money at all.

The low 1939 dealer earnings are of particular interest because of a current situation.

When Administrator Bowles, at a recent press conference, sought to justify his proposed discount-cutting plan, he was quoted as saying that dealers were demanding twice as much profit as they made in 1939.

Dealers have not and do not now demand any particular dollar profit. They only ask that their regular discount be continued that they may gamble on a fair profit as they have done heretofore.

That point, however, is an aside. The interesting feature is that Administrator Bowles, for some reason, chose 1939 as a typical dealer profit year. It really was the worst of any 3 years immediately preceding the war and the only one in which more dealers lost money than made it, according to the figures of the Internal Revenue Bureau. During that year, out of 9,359 incorporated dealers reporting to the income tax bureau, only 4,668, or less than half, made any money whatsoever. Their net gross after income taxes was .29, or less than a third of a cent on each dollar's business.

I shall not read, but will file the dealer income tax figures for these 3 years and urgently request that they be used as a basis for determining if dealers should be forced to pay any part of increased new car costs.

*Income of 9,400 incorporated dealers handling estimated[1] sales of 80 percent of all new cars*

(Statistical Division, Bureau of Internal Revenue)

| Year | | Net income before income tax | Gross receipts |
|---|---|---|---|
| 1939 | 4,668 | $22,033,770 | $2,006,677,093 |
| | 4,691 | [1] 10,770,396 | 880,514,658 |
| | 9,359 | 11,263,374 | 2,887,191,751 |
| 1940 | 5,715 | 35,565,740 | 2,882,002,094 |
| | 3,862 | [1] 9,880,860 | 763,650,815 |
| | 9,577 | 25,684,880 | 3,645,652,909 |
| 1941 | 7,012 | 78,985,940 | 3,853,442,258 |
| | 2,398 | [1] 4,467,988 | 398,237,056 |
| | 9,410 | 74,517,952 | 4,251,679,314 |

[1] Net loss.

| | |
|---|---|
| 1939: Net income on gross sales before income taxes | $0.41 |
| Net income on gross sales after income taxes | .29 |
| 1940: Net income on gross sales before income taxes | .72 |
| Net income on gross sales after income taxes | .52 |
| 1941: Net income on gross sales before income taxes | 1.82 |
| Net income on gross sales after income taxes | 1.16 |

RECAPITULATION

| | |
|---|---|
| 9,400 dealers total gross sales, 1939-41 | $10,784,523,974 |
| Net income before income tax | $111,466,206 |
| Average before income tax (percent) | 1.07 |
| Average after income tax (percent) | .71 |

These income tax figures tell the national dealer picture for the 3 years immediately preceding the war more clearly than anything else can. The average dealer went into the war in not more than fair shape. One-fourth of them failed to survive the war. The remaining three-fourths made out by selling used cars so long as their supply held out and by doing service work.

All too often an attempt is made to make it appear that taking new cars away from dealers and making them dependent upon used cars and repairs was a universal golden blessing. The fact is, of course, that while here and there a few large dealers made money during the war, the average dealer had a desperate struggle to keep his doors open. He comes out of the war with his inventories exhausted, his shop equipment worn out, his new car supply uncertain, and grave dangers of future competition being much keener.

OPERATING COSTS

In considering dealer operations the question of increased costs of doing business in either large or small volume is an important one. Under the present ever-changing conditions it is difficult to accurately forecast costs. NADA has submitted questionnaires on these items to the dealers, and up to the present time have been able to summarize the first thousand returns.

We submitted 14 items which mainly comprise the cost of doing business and the percentage estimated increase is as follows:

| | Percent |
|---|---|
| 1. Make ready for delivery (excluding freight) | 28.43 |
| 2. Guarantee policy adjustments | 26.04 |
| 3. Average salary paid (including clerical and sales commission) | 29.21 |
| 4. Average wage paid | 30.04 |
| 5. Reconditioning per used car | 73.56 |
| 6. Miscellaneous supplies (including stationery) | 19.07 |
| 7. Miscellaneous express and hauling | 15.02 |
| 8. Rents and leaseholds | 34.07 |
| 9. Maintenance—buildings | 40.30 |
| 10. Maintenance—equipment | 39.55 |
| 11. Taxes other than income | 19.17 |
| 12. Insurance (including building) | 16.75 |
| 13. Light, heat, water, power | 14.24 |
| 14. Telephone and telegraph | 15.93 |

The weighted average of these 14 items is 25.91 percent.

I would like to amplify on a few of these items.

AVERAGE SALARIES PAID INCLUDING CLERICAL AND SALES COMMISSIONS, 29.21 PERCENT

The Wage Stabilization Act has made it most difficult for automobile dealers to obtain permission to increase clerical salaries, over the amounts paid in 1942. These inequities must be promptly corrected. Many increases have already been made.

Compensation to salesmen is an important item. For instance, the west coast salesmen are employed under a union contract which agreement stipulates the amount of their compensation and prohibits all others in the establishment, including the dealer himself, from selling a car. These agreements, arrived at through collective bargaining, would make it extremely difficult for a dealer in that section of the country to curtail his sales force. In the remainder of the country the general average compensation to salesmen prior to the war would not support the standard of living advocated recently in the President's address.

It is generally recognized that the adoption of a more satisfactory scale of compensation to salesmen is one of the first moves to be made by dealers.

There are some who contend that in the initial stage of limited distribution salesmen will not be required. It must be realized that salesmen are not made by pinning a tag on them. It will require 8 months to a year to organize and properly train the sales forces that will be required to handle the increased

distribution. This will necessitate a considerable outlay by the dealer for some period before he receives any return.

AVERAGE WAGE PAY, 30.04 PERCENT

Prior to the war automobile dealers employed in the neighborhood of 600,000. This number was materially curtailed during the war. Dealers gave to Army Ordnance alone more than 30,000 men who were organized by the dealers themselves. Reassembling and making satisfactory working arrangements with this staff will be a large and expensive job, and earnings cannot start until dealers' forces are properly staffed.

Many of the items, of course, in a dealer's operation involve labor. It is indisputable that the increase of wage in dealer establishments will be comparable with that in the manufacturing end of our industry or in other lines of business. Incidentally, since the removal of restrictions upon increases in salaries, many dealers have increased the wages to their mechanics although the same ceiling on retail prices remain as existed in 1942

RECONDITIONING USED CARS, 73.56 PERCENT

It is difficult to estimate the number of used cars a dealer will trade in against new car sales. There certainly will be a reasonable number and it can definitely be accepted that the condition of the used cars traded in will be such as to necessitate much larger reconditioning costs in order to make them safe for further use.

RENTS AND LEASEHOLDS, 34.67 PERCENT

Many leases have expired during the past year and are expiring currently. In the majority of cases, renewals have carried an increase from 25 to 50 percent, and in some cases as much as 100 to 150 percent higher.

MAINTENANCE OF BUILDINGS, 40.30 PERCENT

The majority of dealer establishments are badly in need of repair and renovation due to the inability of caring for such items during the war period. This work will require considerable outlay in the immediate future. The average figure from 1,000 replies received is approximately $9,000.

MAINTENANCE OF EQUIPMENT, 39.55 PERCENT

During the past 3 years it has been practically impossible for a dealer to replace any shop equipment. On an average this will require an immediate outlay of approximately $4,000.

I have taken time to explain but a few of the cost items, but all of the others are subject to a comparable explanation.

As previously mentioned, it is difficult to obtain a comprehensive survey of dealer operations. The shortage of clerical help prevented many dealers from completing and returning the questionnaire. We have, however, approximately 2,000 complete replies upon which to base our calculations. We have about completed the analysis of 1,000 returns. Indications are that for the 3-year period 1939-40-41, the net profit figure may exceed the average individual report figure shown in the 9,400 income tax reports.

The remaining 1,000 reports are in the hands of the International Business Machine Co. for indexing and summarizing. We expect to receive the completed figures within the next few days and will then be in a position to render data covering the operations of 2,000 dealers.

To the experienced dealer who has traveled the rough roads in the hills and valleys of past years of the trade, there are two outstanding problems for which he cannot provide an answer. They are:

1. How soon he will be able to obtain a normal supply of new cars on which he can make a reasonable profit.

2. How he will be able to get rid of the used cars he is forced to accept as trade-ins without sustaining a tremendous loss.

Only a crystal ball reader would dare hazard a guess on the date of the return of factories to normal production. The same statement goes for estimating final manufacturing costs. How anyone can predict accurately on either of these two points in the face of a threatened strike for a 30-percent increase in wages and the refusal of suppliers to set costs is beyond the ability of the average dealer to comprehend. Many of our most experienced automobile men do not believe that factories will be in full production for at least a year and possibly longer. Nevertheless, the figures upon which OPA is seeking to justify its proposed cut of dealer discounts are predicated on the assumption that full production and normal peacetime sales operation and assured profit are just around the corner. The mildest thing that can be said about these rosy predictions is that they just cannot be supported by facts.

The used-car problem is not as grave, of course, as that of new-car production, but it cannot be slighted. The assumption that there will be no old cars traded in is wholly unsound. Not only will there be trade-ins, but they will be of a type of car which will require vast reconditioning expenditures. Many trade-ins will have to be junked outright. Nevertheless their owners, having bought them in the black market which immediately followed an imposition of OPA ceilings on used cars, will be demanding high prices for them.

Dealers everywhere are asking these pointed questions about the future used-car market:

1. How will OPA adjust used-car ceiling prices periodically to meet going market values on a basis that will be fair to both car owner and dealer alike?

2. Can the dealer make money on used cars in a falling price market?

3. How many used cars will be traded in on new cars?

4. Can the dealer take in used cars at prices which will permit him to properly recondition them for a profitable sale?

5. What proportion of cars traded in will have to be junked?

Until these new- and used-car problems are solved, dealers everywhere will be forced to restrict the number of their employees. As an element in the reconversion picture, this fact is worthy of consideration. Before the war, dealers gave employment to approximately 600,000 persons. Today only a small percentage of that number is employed, but dealers everywhere are anxious to create as many jobs as possible. They will be forced to make jobs strictly in accordance with their ability to do so, and this ability will be greatly affected by whether dealers are permitted by OPA to operate under a living discount.

The place of the car buyer in the situation is of the utmost importance. Dealers who are in direct contact with automobile users find far more interest in a return of new automobiles and good service for used cars than they do in any possible slight increase in costs made necessary by increased production expenditures. The motorist, who represents a very large part of the adult population of the country, realizes that he has shared in the enormously increased national income during the last 3 years and has saved money on the restricted operation of his car while the retail automobile dealer has had virtually nothing to sell. What the average citizen needs and wants badly is adequate transportation. He cannot see that the return of it is going to be expedited or his general transportation needs aided by slicing the dealer's discount to a point where he will have difficulty in operating.

The motorist also is aware of the fact that many dealers have operated at an actual loss during the war in order to hold their old customers for the coming of a better day. There is an appreciation of this effort to give service and in return for it car owners generally want to see their friends, the dealers, treated fairly now that the time again is at hand when they will have a chance to recoup some of their wartime losses.

Dealers often are asked just what it is they want done in the present trade discount situation. That is a fair question and one which is easily answered. They are most desirous that no change be made in their historic trade discount until it can be proven publicly and absolutely that any suggested changes are justified. Dealers believe that no attempt should be made in the present muddled automobile production situation to make any change in the dealer discount until the following points are definitely settled through a complete inquiry into all facts:

1. What will be the actual production costs of all cars after the present wage discussion is settled and all factories are in full production?

2. What part, if any, of these increased production costs should the dealer have to bear in the light of his 3 years of adverse business?

There is a simple way for our Government to meet this situation and be completely fair to all concerned. That way is to permit the dealer discount rate to remain on the time-proven present level. This would give every one of the 35,000 or more dealers an opportunity to start rehabilitating his business on the same basis as where he left off when the war curtailed his operations. In doing this he would be carrying his share of the postwar burden.

Every dealer is more than willing and anxious to bear a fair share of the postwar burden as he has borne the burdens placed upon him during the war period.

To you gentlemen of the Congress who, as members of the Small Business Committee, are charged with the responsibility of protecting the interest of the 3,000,000 or more small businessmen and their many millions of employees in this countr it certainly must be obvious to you that if the OPA is permitted to arbitrarily disturb the traditional dealer discount that it is conceivable and probable the great majority of dealers will be forced to discontinue business with the resultant disastrous effect upon the general economy and welfare of the country.

## Aftermath of the War

EXTENSION OF REMARKS
OF
## HON. BURTON K. WHEELER
OF MONTANA

IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "You Pays Your Money," by Milton Mayer, published in the Progressive of November 5, 1945.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOU PAYS YOUR MONEY

(By Milton Mayer)

At times I fancy myself as a crazy utopian, because I insist that the world can be made a fit place to live in; at others, as a hopeless pessimist, because I insist it cannot be made a fit place to live in by next Thursday. But today, as I glim a couple of front-page stories in the St. Paul Pioneer Press, I fancy myself as the only sane man left alive.

One of the stories from Tokyo asserts that mass starvation—already a fact in bombed-out Europe—will occur in Japan this winter in spite of General MacArthur's statesmanlike struggle to get the country on its feet. Relief, in the form of food, has got to come from the United States. The other story, from Washington, reports that the current turkey crop in the United States will be twice as big as it was before the war, and that the Government is going to have to support the falling prices on turkeys and chickens; and, horribile dictu, the egg situation is so good, and the price going down so fast, that the Department of Agriculture will have to curtail egg production.

Here it is, then, a few weeks after our biggest and best war to support the American way, and the American way is beginning to collapse again. The American way is capitalism, sometimes known as the free market, but there is nothing free about a market supported by Government parity, and Government curtailment of production, in the interest of maintaining prices, is nothing short of socialism, though the Socialists would point out in a hurry that it is socialism in reverse.

And, while the American way, so recently vindicated by the atom bomb, moves rapidly toward a header, with the specter again of poverty in the midst of plenty and the very means of life being plowed under in order to support an inedible dollar, the people of two continents approach starvation and freezing. Since their starvation is socialized, and they have nothing to exchange for eggs, their relief must be socialized. Either we feed them through UNRRA or they die. Some vermiform vestige of morality whispers to us, "Thy brother is hungry," but an equally vermiform vestige of the American way whispers, "Plow it under, cork up the hens, support the prices."

Thus the American way, and our morality is, I hope, American, too, is caught between two socialisms, socialized greed and socialized charity. And all this a few weeks after a war that was fought, at a cost of $2,000,000,000 a week, to bring freedom from want to the world.

We pay our money, and the blood of our young men, but apparently we don't take our choice. Having sunk a hundred billion a year to the bottom of the seven seas, we find ourselves approaching, slowly but surely, the condition of the two nations first involved in this war, Germany and Poland. In Poland mass hunger has been the rule for seven centuries, in order to support the American way. In Germany, for two centuries, the American way has been supported by the imprisonment of a freezing man who took so much as a fallen twig out of another man's forest.

We grow poorer in goods, we, the only rich people left on earth, and we grow more arrogant in spirit. The cost of war must be measured not merely in the expenditure of goods, but also, and much more so, in the increased determination to hold on to the decreased goods that are left. Worse yet, the cost of war to the victor must be measured in the determination to take from somebody else sufficient goods to compensate for those expended. And so the "hard peace" boys, who are only crazy with the heat, play into the hands of the national lust for somebody else's goods. The utopian ideal is to fight $2,000,000,000-a-week wars without paying a cent for them.

This ideal could once be realized in the Congo, in India, and in Mexico, but it cannot now be realized in Asia and in Europe for the main and simple reason (as Penrod would put it) that you cannot get blood out of a turnip. If Europe and Asia freeze and starve—such people grow so desperate that they will fight anybody anywhere, including each other—while we return to Mr. Wallace's reverse socialism of plowing under, or to Mr. Hoover's free, but empty, market, there will be war everywhere, and it won't be the atom bomb that started it.

The more I think about all this—this total failure of the total war, even in terms of our own greed—the more my private suspicion is confirmed that I am the only sane man alive. The more I think about Mr. Truman's peacetime conscription—the "Prussianism" we went to war against 25 years ago—the readier I am to offer myself as candidate for the office of prophet without portfolio. The more I think about our red-handed policy toward Puerto Rico, which we don't even need in order to be rich; the more I think about Russia's acquisition of Manchuria and half of Korea as its share in the divvy for its 8-day participation in the east; the more I think—

I am the only sane man alive. Plow me under, daddy, eight to the bar.

## Closing of the Higgins Industries

EXTENSION OF REMARKS

OF

## HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement appearing in one of the local newspapers, written by Andrew J. Higgins, president, Higgins Industries, Inc., and entitled "Give Me Liberty." The statement explains why Higgins Industries closed shop in New Orleans.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

GIVE ME LIBERTY

(The statement below, addressed to the loyal workers of Higgins Industries, Inc., New Orleans, La., is published here because we believe it holds special interest to every American citizen. Higgins Industries, Inc., has voluntarily shut down shop because of the harassment of organized labor unions and government agencies.)

This present and last strike called by the self-styled "elected" bargaining agents of the multitudinous crafts accepted for affiliation with the American Federation of Labor, has degenerated into violence, intimidation, and sabotage. No matter what name has been applied to it—"lockout," "shutdown," "stoppage," or "fishing expedition"—this is the last strike at Higgins Industries, Inc.

The dream I had of educating these people to cooperate and produce an example, a yardstick that would prove that management and labor could get along together, degenerated into a nightmare.

On every occasion when speaking to labor groups I counseled moderation, clear thinking and wise leadership to make the peace obtained at such high costs worthwhile. I preached the same theories on many occasions before employer groups.

I have fought the good battle for labor. I will continue to stand for the rights of labor. I believe in organized labor and collective bargaining, but I do not believe in and will not support any isolated pressure group that is abusing organized labor and its membership.

I consider the Wagner Labor Act oppressive in its operation, and in the long run it will do labor and American industry a disservice. Under that law, or its interpretation, an employer is powerless to effectively plead his own case. He is denied his constitutional right of free speech. He can be accused of any outrageous thing, or deed, or intent, by any labor representative, and if he dares to defend himself to the public, or to his own employees, he is in danger of being found guilty of unfair labor practice!

The men who have been with this company have on many occasions been ordered to cease work, arbitrarily, by some steward or by some business agent, completely ignoring the bargaining contracts and agreements, or the orderly processes of settling disputes provided therein.

We had resigned ourselves to work out difficulties and possibly overcome them by conciliation and the processes of law, however inadequate and unjust; but within the last several days, the stream of reports and visible evidences of assault on those men coming to work, threats and intimidations to their families, threats against their lives, plus acts of sabotage, has caused this management to come to an extreme decision that we hope will be so sacrificial and so soundly taken, that it will shock the lawmakers and those who have been abusing power; we have decided for these reasons and for the protection of the lives of our employees to call this terrible condition to the attention of the country by shutting down our manufacturing operations despite golden opportunities.

We have approximately $40,000,000 of orders on hand. If we were free of this threat, if we could be clear in our planning, we could take on more work to provide more jobs. It is a certainty that we could have provided more jobs, at equal or higher pay, than we did in our spectacular accomplishments during the war. Such an operation required cooperation of labor and management alike, but labor was found unable to meet this responsibility.

These alleged labor leaders have shown a callous disregard of the interests of their members and of the industries they were serving. They never recognized the fact that by helping improve the position of the company, or any other company they had dealings with, they would be assisting in creating work, better work, in providing better jobs at better pay.

Men that collect, handle, and are custodians of immense amounts of money derived from dues and fees should be worthy of a bond. Does the rank and file know what disposition is being made of the immense amounts so collected?

These self-styled or self-elected bargaining agents have been misleading their membership. This strike was unquestionably called for their own self-perpetuation, and the workers are their scapegoats.

These business agents of the local crafts who have gained the support of the presidents of their international unions have influenced these responsible and serious men against this company. In face of the fact that I, the president of this company, overlooking all of the difficulties I was suffering from a local condition, gave support to organized labor, subscribing as I have always done to the rights and dignity of labor, and hoping that I could add sound, workable ideas to the principles of democracy.

Contrary to these pygmy men damaging organized labor, I am still the friend of labor and of organized labor, but from now on I will suport organized labor only provided labor itself does the sensible thing—to demand and elect that they be made responsible under the law, as is any other organization, and as I wrote President Truman in my letter of October 15 past: "All officers or agents of the unions should be accountable for all

initiation fees, dues, fines, and collections, and such officers or agents should be commercially bonded."

Organized labor unions must be made responsible under the law for their agreements and their contractual obligations, the same as any other commercial organization.

We have just finished an awful war. If the poor devils that got by without being killed cannot take a job without paying a tribute for it, then it is a futile victory.

Now, this company is a prosperous and a going concern with vast operations possible for it at the time of this decision. Its operation would have called for the employment of a great number of men vital for the prosperity of the community, this State, and this section of the country. But, under the conditions imposed on us the ambition to take chances to take on work to create jobs has been lost to us.

To the stockholders and management of this company, the chief incentive was to create good work, to provide jobs, and make a contribution to the welfare of this country. To do so we must meet pay rolls, we have to be in a competitive position; we realize we cannot do so when dealing with pygmy-minded vicious men.

So, spectacularly, we are going to act as the guinea pig, and call it quits rather than work under these impossible conditions. These grave decisions were arrived at when we had evidence that the power, unconstitutional or not, of various Government agencies were combining and being directed in association with these local groups, fallaciously supported by their international presidents, to coerce us into impossible working contracts.

Last year the War Labor Board said we had a justifiable, full, and proper right to cancel the contract with the AFL crafts; ridiculously at the same time, another branch of that board said that we must continue an association with those same people under the same conditions of the contract they said we had the right to cancel.

We submitted to indiginities and arbitrary contradictions because we were manufacturing vital things needed for the winning of the war. When the war ended, we believe we very properly questioned the constitutional right of this wartime board to continue its domination over us.

Here recently, we have been put in an absolutely untenable position where another group of organized labor has contended they represent a majority of our workers and have been granted hearings by an organization set up under the Wagner Labor Act, but in the face of this the War Labor Board notified me yesterday that I was in contempt or in default, and would be shortly required to go to Washington again to debate clauses of a contract that that same War Labor Board said were properly canceled—this edict coming at a time when loyal workers are being assaulted or threatened with assault or worse; the placards carried by hired goons in front of my plant, brazenly denouncing and vilifying, damning the company, threatening that they were going to ruin the company, and vocally broadcasting a boycott of the company.

After due deliberation, we came to the decision that we would free ourselves of this oppression. We cut the tentacles of the octopus, and like the Massachusetts colonials that threw the tea overboard from the ships, by this act we will evidence our protest against bondage. The men at our plants, like the Colonies, had no representation. They were denied the right of voting who would be their collective bargaining agents.

Five years ago a few people forced a union contract on me. The local power bounds, aided and abetted by Government departments, have held our workers in bondage and forced them to pay, not taxes, but tribute—and to whom?

Now, I don't intend to emulate Patrick Henry, or go as far as he did. He said, "Give me liberty or give me death." We say for ourselves and our workers, "Give us liberty and life," and the right of any man to take any job that is offered and he is qualified to take without tribute to anyone.

HIGGINS INDUSTRIES, INC.,
ANDREW J. HIGGINS, *President*.

## Retail Lumber Dealers Oppose OPA Program

EXTENSION OF REMARKS
OF
**HON. WILLIAM A. PITTENGER**
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. PITTENGER. Mr. Speaker, the retail lumber dealers in the Northwest are opposed to the new proposals of the Office of Price Administration. Briefly, the OPA proposes to hold the consumer's price at the present level; to grant the manufacturers of lumber and building materials the right to increase their selling price to the retail lumber yards and building material dealers, and let the retailers absorb the increase in price. There are also other features in connection with the construction of new buildings. In all plans, it is important to note that the retailers will absorb the increased costs.

Yesterday, I pointed out that such was the principle of action proposed in connection with the retail dealers in the sale of automobiles and trucks. They are to absorb the increased costs, and the effect will be to put them out of business, because they will not be able to operate at a profit.

The same thing applies in the case of the retailers of lumber and building materials, if the OPA program is to go into effect. This policy will ruin the retailers. They must operate at a profit if they are going to stay in business. The proposed OPA plans will stagnate reconversion to a peacetime economy of the building industry, and will prevent the construction of homes and farm buildings so badly needed by the people of the country.

The program is supposed to prevent inflation, whatever that may be. Inflation means one thing to one person and another thing to someone else. It is a loose term. It has many contributing factors and causes. A rise in price does not necessarily mean inflation.

Following World War No. 1, the currency of France, Germany, and other countries became practically valueless. It lost its purchasing power. Some people point out that this happened on account of the countries being bankrupt. The rise in prices was the result of the use of currency that had ceased to have value. The evils of printing-press money was called inflation.

Regardless of what constitutes or does not constitute inflation, the policy of OPA will work injury to the retail merchants who deal in lumber and building materials. Our system of private enterprise is built on small business and it ought to be encouraged instead of being handicapped. Here, again, when OPA attempts to eliminate the element of profit, it destroys one of the cornerstones of our American system. The only alternative is the communistic conception of government ownership and operation.

## School of International Affairs in Memory of Woodrow Wilson

EXTENSION OF REMARKS
OF
**HON. HARRY FLOOD BYRD**
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. BYRD. Mr. President, the Honorable Jesse H. Jones has made a donation of $300,000 for the purpose of creating at the University of Virginia the Woodrow Wilson School of International Affairs.

I ask unanimous consent to insert in the Appendix of the RECORD a letter written by Mr. Jones to Dr. Newcomb, president of the University of Virginia.

I do not know of anything more appropriate that could be done than to establish at the University of Virginia a School of International Affairs in memory of Woodrow Wilson, who stands today as he always stood as one of the greatest American statesmen.

As a Virginian, I want to express my great appreciation to Mr. Jones for this very valuable contribution he has made to a better understanding of international affairs.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *October 23, 1945.*
Dr. JOHN LLOYD NEWCOMB,
*President, University of Virginia, Charlottesville, Va.*

DEAR PRESIDENT NEWCOMB: I have under consideration the founding of the Woodrow Wilson School of International Affairs in some outstanding university, and my thoughts turn first to the University of Virginia, of which he was so distinguished an alumnus.

Such a school would be devoted to the teaching of international relations with emphasis on those aspects of the subject with which his name will ever be associated.

I cannot pretend to outline the field for such a school, and nothing would be further from my thought than to limit the academic freedom of the school or of the university authorities. To illustrate what I have in mind, the teaching might embrace such things as past and present history of American foreign relations, American policies in the foreign field, past and present efforts at international organization, international commerce and its effect on Government policy, international law and international justice, negotiation and interpretation of treaties, the practice of diplomacy, etc.

If the idea appeals to you and your board, and you would create the Woodrow Wilson

School of International Affairs at the University of Virginia, I would contribute, or cause to be contributed by a foundation that Mrs. Jones and I have heretofore created, $20,000 a year for the ensuing 15 years for the payment of faculty salaries and lecture fees. This amount should be sufficient to attract persons of high reputation and recognized competency. The period of 15 years is suggested with the thought that it is a sufficient length of time to prove the usefulness of the project. If it fails to justify itself, it should then be abandoned. If it succeeds, means will no doubt be found to carry it on.

I am prompted in this move not merely to honor the memory of a great American statesman, whom, because of his service to the world, his recognized high principles, his great political and intellectual integrity, I hold in reverence, but to help in giving to coming generations of young Americans a livelier appreciation of the vital interests and heavy responsibility of the United States in the outside world.

I should like to feel that I was by this means helping to make ready some of your students to serve their country in foreign affairs.

As I see Woodrow Wilson, he sacrificed his life for world peace.

If, following World War I, his ideals for world cooperation could have been consummated, we might have been spared World War II, with its devastating effect on mankind. It will be recalled that during his speaking tour in 1919 when he was appealing to the American people for support of world cooperation, and on which tour he was stricken, President Wilson said at Omaha, Nebr.:

"I tell you, my fellow citizens, I can predict with absolute certainty that within another generation there will be another world war if the nations of the world do not concert the method by which to prevent it."

Now, a generation later, we recognize the wisdom of his appeal for world cooperation and will profit by adopting that philosophy.

Will you give the subject consideration and let me hear from you?

Sincerely yours,

JESSE H. JONES.

## Hospital Aid

EXTENSION OF REMARKS
OF
### HON. GLEN H. TAYLOR
OF IDAHO

IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hospital Aid" published in the Washington Post of November 6, 1945.

There being no objection, the editorial was ordered to be printed in the RECORD as follows:

HOSPITAL AID

Our national health rests on four main pillars, according to the Senate Committee on Education and Labor. These are medical research, preventive medicine, medical care and hospitalization. Each of those pillars is weakened by the present inadequacy of health centers and hospitals. The committee found, for example, that a community which has no hospital is often deprived also of doctors' services, for many young men in the profession refuse to practice where hospital facilities are not available.

Surgeon General Parran told the committee that 40 percent of the counties in the United States, with some 15,000,000 people, have no recognized hospital. Most of our hospitals have been built with private contributions. Their location has thus been erratic. The result is that we have no systematic pattern of hospital service. Medical centers and hospitals are particularly scarce in the rural areas. But many city dwellers also are deprived of these aids to health. Dr. Reginald Atwater, secretary of the American Public Health Association, told the committee that less than 10 percent of the country's health agencies "are provided with physical facilities even approaching reasonable standards of adequacy."

The outcome of the committee's investigation is a bill authorizing Federal grants-in-aid to help the States overcome these deficiencies. It would authorize the appropriation of $5,000,000 for State health-facility surveys and planning and $75,000,000 a year for 5 years for actual construction of hospitals and health centers. The modesty of the program is indicated by the fact that in 5 years it could provide only about one-fifth of the facilities estimated to be currently needed.

We heartily endorse the committee's recommendation of this bill for early enactment. At the same time, however, we share Senator MURRAY'S dislike for one important administrative feature. The bill would set up a Federal Hospital Council and give it a sort of administrative veto upon the actions of the Surgeon General if he should disapprove State plans for hospital construction under the terms of the bill. An advisory group to aid the Surgeon General in making decisions, with full power to publicize its findings, would be most useful. But we do not think that administrative powers should be split in this haphazard manner. To pass such a measure while Congress is voting power to the President to eliminate confusing administrative tangles would be a grave reflection on congressional judgment. With this obvious defect corrected, the bill will hold great promise of better care for the sick in the postwar years.

## Common Sense About the Peace

EXTENSION OF REMARKS
OF
### HON. DEWEY SHORT
OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, October 30, 1945*

Mr. SHORT. Mr. Speaker, under leave heretofore granted, I extend my remarks by including the following timely and interesting article by William Henry Chamberlin, on common sense about the peace, which appeared in the Progressive magazine of October 15, 1945.

Mr. Chamberlin spent several years in Russia, is a world-wide traveler, highly educated, but has never lost the common touch, and it is my hope that many people will read his splendid article.

COMMON SENSE ABOUT THE PEACE

(By William Henry Chamberlin)

Marvelous is the power of semantics. A poll of American public opinion on the proposition, "Do you believe that the peace should be based on the principles of the Atlantic Charter?" would probably reveal a substantial affirmative majority. But if the question were worded differently, "Do you believe in a tough peace for Germany, as laid down in the Potsdam Declaration, and an equally tough peace for Japan?" a majority in the affirmative would again be registered.

But the kind of peace that was foreshadowed in the secret conclaves of Teheran and Yalta and announced at Potsdam bears no more relation to the Atlantic Charter, or to any principles of decency, humanity, and civilization than the Declaration of Independence bears to a totalitarian concentration camp. After the last war, the Nation, then edited by Oswald Garrison Villard, and not to be confused with the magazine of the same name which recently gave its blessing to "Bull" Halsey's desire to kick the defeated Japanese in the face, published one of those very few magazine editorials which are brilliant enough to remain in the recollection after a lapse of 25 years. It was entitled "The Madness of Versailles," and it was a magnificent indictment of the injustices and mistakes of the Versailles Treaty and of the betrayal of Wilson's Fourteen Points.

But Versailles was a model of equity and humanity compared with Potsdam. It took away comparatively little territory that was authentically German. Its reparations arrangements were its worst feature and broke down with a disastrous crash that was equally harmful to victors and vanquished. But it did not authorize the wholesale uprooting of populations or deliberately deprive the German people of some of its most important means of national livelihood.

There is no stronger condemnation of the peace settlement, which is now largely an accomplished fact, even though the major victorious powers tied themselves in hopeless knots trying to settle some of its minor points at London, than the phraseology of the Atlantic Charter:

"No territorial changes that do not accord with the freely expressed wishes of the peoples concerned. . . . The right of all peoples to choose the form of government under which they will live. . . ."

What a mockery these phrases are, when one contemplates the spectacle of fifteen or twenty million homeless, beggared refugees who have been, are being, or will be driven from their homes and set adrift in the postwar Europe of hunger, cold, and pestilence. These would include several million Poles who formerly lived east of the so-called Curzon Line. There are also some nine million Germans who have been uprooted in the regions east of the Oder and the Neisse Rivers which have been assigned to Poland and the Soviet Union. Finally one must reckon three million Sudeten Germans and an uncertain but large number of stranded refugees, Poles, Ukrainians, Serbs, people from the Baltic States, who have strong reasons for not wanting to return to their native lands under existing regimes.

Even after the savage Thirty Years War, Protestants who left Catholic states and Catholics who, by choice or compulsion, left the rule of Protestant princes were assured compensation for their property. There has been noteworthy progress in inhumanity in the twentieth century, by comparison with the seventeenth. The millions of uprooted people in eastern Europe are permitted to take nothing of their property and life savings, except what they can carry in their hands or in any primitive conveyances they may have kept through the ravages of war and plundering armies.

If the political realities of Potsdam are a travesty on the professed war aims of the United Nations, the economic provisions of the Potsdam agreement are a complete repudiation of the fourth point of the Atlantic Charter:

"They will endeavor, with due respect for their existing obligations, to further the enjoyment by all states, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity."

Such vital branches of German peacetime industry as metals, chemicals, shipbuilding, machine building are sentenced either to complete destruction or to a system of foreign control so rigid as to make normal efficient production impossible. At a time when all Europe needs all the machinery, equipment, and manufactured goods it can get from any source, the most productive industrial system in Europe, insofar as it has survived obliteration bombing, is to be very largely wiped out of existence.

The contradictions of the Potsdam economic program are so numerous and flagrant that one might well suspect a purpose not to disarm but to destroy the most productive industrial mechanism in Europe, and thereby increase and prolong the distress in that stricken continent indefinitely. American responsibility to help feed and clothe the cold and hungry peoples of Europe is often stressed. But the territorial and economic decisions of Potsdam have wrought more harm than the most general contributions to UNRRA can repair.

One of the most glaring of these contradictions is the simultaneous declaration that "primary emphasis shall be given to the development of agriculture" in the German economy and the decision to give one-fourth of Germany's arable land to Poland. Another contradiction is the thrusting of millions of destitute refugees into the shrunken remainder of Germany and the decision to eliminate or greatly reduce the industries which might conceivably give these people employment.

Perhaps the most hopeless contradiction lies in the announcement of a desire to assist the growth of democracy in Germany while at the same time the peacemakers do everything in their power to make living conditions there utterly insupportable. There may be differences of opinion about the precise meaning of the word "democracy." But all experience shows that no system worthy of the name has maintained itself very long when economic conditions have become not only dark but hopeless.

Some of the glib talk about transforming Germany into an agrarian country would convey the impression that there are vast open spaces waiting for new hands to till. Germany is one of the most densely populated countries in Europe and the population per square mile will be even larger because the eastern regions which have been taken away are more agricultural than the highly industrial Ruhr and Rhineland.

Some of the criminal blunders of Potsdam could have been avoided if American public opinion had been better instructed in European history, geography, and economics and if men who know the realities of the situation had not often been intimidated because of the hue and cry set up against anyone suspected of favoring a soft peace. When one considers what the world has suffered from hardness and toughness during the last generation, a reflective mind might suspect that a little softness, which might be better translated as justice, mercy, and humanity, would not be out of place.

Arguments about a hard or a soft peace possess little relevance when countries have been so thoroughly decimated by modern bombing as have Germany and Japan. The road to reconstruction and recovery in any case would have been long and difficult. With the terrific lightning reprisal weapon of air bombing in the hands of the Big Three any attempt at rearmament could be quickly and easily smashed.

It is a curious example of the age of confused thought in which we live that some of the very individuals who are clamorous in their advocacy of One World are equally vociferous in demanding a permanent pariah or helot status for the German and Japanese peoples. As if one could take the most advanced industrial countries in Europe and Asia, respectively, and turn them into cesspools of unemployment and hopeless festering misery without the most disastrous consequences for the economic well-being both of Europe and east Asia.

It is high time to bring a little common sense to bear on the problem of the peace. The American people should understand that they must choose between revenge and reconstruction. They cannot have both. It is easy to predict which road will lead most surely toward the rehabilitation of the civilization which has been almost extinguished in some parts of the world which have suffered most in the war.

It is noteworthy that American administrators on the spot, often military leaders who certainly cannot be suspected of softness in the undesirable sense of the term, are often more humane and reasonable than certain back-seat drivers at home who are animated by nothing more constructive than an insatiable and indiscriminate desire for revenge not only on all living Germans and Japanese, but on still unborn generations.

It is a common fallacy in pseudo-liberal circles to suggest tha a tough peace in the sense of the destruction of German and Japanese industry, shipping, and foreign trade will only injure the well-to-do classes and may be reconciled with the interests of the German and Japanese masses. This is utter and conspicuous poppycock.

Quite regardless of whether their internal economic systems are capitalist or socialist, individualist or collectivist, Germany and Japan, as thickly populated countries which cannot be self-sufficient in food and raw materials, must possess a reasonable amount of peacetime industry, shipping, and foreign trade in order to maintain economic equilibrium. The alternative would be permanent mass unemployment, hunger that could easily pass over the borderline into starvation, chronic unrest and a complete eclipse of the hope that the previously submerged liberal and democratic forces in the two former Axis states could establish stable governments and reintegrate Germany and Japan into a world community of peaceful nations.

There is often a disastrous time-lag, especially dangerous in this atomic age, between a changed situation and popular realization that it has changed. There is no danger that the next war, should such a catastrophe occur, will be launched by a shattered and decimated Germany or Japan. Yet the whole "Dumbarton Hoax" was framed on the absurd assumption that this was the danger, that the only powers which could conceivably wage war within any predictable future were all somehow peace-loving and should enjoy an above-the-law status.

Strikingly barren as it was in positive results, the recent London fiasco may serve a useful purpose if it dispels certain illusions about the close unity and common purposes of the United Nations and points the way for a strong, independent American foreign policy. One of the first signs of such a policy would be to set about the task of genuine peacemaking in those parts of the world which are open to our influence. We should put aside counsels which are inspired sometimes by blind hate and sometimes by desire to serve the interests of a foreign power which seems interested in spreading as much chaos and misery as possible in neighboring countries. We should look to the future, not to the past, place reconstruction ahead of revenge, and think in terms of building up a united Europe, not of tearing down the economic livelihood of any country. If there is ever to be a semblance of democracy in Germany and Japan, the people must eat.

## Dorothy Thompson Makes Same Proposal Regarding Atomic Bomb as Is Contained in H. R. 4014 and H. R. 4015

EXTENSION OF REMARKS

OF

## HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. VOORHIS of California. Mr. Speaker, in a recent column Dorothy Thompson discussed the problem of the atomic bomb in her customary forthright way. I am encouraged that once again there is concluded in her column substantially the same proposal which is contained in the two bills which I introduced in the House on September 12, 1945, namely, H. R. 4014 and H. R. 4015. Under unanimous consent, I include herewith the column by Miss Thompson:

ON THE RECORD

(By Dorothy Thompson)

Recently I set forth propositions about the atomic bomb: It is no secret; it can be used only as an instrument of aggression; as an instrument of war it rings the death knell of small nations and promises mutual annihilation to the largest; it is an instrument for unlimited political blackmail; as the property of a commission, such as that proposed in the original May bill, it is an instrument threatening domestic liberties.

Already the atomic bomb is blowing up what little there was of international confidence. No nation can "trust" another which has the capacity to destroy its centers of population from long distances. Its unique possession by us, together with flaunts of power—"We are the most powerful Nation militarily on earth, with the largest Navy and air force," and the call for universal service to "enforce" peace, is scaring the world to death, and leading to an atomic science race. Our moral position is weakened. At Nuremberg we shall accuse Germans for having broken the rules of warfare by first resorting to weapons banned by international conventions. The onus for the introduction of atomic warfare rests, however, on the United States.

We have committed ourselves to stopping potential aggressors. Already there is apprehension abroad that the United States may be the next potential aggressor. The only way, in the atomic age, to strike down a potential aggressor, is to strike without warning. Any nation, with the atomic bomb, can act before a security council agrees on who is potentially dangerous.

To hand the atomic bomb about indiscriminately in a world of sovereign states and great powers who have hitherto refused any restrictions upon their actions is suicidal. If every one has the atomic bomb, one will use it first.

Soon all great nations will have it. Estimates that it will be years before it can be developed elsewhere are based on false assumptions. One is that no other country has a formula now.

How do we know? The greatest contribution came from Germany. One of the leading atomic physicists, Professor Lange, went to Russia as early as 1934. When the Russians took Berlin, they captured the physical laboratories in Dahlem, and there and in Vienna are bidding for scientists and getting them. The length of time needed depends on advances already made, and the urgency put behind development. That will be immense.

Atomic power for war should be outlawed. How? By verbal or paper agreements?

The solution is as simple as the judgment of Solomon.

The secrets of atomic science should be given to every country which agrees to submit to a control of its mines and laboratories by an international authority, responsible exclusively to the world security organization—to humanity. It should be composed of scientists, technicians and engineers, selected chiefly from small nations who would, of course, also be under observation. Small nations are more trustworthy, since for them atomic warfare means obliteration.

The composition of the authority and watchmen is of preeminent importance. If any power represented in the board knows about its dispositions, relative to that power's own territory, the purpose of control will be largely stymied. If the watched participate in watching, they are certain to try to control the directives. The body must be neutral vis-a-vis any single power.

It may be argued as a measure of difficulty that atomic bombs can be manufactured in small factories. But there is unanimity that the deriving of atomic energy from elements more stable than uranium and plutonium is long distant. The commission, therefore, must have a geological branch to investigate and guard sources of raw materials.

Its purpose is not to control the bombs but prevent their manufacture.

## Blue Discharges

EXTENSION OF REMARKS

OF

### HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD some editorials from the Pittsburgh Courier with respect to blue discharges. I make this request because I feel that the granting of blue discharges is all wrong. I am informed that in recent months the Army has curtailed the practice of the promiscuous issuance of blue discharges. I earnestly hope this is true. There ought not be a twilight zone between innocence and guilt.

Soldiers guilty of the most heinous crimes because of influential friends and pull have been granted blue discharges, while other men, honest and honorable, but not by nature and training adapted to military life are given blue discharges.

Blue discharges are certain to be a headache for Congress from now on.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Courier of October 20, 1945]

COURIER LAUNCHES PROBE OF ARMY'S BLUE DISCHARGE

(By John H. Young III)

Charges are flying thick and fast on the Army's issuance of the blue ticket which deprives holders of practically all benefits in compensation for military service. The Army is reportedly (1) handing out the blue ticket with reckless abandon, (2) allowing the discharge to be issued without holding proper board hearings, (3) allowing commanding officers to use it as a weapon to settle personal differences with their men, (4) allowing prejudiced officers to use it as a means of punishing Negro soldiers who do not like specifically unbearable conditions, and (5) issuing the blue discharge in proportionately higher numbers than other discharges.

One story coming from a Congressman's office in Chicago is that some 50 soldiers near Chicago were blandly asked if they wanted a discharge. When they answered in the affirmative, they were invited in to sign. Not until they were actually in the act of signing did they discover that they were signing for blue discharges. The charge here is that soldiers are being tempted with the blue discharge as being the quickest way of getting out of the Army.

As open to question as the Army's issuance of the blue discharge is the Veterans' Administration use of a power which it is believed Congress intended to be granted that agency in carrying out the provisions of the GI bill of rights. * * *

Section 300 of the GI bill makes it clear that Congress intended to bar from benefits only those who had been dishonorably discharged as a result of general court martial. As exceptions, Congress was careful to list being a conscientious objector and an officer resigning for the good of the service.

[From the Pittsburgh Courier of October 27, 1945]

COURIER ASKS SECRETARY OF WAR TO LIMIT ARMY BLUE DISCHARGES

(By John H. Young III)

Branding the blue discharge as "a vicious instrument which should not be perpetrated against the American soldier," the Courier this week called upon Secretary of War Robert Patterson for outright abolishment of the questionable discharge or issuance of orders for strict limitations on its use. This action was taken when last week's article brought an avalanche of letters from holders of the blue discharge and interested citizens who considered the situation an outrage.

No one seems to be able to explain how the blue discharge came to be issued in such great numbers in this war. In World War I the blue discharge was rarely, if ever, given. In the last war it was the general practice to either give the dischargee a clean bill of health or give him the benefit of formal trial by court martial before imposing such severe terms on his rights as is the case in the blue discharge. This, the Courier holds, should prevail at this time.

Regardless of the Army's belief and the Veterans Administration's interpretation, the Courier believes that there is no twilight between honor and dishonor. A discharge is either honorable or dishonorable.

[From the Pittsburgh Courier of November 3, 1945]

ATTORNEY GENERAL AGREES TO STUDY BRIEF

(By John H. Young III)

The Courier's fight in behalf of veterans who are holders of the blue discharge gained momentum last week as Attorney General Tom Clark and Assistant Solicitor General Harold Judson, after lengthy discussion, agreed to study a brief prepared by the Courier which pointed to the question of the Veterans' Administration's own interpretation of its powers to sit as a court on each blue discharge. Coupled with this agreement was the Congress of Industrial Organizations' decision to place its full strength behind the fight to place the blue discharge holder's case before the Nation.

Veterans' Administration Instruction No. 1, issued October 30, 1944, over the signature of Gen. Frank T. Hines, then Administrator, listed those barred by Congress and went on to make a provision of its own:

"*Provided, however,* That where service was otherwise honest, faithful, and meritorious a discharge or separation other than dishonorable because of a minor offense will not be deemed to constitute discharge or separation under dishonorable conditions."

The Courier contends that by this provision the Veterans' Administration went on its own to set forward a condition of qualification that was neither written nor implied by Congress; that by this provision the Veterans' Administration sets itself up as a court of judgment.

In an interview in his office, Veterans' Administration Solicitor Edward E. Odom admitted that the handling of the blue discharge, in relation to GI benefits under the GI bill, was a cumbersome affair. He said that Congress had shifted the responsibility of interpreting the law to the Veterans' Administration and added that he had asked Congress to clear the matter up prior to the passage of the GI bill.

When asked if any outside legal authority had given an opinion on the Veterans' Administration's interpretation of the GI bill, Mr. Odom said that such had not been the case. He said that the interpretation was made in the Veterans' Administration and that his office stood behind the legality of the interpretation.

The case of the blue discharge was discussed with Meyer Bernstein, veterans' representative of the CIO. Mr. Bernstein declared:

"There ought not to be any limitations on the rights of any soldier or veteran unless he has been given a dishonorable discharge for sufficient reasons. I am for the outright abolition of the blue discharge."

[From the Pittsburgh Courier of November 10, 1945]

LEGION TO SCAN BLUE DISCHARGES

(By John H. Young III)

A high spokesman of the American Legion told the Courier that he believed that limitations should be drawn in the GI bill, specifically naming types of blue discharges believed to be under "dishonorable conditions," the terminology used by the Veterans' Administration to give itself power to sit as a court on blue discharges.

The Legion spokesman said that his organization would take up the matter of the blue discharge at its executive meeting in Chicago on November 15 of this month. Later, he said, the blue discharge will be the subject of discussion at a session of the national Legion meeting in Chicago, beginning November 18:

*Record of blue discharges*

Number of blue discharges issued between December 1, 1941, and June 30, 1945 (official War Department figures for the Army alone):

| | |
|---|---|
| Negro | 10,806 |
| Others | 37,797 |

The Courier challenges the Nation to solidify its opinion on what should happen to the holder of the blue discharge. These are our forgotten men. The spirit of the GI law demands that Congress should make its position clear.

## Viewpoints of Servicemen

EXTENSION OF REMARKS

OF

### HON. WAYNE L. MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials published in Yank News, one entitled "Tap Roots" from the issue of October 11, and the second entitled "The $64

Question" from the issue of October 18. These editorials set forth very clearly and with great force the point of view of a great many servicemen in regard to matters pending before the Congress of the United States.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Yank News of October 11, 1945]

THEY CAME BACK

"TAP ROOTS"

They were having a banquet in Mapleville. Everybody who was anybody was there. At the head table sat all the mighty of Mapleville—the town dignitaries, the bank president, the secretary of the chamber of commerce, heads of labor organizations, and church groups. As I said, everybody who was anybody was at the head table. Seated at the end of the head table, as sort of an afterthought and local color, sat a lone buck private.

The banquet was in celebration of, and in anticipation of, postwar planning. The speeches were as stimulating as a tomato-juice cocktail. When the orators were all through—they called on the buck private.

I saw him get up from his end of the table and walk over to the microphone. He limped, just a trifle, and he said into the microphone quietly and most ungrammatically:

"My name is Boone—Ezra Boone—and this ain't no speech. I had seven brothers and sisters. I was the oldest and I had to work since I was 13. I worked all my life, and I got drafted out of Mapleville. And I've come back to my old job, if I can hold it. You'll excuse me if I don't make a good speech.

"There was one guy in my outfit who dreamed of this kind of a banquet. He used to say to me, 'When the war's all over, Ezra, when we've won freedom for everybody, don't forget, we got to win it for ourselves.' When we used to get the papers from back home about folks rowin' and strikin', he used to say to me, 'Don't pay any attention to that, Ezra. That's just disputin'. That's democracy in action, liberty in the makin'. Only in America can they do those things.' From the papers, I kinda think we've been havin' a lot of 'democracy in action.'

"I've listened to everybody tonight. Nobody seems to have the idea of this fellow. He used to say to me, 'Ezra, liberty's a great tree. Its branches shade all men. Don't forget you belong to the greatest Union in the world—the United States of America! That's States in Union. And don't forget another thing—that liberty has got its tap roots in the soil!'

"I've listened to all your speeches. Maybe I don't understand them. You're plannin' for my future. You're plannin' for thousands of jobs for fellows like me who will come back. You're goin' to lend us so much money to buy a home or to go into a little business. That's nice of you to lend it to us. We appreciate that. But what about liberty—the freedom he used to talk about—the liberty that covers all men, the freedom he lived for and he died for?

"You want to know one thing? Nobody said where the tap roots of liberty are. I'll tell you, Mister. The tap roots of liberty are everywhere the Army's been, the marines have been, where the sailors have been, and where the fliers dropped like falling autumn leaves—where those men fell, Mister—that's a tap root of the tree of liberty! They mark the spot with a little white wooden cross.

"And I know where one of those tap roots is, Mister. It's where he lies—in a grave on Kwajalein!

"I'm sorry he ain't here tonight to talk for himself. I ain't got no education. Maybe you know what you're doing because you're smarter than I am. But I'm goin' to tell you somethin'! A lot of us are back and more are coming back. All we expect is a world like he dreamed—dreamed about and died for. A world where there's a job for every man that wants to work. A world where every man can sit under his 'own vine and fig tree and no man can make him afraid.' He made me learn that. He said, 'Washington wrote that'."

Then he looked around the hall very carefully, very quietly, and very deliberately, and he said:

"You know, this friend of mine, my buddy—he used to say to me, 'Ezra, the folks back home have got to realize one thing. They planned their world their way. We're going to save it—their world—but from there on out, Ezra, we're going to plan the world—our way!'

"You've done a lot of planning tonight—for a world that we fought for. Don't you kinda figure you should kinda ask us about the world we want? I don't think that's any more than fair. Do you?"

Then he turned and walked away from the microphone; I noticed that he limped perceptibly.

After he sat down there weren't any more speeches on postwar planning.

There just couldn't be.

---

[From the Yank News of October 18, 1945]

THEY CAME BACK

THE $64 QUESTION

(By C. W. R.)

I noticed him sitting on the park bench watching the falling leaves. They're beautifully colored this time of year. They seemed to match the service ribbons he wore. On one of these service ribbons was the insignia of five major engagements. One little ribbon to the side, I noticed, was the unit citation. I watched him out of the corner of my eyes—watched him light a cigarette with hands that trembled—the aftermath of the jungle. You'll notice a lot of that in the days that are to come.

Then I said to him, "From the looks of those service ribbons, son, you've been around."

"Yeah," he said, "* * * you can say that again. Caribbean—European—Mediterranean—Asiatic—that makes it all the way around, Mister."

"And that unit citation—how come?"

"Oh, that one? I got that in the second battle of the Kula Gulf. I was on board the St. Louie."

There was a young fellow on the bench, a little older than this boy, but not so very much older, and he folded up the newspaper and turning to the both of us, said:

"It looks like the guys are going to get that raise this time. Oh, maybe not the full 30 per cent, but we'll ring the bell around 15 or 20 percent. That makes up for the overtime we lose. More dough 'to take away' from the job. Yeah—'the war's over', and the boss might as well learn it now as any time—'business is business.' That'll mean more money for you, sailor, when you get a job."

The young sailor lit another cigarette and his hand trembled perceptibly. "Yeah," he said, more to himself than to us, "—if—and when—I get a job that I can hold." He took a couple of drags from his cigarette and sat watching the falling leaves and sort of nodding to himself.

This fellow with the paper said, "What do you think about it, Mac? I'd like to hear what you got to say. This makes it soft, don't it?"

"Yeah," he said. "Maybe we owe you a debt of gratitude. Maybe some day I'll pay it off—who knows? Now let me answer your question; the fact is it's two questions in one, but I'll answer them together.

"The boss made so much lousy money that he never had so much in his lifetime. You've got better wages than you ever had before, and that's no kidding. You've both made it—a lot of it. How about me? That's the $64 question; that's the jack-pot question. I'm going to give you the answer so you can have it all yourself.

"I've been thinking of guys like you and the boss all the way from boot camp to Tinian. I've been wondering why guys like me have to go while guys like you stayed behind; you and the boss. But I know the answer to that one. You don't have to tell me. You and the boss were 'indispensable.' Me and thousands like me were 'expendable.' You want to know what I think about this raise? Now get a load of this.

"You want more dough to take home. I know guys that'll never take nothin' home. The Government will send their mothers or their dads or their wives a little better than 50 bucks a month until they eat up the face of the policy, then there won't be nothing to take away. Then the jungle can just grow over them and the world will forget them.

"Did you ever think about giving the dead a raise? Did you ever think that you and the boss wouldn't have anything if it wasn't for those guys? How about giving the dead kids a raise; the dead kids I know on Tinian, Saipan, and Tarawa? How about raising the pay of the dead? How about the wounded? Does that 30 percent apply to us, the wounded? Or do we struggle along on these lousy pensions? Or do you and the boss ever think about that?

"How about some back pay for me while I'm living? How about House Resolution 127 that would give me 3 bucks a day for every day I was in the States while you were making your twelve to fifteen a day and the boss was making his thousands a month? How about that House Resolution 127 that would give me 4 bucks a day every day I was overseas in the jungle while you were making 12 and 15 bucks a day and dodging hot spots at night, and while the boss was figuring out how he could beat the income tax?

"How about me? I was on that 24-hour shift. Did you ever think about that? Or do you think that three and four dollars is too much of a raise for me? How about this Purple Heart, the one I'm wearing? The House Resolution 127 would give me 500 bucks for that. I'd give 500 bucks to see some of those Congressmen where I've been.

"You got to understand me, mister. You're all hopped up over the 30 percent more pay to take home, but do you want to know what I really think about the whole thing way down underneath? Way down underneath, you and the boys stink!

"Sure, I know, I know, the war's over, business is business, but when you get time, tell this to the boss what I told you. And don't ever tell it again to a guy with a service ribbon like mine."

Then he got up and walked away.

The young fellow on the bench took one look at him and walked the other way.

But me, I sat there watching the falling leaves, the drifting leaves, and I thought about the unpaid debt to the dead and the niggardly payment to the living. And I thought about this boy's answer.

Yeah, his answer to the "$64 question."

---

## Promotion of Industrial Peace—Will of a Marine Lieutenant

---

EXTENSION OF REMARKS

OF

## HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

*Thursday, November 8 (legislative day of Monday, October 29), 1945*

Mr. BRIDGES. Mr. President, from the holocaust of the war just ended has

come a story which is today so timely and may always be so inspiring that I feel the Senate should pause to hear it. It is the story of a will scribbled by one of the immortal heroes of Iwo Jima just before he made the supreme sacrifice on that bloody Pacific island.

The will is that of the late First Lt. Benjamin Rush Toland, United States Marine Corps Reserve. His home was in Concord, N. H. By his will the young officer left a part of his possessions to the A. F. of L., the CIO, and the National Association of Manufacturers "for the purpose of improving general relations between labor and capital."

In recent days, Mr. President, many in high places and many in the rank and file of our citizenry have pleaded for industrial peace. In the midst of the Nation's internal strife, Lieutenant Toland's will has come to light and to me it is the most eloquent appeal to get along with each other that the American people could receive.

The will of Lieutenant Toland is of manifold significance. It emphasizes the truth that the American youth is sound and even in the face of death thinks of a fuller life for the people of the land he loves and serves. It emphasizes the truth that failing to establish and maintain domestic tranquillity would be failing those who fought and those who died to keep America secure.

The will of Lieutenant Toland emphasizes the loss our country has suffered in this war, for this hero's generation many are gone who would have lived and worked diligently for the complete unity of our people.

Mr. President, in loyalty to the purpose for which so many have given their lives we must not fail to make the peace of the world permanent and we must not fail to establish industrial peace in our own land. I ask unanimous consent to insert in the Appendix of the RECORD an article from the Manchester Union of November 5, telling this story.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARINE HERO'S BEQUEST TO BETTER LABOR-CAPITAL RELATIONS REVEALED — TOLAND LEAVES FUNDS TO CIO, A. F. OF L., AND MANUFACTURERS—WROTE WILL BEFORE GOING TO DEATH AT IWO JIMA

Under the provisions of a will he scribbled shortly before he went into the thick of the bloody Iwo Jima campaign, Lt. Benjamin Rush Toland, 24, USMC, of Concord, left a portion of his modest estate "for the purpose of improving general relations between labor and capital."

First public disclosure that the valiant Marine Corps officer who was killed in action on Iwo Jima last February 21 had provided gifts for both labor and management organizations was made yesterday at the annual meeting of the State CIO council in Manchester.

WRITES OUT DOCUMENT

At that time Harold Daoust, State president of the CIO council, revealed that the lieutenant had, in a hand-written document executed before he entered the Iwo Jima campaign, stipulated that in event of his death the CIO, A. F. of L., and the National Association of Manufacturers each be given one-tenth of his estate for the purpose of promoting better relations between labor and capital.

Attorney Frank J. Sulloway, of Concord, executor of the Marine lieutenant's estate, confirmed the CIO State head's announcement later in the day, adding that the will was being interpreted to mean the State divisions of the organizations mentioned. He added that after various taxes had been deducted the gifts in each instance would probably be "about $500 or $600."

Other bequests included gifts to St. Paul's School of Concord, the St. Paul Episcopal Church of Concord, Yale University, and the New York Times' Christmas Fund for its 100 neediest cases.

Following Mr. Daoust's announcement Sunday the State CIO council at its annual convention voted to set up a Benjamin Rush Toland trust fund and to award each year a medal to the member of a CIO affiliated union in the State who is judged to have done the most during the preceding year to promote harmony between labor and capital.

Lieutenant Toland, a brilliant student at St. Paul's School and at Yale University, where he was Phi Beta Kappa, and was graduated summa cum laude, was a member of the Yale varsity hockey team. Recently a gift of books on social and philosophical subjects was presented by Yale University in his memory to the Concord Public Library.

Lieutenant Toland's parents, Mr. and Mrs. Edward D. Toland, have resided for some years at Ash Brook farm on the Hopkinton road. Mr. Toland, an artillery captain in World War I, recently retired from the St. Paul's School faculty. Mrs. Toland, active in civic and social affairs, is Republican national committeewoman from New Hampshire, a post which she has held for more than a decade.

Following his graduation from Yale in June 1942, Lieutenant Toland, who had enlisted with the Marine Corps 3 months previously, went to Washington, where he worked for a short while for a Government agency pending call to active duty.

Mr. Toland said today that his son was keenly interested in the subject of labor-management problems and had intended entering that field.

## Views of the Automobile Dealers of North Dakota

EXTENSION OF REMARKS
OF
## HON. CHARLES R. ROBERTSON
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement made by me before the Small Business Committee:

Mr. Chairman, I am grateful to you and your committee for the privilege of appearing before you to present what I believe to be the views of the automobile dealers of the State of North Dakota, which State I have the privilege of representing at large.

I should like to say at the outset of my remarks that I appear before you representing automobile dealers who would be classified in the national category as more or less of the small-business type. Within my State are some large dealers, but the rank and file of them are small dealers. The annual number of cars sold by many of these dealers would not run into great proportions. It is my opinion that Mr. Bowles with his ideas would centralize the automobile business in the big cities.

I think you have here before you a truly fundamental question: Are we to stand sponsor for the American plan, which is the open door for small business to move forward under its own steam or are we to stand sponsor for the principle of monopoly or for the amalgamation of capital as would be the case in the large business centers. It is my firm belief that the automobile dealers of the Nation, particularly the smaller ones, hold the record, perhaps, in the production of the small margin of net profits, and as a result it is but natural that their mortality rate would be very high.

The people of North Dakota are more concerned with the service available on their cars and trucks than they are over the matter of a few dollars' difference in the purchase price. They have learned through bitter experience, particularly western North Dakota, which as you all know went through a series of crop failures caused by extreme drought, that their automobiles and trucks might be called upon to give service over a period of time far in excess of average expectancy. This area is usually referred to as the "dry area."

Many of our western North Dakota citizens drove automobiles produced during the 20's for well over 10 years. They were forced to do this by circumstances beyond their control. It was fortunate indeed that these automobiles were sold by dealers who recognized the following obligation: That is, the obligation to provide service after the profit was realized on the new car sale. Were is not for the fact that the vast majority of dealers stocked parts and maintained service establishments, these cars could not have gone through the long period of service which they were called upon to render.

At the present time the number of dealers handling new cars in North Dakota is slightly in excess of 300. We are experiencing a steady expansion because of good crops in North Dakota. However, in the late 30's the number of dealers in business was close to 600, and even in 1941 495 dealers were still in business in spite of the shrinkage of new-car production caused by the defense program.

I have every confidence that my constituents will take a fair attitude toward the dealer in the matter of protecting his established trade discount so long as the tendency of the retail automobile business is to tie in service availability with each sales outlet.

It must be readily apparent that the average sales per dealer is well under 30 cars per year when you check the fact that North Dakota delivered at retail new passenger cars in the following volume:

| | |
|---|---|
| 1936 | 11,095 |
| 1937 | 12,060 |
| 1938 | 8,620 |
| 1939 | 9,805 |
| 1940 | 12,358 |
| 1941 | 13,621 |

While a matter of forty or fifty dollars per car taken from the large city dealer who deals in thousands of cars may not be a factor in his being able to tay in business, in the State of North Dakota, where the average dealer handles only an average of 30 units, this forty or fifty dollars per car means the difference between a living and a loss for the dealer.

As I understand it, these dealers are not asking for a fraction of 1 percent increase in their trade discount. Their business is based on volume, as everyone knows. To talk in terms of dollars per unit distorts the entire business picture.

I suppose many dealers inf North Dakota gave away as much of their profit as the average dealer in the country. I fail to see anything inflationary in the tendency of an automobile dealer to give away part of his profit. On the other hand, I can see no way in which Mr. Bowles or any Government agency can

revolutionize the standard of automobile dealers to a point where they will all cease to lose money, give discounts, or in other ways dissipate part of their profits. This is a variable factor and is not subject to control.

Dealers in my State, when guaranteed the retail price under the Murray-Patman Act, delivered automobiles to divisions of the Federal Government and to the State government at a discount from list. It may have been poor business; it may have been their expression of appreciation of the help they received from a federally created crisis in their business. However, the record of the Internal Revenue Department and the records of the State highway department at Bismarck, N. D., will reveal that as late as 1943, discounts were given to both the Federal Government and the State government on both cars and trucks in spite of the fact that the Murray-Patman Act guaranteed these dealers full retail price on their automobiles and trucks covered by that act.

Finally, I emphasize this fact so far as North Dakota is concerned:

Since Pearl Harbor a good many States have had a reduction in the registration of used cars, but in North Dakota we have more cars registered today than we did at the time the war began.

This means that we are going to have a considerable number of trade-ins, and these automobiles will have to be completely repaired and reconditioned in order that they can be resold and give service to the next owner.

So, naturally there is going to be a loss under these circumstances and the dealer cannot afford to take a cut in his discount because the used car will absorb a great deal of this profit.

Should the OPA put into effect their proposed ruling, it is my personal belief that it would be most devastating to the industry, hinder reconversion, and damage future employment.

## The Soldier's Gripe

EXTENSION OF REMARKS
OF
### HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. LECOMPTE. Mr. Speaker, in connection with the endless delays and difficulties experienced by enlisted men in obtaining release from the service and the honorable discharge each one has earned, I wish to extend my remarks and include a carefully prepared statement by George E. Sokolsky, well-known columnist, which recently appeared in the Daily Courier, Ottumwa, Iowa. Mr. Sokolsky included in his column a number of specific complaints and urges an investigation of them. These complaints are typical of many that I receive in almost every mail.

THESE DAYS
(By George E. Sokolsky)
THE SOLDIER'S GRIPE

Whenever I talk to a soldier anywhere, on the street, in trains, among strangers or personal friends, I hear the same gripe—officers did not treat the men as Americans are accustomed to being treated. "The caste system may be necessary for discipline but it was carried too far." "Officers selected fine establishments for themselves but put the soldiers in filthy huts." "The West Point officer had some respect for the rights of the GI, but the barbers and ribbon salesmen treated him as though he were a German."

Here are a few paragraphs from Japan:

"In our company we have men with over 100 points who are still here while other men with less have already left. One man's wife died, leaving four children, and he has enough points. It took them a month to notify him of the death and he has been standing by awaiting transportation for 2 weeks now. Yesterday a colonel was flown out simply because he had enough points. We were told we were stationed too far from the docks, yet we are only 2 miles away.

"These are the men we must not forget, for if this type ever gets the power—watch out. They don't want to demobilize, for then they would lose their rank and authority and have to go to work."

Here is another letter (place not identified by request):

"If we were in a prison camp, you'd all be howling 'get them out'—let me assure you that we're in prison—every last one of us. What can we do—we can't bitch to our Army CO's. If we did we'd end with some swell assignment—you can imagine. We can't write to our Congressmen—those letters are forwarded to the War Department and 'proper action' is taken.

"* * * Find out why doctors who spent the war in England have gone home with 46 points while doctors over here with 80 plus points are still here Find out why we're used as storekeepers, garagemen, restaurant supervisors, odd-job men, supply officers."

Here is another:

"I belong to that small minority who were prisoners of war in Germany and who, because of their small numbers, are receiving no credit or consideration in being discharged from the Army.

"The point system—where does it leave us? In the same status as a soldier who was safely berthed in England—even worse—he may receive campaign stars for being attached to a combat outfit. We were unattached. * * *

"I think we have a gripe."

A doctor wrote me that where he is stationed doctors have enough work to keep them busy 2 hours a day. He says many are becoming alcoholics from ennui.

Obviously, it is impossible for me or any other reporter to investigate these gripes, to determine whether they are individual or general, whether they are justified or the inevitable dissatisfactions of strong and vigorous youth with the restrictions of a regimented life. Yet this fact does stand out: The letters I have received and the conversations I have had cover all theaters of war, Europe, Africa, Asia, and even American theater. The gripes are all the same.

This, true or not, is very bad for the Army. In time it will be reflected in the attitude of Congress toward the Army. The gripes are too widespread to be laughed away. The bitterness displayed by the men in their letters and conversations will not down.

The Army ought to invite a nonmilitary commission, appointed by the Secretary of War, to make a thorough investigation of these gripes and to determine what is true and what is false. For instance:

1. Is it true that officers raided soldiers' food supplies?

2. Is it true that USO shows and bands, designated for GI's, were used to the advantage of officers?

3. Were GI's punished, even by transfer, for complaints?

These are a few questions. There are many more, particularly with regard to leaves, separation, and transportation. These problems need to be studied to strengthen, not to abuse, the Army, to determine if the Reserve Officer system is beneficial or harmful to the service.

## Governor Lehman Denies Clothing Gathered for Europe Is Rotting in Philadelphia Warehouse

EXTENSION OF REMARKS
OF
### HON. WILLIAM R. THOM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. THOM. Mr. Speaker, letters have come to me from Ohio charging neglect and inefficiency in the handling of the clothing gathered in drives throughout the country to be sent to Europe. Specific charge has been made that garments are rotting in warehouses in Philadelphia.

These complaints have been submitted to Gov. Herbert H. Lehman, Director General of UNRRA, who has written me that at present there are none of the garments in Philadelphia warehouses, and that of the 111,000,000 pounds collected less than 10,000,000 pounds will remain in this country by the middle of November.

His full letter follows:

Hon. WILLIAM R. THOM,
*United States House of Representatives, Washington, D. C.*

DEAR MR. CONGRESSMAN: I have investigated the complaint that used clothing contributed by people of this country was rotting in the warehouses of Philadelphia, and I am informed that there is not a pound of loose clothing warehoused in Philadelphia at this time. In fact, the baling plant in Philadelphia (D. Pomerantz Co.) completed baling operations on September 30, and by October 1 had shipped out all baled clothing. Not one pound of clothing collected in Philadelphia has rotted or suffered damage, and to the best of our knowledge not a pound of it was lost.

I assume you know that the United National Clothing Collection, which took place in April and May, involved the gathering together of small parcels of clothing from millions of homes. They were then concentrated in specified places, or collection points, and shipped to Treasury warehouses, and to baling plants for sorting, baling, and packing; and finally, all of this clothing had to be transported and loaded onto ships. Despite this very complex task, all of the clothing has been baled and packed for overseas shipment and less than 10,000,000 pounds of the total 111,000,000 pounds collected will remain in this country by the middle of November.

I outline below the present status of clothing collected in this drive:

| | *Pounds* |
|---|---|
| Received at Treasury warehouses | 111,105,246 |
| Baled and packed for overseas | 111,105,246 |
| Exported or booked for shipment on specific vessels | 103,132,979 |

The unshipped balance includes 1,000,000 pounds allocated to the American-Jewish Joint Distribution Committee for distribution to persecuted persons in Hungary, Rumania and Bulgaria. Shipments of this clothing have been delayed because of congested conditions in Black Sea ports. Shipments of 700,000 pounds for stateless persons in Holland, Belgium, France, Spain, Portugal and north Africa—to be distributed by the Intergovernmental Committee on Refugees—have been delayed awaiting cables from representatives of the Intergovernmental Committee on the distribution and

type of persons for whom the clothing is intended.

At the recent request of the military, we have also set aside 4,000,000 pounds for displaced persons of other nationalities in camps within Germany and negotiations are proceeding on this matter.

An additional million pounds for displaced persons of other nationalities in camps in Austria has been allocated and we are awaiting instructions from the military authorities as to reshipment.

A small reserve of approximately 1,272,000 pounds is being held to meet emergency needs.

Although UNRRA is proud to have participated in this undertaking, and to have assisted both with money and with personnel, the United National Clothing Collection was accomplished more by the American people than by UNRRA. The chairman, Henry Kaiser, who was appointed by the President of the United States, was assisted by private relief organizations and many individuals who have given their time and energies. Thousands of our countrymen, here in the United States devoted their best efforts to this undertaking, activated only by the desire to help those who had suffered more than themselves and who needed their friendship and material assistance.

I am grateful as always for your interest and hope that you will continue to call upon us if you need additional information. I can assure you that any further particulars you may desire will be readily supplied.

Sincerely yours,

HERBERT H. LEHMAN,
*Director General.*

## Address at Dedication of Fifth Marine Division Cemetery on Iwo Jima

EXTENSION OF REMARKS
OF
### HON. HAL HOLMES
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. HOLMES of Washington. Mr. Speaker, under leave to extend my remarks, I include an address, copy of which was received by C. A. Hawley, Grant County auditor, Ephrata, Wash., from a soldier on Iwo Jima. Mr. Hawley says:

I have read nothing more beautiful or appropriate regarding the boys who gave their all in this terrible conflict.

I commend it to your reading this coming Armistice Day.

In March 1945 a Jewish chaplain by the name of Roland B. Gittelsohn, whose home address is 301 Earle Avenue, Lynbrook, Long Island, N. Y., delivered the following address at Iwo Jima on the occasion of the dedication of the Fifth Marine Division Cemetery:

"This is perhaps the grimmest, and surely the holiest, task we have faced since D-day. Here before us lie the bodies of comrades and friends. Men who until yesterday or last week laughed with us, joked with us, trained with us. Men who were on the same ships with us, and went over the sides with us, as we prepared to hit the beaches of this island. Men who fought with us and feared with us. Somewhere in this plot of ground there may lie the man who could have discovered the cure for cancer. Under one of these Christian crosses, or beneath a Jewish Star of David, there may rest now a man who was destined to be a great prophet; to find the way, perhaps, for all to live in plenty, with poverty and hardship for none. Now they lie here silently in this sacred soil, and we gather to consecrate this earth in their memory.

"It is not easy to do so. Some of us have buried our closest friends here. We saw these men killed before our very eyes. Any one of us might have died in their places. Indeed, some of us are alive and breathing at this very moment only because men who lie here beneath us had the courage and strength to give their lives for ours. To speak in memory of such men as these is not easy. Of them, too, can it be said with utter truth, 'The world will little note nor long remember what we say here. It can never forget what they did here.'

"No; our poor power of speech can add nothing to what these men and the other dead of our division who are not here have already done. All that we even hope to do is follow their example. To show the same selfless courage in peace that they did in war. To swear that by the grace of God and the stubborn strength and power of human will, their sons and ours shall never suffer these pains again. These men have done their job well. They have paid the ghastly price of freedom. If that freedom be once again lost, as it was after the last war, the unforgivable blame will be ours, not theirs. So it is we the living who are here to be dedicated and consecrated.

"We dedicate ourselves first to live together in peace the way they fought and are buried in this war. Here lie man who loved America because their ancestors generations ago helped in her founding, and other men who loved her with equal passion because they themselves or their own fathers escaped from oppression to her blessed shores. Here lie officers and men, Negroes and whites, rich men and poor—together. Here are Protestants, Catholics, and Jews—together. Here no man prefers another because of his faith or despises him because of his color. Here there are no quotas of how many from each group are admitted or allowed. Among these men there is no discrimination; no prejudices; no hatreds. Theirs is the highest and purest democracy.

"Any man among us, the living, who fails to understand that will thereby betray those who lie here dead. Whoever of us lifts his hand in hate against a brother or thinks himself superior to those who happen to be in the minority makes of this ceremony and of the bloody sacrifice it commemorates an empty, hollow mockery. To this, then, as our solemn, sacred duty, do we, the living, now dedicate ourselves: To the right of Protestants, Catholics, and Jews, of white men and Negroes alike, to enjoy the democracy for which all of them have here paid the price.

"To one thing more do we consecrate ourselves in memory of those who sleep beneath these crosses and stars. We shall not foolishly suppose, as did the last generation of America's fighting men, that victory on the battlefield will automatically guarantee the triumph of democracy at home. This war, with all its frightful heartache and suffering, is but the beginning of our generation's struggle for democracy. When the last battle has been won there will be those at home, as there were the last time, who will want us to turn our backs in selfish isolation on the rest of organized humanity, and thus to sabotage the very peace for which we fight. We promise you who lie here: We will not do that. We will join hands with Britain, China, Russia in peace, even as we have in war, to build the kind of world for which you died.

"When the last shot has been fired, there will still be those whose eyes are turned backward, not forward, who will be satisfied with those wide extremes of poverty and wealth in which the seeds of another war can breed. We promise you, our departed comrades: This, too, we will not permit. This war has been fought by the common man; its fruits of peace must be enjoyed by the common man. We promise you, by all that is sacred and holy, that your sons, the sons of miners and millers, the sons of farmers and workers, will inherit from your death the right to a living that is decent and secure.

"When the final cross has been placed in the last cemetery, once again there will be those to whom profit is more important than peace, who will insist with the voice of sweet reasonableness and appeasement that it is better to trade with the enemies of mankind than, by crushing them, to lose their profit. To you who sleep here silently, we give our promise: We will not listen. We will not forget that some of you were burnt with oil that came from American wells, that many of you were killed by shells fashioned from American steel.

"We promise that when once again men seek profit at your expense, we shall remember how you looked when we placed you reverently, lovingly in the ground.

"Thus do we memorialize, those who, having ceased living with us, now live within us. Thus do we consecrate the living to carry on the struggle they began. Too much blood has gone into this soil for us to let it lie barren. Too much pain and heartache have fertilized the earth on which we stand. We here solemnly swear: This shall not be in vain. Out of this, and from the suffering and sorrow of those who mourn this, will come—we promise—the birth of a new freedom for the sons of men everywhere. Amen."

## The Role Played by Turkey in World War II

EXTENSION OF REMARKS
OF
### HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. MUNDT. Mr. Speaker, under leave granted me by the House and for the information of the Congress and the country, I am including with these remarks the complete text of the annual speech to the Turkish National Assembly which was delivered in Ankara on November 1, 1945, by President Ismet Inonu of Turkey. I commend its careful reading to all those desirous of making an accurate appraisal of the role played by Turkey in World War II.

Last month when Representative FRANCES P. EOLTON, of Ohio, and I spent several days in Turkey as members of Subcommittee No. 2 of the House Foreign Affairs Committee, we spent over an hour one morning in conference with President Inonu, of Turkey. In that conference, speaking through an interpreter, the President of Turkey reviewed for us the contributions which his country had made to the cause of the United Nations during the war. His recital that morning was much the same as the portions of the attached speech dealing with that phase of Turkish activity, except that in his conference with us he went into greater detail and added some interesting side lights and background concerning his conference with Franklin D. Roosevelt and Winston Churchill in Cairo.

When President Inonu had completed his statement to us he asked, "Have I persuaded you that Turkey really made a contribution to the United Nations' cause during the war? Do you feel we should be criticized or commended for our course of action?" Mrs. BOLTON and I, making no claim to being military experts or war strategists, could not, of course, qualify as judges of the value of the contributions made by Turkey to our side of the fighting but we did recommend to President Inonu that he make a public statement of the part played by Turkey during the war because we assured him that he had given us an understanding and an interpretation of Turkey's position which we believed was not generally appreciated by the American public.

With gracious charm, President Inonu stated:

If you really feel the American public and the people of the United Nations would be interested in knowing how our wartime policy was evolved and what we desired it to achieve I shall make this a part of my public pronouncement when I address the next national assembly.

Yesterday, the press attaché of the Turkish Embassy in Washington delivered the following speech to my office and I take pleasure in calling its contents to the attention of readers of the CONGRESSIONAL RECORD. It is my belief that President Inonu and the people of Turkey have a real friendship for the United States and a genuine desire to participate with all other members of the United Nations in the maintenance of world peace and the development of the democratic ways of life. I am hopeful that a reading by Americans of the record of Turkey's part in the war as reviewed by President Inonu will help develop a more widespread recognition of the difficult problems faced by Turkey during the war and a greater appreciation for the fact that she resisted the threats and lures of the Nazis and cast her lot and her future with the free fighting forces of the United Nations.

ADDRESS OF PRESIDENT ISMET INONU, OF TURKEY, MADE BEFORE THE TURKISH NATIONAL ASSEMBLY ON NOVEMBER 1, 1945

It is with emotion that Turkey, too, follows the effort for the establishment of world peace, after the catastrophies and sufferings caused by World War II. The sole desire of peoples everywhere is directed toward the attainment of the goal for humanity to live in peace on the foundation of the principles proclaimed by the United Nations.

In these days of the final settlement of world issues, Turkey finds herself in the position of one, who can face everyone and the world society of nations with a clear conscience and hold her head high, with a deep sense of justice. The United Nations have, during the last 6 years appraised the role of Turkey in the Second World War from different angles and viewpoints. In many ways Turkey has won their esteem. I beg the national assembly's permission to review the position of Turkey—without allusion to secrets which cannot yet be revealed—during the Second World War. At the time the horizons darkened in the spring of 1939, Turkey was the only nation, among her equals, who openly took her stand by the side of Great Britain and France, for the cause of the ideal of justice. When in 1940 France collapsed and the battle of Britain was in full progress, we were still the only nation who would laud British heroism and declare ourselves Britain's ally. Later, when diplomatic relations between France and Great Britain were broken and the battles of Merselkebir and Dakar were fought the triple alliance concluded between Great Britain, France, and Turkey imposed upon us, juridically and by reason of events which came to pass between our allies, a strict neutrality. Yet it was Turkey again, which declared, without hesitation that our alliance with Britain continued. In the Tripartite Treaty the reservation was made, in a special protocol, that Turkey's obligations, arising from the alliance, could not lead us to an armed conflict with the Soviet Union.

In the early parts of 1941, Turkey stood, her forces mobilized, ready to face German and Italian aggression from Thrace or Rhodes. Let us remember that these were the days when a pro-Axis Government had been installed in Irak and that the Vichy Government had openly declared its anti-British attitude in Syria. When one remembers that though fully encircled from all sides by Axis forces the Turkish nation alone, solely dependent upon her own manpower and almost to the exhaustion of her financial resources, barred the road to those proud aggressors who held Europe in their grip, it is, in all justice, right that the services rendered and the perils envisaged by the Turkish people in the Allied cause should be accorded due appreciation at once.

Upon the outbreak of hostilities between the Soviets and the Germans, Turkey informed the belligerent parties of her decision to remain neutral in the conflict. The years 1941 and 1942 were the most difficult for Soviet Russia and Great Britain, when they had to face great pressure from the Axis powers. The recognition of the services rendered by us could not be better illustrated than repeating to the honorable members of the National Assembly the very words of authoritative Allied spokesman. On January 19, 1942, the Soviet Ambassador, acting as an intermediary of the Soviet Government officially communicated, in detail, to the Turkish Foreign Ministry the appreciation of the Soviets, stating that Turkey's position had really benefited the Allies.

On December 4, 1941, the President of the United States declared that the defense of Turkey was of vital importance to the defense of America and that lend-lease material would be delivered to Turkey without signature of a formal agreement. This agreement was not officially signed until February 23, 1945. As to the British Government, their appreciation of the Turkish attitude has been made public on several occasions. In the early part of 1943, during his visit to Adana, Britain's Prime Minister made declarations the memory of which we shall always cherish.

I would now like to answer before the Grand National Assembly to criticisms directed against Turkey since the end of 1943. You know that in the domain of international relations secrets between powers are not the property of one state. However, I want only to emphasize as the expression of a simple factual truth the injustice of which has been imputed in our case. We have been criticized for having concluded a treaty of friendship with Germany. Before the outbreak of hostilities between the Germans and the Soviets and the arrival of the former at the gates of Istanbul, the Germans were tied to Soviet Russia by a pact of nonaggression previously concluded. At a time when our country stood all alone to face the combined Axis forces, at a time when the United States had not yet entered the conflict, at a time when Great Britain mobilized everything against a possible invasion of the British Isles and at a time when the Soviets were tied to the Germans by a nonaggression pact, could it have been rightly expected of us to refuse a written German commitment not to attack Turkey? All the more so, when it was explicitly stipulated in this pact that Turkey would remain attached to her alliances and obligations.

In all preceding and following discussions, German aid to Syria and Iraq, by giving passage through Turkey, had been categorically refused them. We were able to make the Germans accept all these conditions. It has been brought to light since and present disclosures show that this pact with Germany signified nothing but a postponement for the Germans to a later date of their military operations against Turkey. Insofar as we were concerned this pact afforded us the opportunity of taking the necessary military measures, providing us with the means to surmount these critical times. Besides, the point must be borne in mind that that Soviet, British, and American praise on the Turkish attitude antedates the conclusion of friendship pact with Germany. This, too, indicates that the friendship pact with Germany had been considered, while it served its purpose, equally indispensable in the conscience of the Allied Nations and that criticisms have been artificially provoked. Once the dark days were over, it has been voiced, from a number of sources that at the time of the German advance to the Volga, we embarrassed the Soviets by concentrating our forces on our eastern frontiers. The truth, even though it may be unknown to peoples, is entirely known in detail to Allied authorities and officials. The facts are entirely contrary to these allegations used for purposes of reproach. When the Germans advanced up to the Volga, our defenses extended from Rhodes, in the Mediterranean to Hopa, on the Black Sea. The probability of a sudden German surprise attack against our Black Sea defenses led to the dispersal of our forces all along the Black Sea front. We even had to concenerate forces in the capital for the defense of Ankara. German plans, recently discovered, clearly disclose that these precautionary measures had not been taken in vain. Moreover, at the end of the summer of 1942, we officially informed the Soviet Government that we were concentrating forces at Trobzon and Hopa against the eventuality of a German landing at the back door of the Caucasus and that dispersal of our military forces was due to this reason.

In reply the Soviets expressed their satisfaction. I do not know of a more convincing proof than the disposition of the Turkish forces during this war, that our military movements were directed against no one else but the Axis powers.

With reference to criticism of our belated entry into the war against Germany and Japan, it is alleged that Turkey's declaration of war made no effect and that it came after Allied victory had assumed a decisive character.

We have no pretention as to the effect of our declaration of war. We contend, however, that Turkish conduct during the period of years of nightmare has helped in the victory of our Allies. Our entry into war against the Germans and the Japanese was decided upon demand of our Allies. To this declaration of war our Allies must have attached certain importance, for it was they who asked for it and it can never be alleged that we declared war on Germany after Allied victory had become definite. We were with them during the dark days. As to the days of glorious victory, we had no desire to share the spoils and we, therefore, would not think of taking advantage of the occasion. Our action was prompted solely with the desire of acting in concert with our Allies.

Criticism has also been levelled against us for not entering into the war immediately after the breaking off of diplomatic relations in the August of 1944. The Turkish attitude decided upon after exchange of communications between Great Britain and ourselves was as follows: Turkey's decision would constitute the first step towards effective belligerency. The British Government had informed

us that they would go into detailed discussions with us later regarding Turkey's entry into the war. But our Allies made no demand of us for the execution of the decision which they held in their hands.

As regards the reproach that we did not let Allied ships pass through the straits to aid Russia, the allegation is absolutely unfounded. No reproach or default can be leveled at Turkey on this account. If the Allies were not able to extend help to each other by using the straits, this is through no fault of Turkey. Nor is it due to Turkish action. The situation was the result of Axis Powers being able to keep closed on sea and in the air the Mediterranean routes. While on the subject, I judge it useful to mention that Great Britain drew our attention to the passage into the Black Sea of certain German ships in June 1944. In her capacity as one of the signatories to the Montreaux Convention, she objected to this. During the discussions which ensued, it did not take more than a week for Turkey to make categorical and radical decisions to stop the passage of German ships. This was again in accordance with the spirit of our alliance with Britain and our attachment to the United Nations cause. It is, therefore, impossible to argue that the Montreaux Convention, in practice, worked against the Allied cause. Moreover, it was proven during the Second World War that the straits were in good hands and that there was no obstacle to bar free passage of ships of all nations.

Honorable members of the Assembly—German policy contended that the Second World War was a continuation of the First. The fact is also clear that Turkey was the only country which constituted an exception. The rest of central European powers found themselvess in the same camp.

As to Turkey she had to bear burdens as heavy as those she bore in the First World War. After the First World War Turkey suffered four more additional years of war until she could conclude the Peace Treaty of 1923. She lost a great empire and to be able to safeguard her existence and national frontiers endured countless misfortunes. This was the Turkey, which 16 years later, toook her firm stand by the side of Great Britain and for the survival of the cause of the United Nations, often at the risk of great dangers. In return for all this, Turkey had no demand or claim on her losses in the past. Instead, Turkey endeavored, within her means and to the best of her ability, to render services to the Allied cause. Under the circumstances, it would be fully inconsistent with any sense of justice to exact from Turkey, under any pretext whatever, something of her territories or her sovereign rights. We do not doubt that, if we could explain these facts and put forward our rights to the peoples of Soviet Russia, to the peoples of the British Empire, and to the peoples of the United States, they would find that we are within our rights.

I have no illusions as regards the fact that it is without the bounds of our material means and possibilities to make our cause heard and bridge the vast oceans to enter among the peoples of Soviet Russia, Great Britain, and America, for such explanation of facts.

Consequently, it depends essentially on the sentiments of justice and equity of the leaders of great powers that their peoples may have an exact knowledge of the problems concerning Turkey If such sentiments are allowed to depart from the truth, it becomes difficult to formulate an idea of the nature of understandings with the great nations of the world. In spite of all, however, we want to believe that the principles of the United Nations Charter have been permanently established and that sincere intentions shall guide the world. If humanitarian feelings are to be taken as the foundation upon which the future world edifice is to be built, we have confidence that Turkey shall be recognized as one of the useful members of the new world peace organization. Meanwhile, we proclaim openly that we have no debt to pay anyone whatsoever in territory or in the relinquishment of Turkey's sovereign rights. We shall live as men of honor and so we shall die as men of honor.

Honorable members of the assembly, the actual state of our foreign relations is as follows: Following the denunciation by the Soviets of the treaty of friendship we have exerted great effort to conclude a new treaty seriously ameliorating the old one and based on new foundations. The result of these efforts are well known to you. We have not lost hope that the truth will be better understood and that good neighborly feelings shall prevail. It is probable that good relations will be established between the two countries. We always welcome, wholeheartedly, that future possibilities with Britain—to whom we are tied by an alliance—shall increase and that after the many events which took place during the course of the Second World War, the British people consider our excellent relations and our alliance with them a useful factor.

Our relations with the United States of America are developing in an atmosphere of increasing friendship. We have faith that the United States will apply sincerely the principles of the United Nations Charter toward all the nations of the world. We wish that all our neighbors beginning from Bulgaria to Irak shall live as independent nations. Our aim is to maintain good relations with them all. We follow closely and with sympathy the efforts of our neighbor, Greece, deployed by her on the road of rehabilitation and the healing of her wounds which she received during her catastrophic struggle. We welcome with satisfaction possibilities of the development and deepening of our friendly relations with Irak. We have no other political objective other than to become one of the most civilized nations of the world so that Turkey ascends to the ranks of a useful and hardworking member of the family of world nations.

---

## Certificate of Incorporation of World Bill of Rights Association, Inc.

EXTENSION OF REMARKS
OF
## HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following certificate of incorporation of the World Bill of Rights Association, Inc.:

We, the undersigned, being desirous of associating ourselves for purposes hereinafter more particularly described, pursuant to and in conformity with the membership corporations law of the State of New York relating to membership corporations, do hereby certify, and declare that we are all of full age, citizens of the United States, residents of the State of New York, and that all of the directors hereinafter named are citizens and residents of the United States and the State of New York.

First. The name of the proposed corporation shall be known and designated as World Bill of Rights Association, Inc.

Second. The particular objects for which said corporation is formed are as follows:

To preserve and defend the Constitution of the United States of America and the constitutions of the constituent States of the United States of America.

To acquaint by means of publications and public meetings all peoples of the United States with the democratic rights and blessings which they possess under the Constitution of the United States of America and the constitutions of the particular constituent States to which they belong.

To preserve for all Americans every democratic freedom contained in the Federal Bill of Rights.

To oppose by means of publications and public meetings and all legitimate peaceful methods every form of totalitarianism in the United States of America.

To advocate the adoption of a world bill of rights, whose principles and provisions shall be based on our own Federal Bill of Rights, the Atlantic Charter, and the "four freedoms."

To support the Constitutional Government of the United States and all Americans in extending such a world bill of rights to all the peoples of every nation upon the face of the earth.

To oppose all efforts of any totalitarianism to deny the peoples of any nation democratic freedoms contained in this world bill of rights.

Third. The territory in which the operations are principally to be conducted shall be New York, N. Y.

Fourth. The principal office of the World Bill of Rights Association, Inc., shall be located in the city, county, and State of New York.

Fifth. The number of directors of the World Bill of Rights Association, Inc., shall be not less than 5 nor more than 30.

Sixth. The names and residences of the directors until the first annual meeting are: John Torpats, 510 West One Hundred and Twenty-third Street, New York; John Lembergh, 28 West Seventieth Street, New York; Richard Hermanson, 105 Grand Avenue, East Rockaway, N. Y.; John Balkunas, 64–14 Fifty-sixth Road, Maspeth, N. Y.; Alina Rabcewicz, 121 St. Marks Place, New York.

Seventh. That all of the subscribers to the certificate are of full age; that at least two-thirds of them are citizens of the United States; that at least one of them is a resident of the State of New York, and that of the persons named as directors at least one is a citizen of the United States and a resident of the State of New York.

In witness whereof, we have made, subscribed, and acknowledged this certificate, this 14th day of August 1945.

JOHN TORPATS.
JOHN LEMBERGH.
RICHARD HERMANSON.
JOHN BALKUNAS.
ALINA RABCEWICZ.

OFFICERS

The temporary executive board of the World Bill of Rights Association, Inc., is as follows: President, Hon. Alvin E. O'Konski, Congressman from Wisconsin; vice president, Rev. John Balkunas, trustee of the Lithuanian R. C. Federation of America; vice president, Richard Hermanson, writer and high-school teacher, representing the Latvian Americans; vice president, Dr. Tibor Kerekes, professor at Georgetown University, executive secretary of the American Hungarian Federation; vice president, Gustav Kosik, editor of the Slovak V Amerike; vice president, Milan Obradovich, vice president Serbian National Defense Council; vice president, Dr. John Torpats, economist, author, and writer, representing the Central Committee of Estonian-American Organization; executive secretary, Rev. A. A. Skoniecki, executive secretary of the Coordinating Committee of American Polish Associations in the East, author and writer; treasurer, William H. Smyth; recording secretary, Alina Rabcewicz.

The headquarters of the association are located at 103 Park Avenue, Room 511, New York 17, N. Y., telephone Murray Hill 5–6486.

Any freedom-loving group or person can join by contacting World Bill of Rights Association, Inc., 103 Park Avenue, Room 511, New York 17, New York, telephone Murray Hill 5-6486. For freedom's sake join now.

## H. R. 4393

EXTENSION OF REMARKS

OF

## HON. CLAIR ENGLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. ENGLE of California. Mr. Speaker, under unanimous consent to extend my own remarks in the RECORD, I include two letters relating to H. R. 4393, a bill introduced by me some weeks ago for the purpose of reimbursing the owners of gold mines for the damages done to their mines during the time they were arbitrarily closed down by the Government. The order closing the gold mines was a type of order not duplicated in any other instance and inflicted a financial loss upon the gold miners without parallel in any other industry in this country. These two letters from practical mining operators in my district are so much to the point and state the case so well, that I feel they are of general interest:

PIONEER-LILYAMA MINES,
*Placerville, Calif., October 31, 1945.*

Hon. CLAIR ENGLE,
*House of Representatives,*
*Washington, D. C.*

DEAR CLAIR: I acknowledge receipt of copy of your H. R. 4393 which I have read with much interest. This bill seems to be well drawn and such that it covers the subject. If it can be enacted into law, it will mean a tremendous benefit to the State of California. Probably no industry ever suffered such an unjust blow as western gold mining received under L208. Its results have been disastrous for dozens of profitable mining operations—operations which by their very nature were unable to convert to any wartime activity.

Here in California we are endeavoring with a promise of success to induce our corporate securities department to relax some of their stringent regulations governing the sale of mining stocks. I met with the commissioner yesterday and believe we have worked out a program that will be of great help—but it all still involves the sale of stock to get our mining industry again going. This means a reduced interest for the operators, of course—a penalty directly chargeable to L208.

All of this, too, is involved with present high wages and low gold prices of $35. No other industry ever was so nearly bankrupt by arbitrary Government action—twice the target. At a time when all attention is centered on postwar employment problems our Uncle Sam hamstrings gold mining—with a price lower than anywhere else in the world and a legalized banditry that compels a producer to sell instantly all of his product at the buyer's price and exclusively to that buyer—the buyer being immune from all responsibility for his actions. Maybe some college economist who never operated any business anywhere can figure out that it is cheaper to pay a dole to unemployed miners than it is to pay a decent price for their product—but I am too simple minded to be able to reach any such conclusion.

Your fine letter was read to the mining council's last (annual) meeting at Auburn a couple of weeks ago—all mining people appreciate your efforts on their behalf.

With best wishes to you,

Sincerely,

HAL GRIGGS.

ORO FINO CONSOLIDATED MINES,
*Auburn, Calif., October 31, 1945.*

Mr. CLAIR ENGLE,
*Member of Congress, Washington, D. C.*

DEAR CLAIR: Thanks for the copy of your bill for the relief of the gold miners. That is a practical move on behalf of this ignored industry and naturally, originates from the one man in Washington realizing our plight and with determination enough to attempt to do something about it.

I note that gold mining is booming in Canada. Also, that neither Russia nor South Africa are letting any of their gold out of their hands. In fact, only our Nation seems indifferent to the metal and, as a consequence, it is only a misfortune to be a gold miner if his mine happens to be in the U. S. A.

The President's generous attitude toward labor, and his consideration for those industries whose margin of profit is so slight that advances in price are required in order that they exist, and so are permitted to apply for permission to advance prices, was noted in yesterday's speech. But, as there cannot be any advance in the price of our product except by international agreement, how is the operator of a gold mine to compensate for this increase in the cost of production incurred by increased wages? Perhaps this would be an auspicious time to advance a bonus on newly-mined gold? A few high-grade properties may be able to shoulder this additional burden, but the majority of California's gold mines are marginal and for them this is out of the question. So what?

We are having the first storm of the season. It started yesterday and looks as though it might clear up tomorrow. Please keep us informed of progress, and know we greatly appreciate your thoughtfulness and efforts.

Cordially,

JACK.

## Discharges From the Armed Services

EXTENSION OF REMARKS

OF

## HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. ROBERTSON of North Dakota. Mr. Speaker, I am daily in receipt of letters from men in the armed services expressing a desire to be allowed to return to their homes. Some of these come to me from the theaters of war in Europe and Japan, and others from camps in our own country, as well as many from their families. I feel particular concern on this question for those who have served long periods of time overseas, and equal concern for those who have families at home dependent upon them.

I am further concerned with the vast numbers of young men who have been taken into the service and deprived of opportunity to finish their education. This situation was imperative so long as the Nation was at war. It seems to me now that the country is at peace again every effort should be made by the War Department to return these students in order that they may complete their education. We have a responsibility to them, and there will come a time when their education will be of immense value not alone to them, but in the public service they may render to the country in private life. We will need educated men in the future.

I express equal concern for young men who have been taken from the farms of the country. I know of many instances in the State of North Dakota where young men have been taken into the service of their country, leaving their aged parents to carry on as best they can. These cases should be looked into intelligently and carefully by the War Department. There are hundreds of instances where men are being held in the service today where they can render no further service to their country. They should be returned to their farms and to the farms of their parents. Their contribution to the country would be of vastly greater importance at home than to be retained in the armed forces.

Under unanimous consent, I include herewith excerpts from a few letters which have come to me within the last few days:

1. "I would like to write you a few lines concerning my son who is in the Army. He has been in the Army now for 25 months, nearly a year overseas. He has been on the island of Okinawa since the island was taken, and is still there. He is very anxious to get back in the States so that he can continue his studies which he started before he was drafted into the Army. Great promises were made him that he would go back to school as soon as the war was over and it is up to the ones in higher authority to see that these promises are fulfilled."

2. "We have been hearing so much about the discharging of servicemen for continuing their education and this especially among the medical men who are so badly needed in the States. Very little is being done, although a lot is being said. My husband has been in the service over 2 years. At the time he joined the ERC in college, many promises were given to the students about finishing their period of training and education. He was a medical student and the Army called him in spite of the special set-up which he was in. He was given a short period of training and was then sent overseas. Now the war is over, he wishes to continue his work in the field of medicine, and in spite of the fact that every newspaper and magazine keep telling those fellows of the need of medical students here in the States, they are not being given the opportunity to do so. Like so many others, why can't he be released and allowed to continue his schooling? These boys have done their share of fighting and it is the least they deserve after all that they have done for their country."

3. "I am writing to urge you to do everything possible to speed up the release of men in the Army and Navy whose services are not needed. My only son got the first 2 years of his medical education at the University of North Dakota before the Navy took over the education of young doctors. Then the Navy ordered him to Duke University Medical School, July 1, 1943, where he finished his work on March 24, 1945, and got his degree in medicine. He was then ordered to Farragut, Idaho, to serve as an intern in the United States Naval Hospital, where he started his duties April 1, 1945. As long as there was work to do there he was happy—he was very willing to do his part. But for the past 3 months there has been less and less work to do at Farragut Naval Hospital. Now there are three times as many doctors there as are needed."

4. "Now that the war has been won it appears to me that the size of the armed forces can be cut. I was one of the last

ones drafted from our county, being as I am, 32 years old, having been married 10 years and the father of two children, ages 8 and 5. I was considered essential but due to the shortage of available men I was inducted on May 15, 1945. The allowance my wife gets, in addition to being a great burden to the taxpayer is not sufficient to care for my family with living costs as they are. It appears that with volunteer and Army career men, and men 18 to 26 without families, they will have a more efficient Army than they would have keeping us family men in and take a chance on our homes being broken up in addition to the added expense."

5. "Now that the war has come to a successful end the next thing that comes to our minds is what is going to happen to the men in the service that have been recently drafted and are past 26 years old with families. I am 28 years old. I was married in 1940 and have two children, one 4 and one 2 years old. I was kept out of the Army so long due to the fact that I was a family man, and now with the point system it looks like the men drafted within the last year will be the last ones out. We were the last ones in due to our families and I really believe we should be in line as being the first ones to be discharged."

6. "I think something should be done about discharging limited servicemen who are classified as unfit for overseas duty and have never been able to serve overseas. They have no way of getting enough points to be discharged the way the point system is now and it is not their fault they haven't been able to go overseas to get their points that way. My husband is 30 years of age and has been in the Army since August 3, 1942. He went in with the first group of limited service fellows and was always classified as unfit for duty overseas, consequently he has been shoved here and there from one Army camp to another for the simple reason that the Army has not known just what else to do with some of these men. I suggest something be done for their benefit also as they have surely done their duty."

7. "My son who is now 21 years old entered the Army 2 years ago. He had been a premedic student at the Jamestown College for one full term of 9 months and 3 months' summer school and had started another year at the college when he left for the Army. He trained as a tail gunner on a B-17. Spent over 5 months in England during the war with Germany. Made 14 bombing missions over Germany, Czechoslovakia, France, and Belgium, and in addition to this, made several food missions over Belgium and Holland while the fighting was still on. He did not receive credit on his combat missions for the food missions nor was he given credit on his combat hours for the food missions. His outfit received a Presidential citation for their bombing of some port in France that was still being held by the Germans. He is now at Drew Field, Tampa, Fla., and has been there since August of 1945. He has been assigned to MP training. Imagine a man wanting to get back into college to complete his medic course and gets thrown into an outfit like the MP's."

8. "I am writing you in regard to my husband who is now in Japan. He entered service May 22, 1942, and went overseas in December 1942. He has served in Fiji Islands, New Caledonia, Philippine Islands, and now is in the mainland of Japan. He has 77 points to September 1 and has had only a 7-day furlough since he entered the service and that was just before he went overseas. Isn't there some way you could send him home, as he has been there almost 3 years?"

9. "My husband is in the service and is in Camp Berle, Calif. He writes me that he is just idling his time away. I need him at home and I have four children to take care of. I am requesting you to use your influence to get his discharge."

10. "I am writing to you about my son. He will be 30 years old next January and has worked with me in my farm-machinery business since he was out of high school. He was sent to Italy in 1944 and fought in France, Germany, and Austria to the end of the European war. He has applied for a discharge to his commanding officer. I forwarded a number of affidavits to him, one from my doctor who is treating me for arthritis and heart trouble, but that was rejected and "not essential" written over it. Now I am past 70, raised a family of 10, all of whom are either married or on their own and have but four boys left single. One spent 3 years in the Army and is discharged and is all crippled up with arthritis and drawing a small pension. He is unfit to work. Another boy served in the Army nearly 5 years and is still in Japan. My youngest boy is 19 and is in France and expects to be sent to Germany for some time to come. I tell you I am desperate, and there is this son doing nothing in camp but chewing his fingernails, as he writes, and becoming a bum if he has to stay in longer. Surely there can be no just reason for not discharging him as he is surely not worth a thing to the Army while here the job is waiting for him, and not only that, but three or four more jobs for others if he takes over, which I want him to do as I cannot in present state of health carry on any more."

11. "I received yours of October 1 and usual paper phooey on discharges. Many others are getting out. We lost over $5,000 in crops and wages by the taking of all our help. We want our boys discharged and home by Christmas. Now the war is over—we will choose our help according to their ability to serve all alike."

## Do Retailers Get a Square Deal From Government?

EXTENSION OF REMARKS

OF

### HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. BENNETT of Missouri. Mr. Speaker, today I attended, together with many other Congressmen, a meeting of the House Small Business Committee, which is considering the OPA policy of cost absorption, as applied now to automobile dealers. The dangers in this unfair policy have long been apparent to me and it has been evident to all of those of us who have studied the matter that the policy would gradually be extended to more and more lines of business, if the OPA planners get their way.

Under leave to extend my remarks, I include the following brief article prepared by me and published in the November issue of the Missouri Grocer, the monthly magazine of the Missouri Retail Grocers' Association. The article follows:

DO RETAILERS GET A SQUARE DEAL FROM GOVERNMENT?

(By Hon. MARION T. BENNETT, Member of Congress, Sixth District)

I have been invited to express my views as to what the Federal Government appears to have in mind for private enterprise, especially the retail merchant. It is with mixed feelings that I undertake this assignment because I fear that many of the things that the present governmental leaders tell the merchants of the country they wish to do for them will never become a reality.

On the other hand, I am fearful that many things will be done to our retailers by the present administration which were not bargained for when we last went to the polls. To be blunt, the outlook is far from promising.

The American retailer today faces the greatest challenge in his history. For scores of years, prior to this war, the distributors of this Nation have operated under a competitive system that could truly be called free enterprise. Today, however, just at a time when the frustrations caused by operating in a wartime economy should be coming to an end, the retailer finds himself threatened by a form of unfair competition which he cannot beat down by supermerchandising methods or by sheer ingenuity and energy.

Today his competition is not that of the store across the street, but the coercive force of misused policing powers vested in the hands of the Government itself. Today, the retailer's competition sneaks up behind him and grabs him by the throat in a manner that he cannot combat.

This crippling force of governmental interference takes several forms. I shall only discuss a few of its manifestations in these limited remarks.

First of all, it manifests itself in that travesty upon justice—the OPA pricing policy known as cost absorption. This new device to confuse and upset the retailer in his normal business calculations has not yet been foisted upon the retail grocer, but, in my opinion, it is only a matter of time until he, too, feels the weight of this regulatory squeeze.

Cost absorption, as you know, instead of encouraging a man to stay in business, sets up squeezing price powers which, if carried through, can only result in his being put out of business in a relatively short space of time.

As I stated, not all of our retailers have yet felt this squeeze. Certain product lines have been temporarily exempted from the formula. In the hard-goods line, however, the squeeze has already commenced. In my opinion other lines will shortly be placed under the same order unless the Congress or the President takes prompt action to prevent the OPA from carrying further this destructive and almost criminal policy.

OPA's price-control program for the reconversion and transition periods rests upon a series of wholly unwarranted economic assumptions. We all agree that a flexible control over prices on essential living items is important and might act as a brake upon runaway price rises. OPA's policy of rigidly controlling almost every known price, however, impairs the incentive to produce and thus adversely affects the number of jobs we may expect to have available. The natural carollary to this is that we then find a further restriction on the volume of civilian goods for which there is an admitted pent-up demand.

A policy of rigid price control while wage increases are permitted or encouraged is doomed to failure, in my opinion. It is economic fallacy to think that it could ever succeed.

Statistics show that wartime earnings before taxes for retailers have increased far less rapidly than in other industries. The record shows that earnings of manufacturing corporations increased approximately four times as much as did earnings of unincorporated retailers during wartime. Most retailers, of course, still operate in the unincorporated form. I shall discuss these tax problems also a little further on.

Today, retailers are being asked to absorb the price increases that are being given to the manufacturer in practically every case. For example, of the 54 general price increases granted by OPA to manufacturers in the first 7½ months of 1945, distributors were required to absorb the full increase in 51 in-

stances. In 1944, 54 increases were also given to manufacturers. In those cases also the retailers assumed the absorption of the full increase in 35 cases, with no absorption being asked of the wholesaler.

That is just the beginning. The flood of manufacturing increases is just before us and the retailer has only begun to absorb these increases if OPA is permitted to have its way.

It is a recognized economic fact that volume of retail sales are closely related to changes in individual incomes. We all recognize that many individual incomes are going to fall below wartime inflated levels as the war production demands cut off, as the servicemen return, and as discharged war workers are forced to seek other employment. This decline is already under way and is reflected in Nationwide statistics for retail sales.

Statistics also show that the actual cost of retailing per transaction rose during wartime. It is not likely that this trend will be reversed in any great hurry. Why OPA does not recognize these fundamental economic facts is more than I can understand unless it be that the course that agency is plotting is deliberate and of a sinister nature.

Incorporated retailers turned over as taxes to the Federal Government 9 cents of their sales dollar during wartime as compared with about 1 cent before the war. With the heavy national debt still hanging over our heads, we are not safe in assuming that this tax liability will become very much less for many years to come.

All evidence points to the fact that the small retailer will be less able to absorb these manufacturing price increases than will the large retailer and the chain store. The margins which OPA proposes to allow retailers in most lines will be so inadequate that failures may be expected on a large scale unless prompt action is taken to stop this un-American and, in my opinion, illegal policy.

To top this we now have a leading Democratic Senator, the chairman of the powerful Senate Finance Committee, insisting that tax reductions shall not be granted to the small man for psychological reasons. He says that he must be made conscious of his duty to the Government. Whose Government is this, I ask, unless it is that of the little man?

I fear inflation. Everyone with a grain of common sense fears inflation. But, when we weigh these punitive, rigid, stupid, unimaginative, and undemocratic policies which OPA is now pursuing against the problems of providing full production and full employment, I say that the present administration is playing a dangerous game in promising us prosperity on the one hand and building us a one-way highway to permanent depression and breadlines on the other.

Let me point one or two other examples of this short-sighted Federal policy with respect to retailers and small businessmen.

The Department of Commerce, headed by Henry A. Wallace, has charge of selling surplus consumer goods which the Government no longer needs for its own purposes. Under a policy which presumably carries Mr. Wallace's personal approval, that Department gives to chain stores and mail-order houses an extra discount which is often as much as 20 percent when a chain store or a mail-order house makes a purchase of surplus consumer goods from the Government. And it does this even where the purchase covers small lots of a size that independent, small retailers would willingly acquire for their own stocks.

Thus, we find another powerful agency of Government deliberately putting road blocks in front of small retailers and, in effect, subsidizing their large competitors, the chains and mail-order houses. How much longer these policies will prevail depends upon the President, the Congress, and the President's right-hand officials.

Again, let us look at the manner in which another Government agency favored large firms over small ones in the allocation of scarce materials. A survey of the textile low-cost-garment program made last summer showed that the War Production Board had so arranged its allocation orders that one single chain outlet had secured title to 95 percent of one class of men's underwear, 81 percent of another class, and 75 percent of still another group. Those things just can't happen under a Government-materials-control program unless the officials in charge of the program are aware of what is going on.

Taxwise, the small retailer faces a very uncertain future. Excise taxes, continued high income taxes, and little sympathy for the needs of small firms to build up adequate reserves of capital with which to meet their competition and periods of lean times seems to be the order of the day. It avails a merchant nothing today to merely act as a middleman of funds which pass across his counter to rest ultimately in the Federal Treasury. No credits or exemptions are offered to him for the amount of midnight oil he burns or the paper he uses in filing out the multitudinous forms required of him as the Government's tax collector and for other purposes.

I could go on and mention other examples than these, some so ridiculous as to be almost unbelievable. I shall not bore you with the details, however, because many of you readers have a greater detailed knowledge of some of these problems and obstacles from first-hand experience than I have.

Considering the picture from the broad viewpoint, however, I feel that the combination of all of these Federal actions I have mentioned constitute the gravest threat to our postwar happiness and prosperity that can be imagined.

Our retail merchants are the backbone of this country. Their futures are at stake in this wierd program which has been given to us by the theorists of the OPA by remote, but firm, control. The other programs referred to are just as potentially dangerous because they reflect a sinister and incomprehensible program which, if followed to its final implications, will throttle and put out of business the majority of the small merchants of the Nation.

There has been too much propaganda during the past few years from the viewpoint of the consumer and not enough from the viewpoint of the man who sells the consumer the great bulk of his purchases.

Price control, low selling prices, keeping the cost of living down, and all of the other aims we seek are laudable in the extreme, but when these aims conflict with the fundamental aim of our Republic, which is freedom of enterprise for the individual, then a crossroads has been reached and a decision must be made

Unless our present governmental leaders change their minds and reverse themselves on some of the programs that they are trying to foist upon us, I fear for the future of the independent merchant. When he fails, the bulwark of democracy in this Nation goes down with him.

Mr. Speaker, the Select Committee of the House of Representatives to Investigate Executive Agencies has submitted its report, No. 1142, as of October 22, 1945, on the subject of the reconversion policy of OPA. Here is its opening statement in that report:

The policy of adherence to rigid formulas has retarded reconversion, prevented production, especially in low-priced commodities, has restricted opportunity for full employment and has, at least in some instances, actually caused prices of cost-of-living commodities to rise. It has compelled manufacturers to discontinue and abandon production of prewar low-priced commodities they were skilled in making in great volume and has permitted newcomers to manufacture such commodities at higher prices than were necessary to enable those already in the field to stay in business.

The report then continues with a few specific but typical examples:

The largest-volume low-priced awning manufacturer in the country produced prewar a window awning which retailed in tremendous quantity at $1.59. Manufacturing costs have risen, he required an increase which would have resulted in a retail price of $1.79. Unable to get it, he abandoned that product. A vastly inferior awning of the same size, made by a newcomer to the field sells at retail for $3.28 with OPA approval.

A large-volume manufacturer of low-priced electric irons was given authority by War Production Board in May 1944 to manufacture 58,000 irons. Application was made to OPA for a price which would permit these irons to be manufactured and retailed at less than $3. Seven months elapsed before any price was granted. The price then granted was not sufficient to cover manufacturing costs. In consequence, these irons were not produced. In contrast, a newcomer to the field was granted permission by CPA to price an inferior and inherently dangerous electric iron to retail at $5.50.

A large-volume manufacturer of home medicine cabinets, whose products wholesaled prewar at 70 cents and $1.50, needed an adjustment to cover increased costs of manufacture. He could not get the adjustment and was forced to discontinue these items. In contrast, a newcomer to the field, whose own business had been the manufacture of lamp shades, obtained OPA approval of wholesale prices of $1.30 and $2.30, respectively for identical medicine cabinets.

Your committees' investigation also revealed that current OPA policy includes a practice known as open billing. Under this practice a merchant has no way of knowing how much his merchandise will eventually cost him as the manufacturer's price depends on subsequent OPA action.

In one such instance a merchant, having long since sold goods so purchased, was billed an additional $45,000 because his supplier later received authority to increase his price. In another, a merchant having received 200 washing machines sold them to his customers and is now nervously awaiting OPA action to ascertain how much money he may have lost.

On the other hand, some merchants are more cautious and refuse to sell commodities until they know the price at which their suppliers will eventually bill them. Despite theis customers' need, and their own reluctance, such merchants are obliged to warehouse their goods and scarcity is prolonged with all its consequent hardships and dangers.

The Nation's productive potential, long geared to the necessities of all-out war, must be assisted and directed as rapidly as may be to the resumption of the important function of providing for the citizenry the high standard of living in which it is their birthright to participate and flourish. To bring this about, and to make its fullest realization attainable in the nearest foreseeable future should be the actuating policy and underlying motivation of all official thought, concept, and action.

The primary need of our Nation's economy in the reconversion period is ever-increasing production. The actions and policy of OPA should reflect this fact. No action which curtails or shuts off production should be taken by that agency. On the contrary, where there is conflict between rigid holding of the price line on one hand and increasing production on the other, the latter must now be the controlling consideration.

That is the language of the committee report, and, of course, it is right as far as it goes. I would go a little further and say that we should declare this war at

an end and as quickly as possible abandon these attempts at a managed economy into the mire of which we sink a little deeper with each new OPA directive.

## General Motors' Answer to UAW-CIO Demands

EXTENSION OF REMARKS
OF
**HON. GEORGE A. DONDERO**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. DONDERO. Mr. Speaker, the CONGRESSIONAL RECORD of November 6, 1945, carried the statement of Walter P. Reuther, vice president and director of the General Motors department of the UAW-CIO's demand for a 30-percent wage increase.

In order that the public may have full and complete information regarding the wage controversy between the UAW-CIO, General Motors and other automotive industries, I offer for the RECORD a statement of Mr. C. E. Wilson, president of General Motors.

General Motors, like the rest of the automobile industry, believes in high wages. It has paid high wages in the past and expects to continue to pay high wages in the future. General Motors wants all jobs in its plants and offices to be good jobs, not only in terms of working conditions and opportunity, but good jobs as judged by compensation for equivalent work generally throughout the country.

Immediately at the end of the war, the UAW-CIO made a demand for a wage increase amounting to 52 hours' pay for 40 hours' work and backed this up by a strike threat. Other CIO unions representing others of our employes made similar demands. These demands were made even though the union officers knew that as a result of our war effort there would be a considerable period during which profitable volume operations were impossible on account of the reconversion problems. The demands were made even though they also knew we were making every effort to speed the reconversion of our plants, restore peacetime production, and expand employment.

They expressed these demands on two principal counts:

1. Maintenance of the wartime take-home pay of employes on the argument that employes should be paid the same amount of money for 40 hours' work as they had been paid for 48 hours' work including overtime on the extra hours over 40.

2. The assumed ability of the corporation to pay this large wage increase either from working capital, tax refunds from the Government or estimated future profits.

On October 3 General Motors refused this unreasonable demand for a 30-percent increase because we were convinced that there was no justification or merit in the reasons advanced supporting the demand. Moreover, we believed that such an increase was not consistent with the country's effort to stabilize wages and prices and avoid inflation.

We would like to have been better prepared for peacetime production, but the necessities of the war effort, as interpreted by those responsible, did not make this possible. Therefore, a number of employees had to be temporarily laid off. However, in order to speed up reconversion all those who could be employed on such work have been employed more than 40 hours. Likewise contractors who are building new plants and modifying our old ones have had their employees work more than 40 hours and paid them the extra premium for overtime work. Speeding up this work has meant extra cost which the contractors have charged to us. We have done everything we could to employ quickly more men than ever before worked for General Motors in peacetime. We have worked more than 40 hours per week where this would expand production and employment.

If it had not been for strikes in plants of our suppliers and one or two in our own plants—most of which the UAW-CIO was responsible for—we would have already employed many thousand more workers on productive work, and they would be working more than 40 hours per week to meet the demand for our products which so many people need so badly. Plants like our electromotive plant at LaGrange, Ill., where we build Diesel locomotives and where there was no reconversion problem, have been regularly scheduled at 48 hours per week. Since we were doing everything we could to speed up production and were willing to pay the extra overtime premium for the work, we did not think there was any merit whatsoever in the take-home pay argument. Paying more money to those who are working will not help those who are temporarily laid off.

Few people realize that working more than 40 hours a week in manufacturing plants does not result in unemployment. Obviously, when all the work places or jobs are filled and a plant is operating only 5 days or 40 hours per week, no more people can be employed on this basis but the plant will remain idle on the sixth day. Therefore, working extra time on the sixth day or more than 8 hours per day for 5 days per week does not prevent a single additional person from getting a job. Additional employees cannot be employed for a few hours per week. More people are actually employed in distributing the extra products produced and in other occupations supported by this higher level of production.

Demands were pressed for the unreasonable increase in wages, without any corresponding increase in productivity over prewar levels, on the assumption that the additional costs could be absorbed from profits previously earned, from tax refunds in case of operating losses, or from assumed future profits. General Motors is not willing to pay out in excess wages for work not performed money saved up for many years to modernize and expand its plants and provide more good jobs. The money cannot be spent twice. Neither is General Motors willing to sell its products at such excessively low prices in relation to costs as to incur an operating loss and get a tax refund with which to pay excessively high wages. The union is really proposing that the taxpayers of the country be called upon to subsidize either unjustifiably high wages or uneconomically low prices on General Motors products. We will not be a party to a proposal to subsidize the prices of our products at the expense of the taxpayers.

Extravagant estimates have been made by the union regarding the possible future production volume and profits of the corporation. In its reply to the union's brief made today, General Motors pointed out some typical examples of the inaccuracies and distortions in the union's figures.

General Motors rejects the theory of ability to pay as a valid argument for demanding high wages for the employees of a particular concern as compared to wages of other workmen doing similar work in related industry. To demand that we should pay our employees higher wages than others pay is just as unreasonable as it would be to demand that we pay higher freight rates than others or higher prices for our materials. It would be like requiring certain individuals riding on trains to pay higher fares for the same distance and class of service than others or asking some citizens to pay a higher price for a loaf of bread in the same store than others pay.

Under the National Labor Relations Act, collective bargaining specifically calls for bargaining over wages, hours, and working conditions and other conditions of employment and does not provide for bargaining with unions over prices of products or assumed future profits.

We expect in the postwar period, and as soon as our plants are completely reconverted, to make a reasonable profit, continue to pay high wages, and deliver good products to our customers at fair prices.

It is almost 4 years since we produced automobiles and there never has been a time in the history of the business when it was more difficult to determine costs. This is especially true in view of the fact that practically all of our suppliers are being confronted with excessive wage demands and do not know at what prices they can afford to sell us their materials. Nevertheless, this question of car prices must shortly be settled with OPA since all of our divisions are now in some production, cars are being delivered to dealers and they should as soon as possible be made available to the public who have been waiting so long for their new automobiles.

There was no provision in the OPA formula anncunced September 6, for recognizing any general wage increases that would affect costs and prices. This matter is fully presented in our answer to the union's brief.

On Tuesday, October 30, the President of the United States made a talk to the Nation on the question of wages and prices and anncunced a new Executive Order, No. 9651. This order modifies previous Executive orders and particularly gives authority for recognizing, as affecting costs and prices, any current wage increases necessary to make the percentage increase in average straight time hourly earnings since January 1941, equal to the percentage increase in the cost of living between January 1941, and September 1945.

Since this new Executive order is now part of our country's wage and price stabilization policy, we are offering under these new circumstances to increase those wage rates by classifications which since 1941 have not been increased in proportion to the increase in the cost of living as determined by the Government agency responsible for administering these Executive orders.

When these adjustments have been made, our factory employees will have had their wages, on the basis of a 40-hour week, increased in proportion to the increase in the cost of living since January 1941. This means that the standard of living of our factory employees will have been maintained in spite of the war and the difficulties of postwar reconstruction. Whether or not the cost of living and basic wage rates can be kept in line in the future will depend on whether or not the people of our country are willing to work for the things they would like to have.

## What Is the World Bill of Rights Association, Inc.?

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. O'KONSKI. Mr. Speaker, the World Bill of Rights Association, Inc., was founded in the belief that if the rights of men are not respected in all

countries of the world, they cannot remain secure on our continent. Freedom is not static; it either expands or it shrinks. It seems that with the present powerful offensive of communist totalitarianism, only a militant movement, dedicated to the expansion and protection of human rights everywhere, can save Christian civilization and the democratic way of life. An all-out offensive based on the principles contained in the Bill of Rights appears to be the urgent necessity of the day.

The association believes that it is not alone in this conviction. Many outstanding men of the church and in public life in America, on various occasions, have expressed similar views in this matter.

President Harry S. Truman declared at the final plenary session of the United Nations Conference at San Francisco, June 26, 1945:

Under this document we have good reason to expect the framing of an international bill of rights, acceptable to all nations involved. That bill of rights will be as much a part of international life as our own Bill of Rights is a part of our Constitution. The charter is dedicated to the achievement and observance of human rights and fundamental freedoms. Unless we can obtain those objectives for all men and women everywhere without regard to race, language, or religion, we cannot have permanent peace and security.

Church leaders everywhere are saying:

In all history, and particularly in modern history, dangers to world peace have come from the unjust treatment of minorities, the denial of civil and religious liberties, and other infringements on the inborn rights of men. To remove these dangers, the nations should adopt an international bill of rights, in which men and groups everywhere would be guaranteed the full enjoyment of their human rights.

And in their latest utterances after the termination of the London Conference, both the Secretary of State, Mr. James Byrnes and his Republican adviser, Mr. Foster Dulles, placed themselves on record in favor of an international bill of rights as the necessary solution for all mankind.

The principles and objectives of the World Bill of Rights Association, Inc., are as follows:

First. While establishing the association, its founders were aware of the fact that although the war is victoriously ended, freedom in large areas of the world is gravely menaced. Human rights, as defined in the Bill of Rights, are under repeated attack and constantly violated. Thus the very foundations of the democratic concept of life are undermined. Many regimes, although assuming a false cloak of democracy, practice terror, and suppress the elementary liberties of people.

Bearing this in mind, the association has dedicated itself to the restoration of freedom and respect for the individual, as the principal condition for democracy. No system, whatever its name may be, which disregards these fundamental rights, can be considered democratic. The bill of rights is the only genuine and undistorted criterion for democracy.

The association will, therefore, denounce and combat any such attempt to falsify or abuse the concept of democracy, as the gravest danger to the minds and consciences of humanity.

Second. The first objective of the World Bill of Rights Association, Inc., is to bring about a better understanding of the true meaning of the Bill of Rights and of its implications among the people of the United States. This will be done through publications, mass meetings, lectures, and so forth. In each important center in the United States branches of the association, closely linked with the headquarters, will be established.

Every group definitely opposed to totalitarianism and believing in the principles of the Bill of Rights is welcome to collaborate on this program.

Third. The association will struggle for the establishment of the Bill of Rights in all countries in the world, and will give all possible support to groups and organization everywhere that accept the principles of the Bill of Rights as their program.

The association trusts that most countries will in due time establish their own national world bill of rights associations, working in close contact with the American headquarters.

Fourth. Simultaneously with the organizational work, all effort will be made to protect the rights of all people who suffer today because of political and ideological tendencies and systems suppressing human rights and liberties.

The association will:

(a) Endeavor to bring to the American people the true picture of and facts concerning the fate of peoples and nations now living under totalitarian domination.

(b) Denounce and combat any false propaganda trying to camouflage the real aspect of policies leading to gradual extermination of religion.

(c) Denounce all governments and regimes which under whatever name or slogan suppress the rights of men.

(d) Concern itself with the fate of those people who, because of conditions of terror in their native countries, became homeless.

Fifth. The association will strive for the application of the following basic rules as essential conditions for a civilized, Christian, and democratic regime anywhere:

(a) Full freedom of religion, both in the field of religious services, rites, and teaching.

(b) Full freedom to organize political parties, two or more, according to the desires of the population, and not just one party or political front on the totalitarian pattern.

(c) Constitutional government based on free elections, secret ballot, freedom of open campaigning for all parties.

(d) Full freedom of speech, writing, expression, assembly, and the right of citizens to criticize their own government.

(e) The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches, and seizures. Security of all citizens against unlawful arrest, detention, or persecution because of religious, political or other convictions. No secret police, concentration camps or any other methods shall coerce and terrorize human minds.

(f) No trial without legal defense and jury.

(g) Impartial courts, free from political influence or pressure.

(h) Freedom of labor to establish and join unions, to strike, to collective bargaining and decent wages.

(i) Adequate protection for the sick, aged, and disabled. Necessary insurance in case of unemployment, sickness, old age, or death for wage earners.

Sixth. The association will seek and demand, under the United Nations Charter and under the Atlantic Charter, for all nations:

(a) Freedom to work out their own destiny with justice and equality before the law.

(b) True independence and right of self-determination.

(c) Territorial settlements in conformity to the wishes of the people concerned.

(d) Rightful voice in treaties of peace so that justice and equal treatment be assured to all.

Seventh. The association will strongly advocate the restoration of principles and morality as a guide to conduct, and the subjection of physical power to the restraints of moral law.

By starting a militant movement, dedicated to these ideals, the association believes itself to be fulfilling the obligation of every true American toward the dead in this war, and to all those people who, placing their hopes in democracy, conducted a sanguinary fight for freedom for over 5 years. Now that the military campaign has been victoriously ended, an equally powerful campaign for the rights of men must be launched. Only full success of this campaign can assure a just and permanent peace for the whole world.

The charter members of the World Bill of Rights Association, Inc., are representatives of Americans of Estonian, Finnish, Hungarian, Latvian, Lithuanian, Polish, Serb, and Slovak descent. Other groups or persons can join by contacting World Bill of Rights Association, Inc., 103 Park Avenue, Room 511, New York 17, N. Y., telephone Murray Hill 5-6486. For freedom's sake, join now.

HOW YOU CAN JOIN IN THE FIGHT FOR FREEDOM

Any freedom-loving group, club, society, or individual can join by writing: World Bill of Rights Associations, Inc., 103 Park Avenue, room 511, New York, N. Y., telephone Murray Hill 5-6486.

The fees and dues for membership are as follows:

*Clubs, groups, societies, etc., national or central organization*

| | |
|---|---|
| Charter and life membership | $1,000 |
| Honorary life membership | 500 |
| Honorary year membership | 100 |

*Clubs, groups, societies, etc., local chapters*

| | Per year |
|---|---|
| Sustaining membership | $50 |
| Active membership | 25 |
| Participating membership | 10 |

*Individual membership*

| Regular membership | 1 |

## Opposition to OPA Plan

EXTENSION OF REMARKS
OF

## HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. BROOKS. Mr. Speaker, by telephone and telegraph, I have received protests from my people against the OPA plan which is now proposed to increase the factory profits at the expense of the automobile dealers throughout the country. I have studied the proposed plan carefully, and I feel that if instituted, it will perpetuate a rank injustice on the little automobile dealers throughout the United States. It will mean that many dealers will have a struggle to carry on, and that some dealers, now near the margin, will be thrown completely out of business.

But more than this, Mr. Speaker, the OPA plan, as proposed, will mean that the entire country will make a direct contribution to the financial good health of the giant automobile factories of the Nation, located largely in the Detroit area of this country. The little dealers will be scaled down—not to help the public bear the heavy costs of rising prices—but for the purpose of increasing profits to a few big factories.

Mr. Speaker, I hope the OPA will "Stop, look, and listen" before making this serious mistake and before perpetrating a most serious injustice upon these people throughout America. To show the general interest being manifested in opposition to the OPA plan I am setting forth telegrams which I have received from dealers in Louisiana:

HOMER, LA., *November 7, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Please attend OPA hearing Thursday, November 8, 10 a. m., and protest reductions in dealers discount.

WEST MAIN MOTOR CO.,
F. P. MCFARLAND.

---

HAYNESVILLE, LA., *November 7, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Our delegation will be in Washington Thursday to attend OPA meeting and protest reduction in dealers discount at OPA hearing. Will appreciate you attending meeting and cooperating with delegation.

Thanks.

HAYNESVILLE MOTOR CO.,
GEORGE BREED.

---

MINDEN, LA., *November 7, 1945.*
Congressman OVERTON BROOKS,
*Washington, D. C.:*

OPA has not announced retail price on automobiles. It is rumored that OPA is considering a 50-percent reduction in the dealers discount. We have handled automobile dealers accounts for many years and know such a reduction in the dealers margin would be ruinous. Such price fixing would force dealers who want to comply with the law out of business and turn the sale of new cars over to the unscrupulous who would handle them in the same manner that a great many used cars are being handled today. In the interest of honesty in merchandising, respectfully request you to use your influence with OPA to allow the usual dealer discount in the fixation of retail prices of automobiles.

MINDEN BANK & TRUST CO.,
J. E. HARPER, *President.*

---

URANIA, LA., *November 8, 1945.*
T. OVERTON BROOKS,
*Member of Congress:*

Would be glad if you would request Mr. Bowles to withhold all price orders on automobiles pending hearing before House Small Business Committee. Prices should not be fixed until this committee is heard.

Q. T. HARDTNER.

---

MANSFIELD, LA., *November 7, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Our Louisiana dealers' delegation will attend an OPA hearing Thursday, November 8, 10 a. m., to protest their plan of reducing the dealers discount. This would be a most unfair reduction at this time when we must incur heavy expenses in rebuilding our organizations. Our committee will call you early Thursday, and I would appreciate it if you could attend the hearing with them and give us your enthusiastic support. Would appreciate it if you will wire me collect advising if you can give us this help.

AMOS N. LATHAM.

---

MINDEN, LA., *November 7, 1945.*
Hon. OVERTON BROOKS,
*Member of Congress,*
*Washington, D. C.:*

Small Business Committee hearing November 8 for discussion of OPA proposal to reduce dealers discounts is against all small dealers that have tried to operate legitimate business through the war period. The OPA ceiling on used cars has proven very unsatisfactory and has not been enforced, and it has worked a hardship on the new-car dealers, as they have not been able to buy the used cars but are being sold to people that are dealing in black market, and a reduction in new-car dealers' discounts will cause a widespread black market with new cars as some dealers will force a trade for the consumer to get a new car. I urge you to attend this meeting personally and give your full cooperation to the Louisiana delegation that will contact you early Thursday in defeating OPA proposal to cut dealer discounts.

T. C. BLOXOM MOTOR CO.,
*Dodge and Plymouth Distributors.*

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Our Louisiana dealers delegation will attend an OPA hearing Thursday, November 8, 10 a. m., to protest their plan of reducing the dealers discount. This would be a most unfair reduction at this time when we must incur heavy expenses in rebuilding our organizations. Our committee will call you early Thursday and I would appreciate it if you could attend the hearing with them and give us your enthusiastic support. Would appreciate it if you will wire me collect advising if you can give us this help.

PLEASANT HILL MOTORS CO.,
YEARWOOD.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Louisiana Automobile Dealers Association delegates will attend an OPA hearing Thursday, November 8, at 10 a. m., to discuss proposed plan for reducing dealer discount. This reduction would be most unfair at this time when we are incurring heavy expense in rebuilding our dealerships. Will greatly appreciate if you can arrange to attend this hearing with our delegates and give us your support. Will also appreciate if you will wire me collect advising if you can give us this help.

HOLMES FONTIAC CO., INC.
C. W. HOLMES.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*Washington, D. C.:*

Please welcome our dealer delegation from Louisiana that will attend OPA hearing Thursday this week in Washington. This reduction would be unfair in the face of higher overhead and salaries. I would appreciate if you would attend this meeting and go to bat for us. Please advise collect by Western Union if you will assist us.

HUTCHINS MOTORS,
T. W. HUTCHINS.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

We earnestly request your support in opposing proposed OPA reduction in dealers discount before Small Business Committee hearing Thursday, November 8, 10 a. m. This matter is of vital importance to all automobile dealers in view of the ever increasing operating costs. Please wire answer collect.

PACKARD SHREVEPORT CO.,
D. E. PROCTOR,
J. BRYAN THIGPEN.

---

VIVIAN, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

A most unfair reduction in discounts for automobile dealers is to be discussed at a OPA hearing Thursday, November 8, 10 a. m. A Louisiana delegation is leaving immediately for Washington to protest a reduction at this time when our reconversion expenses are mounting so rapidly. Our delegation will contact you early Thursday, and I would appreciate your wholehearted cooperation as well personally attending the hearing. Could you please wire me collect if you can give us this much-needed assistance.

CALDWELL & GIBSON, INC.,
C. T. GIBSON.

---

LOGANSPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*Member of Congress,*
*Washington, D. C.:*

Representatives from dealers meeting held in Shreveport today will attend OPA hearing Thursday, November 8, 10 a. m., in protest of plan to reduce dealers discount. If possible attend this meeting with our delegates. Any help you give them will be appreciated by us. If labor increases in auto plants our labor increases also. We think plan very unfair and ask your aid. Please wire us collect if you can and will go to this meeting with our crowd.

STUBBLEFIELD CHEVROLET CO.,
J. D. STUBBLEFIELD.

---

COUSHATTA, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Understand Small Business Committee hearing Thursday, November 8, 10 a. m., for purpose of discussing OPA reduction in deal-

ers discount. Louisiana delegation will contact you early Thursday and we must earnestly request that you extend to them your wholehearted cooperation as well as personally attending the meeting in order to defeat this most unfair reduction in our discounts. Particularly in face of increasing cost of labor, rent and other reconversion expenses in our business. Wire us collect at once and let us know if you can give us this assistance.

WILLIAMS and STRANGE.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

The automobile dealers of Louisiana are sending a delegation to Washington, November 8, 1945, 10 a. m., to protest their plans of reducing dealers discount. At this time we are having to increase our expenses considerably to rebuild our organization and we feel that reduction is unfair. Please expect a call from our committee early Thursday and I would appreciate it if you could attend the meeting and support our protest. I will appreciate it if you will wire me collect, advising if you can give us this help.

HOWARD CRUMLEY,

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Our Louisiana dealers delegation will attend on OPA hearing, Thursday, November 8, 10 a. m., to protest their plan of reducing the dealers discount. This would be a most unfair reduction at this time when we must incur heavy expenses in rebuilding our organizations. Our committee will call you early Thursday and I would appreciate it if you could attend the hearings with them and give us your enthusiastic support. Would appreciate it if you will wire me collect, advising if you can give us this help.

GLENN HUFF, INC.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Thursday November 8, 10 a. m., OPA will discuss reduction in discounts for automobile dealers, which, to me is most unfair. A Louisiana delegation is leaving immediately for Washington to protest a reduction at this time when reconversion expenses are increasing daily, and will contact you early Thursday morning. I will greatly appreciate your cooperation as well as your attending the hearing in person. Please wire me collect if you can give us this assistance.

W. B. SAFFORD, Jr.,
*President, Central Motors, Inc.*

---

SPRINGHILL, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Our Louisiana dealers delegation will attend an OPA hearing Thursday, November 8, 10 a. m., to protest their plan of reducing the dealers discount. This would be a most unfair reduction at this time when we must incur heavy expenses in rebuilding our organizations. Our committee will call you early Thursday and I would appreciate it if you could attend the hearing with them and give us your enthusiastic support. Would appreciate it if you will wire me collect, advising if you can give us this help.

BRANCH BROS. MOTOR CO.

---

MINDEN, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Have been informed Small Business Committee hearing is set for Thursday, November 8. To discuss reduction in dealers discount. Louisiana delegation to contact you Thursday and I earnestly request your wholehearted cooperation and your personal attention with you personally attending the meeting in order to defeat this unfair reduction in automotive dealers discount. Since we are faced with increased labor, rent, and reconversion cost and have gone through 4 years without any new cars whatsoever I feel that this is a gross injustice to all the dealers in the United States. Wire collect if you can and will give our committee assistance.

STANDARD CHEVROLET CO.,
K. L. ALBRITTON.

---

MINDEN, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Understand Small Business Committee hearing Thursday, November 6, for purpose of discussing OPA reduction in dealers' discount. Louisiana delegation will contact you Thursday. We most earnestly request that you give them your hearty cooperation in their efforts. It is further requested that you personally attend this meeting in order to defeat this disastrous reduction in discounts. It is apparent to all of us that gave our services to the armed forces that governmental forces are operating to our disadvantage, to say nothing of the dealers that stayed in business and kept the transportation system of the Nation intact. The automobile dealers were the first American civilian casualties of this war; they will be the first to bring to the public the fruits of a true reconversion policy. Why should they be penalized in order to help OPA appease a labor group that has made more money than they ever dreamed possible? Cost of living, cost of labor, rents, and all equipment pertaining to this business has increased at least 30 percent. Let's halt this thing somewhere if we all have to quit. Your help will be appreciated.

T. & M. MOTOR CO.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

The OPA is to have a hearing on the reducing of automobile dealers' discounts at 10 a. m., Thursday, November 8. This proposed discount is an unfair reduction during this time of reconversion. A group of Louisiana automobile dealers will call on you early Thursday morning and I would appreciate you attending this meeting with them and giving them all the support you can; please wire me collect advising if you can give us this help.

RED RIVER MOTOR CO.,
PATTON HAWKINS.

---

HOMER, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Our Louisiana dealers' delegation will attend an OPA hearing Thursday, November 8, 10 a. m., to protest their plan of reducing the dealers' discount. This would be a most unfair reduction at this time when we must incur heavy expenses in rebuilding our organizations, our committee will call you early Thursday and I would appreciate it if you could attend the hearing with them, and give us your enthusiastic support. Would appreciate it if you will wire me collect, advising if you can give us this help.

CLAIBORNE MOTORS, INC.,
FRANK HARKNESS.

---

MINDEN, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*Member of Congress,*
*Washington, D. C.:*

Our understanding Small Business Committee hearing next Thursday morning, 10 o'clock, to discuss with OPA reduction of dealers' discount. Such a reduction is most unfair and will likely result in putting this dealer and three ex-service sons out of business. We request your wholehearted cooperation and attendance at meeting to defeat such unfair action by OPA. Advise, collect, if you can give this much-needed assistance.

PARKER BUICK CO.,
C. J. PARKER.

---

SHREVEPORT, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

There will be a Small Business Committee hearing Thursday, November 8, 10 a. m., for the purpose of discussing OPA reduction in dealers' discounts. Shreveport and Louisiana delegates will contact you early Thursday, and I most earnestly hope that you will extend to them your wholehearted cooperation, as well as personally attending this meeting, and, after hearing discussed what they think is unfair reduction in our discounts, help us to defeat this move, particularly in face of increased cost of labor, rent, and other reconversion expenses in our business. Wire me, collect, at once if you will be able to give us this assistance.

R. F. KAYSER TRAILER CO.,
J. M. BOGARD.

---

MINDEN, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*Member of Congress,*
*Washington, D. C.:*

Please attend personally the Small Business Committee hearing Thursday, November 8, for the purpose of discussing OPA reduction in dealer discounts, and urge you to use your influence in not allowing discounts to be cut. Our costs of doing business have increased considerable since 1941, and we cannot service our customers as they should be serviced if our discount is cut. A Louisiana delegation will contact you early Thursday, and would appreciate your extending to them your wholehearted cooperation to defeat OPA proposal to reduce our discounts.

ANDRESS MOTORS CO.,
HARRY C. ANDRESS.

---

NEW ORLEANS, LA., *November 7, 1945.*
Congressman OVERTON BROOKS,
*Washington, D. C.:*

Would appreciate your asking Chester Bowles to withhold all price orders on autos pending the hearing before the House Small Business Committee.

PLAIN DEALING, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives:*

Small Business Committee meets Thursday morning to discuss reduction in auto dealers discount. Our delegation will contact you before meeting. Thad Andress is in Shreveport. Member, please help us fight this reduction. It will wreck the dealers.

CALDWELL MOTOR CO.,
J. D. FENET.

---

OIL CITY, LA., *November 6, 1945.*
Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

An unreasonable reduction in discounts for automobile dealers is to be discussed at an

OPA hearing Thursday, November 8, 10 a. m. This reduction, when our reconversion and labor expenses are mounting so rapidly, is very unfair. Our delegation will contact you early Thursday, and I would appreciate your whole-hearted cooperation, also personally attending the hearing. Will you please wire me collect if you can give us this needed assistance?

A. G. LEE.

---

HOMER, LA., *November 7, 1945.*

Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

Thursday, November 8, at 10 a. m., there will be an OPA hearing to discuss reduction in discounts for automobile dealers. A delegation from Louisiana is leaving immediately for Washington to protest this reduction, especially at this time, when our reconversion expenses are mounting so rapidly. Our delegation will contact you early Thursday, and I would appreciate your whole-hearted cooperation as well as your personally attending this hearing. Please wire me collect if you can give us this much needed assistance.

EMERSON MOTOR CO.,
H. H. EMERSON.

---

HAYNESVILLE, LA., *November 7, 1945.*

Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

A Louisiana delegation is leaving for Washington to protest a reduction in discounts for automobile dealers to be discussed at OPA hearing Thursday. Our delegation will contact you on that date and we would appreciate your cooperation as well as personally attend the hearing. Could you please wire collect if you can give this much needed assistance?

WATTERS HARDAWAY MOTORS.

---

PLAIN DEALING, LA., *November 6, 1945.*

Hon. OVERTON BROOKS,
*House of Representatives,*
*Washington, D. C.:*

We are making large investment in Ford dealership and hear that unfair reduction in discounts for automobile dealers are to be discussed at OPA hearing Thursday, November 8. This reduction, if passed, might cause our business failure. We are asking you to meet and cooperate with our Louisiana delegation, as well as personally attending this hearing for us. If possible, will you please wire us your decision collect?

GLEASON & SPEARS,
W. A. SPEARS.

## The World Bill of Rights Association Is a Reality

EXTENSION OF REMARKS
OF
### HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. O'KONSKI. Mr. Speaker, in the last 8 months I have talked to nearly a million people throughout this Nation champion'ng the cause of freedom. In spite of the threat to freedom throughout the world, I was amazed at the love for freedom that still burns in the hearts of Americans everywhere. In the course of my travels literally thousands have stopped me and asked what is there that they can do to help preserve freedom and keep it secure here in America. These thousands even went further. They inquired at to just what is there that they can do to extend freedom elsewhere. These people know that freedom never remains static. It either grows or it shrinks. These people know that if the friends of freedom remain dormant, the enemies of freedom will march and conquer.

For that reason I accepted the presidency of the World Bill of Rights, Inc. It was, indeed, an honor to be part of the American Legion celebration of the one hundred and fifty-sixth anniversary of the American Bill of Rights enactment at New York on September 25, 1945. It was here that I, as president, launched the World Bill of Rights Association to the freedom-loving people of this Nation, so that all freedom-loving people could organize as a unit in their fight to keep freedom here in our shores by working to extend freedom elsewhere. Mr. Speaker, I include in my remarks the speech I made on that occasion:

Fellow Americans, I deem it an honor and privilege to speak at this historical spot and on this truly American occasion of the one hundred and fifty-sixth anniversary of the enactment of the Bill of Rights, that priceless heritage which, thank God, permits me to speak without fear about the newly organized World Bill of Rights Association which it is my honor as its president to introduce to the world here today.

In 1941, when the war clouds were hovering over the world, a Sesquicentennial Bill of Rights pamphlet was published by the Library of Congress. It contains a significant and strong appeal to the people of America. It stated as follows:

"Now it will be a time for the renewal of faith, faith in the doctrine of human liberty, faith in the principles by which we govern and are governed. It will be time, too, for remembering—for remembering that in other parts of the world these privileges and these protections are denied, and for remembering that when they are denied neither human liberty, nor human decency, nor human self-respect survives their loss."

This battle cry for freedom in 1941 was reiterated in the Atlantic Charter and again in the pledge of the "four freedoms." This battle cry for freedom was our only objective in World War II.

Since these words were written, World War II was fought for the precise attainment of these objectives so that personal freedom be preserved and insured for posterity. For this reason we participated in this war, in which we sustained more than a million casualties. Our boys and girls in all areas of this global war suffered privations, starved in prisons, plowed through jungles, bled, were murdered, and died, to defend and spread freedom where it was threatened.

There are those who are tempting us to forsake the purposes for which more than 13,000,000 of our youth offered their lives. Picture if you will the denial of freedom to the people in Estonia, Finland, Hungary, Latvia, Lithuania, Serbia, Poland, Slovakia, and many other countries.

World War II was started by the totalitarian dictators, not so much against the American Government, but against any system of "human rights and liberties." Thus the Bill of Rights is the arch enemy of any totalitarian system of enslavement. Dictators hate and despise any bill of rights for the people, no matter where it may be. World War II, therefore, was a defensive war because, we, as free people, saw a threat to our Bill of Rights, not only in the United States of America, but all over the World.

In a military sense we have won World War II! Now, as the victorious military power, it is our duty toward ourselves and to all others to whom we promised freedom, that we turn to the offensive. Nothing is static in the world. Freedom either expands or shrinks. The Bill of Rights either extends or diminishes. Freedom through the Bill of Rights will not remain secure anywhere if it does not spread. If we do not turn to militant action in the offense for the extension of the Bill of Rights to other people in other countries, then the enemies of freedom will march and conquer instead.

It is now obvious to the American people as a result of this war that the Bill of Rights is indivisible. This means that if, anywhere in the world, the Bill of Rights is attacked our own security in America and our way of life is menaced. Do not forget that it can be menaced from within as well as from without. In order to make our future secure, we can no longer remain indifferent to the fate of freedom elsewhere. For the security of America we must promote and protect the Bill of Rights throughout the world.

America is at the peak of her power. We must carry the torch of the bill of rights aloft everywhere and not retire in fear to a selfish shell. After World War I we scrapped our Navy and disarmed. Let us not today, with a world more turbulent than ever, dare disarm and scrap our moral arsenal and invite enemies of freedom to steal from us that for which our boys struggled and died when it is our history-given opportunity to use our power for the blessings of all humanity.

The Atlantic Charter and the "four freedoms" were announced to the world as the objectives of World War II. They were an extension of our own Bill of Rights in applying them to the whole world. This was a solemn promise by America to all the oppressed and all those peoples fighting for freedom and justice. We cannot fail them now. We must not fail them now. We dare not fail them now.

With that idea in mind, the World Bill of Rights Association today has been founded. As its first president, I have the honor here today to announce its establishment, initiated through the efforts of American citizens of Esthonian, Finnish, Hungarian, Latvian, Lithuanian, Polish, Serbian, and Slovakian ancestry. This is just a nucleus. We invite all true Americans of any race and creed who believe in the mission of the Bill of Rights and in the blessings of democracy to join with us. We must build a militant movement of free men who will carry forward the torch of liberty handed to us by our forefathers. We must act, recognizing that as Abraham Lincoln said, "The world cannot remain half slave and half free." People of America, champions of freedom, for freedom's sake join us now.

---

## When Are They Coming Back?

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. HOFFMAN. Mr. Speaker, here are just a few of the letters received from the boys who want to know when they are going to get home. They read as follows:

I want to let you know this, mom, else I wouldn't bother you about it. Please don't make any decisions till you have read the entire account and then if you feel that

——— and myself have not been done an injustice, then may God grant you the power of knowing what justice is.

As you know, ——— and myself have our orders to go to the States and are awaiting transportation. Our C. O. relieved us of all duties—when we checked three new boys out on the range. Incidentally, one old fellow in the unit remained—by old, I mean been in the unit longer.

Well, this morning ——— and myself were called to the captain's office. We could not imagine what it was unless it was something pertaining to our transportation. Well, when we entered his office, B. T. Talbolt, the captain of the base, flew in a rage—flung his arms around, his eyes popped out, and his face as red as a beet. He stormed around, wanting to know why we weren't at the range on duty. We could not get a word in edgewise over his storming to tell him our orders were in and our C. O. relieved us of all duties, and that we had checked out of the station. He had us stand at attention for an hour, and what did he do but go to the range and look around and he didn't like the start the new fellows had there and he claimed they were corking off, and he brought the entire four of them up, gave them a fast mast and put them in the brig for 5 days on bread and water. Then he tells ——— and myself we were on duty and that he would send us out on our orders when he "damn please." And he said "I want you people to realize you are only "damned enlisted men." So ——— and myself are on duty again and probably will be until the other boys are released from the brig. So if your boy isn't home as planned, you can blame a B. T. Talbolt, commander, USN.

Our C. O. is really burned up and there is not a thing he can do. I am telling you, mom, no one can cope with that maniac. He is as stubborn as a mule and swears a blue streak at enlisted men and officers alike (including our C. O.) and no one can get a word in edgeways. I definitely know he had a fit this morning and was off his noodle, and no one can tell me different, as no man in his right mind would act that way. My C. O. and many others here would verify that and the following. He was a hot pilot and got in a bad crack-up. Now, this is definitely the truth. He was in a naval asylum at one time and the doctors claim he got all right. He has 23 years naval service. My C. O., myself, and many others contend that that man does not belong in the command of a bunch of men, but should be in an asylum. He is an Annapolis man and has lots of big shot buddies who stick up for him, and that man knows he can do anything he wants to because he can pull strings with his big-shot buddies and crawl out of it.

When he took the relief that came in for me and assigned him at NAB—I thought that was mighty small, but, boy, I think this takes the cake. How ——— and myself ever escaped the brig we don't know yet. He sure was mightily angry. If he had put us in the brig, I would feel that it was a sentence for no misdemeanor, just as I feel that the four boys he did put in the brig were put there unjustly.

I really didn't want to bother you about this, but I thought you had ought to know about a character like that, and that if he does hang something on ——— and myself I want you to know I have tried to do the right things all along, and I feel I have given good service, and I don't want a man of his calibre making you think I did a great crime if he does brig us or fails to let us go on our orders. However, I hope he does let us go soon after the other boys are released from the brig. If not, I'd like to have you write HOFFMAN and tell him I received orders from Pearl Harbor to return to the United States for rehabilitation and that a maniac captain here has taken custody of the orders and claims he will let us go when he damn pleases. We will wait a week or so, and if in a future letter I ask you to write HOFFMAN, you do so, and maybe something can be done to prevent other men from having to be under a madman. Many officers and men on this station would verify every word of this letter.

I've troubled you enough, so will close with loads of love. May God bless you.

---

OCTOBER 30, 1945.

DEAR SIR: I am writing this to you understanding that I have this right as a constituent from the district that elected you to your present position, but also knowing that you possess a keen interest in the welfare of the soldier who has fought for his country. This letter may sound like a purely selfish way of trying to improve my own position, but such is not the case, for I feel that I am speaking for every soldier on this island, namely, Okinawa. Naturally, since the end of the war we have all experienced a terrific let-down, and a terrible desire to get home. This is only the human instinct in every man away from home. The real thing we have to complain about is that we believe that the country and the administration is selling us down the river. I am going to include the local publication of the island newspaper, which will explain the situation that exists here better than I would ever be able to do. I happen to be one of the few unfortunates who were redeployed from the ETO without benefit of a furlough to the States. At that time we were not bitter, for we realized that there was another war to be fought and that many men who had been overseas so very long were much more entitled to get out of the service, or at least see their loved ones, before continuing the fight.

Now, the war is over with and naturally we expected the Army and the Government to use the same initiative and brilliance in getting us home that they used to bring us over to this theater in such record-breaking time. Such has not been the case, as especially on this island it has been and is continuing to be a long drawn-out process. The shipping has just not been assigned here and plainly we would like to know the reason why. Does it sound plausible that every other location in both theaters can have ships assigned to take them home, while the Ryukus, Korea, and Japan will have only 10 ships with a capacity of 25,000 men, when there is at least easily a million men in these three places.

Men still remain on the rock with 100 points and they have been told that there is not much hope of them to get home for Christmas and there is no real relief of shipping in sight until after the first of the year.

Personally, I do not have too much to complain about as my points are not too high but I, too, am beginning to wonder just how long I have to spend here against my will until I get home when the men that are eligible cannot get there. We all gladly put up with the hardships that all soldiers must face and have even done so to a greater degree, at least here as you probably have read, without complaint. All we want is the promises kept that our Chief of Staff and the President of the country has made us. Where have all the optimistic statements of 6,000,000 men out of the Army by July and the swiftness of getting men home gone? Are they just cases of political demagoguery meant to fool our parents and loved ones, and make them believe they are really trying? This undoubtedly sounds very cynical but how else can a man get after being fooled so much?

Ever since I have been in the service and ever since I have been overseas I have found that you expressed your views, no matter how much ridicule you take and whatever the cost. I hope you can find the time to consider this letter and let me know the picture from the position you hold. If this is possible, I would appreciate it very much.

---

SEOUL, KOREA, *October 25, 1945.*

Representative C. E. HOFFMAN,
*Washington, D. C.*

SIR: Perhaps this little poem will explain itself. It echoes the sentiments of thousands of men.

I will never forget when I left a POE for overseas duty. At that time the United States had the largest and greatest transportation system of any nation. Those words are not mine, but yours and the other men who run our country. In fact transportation was so damned good that I could only get 7 days at home with my wife and four children. If 50,000 men had been needed on the top of Mt. Everest, I have no doubt but what they would have been transported there immediately. Whoever heard of a transportation break-down until it became time to return home? But it was just that system that won the war. Perhaps the break-down of the system will lose something too.

Most of us are civilians in a uniform. The job is done and there are no gripes there, but now it's time for the professionals to take over.

My youngest daughter expected her daddy to come home as soon as the Japs were licked. I'm tired of trying to explain things to her. Perhaps I'll suggest that she write to you instead and you can give her the latest dope, all wrapped up in a new red ribbon.

Sincerely and your former supporter.

---

We sit on our rear
And view with fear
  The trend of the discharge plan
We can't but regret
The fact that we "set"
  Far away from our native land.

The war is done
No need for a gun
  And we wait for the journey home
You can't go yet
'Till the problem's met
  By the brains in the Capitol Dome.

We've got the points
And a pain in the joints
  From sweating out transportation
But the boys with the brass
Are viewing the "glass"
  To picture the whole situation.

We served and we fought
Like they told us we ought
  And now that the victory is here,
We sweat out each day
We hope and we pray
  To return to the girls and the beer.

We eat Ten-In-Ones
Without bread or buns
  As we watch for the promised day
But there are no trips
'Cause there are no ships
  To take us the other way.

The points go down
No need to frown
  Now the Army can all qualify
Still we wait and wait
For that mythical date
  And pray that we don't petrify.

We scream "It ain't fair"
And we tear out our hair
  It's like making your very first million
Oh, little Sad Sack
Your poor aching back
  Is crying to be a civilian.

ADDED BY CARL D. MILLER

Oh yes there are ships,
I'll bet all my chips,
  But no one sends them this way
Unless they get smart
And give us a start
  We'll be here for a year and a day.

## Constitution of World Bill of Rights Association, Inc.

EXTENSION OF REMARKS

OF

### HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following constitution of the World Bill of Rights Association, Inc.:

We, citizens of the United States of America, to unite our strength against any and all aggression that may endanger the security of the United States, to bind ourselves together for joint action to defend, preserve, and uphold the principles enunciated in the Atlantic Charter and the "four freedoms" and every democratic right and freedom set forth in the Federal Bill of Rights, and to dedicate ourselves to a world bill of rights, to guarantee to every man, woman, and child of every race and creed and in every nation the fundamental rights of life, liberty, and the pursuit of happiness, and the right to worship God as their conscience dictates, do make, publish, and declare this constitution for our association.

ARTICLE I

*Name*

The name of this association shall be: World Bill of Rights Association, Inc.

ARTICLE II

*Aims and objects*

To preserve and defend the Constitution of the United States of America and the constitutions of the constituent States of the United States of America.

To acquaint by means of publications and public meetings all peoples of the United States with the democratic rights and blessings which they possess under the Constitution of the United States of America and the constitution of the particular constituent States to which they belong.

To preserve for all Americans every democratic freedom contained in the Federal Bill of Rights.

To advocate the adoption of a world bill of rights, whose principles and provisions shall be based on our own Federal Bill of Rights, the Atlantic Charter, and the "four freedoms."

To seek by all lawful and peaceful means the establishment of the principles of the Bill of Rights, of the Atlantic Charter, and of the "four freedoms" in all countries of the world.

To engage in any and all lawful educational activities anywhere in the world which contribute to the progressive achievement of these aims and objects.

To lend aid and assistance to any organizations, groups, and movements whose objects and practices conform with the purposes of this association.

To support the constitutional Government of the United States and all Americans extending such a world bill of rights to all the peoples of every nation upon the face of the earth.

To bring about the fulfillment of the aims and purposes of the Atlantic Charter and the "four freedoms" in the name of which our country entered World War II.

To expose, resist, and combat all efforts to defeat or deny to peoples anywhere the fundamental human democratic rights which this association has undertaken to uphold and to propagate.

To fight relentlessly and to oppose all efforts of Fascist, Nazi, and communistic totalitarianism which deny the peoples of any nation the sovereignty and the democratic freedoms contained in the World Bill of Rights.

In general, to further by constructive educational means and methods the cause of liberty, freedom, and justice, to the end that there may be established the reign of democratic ideals and principles, which, under God, the Constitution and the world bill of rights can alone bring fullness of life to men and banish strife and hatred and war from the earth.

ARTICLE III

*Membership*

Regular

Membership shall be open to all citizens of the United States who subscribe to the principles set forth in this constitution and desire to lend active support to the work of the association.

Organizational

Membership in the association shall be open to all lawfully established organizations, associations, clubs, societies, parishes, newspapers, and corporations which subscribe to its aims and purposes.

Honorary

The board of directors may from time to time confer honorary membership in the association upon such persons as, in their judgment, render or have rendered, conspicuous service or support to the causes for which the association stands.

Sustaining

Sustaining members shall be those persons who, believing in the aims of objects of the association, are desirous of contributing to the support and maintenance of the association and its activities.

The rights, privileges, and duties of membership shall be defined in the bylaws of the association.

ARTICLE IV

*Meetings*

The membership of the association shall meet annually in convention on Bill of Rights Day, September 25, except Saturday or Sunday, or on the next succeeding day.

The place of the meeting, the order of business, the voting rights of members, and the powers of members in convention assembled, shall be as stated in the bylaws of the association.

ARTICLE V

*Governance*

The property, affairs, and activities of the association shall be under the guidance, control, and direction of a board of directors, consisting of not less than 5 nor more than 30 directors elected by the membership in convention assembled in accordance with the applicable provisions of the bylaws of the association.

The board of directors may form, from among the membership of the association, or outside thereof, an advisory council to be comprised of persons who, in the judgment of the board of directors, are in accord with the aims and purposes of the association and qualified to lend it special aid and/or services.

ARTICLE VI

*Amendments*

This constitution may be amended from time to time by the membership of the association at any annual convention by the vote of delegates and members representing two-thirds of the entire membership of the association.

Any freedom-loving group or person can join by contacting World Bill of Rights Association, Inc., 103 Park Avenue, Room 511, New York 17, N. Y., telephone Murray Hill 5-6486. For freedom's sake join now.

## The Poor Germans

EXTENSION OF REMARKS

OF

### HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial that appeared in the Brussels Socialist newspaper Le Peuple, written by Camille Huysmans, the mayor of Antwerp and Minister of State:

BEWARE!

(By Camille Huysmans)

(During the war he presided over the small group of Belgian members of Parliament who succeeded in reaching London. He is a prominent figure in Belgian political life and a spirited writer. Although he is rightly credited with a considerable amount of Shavian wit, it is not apparent in this article, which is a stern warning to those who think that business should be as usual in the Reich.)

I have been visited by a number of officers who have come back from Germany—Belgians, English, Americans. I dare not say that their impressions agree. They sometimes come from different sectors.

I have also received letters from London, signed by well-known people, specialists who have studied the case of Germany. They tell us to beware. They are uneasy. They are asking themselves what the policy of the Allies with regard to Germany really is.

The policy of the Russians, of which we do not know much, except that they are emptying the houses and factories and at the same time are promoting democratic fraternization.

The policy of the Americans, who do not always understand the rather harsh sentiments of the occidental people (the United States was never occupied).

The policy of the British, who as a rule are reserved and all too often limit themselves to religious sermonizing.

In brief, my correspondents have the impression that the policy of the Allies is oscillating and diverse. Worse, my friends are forced to state that words and actions do not always correspond, and they give examples, among others, a very impressive one—the case of Holland.

Everybody knows that our neighbors to the north have not been treated better than we. The Germans took everything—their industry and their agriculture, their machines and their cattle.

What is now the reward of this people, which, according to the generals, fought well?

The Dutchman looks around him and sees nothing but a void. But when he looks across the frontier, he notes with some bitterness that his cattle and his machines are in Germany and he claims restitution.

What does the military administration answer? "Many regrets. The German people must get through the winter under favorable conditions. That is required for our security."

What should one answer to this? That the Dutch farmer is more worthy than the German farmer, it seems to me. The Dutch farmer has lived through the occupation. He has enjoyed the benefits of expropriation. The German farmer, on the contrary, has been very well off economically.

What is still worse, it is announced that industrial Germany should be reconstructed to allow the German people to live, in order to show them that we are Christian and fraternal peoples.

Is it in this way that Germany should be reeducated? It was a different story in 1942. We agreed at that time that German industry is a war industry, conducted for war, an industry which should be curbed and controlled, if we wished to avoid the return of the beast.

How come then that we do not think any more today of this necessary limitation and of this indispensable control? Furthermore, is it correct that the bombings destroyed the German potential? I do not think so. I base my contention on the Kilgore report.

Germany still possesses 4,000,000 tons of all kinds of machinery and an enormous capacity for producing in a short time new machines. The metallurgical industry still has a productive capacity of 25,000,000 tons a year, with 10,000 tons of synthetic rubber, and the chemical industry, including explosives, has not even been touched. The entire oil refining industry can start up again inside of 6 months in its prewar state. In short, the bombs have damaged 20 percent of the total; there is still 80 percent as a basis for further development.

Mr. Hugenberg, the banker who financed Hitler from the beginning and who belonged to the first government he set up, made no mistake. He plays for high stakes—the stakes of 1920. He has just sent a memorandum to the Allies, and he would like to exploit the West against the East. He threatens us with communism if we do not behave. He will turn Bolshevik if necessary. For sure, the old bogy is still with us, or at least there are those who would try to use it.

But let us ask an indiscreet question. How is it that this gentleman, who should be among the first on the list of war criminals, is still at liberty in September 1945?

What does the renewal of this strange policy of appeasement mean? How come that the president of the American branch of the Farbenindustrie in the United States has suddenly been promoted to the high function of president of the German mother concern, the role of which in Fascist and Nazi politics throughout the world is notorious? This promotion from agent to chief—should it be understood as an official blessing or as the ratification of a business combination? We can indeed ask these questions. Are we already having "business as usual"? Are we losing the peace?

The Germans, especially the women, are already beginning to treat the occupants with irony. I do not underestimate the usefulness of fraternization. But not today. Nothing will be gained by running after them. Let us at least avoid looking ridiculous. The events of the occupation have proved overabundantly that the Germans as a whole stood behind Hitler. The Allies have been unable to find a real underground pro-Allied movement, either during or after the war. The majority of those Germans who were put in prison became overseers of the other prisoners, simply because they were Germans. They kept their positions by turning into the worst torturers and to exculpate themselves they repeated the familiar formula: "I had orders. I was not responsible."

The German high command, still alive, must be well satisfied. Has it not succeeded in demonstrating that it is equally able to exploit the situation after defeat by playing on the weaknesses of the victors?

The movie houses are open; the theaters are crowded; newspapers are published, and one reads in them very suggestive articles. I have one in hand. It develops the thesis that the Versailles Treaty is responsible for the coming to power of the Nazis, that economic conditions alone explain the policy of aggression and everything that has followed. Therefore Germany is not to blame. Economic conditions are. Still better, tomorrow we shall read that the Germans are the victims of the Allies.

The international clergy is setting the stage for this comedy. Cardinal Griffin of the United States has just made a tour of Europe to congratulate the German bishops on their attitude. All of them without exception in their pastoral letters protested against the persecution of the church, but were careful to bless the artisans of every Hitler victory. "Gott mit uns."

If I was asked to give a piece of advice to the Allies, I would like to say: Beware. It is not through kindness that you will destroy nazism. You will destroy it only if you act as masters up to the moment when nazism disappears. In the meantime, avoid the two extremes: the Russian and the other one.

## Why the Delay of Demobilization

EXTENSION OF REMARKS
OF
## HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. LEMKE. Mr. Speaker, every day in the newspapers we find releases by the War and Navy Departments about their wonderful performance in demobilization. However, from the letters and first-hand information from servicemen, we are satisfied that the public statements and releases are not correct. They need checking.

The truth is that in many Army camps and Navy camps, abroad and at home, there is deliberate stalling. Some of the higher-ups are responsible for this stalling. We are going to find out who is responsible. Congress is getting impatient. This is the business and problem of Congress.

The fathers and mothers, the wives and relatives of the servicemen have a right to know who is keeping their sons or husbands unnecessarily in the armed forces. Finally, the taxpayers have a right to know why there is so much delay in this discharge business.

It is not for the best interest of the servicemen to lay in foreign ports with nothing to do. Such a course is demoralizing. The morals of these boys are worth more than keeping a commander in his rank by holding the boys unnecessarily. The Nation's welfare must be put above the War and Navy Departments.

Here are excerpts from a few of the many letters that I and every Member of Congress receives.

Here is one from a sister of a serviceman at Jamestown, N. Dak:

I have a brother who has been in the service 42 months, has two battle stars, 60 points, and is 31 years old. At present he is in Germany with no signs of coming home, let alone being discharged.

* * * The army of occupation certainly can't have the same men during the entire occupation period. They have their own future, too, that has to be considered.

Here is one from a serviceman at Harlingen, Tex.:

We have been held at HAAF in complete ignorance of any pending order concerning our disposition and, even though we have been wholly inactive since the termination of the gunnery training program, not one of us has been declared surplus.

On the other hand we have seen commissioned officers and flight officers, rated bombardiers, declared surplus here at HAAF, the extremely low critical score of 13 points all that was necessary for them to become eligible for discharge. That is the War Department's business, but it does smack of discrimination.

Here is one from a serviceman at Great Bend, Kans.:

Here's a great challenge: Get the 2-year men out of the Army.

Too many thousands of soldiers who have already devoted 2 and more years to the Army, and who face an additional 12 to 18 months of service once impending shipments take them overseas, are relying on just such men as you to help us—now.

For some time we men with two or more years of service have been writing our Senators and Representatives in Washington asking them to legislate a bill which would, after becoming an act of Congress, force the Army to release us from the service.

Here is one from a serviceman at Great Falls, Mont.:

With the end of the war, millions of us in the armed services have been looking forward anxiously to our discharge. The result to date has been anything but encouraging. In spite of repeated promises of the War Department to release men faster, it has been our experience that men are being released slowly. It is the unanimous opinion of the men I am in contact with that there is deliberate procrastinating.

There is a conviction on our part that the military hierarchy is deliberately taking its time, with the realization that their own commissions will be slashed upon a return to peacetime Army strength. It is pitiful that this small group of willful men should have their nice salaries cut, but we who have thrown away from 2 to 5 years of our lives in the Army, do not feel we owe any further Army service that these men may continue to prosper.

I urge you to take every means possible to expedite the slashing of War Department red tape and to force them to start releasing men now, instead of talking of how many they will release by thi New Year's, or a year from this New Year's.

Here is one from a wife of a serviceman at Napoleon, N. Dak.:

My husband is in the service and is in Camp Beale, Calif., and writes me that he is just idling most of his time away.

I need him at home as I have four children to take care of.

Here is one from a serviceman at Camp Crowder, Mo.:

We married men with dependents are waiting patiently to see some action from you to see that we are returned to our homes and families right away. Most of us are needed at home for one reason or the other. If we were accomplishing something useful in the service we wouldn't mind so much. But most of us are just wasting our time reading magazines and newspapers.

My own observation at Williamsburg, Va., convinced me that the demobilization is not as rapid as it could be or as it should be. That the delay in the demobilization is not only conducive to the best interest of the servicemen, or the future of the Nation, but very expensive. It not only costs money, but it is a waste of money to keep men in the armed service when they are no longer needed. This especially when there is nothing for them to do but lay around and waste their time.

Let Congress pass most of the bills pending on this subject. Let us save the morals and the patriotism of the servicemen by discharging them and sending them home, feeling that they have rendered a real service in time of need. Let us declare that the hostilities were at an end on September 2. Let us not be hypocritical enough to fool the boys and keep them in the service because the executive and legislative branches of our Government are too dumb to know that the war is over.

## Automobile Dealers Have Hearing Before Committee on Small Business of the House

EXTENSION OF REMARKS
OF
## HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. PATMAN. Mr. Speaker, the Committee on Small Business of the House is composed of the following Members: J. W. ROBINSON, Utah; EUGENE J. KEOGH, New York; HENRY M. JACKSON, Washington; ESTES KEFAUVER, Tennessee; LEONARD W. HALL, New York; WALTER C. PLOESER, Missouri; WILLIAM H. STEVENSON, Wisconsin; EVAN HOWELL, Illinois; and myself, as chairman.

I am inserting herewith an opening statement made by me as chairman of the committee this morning on the proposal of the Office of Price Administration to reduce automobile-dealer discounts below the prewar percentage level:

This public hearing has been called by the House Small Business Committee for the specific purpose of getting facts on the automobile-pricing situation. Our primary purpose is to determine if the proposal of the Office of Price Administration to reduce automobile-dealer discounts below their prewar percentage allowance is fair and equitable to the dealers of this Nation.

Retail automobile dealers, of whom there are approximately 30,000, constitute small business in the eyes of this committee. They are located in every State and county of this Nation. The problems that confront them are typical of the problems which face the majority of retailers and small merchants of the country. The only difference between their situation and that of many other types of retailers is that they have suffered from a lack of business during wartime while many other types of retailers have enjoyed substantial business and continued prosperity.

This committee, when it was created, was charged by the House with the specific duty of investigating the acts or regulations of any agency or department which might be construed as being harmful to the best interests of small business. We have been informally advised by literally thousands of automobile dealers and by several score Members of Congress that the proposed action by OPA will work an extreme hardship on these 30,000 small business firms and their employees, and will force many of them to close their doors just at a time when the Nation is supposed to be entering its period of prosperity in peacetime.

Small business is more than just a form of business activity. It is a way of life. Like farming, like teaching, like a professional career, it symbolizes the spirit of independence which built this country. The very foundations of this democracy are rooted in small business. Without it this Nation as we have known it would cease to exist.

For the past several weeks, national attention has been focussed on the problems of big business and of big labor as represented by our great industrial corporations and our great labor unions. Today, we intend to look into the problems of small business and hear the story of the man who is in the middle—the man who may possibly be caught between the demands of big business and big labor and asked to carry the burden of financing such price and wage increases as are given to either side in this current wage and price dispute which has made headlines for the past few weeks.

The Office of Price Administration is under a mandate from Congress and the President to "hold the line" on prices.

The Congress and the President are under a self-imposed mandate to do everything within their power to speed industrial reconversion, to maintain purchasing power, and to provide maximum employment for all.

For every manufacturing firm in this country which provides jobs for labor there are 15 firms which distribute the products of these factories in some form or other. For every man or woman employed in a factory there are 5 persons employed in distributing or servicing these products.

Approximately 1,250,000 persons are employed in the manufacture, distribution, and servicing of automobiles in this country.

Only about one-third of these, 398,000, are employed in the direct production of cars.

The remainder are engaged as follows:

| | |
|---|---|
| Wholesaling | 72,000 |
| Retailing and repair work | 389,000 |
| Service stations and affiliated retailing | 335,000 |

Like the Army, the automobile business requires its production units and its services of supply. As in the case of the armed services, more persons are required to distribute and service the goods than are required to produce them. I mention this to show that only a relatively small percentage of those employed in this business are in the car factories. Many more persons are affected by the problem of car prices than just the manufacturers and their employees.

For every man employed in an automobile factory there is another man employed in selling, servicing, or repairing automobiles. More than 350,000 working people depend in normal times on the automobile dealers of this country for employment. Computed in terms of affected workers, the health and well-being of the automobile dealers of the country is just as important to their employees as is the continuance of car manufacturing to the workers employed in direct car production.

The only reason we do not stop to consider these facts is that there are only a few large car manufacturers and one or two large labor unions concerned in their problems and disputes as against 30,000 individual car dealers and their thousands of unorganized employees. Their problems are no less critical for that reason, however.

The House Small Business Committee has had extended contacts with the retail automobile dealers of this country dating back as far as January 1942. This committee professes to have some knowledge of this group's problems.

In 1942, the Government froze more than 600,000 passenger cars in dealers' hands and the entire trade was threatened with bankruptcy. Realizing the plight of the dealers, this committee explored their situation in a series of hearings and, upon the facts developed, prepared and helped to secure passage of the Murray-Patman Act in cooperation with the Senate Small Business Committee under the able leadership of Senator MURRAY.

No bill passed in the history of Congress ever did more for a single industry in such a short space of time. Automobile dealers have told us—the members of the committee—that the passage of that measure meant the difference between absolute ruin and the saving of 75 percent of the dealers of this Nation. More than 30,000 dealers were, as a result of this act, able to survive the hard days of this war which rationing and cessation of passenger-car production imposed upon them. About one-fourth, or 10,000 of them, however, were forced to close their doors.

I shall not attempt to review that act in detail. Most of those present are fully aware of its provisions. Briefly, it provided that full retail value to the dealers for the cars they were holding in stock at the time of the freeze would be assured to them by the Government. When cars were carried for more than 1 month, a monthly increment was added. Likewise, under the act, the Reconstruction Finance Corporation was authorized to assist materially with loans.

The widespread nature of the retail automobile business makes it particularly important that the Government give the utmost consideration to firms in this line. Their prosperity or failure can have a marked effect upon the health of almost every community in the Nation. It has been said that before the war there was a dealer at every crossroads in the United States. That is almost literally true. Every Member of Congress recognizes what a force for good business these dealers are in every community. In normal times, these dealers are at the forefront of every progressive move in their home communities. They constitute the active, forward-looking citizens to whom we look for much of the home-town leadership in this difficult reconversion period.

As I understand the present situation which we are about to investigate, these dealers are not looking for a hand-out from the Government. They are merely asking for the privilege of being permitted to start doing business again under the same trade-discount provisions that prevailed before the war.

They tell us that the Office of Price Administration's proposal to reduce their traditional discounts will prevent their reopening their establishments, will jeopardize their existing investments, and will force many of them to go out of business permanently after having held on by a slender thread of hope during wartime.

It is the purpose of this hearing to find out to this committee's satisfaction the validity of these complaints. In order to do his, we propose to hear, first, from the dealers and their accredited representatives. After that, we propose to give an equal opportunity to representatives of the Office of Price Administration to explain the position of that agency on this matter. After that, if necessary, we are prepared to seek testimony from the manufacturers or from any other persons having a legitimate interest in this situation.

This committee is in full accord with the need for curbing inflation and the avoidance of any undue rise in the cost of civilian products to the ultimate consumer. On the other hand, it feels that the time has come for a greater realization and a keener appreciation on the part of Government, industry, and labor of the importance of the role of the small distributor in the American scheme of things. This hearing is held in that specific frame of mind.

I should like to caution all those who expect to appear before us as witnesses today and thereafter that we are not going to be very patient with those witnesses who deal solely in generalities. We are here to learn facts and not to deal in theories. That is the reason I have taken so much time in outlining our reasons for holding these hearings.

We expect both the dealers and the representatives of OPA to provide us with solid factual information as a basis for any state-

ments made. If a witness cannot support his testimony with that kind of evidence, we shall feel obliged to ask him to step down and make way for the next witness.

The charge has been made that the proposed OPA order to reduce dealers' discounts will work an undue harship upon the dealers. That is the subject of these particular hearings and it is upon that point alone that we expect concrete evidence from both the dealers and from OPA.

Before calling the first witness for the dealers, I should like to point out that a great many Members of both the House and the Senate have asked permission to appear at these hearings and express their personal views and the views of their constituents upon this question.

Due to the fact that so many dealers have come such a long way to attend these hearings and are incurring considerable expense in remaining here in Washington for that purpose, I am going to take the liberty of reading the names of those Members who have asked that they be heard and their interest in this matter recorded for the record. Later, when a more convenient time can be arranged, we are willing to set aside a special day to hear from all interested Members. I have been assured that this will be satisfactory to those Members who have expressed such a keen interest in this particular hearing.

## Doctors in the Service

EXTENSION OF REMARKS
OF
### HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. JUDD. Mr. Speaker, enclosed is another of the many letters I received from highly trained physicians who are continuing to rot professionally because of nothing to do in the service, while their colleagues in civilian practice here are overwhelmed with work and patients are unable to get adequate medical care.

I repeat his question, "Can our country afford such waste? If not, when do we get action?"

OCTOBER 18, 1945.

Hon. WALTER JUDD,
*Representative from Minnesota,*
*House of Representatives,*
*Washington, D. C.*

MY DEAR DR. JUDD: After finishing a letter to Senator DOWNEY I am impelled to write a short note to you as a doctor Member of the House. The first time I remember seeing you was when you spoke at the Students Volunteer Convention in Buffalo in 1932 and the second was when you spoke in the Congregational Church in Rochester, Minn., in 1939, I believe, while I was a fellow at the Mayo Foundation. I have followed your career from afar, and especially after you entered the House, being pleased to see at least one doctor enter the political arena where so many are needed.

You have guessed, no doubt, about what I want to speak to you—the shameful manner in which redeployment of doctors to the States where they are needed so desperately is going forward. At least so it appears to us ensconced here high in the Alps twiddling our thumbs and taking one special tour after another to Bad This and Bad That and Switzerland, the Riviera, Italy, and where else?

Confusion is to be expected in such a huge undertaking, so much is granted. But there appears to be more than confusion, and some of us wonder if there is not something sinister about the whole mess as far as doctors are concerned. With 62,000 of us in uniform out of 160,000 or so total in the United States, why is not some energetic program undertaken to actually get more of us back where we could alleviate the acute shortage instead of getting "the run around" here as we have lately. The matter has been just this evening clinched in our minds in this General Hospital that has been overseas as a unit for about 14 months or more. Our delegate from the officers with high points here returned from Frankfurt this evening with the very heartening news that the doctors with less than 80 points will probably go home next March. Those with more may go sooner.

Now let me cite some line and verse for you to explain why such a report is so alarming to us who have had nothing but misleading information from the start about this program. When I returned from Bremen recently—about a month ago—several of us were assured definitely that we would be on orders home not later than October 3, and that it was merely a matter of the mechanics of the Army until such was done. October 3 arrived and a call was placed to Paris to the officer responsible for our redeployment and we were sweetly reminded that that particular officer had gone "home last week." So his successor was contacted and he assured us that he knew absolutely nothing about our case but would look into it. The office was in process of moving to Frankfurt but he would look into it and for us please to call back in a couple of weeks. This blow was taken standing up by our men, and they called back at the appointed time, only to be informed that they still knew nothing about it all and suggested we call back in a couple of weeks and maybe somebody would know something or other. This week our delegate went to Frankfurt and this evening returned here with the above report that we would perhaps return next March.

Now the strange part of it all is that our enlisted men are being redeployed fairly rapidly, leaving the high-point officers high in the Alps here. Most of our officers are veterans with many more points than the average enlisted score. Why are doctors being held here where they are doing absolutely nothing, while less essential enlisted men are being sent home by transport which is allegedly so scarce?

Is there such a need at home for drivers, helpers, carpenters, electricians, clerks, chemists, etc., that they are being sent home with lower point scores than doctors? We certainly, as officers, would be the last to begrudge the enlisted men their chance when it comes in turn, and we are all for them, even if they are out of turn, if the system is confused enough to permit that. But here comes the suspicion of a sinister purpose back of all this delay, delay, delay, in the redeployment of doctors home. Is somebody among the planners and experts on what is good for the American people trying thus to hamstring the program of private medical care there by holding us as hostages until the situation becomes unbearable there and the people demand Government intervention in their medical care? Judging by the number of bills before the legislatures and Congress now, one could believe such possible, and 62,000 of us in uniform are powerless to ameliorate the situation while held as hostages. Now that is conjecture and has been expressed before by others, but it begins to take better shape when considered in the light of the planned confusion in the redeployment of doctors from this theater. There are a thousand excuses why doctors cannot be gotten home. But is it a matter of safety of the Nation's health, or not? If so, then who is committing the seditious crime against the people by not getting the trained men home to avert the disaster. Transportation can always be found for perfectly awful USO shows and for Hollywood glamour boys on their way home to discharge, as in the case of four of them whose names just appeared in the press during the past month; but not for the doctors—they are not needed badly enough, apparently, and so must commit professional hara-kiri by continued enforced idleness and professional decay. What about our future patients? Will the Army take the responsibility for our decay? Not on your life, for that is our problem and the people's problem. That is why I feel justified in taking the problem to you in Congress, our only court of appeal against a system which is against the public good.

When Wally Ritchie of Saint Paul, whom you perhaps know and whom I knew as fraternity brother, was discharged several weeks ago a great to-do was made about it, since he was the first medical officer of this war to be discharged on points, a fact which I should think would bring shame to the War Department, to admit that they had postponed to so late such a program of returning essential professional men to where they could be used for the national interest.

In a large general hospital such as this one, our professional disaster has been less by far than that of the poor fellow out in the field units. I have talked with many of them who spend half an hour a day caring for the medical needs of a couple of hundred men, and the rest of their time they are forced to invest in traveling to far and near places such as Denmark or Paris. There is a shocking amount of professional decay going on which bodes no good in the light of the alleged continuing doctor shortage in the postwar years until the training schedule has caught up with the need of young recruits to the profession.

One more point and then I shall quit: Have you gentlemen in Congress been aware of the impending ruin to the Medical Reserve Corps of the Army? All I know is what I hear and that is not promising. I have yet to talk to a single medical officer who plans to have anything whatsoever to do with the corps after the war, and can you blame them? They entered this service for the good of their country, realizing full well that they were probably laying the profession wide open to the invasion by planners and social experts who would use every opportunity to discredit private enterprise in our profession when the situation due to our enforced absence became bad enough. It appears they may achieve their purpose if we are held as hostages much longer, considering the long obituary notices in the Journal of the American Medical Association, and the fine trickle of doctors actually returning to their practices.

My wife writes that I am due home just any day now, and so she feels hardly justified in writing. Meantime she has been lulled into a false sense of well-being by the clever propaganda put out by certain types of public relations men who have caused the public to ease its clamor for the return of the doctors because of the alleged imminent return of them home. Large in this scheme loomed the Green project by which some of us were to fly home. It would be interesting to know just how many actually returned via that scheme, and how many, as some of our own high-point doctors, are still taking tours all over Europe to keep from going crazy. Of course, many have fallen into such a state of coma that they don't even tour, but vegetate in their quarters day after day with absolutely nothing to do. I was astonished the other day to hear the chief of a service in a general hospital state that he would just have to go to school again after getting home, and so he had given up the idea of trying to keep abreast of medicine meantime. That was a mature specialist in internal medicine speaking, who is on the staff of Bellevue in New York. What about the battalion surgeon then?

Well, what is the sense to it all, anyway? Is there something sinister or is it just Army "snafu"; the answer lies with the people—whether they will or not tolerate continuation of such shameful waste of professional talent which will take years to replace after the war is over. Can our country afford such waste? If not, when do we get action?

Sincerely yours,

———— ————,
*Captain, Medical Corps.*

## The Full Employment Bill

EXTENSION OF REMARKS
OF
**HON. DEWEY SHORT**
OF MISSOURI
IN THE HOUSE OF REPRESFNTATIVES
*Tuesday, October 30, 1945*

Mr. SHORT. Mr. Speaker, Mr. F. C. Fay, president of the Southwestern Sash & Door Co., at Joplin, Mo., is a successful businessman. He is a good American with sound sense, who has employed men and paid them without Government funds.

Recently he has written me two letters so chock full of keen insight and unanswerable argument that I want to insert them in the RECORD, that they might receive the widest distribution.

If the wild-eyed radicals, crackpots, and screwballs who yell and shout would take time to read these two letters, we would have less confusion in Washington.

Under leave heretofore granted to extend my remarks, I include these communications from Mr. Fay, which are enlightening, constructive, and if followed, will be most helpful to our State and country:

SOUTHWESTERN SASH & DOOR CO.,
*Joplin, Mo., August 18, 1945.*
The Honorable DEWEY SHORT,
*House of Representatives,*
*Washington, D. C.*

DEAR SIR: If the amendment to the Fair Labor Standards Act is enacted, making 75 cents per hour the minimum pay for all workers, it will mean that in order to do this there must be far less spread between skilled and unskilled workers' pay. In competitive business any company must pay all overhead out of gross profit, and there is a definite limit to how high that expense can go if companies are to operate at a profit and if they do not operate at a profit, they cease doing business. Competitive conditions not only control prices, but they control pay; and no fixed minimum pay can be right under changing conditions unless that minimum pay is low enough to be workable during poor years. A company can only pay so much of their total overhead in pay roll; therefore the more unskilled pay goes up, the more skilled pay goes down or the company goes broke. We resent putting more premium on the shiftless, indigent, and lazy people, when to do so it means taking it away from the thrifty, studious, hardworking people who deserve it most.

Furthermore it would mean that older people would cease to be employees, as companies would only take the cream of workers. It would mean you couldn't afford to employ young people and train them, but instead would tend to employ, where possible, people who are already trained. A person with defects physically would be on the out as far as employment is concerned.

It seems to us that Congress must recognize that there is a limit to the burden that any operation can carry whether it be a small company, a large corporation, a city, a county, State, or Federal Government, if we are to keep America and American people and institutions on a sound economic basis.

During wartimes many companies are broke and done for, many of them unnecessarily, many unavoidable. Many that are operating are making plenty and prices are so high now, in spite of controls, that ridiculously high wages can be paid; but laws made to apply now can be disastrous later under normal conditions. What are we to do in the next depression with all this debt and Congress now figuring out ways to add billions and billions to that already top-heavy debt? Most businessmen feel that the next depression will make the last one look like a boom, due to the wasteful spending policies of the Federal Government in the past 13 years.

It is hoped that you will give the above every consideration when reaching conclusions on legislation that is to be enacted.

Respectfully yours,
SOUTHWESTERN SASH & DOOR CO.,
F. C. FAY, *President.*

SOUTHWESTERN SASH & DOOR CO.,
*Joplin, MO., September 5, 1945.*
The Honorable DEWEY SHORT,
*House of Representatives,*
*Washington, D. C.*

Subject: The Murray-Wagner full-employment bill.

DEAR SIR: Let's try to look at this bill from a common-sense, practical viewpoint. During the period of this World War, it is unquestioned by anyone that the people have ahead of them the largest pent-up demand for goods in history due to the fact that so many things were not produced for civilian consumption during the war period. Again we have the largest savings in history with which to buy this avalanche of goods and services which undoubtedly can be produced. The above are accepted as facts by every thinking person.

The above being undisputed facts, then if private enterprise cannot employ the employables of this country during the postwar period, it is only common sense to assume that never again in history will private enterprise be able to employ employables.

Therefore if it is necessary to do additional governmental deficit financing during the immediate postwar period, it is practical to assume that the Government must forever do deficit financing and if they do that, it is only a question of how many years the United States of America can remain solvent.

Yours very truly,
SOUTHWESTERN SASH & DOOR CO.,
F. C. FAY, *President.*

## Rural Health

EXTENSION OF REMARKS
OF
**HON. FRANK W. BOYKIN**
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech delivered at a meeting of the Alabama Farm Bureau Federation by Dr. B. F. Austin, health officer, State of Alabama, at Biloxi, Miss., on October 31, 1945:

Alabama is so predominantly rural that any discussion of public health in this State will necessarily deal largely with the rural aspects of this important subject.

We are a people who believe in slogans, catch phrases, and mottoes. Everyone is familiar with the frequently advertised slogans such as "The pause that refreshes," "Good to the last drop," "Drink a bite to eat," "L. S. M. F. T.," and the products thus advertised. In our effort to capture the fancy of a slogan-minded people your health department has one motto which we hope every Alabama citizen will consider as personal and will exercise his utmost effort to support. It is: "The health of your State depends upon the state of your health." The more you analyze the words in this statement the more significant they become. If we can repeat this motto often enough that every Alabamian will recognize his part and assume that responsibility we can confidently look forward to great improvement in the health of our people.

It is evident that while the health problems of city dwellers are by no means neglected, the main task of Alabama's far-flung public-health agencies is the safeguarding of the health of the State's rural population. Thomas Jefferson on more than one occasion expressed the opinion that democracy would survive in the United States as long as the country remained predominently agricultural. If agriculture should ever have to play second fiddle to industry, however, he was not so sure. "The mobs of great cities add just as much to the support of pure government," he wrote, "as sores do to the strength of the human body. I think we shall be virtuous as long as agriculture is our principal object. When we get piled upon one another in large cities, as in Europe, we shall become as corrupt as in Europe."

However much we may say in praise of a predominantly rural population as a factor in keeping democracy alive and in praise of its other advantages there is no doubt that certain problems assume greater seriousness among rural people than among city dwellers. One of them certainly is in the protection of the people against certain diseases.

The presence of the Negro as a considerable segment of the Alabama population has profoundly affected our health status. With nearly 70 percent of her population classified as rural and containing more than one Negro for every two white people, Alabama is, to an unusual degree, enjoying the benefits and suffering from the disadvantages brought by ruralization and the Negro.

This State's peculiar status with regard to both rural population and the Negro adds greatly to its health problem. There are numerous diseases, some of them taking high rank as killers and others adding greatly to the burdens of poverty, ignorance, and personal inefficiency, to which the members of one or both of these groups are particularly susceptible. The Negro whooping cough death rate, for example, is about two and one-half times as high as the white rate. The tuberculosis death rate is about three times as high among Negroes as among white people. Malaria kills more than twice as many Negroes in proportion to population as white people. The Negro death rate for syphilis is about seven times the white rate. More than two and one-half times as many Negroes succumb to pellagra in proportion to population as white persons. Higher Negro death rates are also found for pneumonia, diarrhea, and enteritis (under 2 years) and the conditions associated with childbirth. The Negro stillbirth rate is considerably higher than the white rate, and the death rate among Negro babies is markedly higher than among white babies.

Furthermore the rural death rates for typhoid fever, scarlet fever, whooping cough, diphtheria, malaria, influenza, measles, typhus, pellagra, diarrhea, and enteritis (under 2 years) are persistently higher than the urban rates for these same conditions.

The increased mortality and presumably the greater prevalence of these forms of ill-

ness among our rural population have a public-health significance and also a social significance not apparent on the surface. Some of these diseases, like scarlet fever, whooping cough, and diphtheria, play little part in society's advancement except insofar as they affect the health and personal fortunes of their victims. Others, however, like malaria, typhus, and pellagra, tend to act as a brake upon the social, economic, and educational advancement of our people as a whole while making complete or partial invalids of their immediate victims.

If we leave the vital statistics for a moment and turn our attention to a disease that plays an almost insignificant role in the mortality tables but a vastly important role in the progress, prosperity, and happiness of our people, we find one of the most potent reasons why rural health is so important in Alabama.

The disease to which I refer is hookworm which kills very few Alabamians but is constantly robbing thousands of them of the physical energy and mental alertness without which individual or social progress is impossible. I need hardly emphasize that this vampire disease, which is really an invasion of the human body by blood sucking parasites, is almost entirely confined to our rural areas, where there are few modern methods for the sanitary disposal of body wastes and where shoeless feet frequently come into direct contact with hookworm infested soil.

Your attention is called to the fact that rural conditions per se are not entirely and directly responsible for the greater prevalence of certain diseases in rural areas. It is unfortunately true that certain social conditions, which have an important bearing upon health, are more unfavorable in the country than in the urban areas. For one thing there is a more serious lack of medical care than in the city. You can hardly expect the best of health conditions in any community where there are enough physicians, nurses, dentists, pharmacists, and hospitals to adequately meet the medical care needs of the people. Unfortunately, in a State like Alabama, a large proportion of the population is not served by public water supplies and commercial graded dairies and therefore does not benefit from the careful supervision of them.

Fully aware of the peculiar health problems due to Alabama's being essentially a rural State and containing an unusually large percentage of Negroes, your State department of health is devoting particular attention to the solution of those problems. Much has been accomplished. But much still remains to be done.

The people of Alabama take justified pride in her health record. While we are handicapped because of the existence of several preventable diseases and other factors common to our southland we are not sitting complacently by and lamenting that climate, poverty, nature, and other phenomena have been unkind to us. On the other hand much has been done to rid our great State of many preventable diseases and other handicaps peculiar to the Southern States. I am delighted to direct your attention to some of the activities and wonderful accomplishments in the health field.

We who are engaged in public-health work fully realize that credit for Alabama's health fame does not all go to paid public-health workers by any means. First of all, we commend the medical profession as a whole for its excellent contributions to health promotion in our State.

Alabama's unique system of health work and enviable record in accomplishments in this field were made possible because of the dream of a great Alabama physician, a statesman humanitarian, and scholar—Dr. Jerome Cochran, of Mobile. It was through his persevering, unselfish efforts that the medical association of the State of Alabama first undertook to lay the foundation for our successful health system. Later the Alabama Legislature by official action designated the medical association of the State of Alabama as the State board of health. It has functioned efficiently and satisfactorily for 70 years.

We who constitute your paid public-health workers are also mindful of the outstanding contributions made to health work by our governing bodies. We are quite cognizant of the fact that little could have been accomplished by the relatively few paid public-health workers if it had not been for the legislation passed by State, county, and municipal governing bodies. The governors, legislators, county, and municipal officials have not only enacted laws but have wisely appropriated public moneys for the employment of efficient specialists in the public-health profession and payment of other expenses incident to the services rendered. Furthermore, the law enforcement and judicial officer of cities, counties, State, and Federal Government have cooperated in a magnificent way to assure success in our health program. We therefore pay tribute to the official of the United States, State, counties, and cities because of the splendid way in which they have promoted Alabama's health.

We also realize that the intelligent cooperation of an informed public has done much to place our great State on the forefront in the battle against preventable diseases. Furthermore, we acknowledge the definite contribution made to the health of our State by such voluntary organizations as the American Red Cross, Alabama Tuberculosis Association, Field Army of the American Cancer Society, Alabama Crippled Children's Society, National Foundation for Infantile Paralysis, all civic clubs, parent-teacher associations, extension services, women's clubs, and others.

I shall not burden you with statistics but will use some comparative figures of deaths caused by a few diseases in 1917 and 1944. I chose 1917 because that is the year Alabama embarked upon an ambitious program to organize county health departments in the State on a full-time basis. Our first full-time county health department was organized in 1914 in Walker County, with Dr. Carl A. Grote serving as health officer, and sponsored by the United States Public Health Service in cooperation with the State and county officials. This was one of the very first county health departments organized in the United States of America. It was in 1917 when the late Dr. S. W. Welch became State health officer and began to interest the Federal Government and the Rockefeller Foundation to make financial contributions to Alabama's health program.

Let us consider some of our accomplishments in reducing the number of deaths caused by a few preventable diseases. Perhaps the most outstanding of these is typhoid fever. In 1917 there were 989 Alabamians who died of this disease. Last year there were only 16. At the same time deaths caused by diarrhea and enteritis under 2 years fell from 1,560 in 1917 to 295 in 1944. Malaria caused 530 deaths in 1917 and only 41 in 1944. Tuberculosis, althcugh still one of our great killers has lost much of its prominence as such. In 1917 there were 2,914 Alabamians who succumbed to this disease while in 1944 there were 1,239. Pellagra killed 1,073 Alabama residents in 1917 and 98 in 1944. Diphtheria caused 191 deaths in 1917 and 59 in 1944. Smallpox once a great scourge has not caused a death in Alabama since 1932 although a man died last year of pneumonia contracted while he had smallpox.

I give you these facts to illustrate what has been accomplished but that is not all. These reductions in deaths did not just happen. It was planned and the people of Alabama responded. There were several factors entering into the picture. Laws were passed requiring public water supplies to be safeguarded, milk and food regulations were enforced, persons were vaccinated to prevent smallpox, diphtheria and typhoid fever, sanitary disposal of human excreta was provided and enlightened public cooperation was experienced.

The only deadly disease that has increased steadily since 1917 is cancer. There were 781 deaths in the State that year from this ailment and 2,083 in 1944. This increase is due partly to the fact that more of us are reaching the cancer age. We are living longer to die of malignancies. Better diagnosis is now available and more persons are consulting their physicians for cancer. A motto of the field army of the American Cancer Society is, "Fight cancer with knowledge." Efforts are made to make a cancer-conscious population and prevent cancer fear. You need to remember that quacks using salves and ointments cannot cure cancer and will only prolong the time when proper treatment is instituted.

Recent State legislation and that now pending in the Congress are going to add much to Alabama's health. Provision is made by State legislation to receive Federal funds and use State and local funds to match for the purpose of building hospitals in areas not now furnished with these institutions. These hospitals are not to be built as charity institutions by the Federal and State governments but these agencies are to contribute funds to aid local nonprofit hospital associations in constructing and equipping hospitals and health centers. Hospitals will include general and tuberculosis hospitals as well as nursing homes for the chronically ill.

It is firmly believed that the construction of these hospitals and health centers will induce well-prepared young physicians to locate in communities where they are now urgently needed. This will make hospital facilities and medical care more readily available to all our population. The reestablishment of the 4-year medical school will inevitably provide a greater number of physicians for Alabama within the next few years, and with modern facilities to aid in their practices there is little doubt that many of them will locate where the hospitals are.

Remember, "The health of your State depends upon the state of your health."

## Columbus Day Address by Francis P. Matthews

EXTENSION OF REMARKS

OF

### HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

*Friday, November 9 (legislative day of Monday, October 29), 1945*

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Columbus Day address which was delivered over the Mutual Broadcasting System by a very distinguished citizen of my home town, Omaha, Nebr., Supreme Knight Francis P. Matthews, on October 12, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen of the radio audience, four centuries and a half have passed into history since Christopher Columbus discovered the Western Hemisphere and inaugurated a new epoch in human affairs. By piercing the veil of mystery which had fenced

the world of the fifteenth century within a small section of its global expanse, the Genoese explorer lifted the curtain of the unknown which, until that time, had retarded the progress of civilization.

Columbus was born into a world limited in its proportions and prospects by stubborn ignorance and paralyzing superstitions. He lived to see that ignorance transformed into a revolutionary knowledge of physical science which directed its enlightening force on the weird superstitions which pictured the terrifying dangers lurking beyond the horizon of the known surface of the earth, and dispelled them like the melting of the twilight mists of morning before the irresistible rays of the rising sun. The force of his discovery has been felt by every human soul that has since responded to the quickening impulse of life. Columbus released the sleeping atomic energy of exploration and discovery, and the limitless blessings of man's creation proceeded to unfold with ever-increasing richness. For 453 years, the fruitful consequences of his undeniable genius have enriched the possibilities and the realizations of man's adventurous progress from the cradle to the grave, as no other single event of human origin has done in the course of time.

By common consent, Christopher Columbus, the discoverer, is secure in his position as the greatest human benefactor of mankind. No other member of the race has, of himself, so definitely enhanced the significance of human existence.

It was a circumscribed world that made up the theater in which the drama of the failures and successes in the life of Columbus transpired. That world is beyond the comprehension of the modern mind, which only casually reflects upon the miracle of the recent encirclement of the earth by an Army airplane in 149 hours. The complacency with which that marvelous achievement is accepted as a routine job indicates how much at a loss the present-day beneficiaries of the voyage of the Santa Maria are, to visualize or evaluate either the cost in human heartache or the price in all but superhuman faith which were expended to vindicate the startling conception of the earth's shape which, for so many painful years, isolated Columbus from normal human contacts and associations in every land where he lived.

It was the unfaltering faith of Columbus which split open the closed gateway that, for centuries, had blocked mankind's unquenchable desire for new lands to explore and exploit. Helpless in his own poverty to promote the daring expedition which he knew would vindicate his seemingly radical theory of the earth's structure and form, through the sheer force of his own will power he compelled a reluctant and conceited society to accept his contentions and provide the means with which to demonstrate their soundness. The story of mankind supplies no more sublime exemplification of the efficacy of fervent faith than is represented in the triumph of Columbus over the ridicule, the disbelief, and the scorn of the self-anointed scoffers of his day.

His was the same indomitable faith, emanating from a humble acknowledgment of man's total dependence upon Almighty God, that inspired the zeal of the crusaders, that fired the determined self-sacrifice of the Pilgrim Fathers, that fortified the anxious heart of the kneeling Washington at Valley Forge, that animated the deliberations of the framers of our Constitution, that comforted the martyred Lincoln, and that the world, in its hunger for the God-given blessings of peace, is seeking in the souls of men today. On that faith alone can the war-torn, torture-ridden, horror-shocked generation in which we live eradicate the malignancies which corrupt domestic, national, and international relationships in this perilous hour in history, and reestablish Christian civilization in harmony with the true essence of Christianity.

Columbus, by his undeniable faith in divine guidance and the supernatural benevolence of the Supreme Father of mankind, single-handed conquered the skepticism and overt opposition of an unsympathetic world, and we, and those who have preceded us since his time, have reveled in the fruits of his faith and sacrifices.

The epoch to which Columbus gave birth marked the beginning of a long era of material profit and spiritual enrichment for mankind in general. New continents, with their seemingly inexhaustible natural resources, poured their fabulous riches into the treasure basket of almost every nation. Capitalized by this material rehabilitation of their impoverished economy, the nations of the earth succumbed to the political pushing and crowding, the internal and international conflicts from which there have evolved the two principal philosophies of government—democracy and totalitarianism—which inevitably fashion the lives of all people today.

Through 453 years of wars and famines and plagues, which at times have neutralized or completely dissipated the beneficent fruits made available through the genius of Columbus, we have progressed from the bleak and grim deficiencies of human life in days before America, to the fascinating realities of the twentieth century. It is difficult to evaluate the breadth of culture stretching between the sailing ship, the hand printing press, the oxcart, and the personally carried letter of the fifteenth century, and the airplane, the lightning-fast printing presses, the streamlined automobiles, and the worldwide postal system of this day.

In transportation, in communication, and in the dissemination of knowledge through the printed word, progress has proceeded through the accomplishment of one miracle after another. With amazing repetition in the material world, the impossible has become commonplace through the inventive and engineering genius of our scientific minds. The potential substances deposited in the bowels of the earth, and which were first opened up for man's exploitation through the dreams of Columbus, have been appropriated and processed in the laboratories and workshops of industry and research, to create the marvels of modern production which serve man so completely in every phase of his needs.

As has happened so often in man's complacent satisfaction with himself, it had almost come to be believed that the ultimate in the evolution of human progress had been attained. At last, human society had exposed and explored the total surface of the earth; it had appropriated the skys to accommodate the airplane and the radio; it had banished distance; it had perfected the instantaneous exchange of ideas through visual and oral intercommunication by means of the radio, the telephone and the talking movies; it had devised numerous appliances to serve the individual's comfort and convenience; and, in spite of the annihilating destruction emanating from the most terribly devastating war of all time, society was ready to strike a pose, and, with folded arms, challenge the future to outdo the accumulated fruits of the receding past.

And then the cataclysm came! Unsuspected and without warning, the fact of the atomic bomb crashed into the unprepared consciences of men, and a new epoch was born—the epoch of atomic energy! One does not have to be very sensitive to discern that the world was frightened by the menacing potentialities of what it had done, or that it is still stunned by the shock of that fright.

The epoch opened by Columbus was one of hope. It forecordained a constructive era. It foretold progress. It could not avoid bringing happiness to mankind.

What may we expect of this new epoch? What does the splitting of the atom mean? How will the harnessing of atomic energy affect the weal or the woe of ourselves and the children of the future families of the world? Has there been produced at last, in the providence of God, a cause which will compel the population of the earth to come together and live in brotherhood, with mutual forbearance and understanding, or perish? It is not so silly to accept that interpretation of the ghost-like ruins of Nagasaki and Hiroshima, when you dwell upon the international misbehavior of society during the last 6 years. The epoch of atomic energy, by its potentiality for annihilation, could well be the final epoch in history. It could well exterminate human life on our planet. It could, on the other hand, produce the elusive millennium of universal peace under an acknowledged and welcomed fatherhood of God.

Which will it be? The answer is to be found in your heart and mine, and in the hearts of our 135,000,000 fellow Americans, as well as in the hearts of some 200,000,000 Russians, and the 540,000,000 of the British Empire. If the 875,000,000 of victorious Allies and their leaders fail to heed the awful significance of war in the future, then, in punishment for our folly, it may well be that the vengeance of an outraged God shall be visited unmercifully upon our children, and our children's children.

It is a sobering thought to contemplate what the coming years may hold for mankind. As has seldom happened in history, events have transpired to center responsibility for the fate of the future within a limited circle. It is not too much to say that upon the United States and Russia depends the hope for peace. They are the two most powerful nations. They have much in common; but, in the most fundamental concept of man, there never were two nations wider apart or more violently in conflict. With us, the individual is supreme; the state, his servant. In Russia, the state is everything; and the individual, subordinate.

Our philosophy is the product of that thinking whose fountain source is deep religious conviction, an appreciation of man's total dependence upon the divine will. Tangible evidence of that fact permeates the records which preserve the story of the Nation's birth and growth to its present preeminence.

Washington, kneeling in the snow at Valley Forge; Lincoln, with bowed head, beside the casket of his little son; Benjamin Franklin, on his knees with the other delegates, rescuing the first Constitutional Convention from failure; the Chaplain's invocation which opens each session of Congress; Thanksgiving Day; President Truman reverently acknowledging God's merciful handiwork in the termination of the war; these, and many other manifestations of religious faith exemplified in our national life, suggest that the poet's conviction that more things are wrought by prayer than this world dreams of, has consistently been America's guiding influence. And in that we emulate the edifying example of Christopher Columbus, as he crowned his conquest of the Atlantic by erecting the cross of Christ on the gleaming sands of the newly found shores of San Salvador, in grateful acknowledgment of God's guidance and help.

Can our Nation, with such a glorious religious tradition, work with Russian atheistic communism to establish in the world the program of the Prince of Peace? Only Russia can answer that question, because only Russia can say how far she will relax the totalitarian dictates now gripping her own people, as well as the tens of millions outside her own borders but still embraced within her smothering sphere of influence. If we are to be realistic with ourselves, we cannot minimize the grave conflict between the principles of American democracy and the dictatorship of the Soviet Republics.

There is no room for compromise in that situation from our point of view. The silent lips of the 250,000 American youth who died

to win our latest war cannot be heard, to voice their demand for the faithful preservation of our cherished liberties and freedoms; but President Truman and Congress recognize and will heed the challenge which their supreme sacrifice represents. We have the power, we have the will, we have the leadership to keep our American idea of democracy safe and sound. In that position of advantage, we dare not betray "the last full measure of devotion" so generously expended by our heroic dead to win victory in every war we have fought.

The ghastly menace of the atomic bomb dictates that there must be peace in the world. With the patience, the perseverance, and the unfaltering faith of Columbus, in spite of every disappointment that comes, and every obstacle that is faced, America will never yield until that goal is assured. The road may be long and hard, but somehow, in God's providence, simply because it must, the righteousness of our cause shall prevail.

## Subsidy Program for Aluminum Manufacture and Distribution

EXTENSION OF REMARKS
OF
### HON. CLYDE R. HOEY
OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

*Friday, November 9 (legislative day of Monday, October 29), 1945*

Mr. HOEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the president of the Fairmont Aluminum Co., of Fairmont, W. Va., addressed under date of October 22, 1945, to Mr. W. Stuart Symington, Surplus Property Administrator, Washington, D. C., in which he sets forth very clearly opposition to the subsidy plan. I think the letter is worthy of being placed in the RECORD and read by Senators.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FAIRMONT ALUMINUM CO.,
*Fairmont, W. Va., October 22, 1945.*

Mr. W. STUART SYMINGTON,
*Surplus Property Administrator,*
*Washington, D. C.*

DEAR SIR: We have read very carefully the report of the Surplus Property Board to the Congress, dated September 21, 1945, on aluminum plants and facilities. We are deeply concerned with that part of the report which proposes, in effect, a subsidy program which applies to practically every phase of the aluminum manufacture and distribution. It is the purpose of this letter to protest against the putting into effect of any such subsidy program which we believe would be dangerous to the economy of the United States, and especially dangerous to the entire aluminum industry including all independents now operating in the aluminum industry, except those who are the beneficiaries of these subsidies. It would open the way to demands for subsidies in other industries and once started, would have the most serious effect upon the free enterprise system in America and upon its free economy.

You call attention on page 26 of your report to section 2 of the Surplus Property Act which provides among other objectives, "to give maximum aid in the reestablishment of a peacetime economy of free independent private enterprise, the development of the maximum of independent operators in trade, industry, and agriculture." Granting of any such subsidies as proposed in your report would destroy peacetime economy of free independent private enterprise rather than encourage it, and would retard the development of the maximum of independent operators in trade and industry, instead of promoting it. We wish to go on record with you as being unequivocally opposed to the granting of Government subsidies in industry on any theory. The principles of democracy are based upon equal opportunities and equal justice to all. For the Government, by any process, to pick out a single individual operator in industry and to grant him a subsidy over his competitors, and to provide that if there is any loss the Government will absorb or share in it, strikes at the very fundamentals of the principle of equal opportunity of justice and of democracy.

We hold no brief for the Aluminum Co. of America, or for any other concern in the aluminum industry. Neither are we motivated by selfish interest in the position that we take. It is true that we believe that the establishment of subsidies such as proposed by you would eventually destroy our company along with other independent aluminum companies, and even the Aluminum Co. of America. But it is not for that reason that we feel impelled to protest and object to the program proposed by you. To destroy us is a relatively small and insignificant thing compared to destroying the principle of democracy, the principle of equal treatment to all, and of equal opportunity in America. Naturally we will fight to protect our own business which was built up against severe competition and without Government subsidy or help of any kind, as all business should be. But we will fight even more to retain in America the free enterprise system and the right of industry in America to be free of unfair competition on the part of the Government, or of the Government providing subsidies to create unfair competition.

We do not go into the question at all as to whether there ought to be more competition in the production of aluminum pig and other aluminum fabrications. If this competition can be developed legitimately with private capital, that is one thing; but for it to be developed under paternalistic subsidies and protection of the United States Government is quite another thing. We maintain that the aluminum industry would be far better off without more competition than it would be with more competition developed by any such pernicious plan as you propose in your report.

We now make specific reference to some of the points urged in your report as a program of the Surplus Property Board in support of Government subsidies. We refer first, to the Government guarantee against losses to which reference has been made earlier in this letter. The proposal is, as we understand it, to give an operator of a Government subsidized plant 15 percent of the net profits, but will require the Reconstruction Finance Corporation (in other words the Government and the taxpayers of the United States) to stand all losses. We agree with the testimony that has been made before the joint Senate committee investigating the matter of disposal of surplus property aluminum plants that such a proposal is an invitation to reckless, extravagant, and calculated mismanagement. Under such a program, an operator could spend money recklessly for sales expense, advertizing, capturing of markets, and other practices which his competitors could not possibly meet, knowing well that if he suffered any losses, the Reconstruction Finance Corporation bore them. The taxpayers paid for his recklessness. And this is true, even though the Reconstruction Finance Corporation did reserve the right to review and approve the prices at which the metal is sold, top salaries, and extraordinary expenses. This would virtually place the Reconstruction Finance Corporation, an agent of the Government, in a position to dictate the price at which aluminum was sold and could result in the Reconstruction Finance Corporation putting all competitors of the favored son or beneficiaries of the subsidy out of business. We furthermore call your attention to the fact that such a subsidy would enable the favored operator to raid other operators in the industry, of their keymen without regard to the cost of it, because the Reconstruction Finance Corporation would pay. Some competition has already been built up during the war period, by raiding the organization of other operators, and the granting of a subsidy such as is proposed, would make this practice feasible and possible to a continuing extent.

You propose, further, to give the lessee of Government plants an option to purchase based upon the earnings record of the plant during the subsidized lease. This would permit a lessee of these plants to deliberately incur losses so that he might eventually buy the plants as cheaply as possible.

As to the subsidy proposed in the Government procurement of bauxite, we will not go into special arguments against it except to stand on the premise that the principle of subsidy is all wrong in a democracy and the subsidy applied to the procurement of bauxite is as indefensible as the subsidies applied to the purchase of plants, or guaranty against losses. The same thing applies to the proposal to subsidize the manufacture of alumina at prices equal to, or lower than the Aluminum Co. of America's cost.

It is our studied opinion that, contrary to what you say in the report, the advent of new producers in the industry through Government plant disposal under the subsidy plan proposed by you, would decrease national security instead of increasing it, and would decrease employment in the aluminum industry rather than increase it, and would create a confusion in the industry. It would play havoc with independent operators, as well as the principal producers. It would be handing over on a silver platter the aluminum industry that has been built up through long effort and through years of energy and devotion to it, to some newcomer protected from the rains of adversity by a Government umbrella.

Respectfully submitted,

FAIRMONT ALUMINUM CO.,
L. M. BRILE, *President.*

## Demobilization of Army and Navy

EXTENSION OF REMARKS
OF
### HON. W. LEE O'DANIEL
OF TEXAS

IN THE SENATE OF THE UNITED STATES

*Friday, November 9 (legislative day of Monday, October 29), 1945*

Mr. O'DANIEL. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD two very interesting letters, one from a Navy man stationed on Guam, and one from an Army man stationed in France, expressing their criticism and dissatisfaction at the methods employed in demobilizing the Army and the Navy.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

GUAM, MARIANAS ISLANDS,
*Thursday, October 18.*

Hon. W. LEE O'DANIEL,
*Capitol Building, Washington, D. C.*

DEAR SIR: I have not wanted to waste the time of any man in Washington over the Navy point system, because I knew that the Navy

had not had time to get started on demobilization, and I felt that when that time came they would do the best that they could possibly do. However, now with their plan for demobilization announced I feel that the time has come for us to write our views—just in case the Navy Department is putting up a pretty good argument before Congress.

First of all I want to point out a couple of obvious lies in the Navy's announcements of the last 2 days. Yesterday, with the announcement of the reduction in points, the Navy Department announced that with a reduction only to 39 in December, one-third of the Navy would be out by the first of next year. When the average point score right now is 26 or 28, I ask you just what kind of fools they take the people back home to be when they announce such a thing. A reduction of 10 more points would be necessary to get it to one-half its wartime force—so, how can a reduction of only 6 points possibly get out one-third?

Today, they made the further announcement that none of the ships in the States for Navy Day could be used for transporting troops. The falsity of this statement lies in the fact that they don't explain why they are not now preparing them to transport troops home instead of leaving them in the ports back home for 10 days to 2 weeks—just to show them off. Nor does it explain why the U. S. S. *Portland* could not have been making another trip to carry troops back when it was in Pearl Harbor for 3 weeks while the 44-point men of the Navy who were homeward-bound were made to paint it for the celebration in the States.

Those are only two of the many flagrant abuses of the truth by the Navy Department that we in the Navy would like for the Members of Congress to inquire into. I feel sure that in our democratic form of Government such utter lack of regard for the rights of civilian sailors will not be allowed to continue.

I appreciate your consideration in reading this letter, and hope that I do not feel called to write any other—because I know that you, as well as all the Members of Congress, are very busy with all the problems of a Nation changing back to peace.

Your humble constituent.

---

FRANCE, *October 22, 1945.*

DEAR SENATOR O'DANIEL: This is the first letter that I have ever written to a Congressman.

They say that the storms in the channel are holding up the shipping, but the port commander says that there have been no storms lasting more than 24 hours. Fellows in the States are getting out of the Army with only a few points, yet men over here are being shipped to Germany for the army of occupation when they have over 3 years of service, and some with over 50 points.

All we seem to be doing over here now is shipping men to other outfits, and other outfits shipping men to this outfit. All they seem to accomplish is mixing things up and moving men around when we don't like to travel especially under the conditions that we have to travel under. There doesn't seem to be any system to it whatsoever. They are just shipping men around for the sake of shipping them around. That's all they accomplish. Things are worse now than they were when the war was going on.

I've only been in the Army 33 months and have only 39 points, and I didn't expect to get out of the Army right away because there are other men over here who have 4 years of service, but when I read about men in the States getting out when they have only a few points, and I am being shipped to Germany, I get mad because I can't see any justice in it.

I volunteered for the Army and wanted to do my part to help win the war. At that time they made a lot of promises none of which have come true. The Army is just a vicious Army and when they get you trapped and up against the wall, they don't care what happens to pfc's or anybody else for that matter except generals.

My folks read the papers at home saying how every effort is being made to get me and my fellow soldiers home, and they expect me home by Christmas or at the latest New Year's. As far as I can see it will be way past June before I get home and by that time they will have forgotten that I was ever home and will look upon me as a complete stranger. I'm not the only guy in this fix. There are others.

They say they are discharging some men in the States because they are surplus. They can't claim that we're essential over here because all we do is sit around and doodle. Enclosed is a sample of this doodling to prove that we have done about every kind of doodling there is and are running out of ideas to kill time with.

We read all of the magazines that we can get and all of the home-town papers that we and our friends get including papers from towns of 5,000 population that are 2 months' old, and of towns that we never heard of and aren't the least bit interested in and still we run out of reading material before noon every day.

This joke has gone far enough.

Yours sincerely.

Mr. O'DANIEL. Mr. President, I hold in my hand another illuminating letter, written to me by the father of a boy who is in the Navy. This father is an official in a large industrial plant, and is fully informed on the subject about which he writes. His son is also qualified, by experience, to speak on the subject. For obvious reasons I shall protect this father and son by not divulging their names. I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

No doubt you receive many letters like this but I would appreciate your reading this.

I would like to call to your attention that no points are allowed for combat engagements for our boys in the Navy. I and about 3,000,000 other fathers do not consider this a fair deal. I have a boy 23 years old, who was pulled out of the Texas University when he only lacked one semester of getting his degreee in aeronautical engineering. He has been on active duty for 28 months and I would like to quote from some of his letters as follows:

"It seems that the Navy has lowered its point system and I don't have but two more years to do; isn't that thrilling. This Navy can't make me believe that they are trying very hard to get their men discharged, when they let the fleet set at anchor a month in the States in order to give the public a Navy Day show. I listen to the news every day, and it seems to me that Congress is really on the ball. A lot of Congressmen propose good legislation whether they get it passed or not. Ships going back to the States could carry an average of at least three to four thousand men per ship; that is, carriers and transports, etc. In other words, it would take 240 ships to bring home a million men. The public may believe that they don't have the shipping available, but they can't make me believe it, because I have seen as many as a thousand ships setting in one anchorage out here. Not all could be used as troop-carrying ships, but at least half of them could, and when you stop and think that there must be other ships at other anchorages, the idea that there is a lack of shipping sort of leaves your mind, and you wonder how hard the Navy is trying to get their men home, and thank God for the pressure Congress is applying. The whole matter is very disheartening. It is unheard of for the Navy to send a person home when they don't have a place for him—he must have the points. I have been excess ever since I have been in this organization. What a stupid, miserable existence this Navy is.

"If this proposed bill for drafting 18- to 20-year-old fellows goes through, the country may as well kiss its supply of doctors and professional men good-by. I have seen these older fellows in school; they usually drop out the first semester, because it is not what they had expected. Most of them have knocked around so much that the things they throw at you in the first part of college seem silly and useless, so they just quit. The ones that do stay are no match for the younger, more eager fellows, who are much sharper and who apply themselves to their work with a burning desire that the older ones cannot start to equal. The Government won't have to put out as much money as they think sending fellows to school. Lots of them intend to go, but I am very skeptical about their attitude toward school once they are on the inside looking out. They won't be able to see the reasons for some of the things they have to put up with in the first 3 years of college, and, consequently, will do them only half way or not at all, and will finally become disgusted, decide that they know more than the professor, and leave. If they don't get disgusted and leave of their own accord, they will probably be thrown out due to poor grades. The years a young fellow spends in school before he has booted his way around in the world are decidedly the most fruitful as far as education is concerned, and are something that, once taken away, the Government cannot give back. It is only the stupid, uneducated, selfish military men who insist on a draft of 18- to 20-year-olds when there is no necessity for it, and I consider them worse than criminals, since they are stealing something that is irreplaceable. If the country wants to keep a large standing Army and reserve Army, I think it is fine, but men like these would put everyone in the Army if they could. I know there must be some solution besides forcing people into 2 years of unfruitful training, wrecking their lives, killing their spirit, and breaking their health, and destroying a potential source of production men and scientists. I can truthfully say that my health was never worse than now, and I don't feel like I will ever have my energy again. The thing that has made me maddest of all is that in my heart I know I haven't done a damn thing toward winning the war, since I have never been needed anywhere I have been placed, and therefore all the time spent has been wasted. The ROTC was just a big joke as far as I am concerned; everything they taught was worthless and out of date; the most foolish thing I ever did was to join that outfit, since it kept me from getting my degree. The people who are handed commissions straight out of civilian life and go through the 3-month indoctrination course the Navy has are of just as much use to the Navy and are just as well equipped as any ROTC man. In fact, ROTC and Regular Navy men are laughed at by the numerous men commissioned right out of civilian life, who have done such a good job in this war. I suppose all this sounds like old stuff to you, mother and dad, but I can't help writing it once more. It isn't bad out here at all; it is just this marking time that gets under a person's skin."

This boy was in four major engagements and has four stars, which would bring his points up if they were allowed to in the Navy. If the Navy needs men, why don't they draft these young communistic CIO boys who are doing so much striking and picketing of plants, and who have been hiding behind lathes and machines in these plants for the last 4 years—and let the boys who

have served their time out there come home? I'm not asking anything special for my boy—only that he and the rest of them be given a fair deal, and it certainly seems unfair that so many who have never seen overseas service have already gotten their discharge.

## United States Employment Service

EXTENSION OF REMARKS
OF
**HON. ROBERT F. WAGNER**
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
*Friday, November 9 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Atlanta Constitution which briefly but accurately points out the need for continuing the United States Employment Service as a federally operated agency.

Experience has shown that the present State-by-State system of employment service and unemployment compensation cannot operate satisfactorily in a national economy such as ours.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNEMPLOYMENT KNOWS NO STATE BOUNDARIES

It is to be hoped that Congress will follow President Truman's suggestion and resist efforts to turn the United States Employment Service back over to the individual States. Some Government services are more efficiently and economically rendered by States, some by municipalities, still others by Uncle Sam. Because Nation-wide cooperation is needed to prevent unemployment in some sections while labor shortages exist in others, job-finding naturally falls under the Federal category.

## From War to Peace

EXTENSION OF REMARKS
OF
**HON. WAYNE L. MORSE**
OF OREGON
IN THE SENATE OF THE UNITED STATES
*Friday, November 9 (legislative day of Monday, October 29), 1945*

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very stimulating and penetrating address entitled "From War to Peace," which was delivered last night by a great American statesman, Hon. Harold E. Stassen, of Minnesota.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HAROLD E. STASSEN, OF MINNESOTA, DELIVERED AT THE ANNUAL MEETING OF THE AMERICAN ACADEMY OF POLITICAL SCIENCE, NEW YORK CITY, NOVEMBER 8, 1945

Mr. Chairman, distinguished guests, and fellow citizens; there can be little doubt that we meet at the opening of one of the crucial decades of history. A world-wide war, tenfold more destructive than any previous war has ended. It ended, and left in its wake a billion of the men and women and little children of the world hungry and short of food. It ended, and left a quarter billion of the people of the world without shelter. It ended, and left a half billion of the earth's inhabitants, including many on every hemisphere, seething in the ferment of political and social unrest. It ended, and let 50,000,000 of mankind wounded or ill or long, dreary distances from home, at strange locations to which they had been swept by the flood tides of the conflict. It ended, and left little white crosses, row on row, arcund the globe, as signposts of the youth, virility, and manhood that was no more and as symbols of the sorrows in the hearts of their loved ones. It ended, as the United Nations were preparing to put into effect their Charter for peace. It ended, and left the production and distribution systems in great areas of the world disrupted and destroyed. It ended, in a rapid succession of guns that shot farther, of airplanes that flew greater distances in shorter time with heavier bomb loads, of rockets that outsped sound itself. It ended, with the awesome flash at Hiroshima and Nagasaki, signaling to the world that science had unlocked the devastating and disintegrating force of the atomic bomb. It ended, and we face the future. And what of that future? What shall our course be?

I believe the best way to discuss that future course is to take up specifically one of the world's problems. I believe we can best come to grips with the issues of the days ahead by discussing frankly and in detail our policy on the world's major challenge of the future—atomic energy. Needless to say, I speak as an individual and not in any sense for the Navy or the Government.

Seeking to find the wise policy as to atomic energy it is important that we first endeavor to clarify basic factual information.

First of all, the successful development of the sustained neutron chain reaction resulting from nuclear fission, and the manufacture of the atomic bomb, was a result of many years of effort by scientists of many countries, including Denmark, France, and Germany, culminating in the specific intense work by large groups from England, Canada, and the United States in the Manhattan Project in Hanford, Wash., and Clinton, Oak Ridge, Tenn., and in groups at Berkeley, Chicago, Columbia, Los Alamos, and elsewhere.

Second. Scientists do not anticipate that there can be any successful scientific counter measure to an atomic bomb. There appears no scientific theory that would provide for its neutralization or its advance detonation.

Third. The production of atomic bombs at present requires an installation of such size that a rigid, thorough inspection, and auditing of materials by competent scientists could ascertain with reasonable certainty the presence or absence of such production.

Fourth. It appears likely that the tremendous energy developed by the process of nuclear fission and the products derived therefrom with its alpha and beta particles and gamma rays can at some future time be harnessed and controlled for peaceful and constructive purposes for the benefit of mankind.

Fifth. There is nothing about the scientific features or fabrication methods of the production of the bomb that cannot be ascertained in a relatively short space of years by any group of able physicists and engineers anywhere in the world with adequate plant facilities.

Sixth. The destructive power in one small bomb is greater than a thousand of the greatest bombs made previously, and it is physically possible to manufacture these by the hundreds and also to still further increase the destructive power of every bomb.

If these are the correct basic facts, then what should the policy of America be? Obviously, there are a number of alternatives. The first is the policy of secrecy and suppression. Under this policy we would provide for heavy penalties against anyone who would reveal any part of the information that was not already public. We would keep our own scientists under surveillance. We would investigate all reports of any of our scientists meeting with scientists or representatives from other countries. We would follow a policy that is inherent in the preface of the Smythe report. I quote, "All pertinent scientific information which can be released to the public at this time without violating the needs of national security is contained in this volume. No requests for additional information should be made to private persons or organizations associated directly or indirectly with the project. Persons disclosing or securing additional information by any means whatsoever, without authorization, are subject to severe penalties under the Espionage Act."

Under this secrecy and suppression policy, we would give to our Government extreme powers which it has never approached before in time of peace. And, what would be the result? Throughout the world other scientists and other engineers would pursue the same discoveries, would experiment and develop, until they too had atomic bombs. Throughout the world the pressure of all governments would be on their scientists to develop the explosive and the destructive powers of atomic energy. Throughout the world the research and experimentation and the utilization of atomic energy for peaceful and constructive purposes would be retarded. Here in America, for the first time in peace, we would be restricting the freedom of science. For the first time in peace, we would be departing from that basic liberty and openness of science which has led in the past to our superb scientific achievements. America would become less attractive as the home of scientists and we would begin to establish conditions of a nature similar to those which caused many scientists to flee from Germany and seek refuge elsewhere.

Or, as a second alternative, we can say we have no secrets from our allies, and open up our entire records and details of production to every one of the United Nations, and rely on their good faith in their use of this information.

What then would be the result? Many other nations would manufacture some of the bombs. There would be an uneasy apprehension between nations as to what their future course might be. Changing policies of government and changing leadership would be viewed with uncertainty around the world. Relations between nations would be carried on with the dread of possible surprise attacks. All of history says that good faith alone is not sufficient for the peaceful relationship between men. Good faith must be coupled with a framework of order, of law, and of justice. Under the give-away alternative, there would be no guaranty of reciprocal openness of information. We would, in effect, be increasing the armament of every other individual United Nation. There is no logical reason why each nation of the world should have the power to destroy other nations. Balancing of power has not proved in the past to be a road to peace but rather a road to war.

It is the third alternative that I advocate tonight. This is the alternative of placing the control of the atomic bomb definitely on the world level. To my mind, it is the only basis that has real hope for future peace, stability, and progress. To my mind, the splitting of the tiny atom, and the destructive release of its tremendous energy, urgently requires the uniting on this great earth of the constructive energy of all mankind.

This new development is one additional powerful reason for developing a new and higher level of government to serve mankind.

The progress of science, of communication, of travel, and of mass production, have already brought the people of the world close together. All of history tells us that whenever men are living close together, they require a government of some form to prevent anarchy and chaos, to establish order and justice, and to facilitate progress and well-being. The world needed government on a world level before the atomic bomb. Now it has become an imperative.

I present tonight specific detailed recommendations not because I am insistent that these are the precise answers but rather because it is my observation that to discuss a subject in broad terms that mean all things to all men, does not contribute to clarification or decision. I present exact detail in order that men might differ with me and from the discussion of those differences we might find the way to the best answers.

The development of atomic energy administration on a world level and the utilization of its force for peace rather than destruction should be through the growth of the United Nations Organization.

I suggest that the United States propose an amendment and implementation of article 43 of the United Nations Charter so as to grant to the Security Council the right and the duty to establish and maintain a small United Nations Air Force of 5 bomber squadrons and 10 fighter squadrons, manned by volunteers from the United Nations, not more than one-fifth of the personnel of any squadron to be of any one nationality background, to be based at 5 different suitable bases around the world, to be financed by a small tax on all international travel, and that the United States furnish 5 atomic bombs to each of these 5 bomber squadrons at the 5 bases around the world to serve as the stabilization force for world order.

I suggest the United States propose to implement article 26 of the United Nations Charter so as to provide that no nation shall manufacture an atomic bomb, and that the manufacture or possession of such a bomb would be a crime against mankind. The present plants would manufacture the number required for the world stabilization force, and then stop.

I suggest that the United States propose to the United Nations that the Security Council be given the right and the duty to establish a United Nations Atomic Commission of distinguished scientists, with the power and the duty to thoroughly inspect all nations, including our own, and to keep accurate accounts of fissionable material to ascertain the fulfillment of the foregoing charter provisions.

I propose that no one shall engage in any nuclear or atomic research without registering with this United Nations Atomic Commission, but that once having registered, any scientist would be entirely free to carry on scientific research and to publish his results to the world. I wish to emphasize that scientific freedom is just as important as academic freedom and freedom of the press to our way of life. The registration should be merely for the protection of mankind as to the location of the research and to facilitate the inspection of the activities.

I know full well that proposals of this kind will be attacked. There will be those who call them visionary, but I might ask whether or not to fail to seek some such method would not be blindness. Are not each of these proposals in fact practical, sound, and attainable?

Some of the clamor of opposition will come from those who will say that such a proposal will violate the absolute national sovereignty of the member nations. Yes; it will. But the narrow concept of absolute nationalistic sovereignty belongs in the same historical discard as the theory of the divine right of kings. The proposal that I make would not cause the people to lose sovereignty. They would be simply delegating a portion of their inherent sovereignty to a new and higher level of governmental machinery where it can be more effectively administered for the people's welfare. Principles of government must stand the test of service to the people if they are to be respected. The concept of absolute nationalistic sovereignty no longer serves the people of this world. It is a barrier that prevents that successful cooperation which every other fact of modern life demands. It is a fertile source of those clashes and frictions that lead to war. And might I add, that the diplomats' squeamishness about abstract sovereignty, as they refuse to take steps to prevent war, does not impress the millions of men who have seen the intimate innards of their pals spread over the landscape by war. Measures of world cooperation, steps of effective working together, machinery that serves mankind, should be judged on their own merits, not by seeking to apply to it the outworn shibboleth of absolute nationalistic sovereignty.

Another argument in opposition that will probably be made is that this proposal does not serve the self-interest of America. It will be argued that we now occupy a position of great power with our armed might, and the possession of the atomic bomb; that we should use this power for our own enlightened self-interest rather than diffuse it on a world-wide basis.

Permit me to meet that argument head-on. In my judgment, if the selfish interest of America becomes the official guiding light of our world policy, it will be one of the most tragic phases of American history. The doctrine of "America first" is purely and simply the extension of the doctrine of "me first." There is, and there will be, a considerable measure of this doctrine in life. But if it ever becomes the officially accepted standard to be followed by everyone, the tragedy, chaos, and suffering, the demoralization and disintegration, will be indescribable. Selfishness is not a virtue for individual life. Neither should it be considered a virtue for national life.

It is my view that the first pennant nailed to the mast of our foreign policy should state the objective to promote the slow, steady march of social, economic, and cultural progress of all mankind and the general welfare of one world at peace.

Nothing less than that is worthy of America. This does not mean a policy of waste and extravagance. It does not mean the encouragement of idleness in other lands. It does not mean a careless charity that undermines the recipient and dissipates the resources of the giver. It does not mean placing the welfare of any other individual nation above that of America. It does not mean that we should be weak in armed forces. It does not mean that we love America less. But it does require a broadness of concept of our policies. It does require that in our domestic activities we constantly be concerned as to their effect on peoples of other parts of the world. We are today the most powerful nation in the world. We do have the greatest productive capacity. We do have a homeland—thank God—that has not been ravished by war. We do have an economy that is healthy and strong. If we seek to be selfish and narrow in this position, that same selfishness and narrowness will pass on down to groups within our country. America will be divided. It will be bigoted and intolerant. And our economy will wither. Unemployment will multiply. We will lose that precise powerful position which we seek selfishly to maintain.

The broad policy I advocate means specifically that we must do more than give lip service to the United Nations Organization. We must do more than cooperate in a manner of detached aloof interest. We must seek constantly to give it vigor and vitality and contribute to its growth. I know there are those who speak of its inadequacy. It is true as I said long since, that it is only a beachhead in the battle for peace, that it is only a very small step in the right direction.

But it is nevertheless a tremendously important step. It is a vital beachhead. It has brought together all of the essential elements for effective world administration. It directly and indirectly represents three-fourths of all the peoples of the world. Its purposes are right. I read them to you:

"1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;

"2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;

"3. To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and

"4. To be a center for harmonizing the actions of nations in the attainment of these common ends."

Its machinery and powers are limited. Its veto is restrictive. But it is flexible. It can grow. It can be amended. It can be changed. Do not sell the United Nations Organization short. Do not undermine what you have in an academic discussion of what you wish you had. The United Nations Organization can be developed in any manner the United States, the Soviet Union, Great Britain, China, and France, and a majority of the other nations wish it to be developed, and realistically, there cannot be effective world government without the agreement of those powers. Let us not lose sight of the fact that the constructive economic and social developments under the United Nations Organization will in the final analysis do more to insure a lasting and durable peace than will the enforcement provisions. The United States must continue to give leadership in this growth and development.

I am tremendously encouraged by the ratification of the necessary 5 and 24, by the successful completion of the work of the preparatory commission in London, and by the fact that in less than 2 months the first Assembly of the United Nations as a definite, functioning organization will take place. This has been a bright spot amidst the dark clouds of the deterioration of our world relationships which occurred at the London Conference of Foreign Ministers, a conference, it should be remembered, that had no connection with this United Nations Organization and was not planned and prepared for in the same thorough manner.

The broad policy we are discussing means that we must promptly reconvert, develop full production, and proceed with plans for the exchange of some of the results of our great productive capacity, with those who need it now, in return for future raw materials and investments and trade and tourist opportunities.

We should not overlook that the basic long-range facts of the world economy are encouraging, even in this tragic winter. The threat of Nazi and Japanese domination has been removed. This good earth has the capacity to produce enough food for all the people in it. The materials are here to construct shelter for all who wish it. There is room on the globe for all the people on it. But the science of government has not advanced as rapidly as have the other sciences, nor as rapidly as has the growth

of population itself. We need intense study of this art of living together. This study should involve not only the development of mechanisms of government on a new and higher level for the conduct of those affairs that cannot be carried on successfully on the old basis of the nationalistic state, but it also means the development of more effective government at local and national levels. The value of a periodic choice by the people between alternatives in administration needs earnest discussion and analysis.

The avoidance of a complete political fragmentation of the population in a democracy to a point where no effective government of continuity is possible, needs emphasis. The Federal principle, its strength and its flexibility; the relations of the economic, social, and political structures; the specific question of federated economies, coexistent with political alliances; and the comparison of men's existing governments with what they had previously rather than with an abstract ideal, all need searching consideration. These must challenge the best of intelligence the world can apply to them. Surely we have learned through two tragic wars and a world-wide depression in a single generation, that the failure of men to learn how to live together can destroy and devastate much of what all their other intelligence, invention, study, and toil can create.

This same broad foreign policy also means that throughout the world we must constantly emphasize basic human rights more than American rights. I am convinced that if we follow such a broad policy as we have discussed tonight, it will not result in our own impoverishment—it will not result in our own weakness. In fact, we will thrive and grow and be happier under the challenge of this course. We will find that after the decade goes by we have a healthier economy. We will find that we have access to more raw materials and greater markets than we otherwise would. We will find that we have a greater measure of good will throughout the world; that we have more jobs at home; that we are at peace.

In any discussion of the seriousness and scope of our discussion this evening, there always arises the question of how it shall be concluded. Permit me to merely say—Let us face the future with confidence.

## The Men We Elect to Congress

EXTENSION OF REMARKS
OF
### HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Monday, October 29, 1945*

Mr. WHITE. Mr. Speaker, under leave to extend my remarks in the RECORD, I quote from a booklet entitled "A Plea for Honest Education":

A trained doctor, regardless of the measure of love he bears a patient, can and does save the life of that patient, where an untrained person would lose the life of that patient even though he were his dearest friend.

But a trained doctor untrained on social forces would make a poor master to be entrusted with control of social forces and the entire public suffers as a consequence.

Men and women in public office can all be highly trained doctors, lawyers, and scientists, and all of them 100-percent honest, and yet if they lack proper training on social forces, they will make the same botch of their task that public officials in this and all other capitalist economies have made for generations past, and all people suffer as all people are now suffering.

In 1787 John Adams expressed this truth in the following words: "All the perplexities, confusion, and distress in America arise not from defects in the Constitution or confederation, not from want of honor or virtue so much as from downright ignorance of the nature of coin, credit, and circulation."

The since failure of public education to heed this criticism of public education by John Adams in 1787, and the consequent election to public office of people who understood as little about coin, bank credit, and circulation as they did of money, price, and purchasing power, has cost the people of our Nation alone, and in but the last 13 years, an average annual loss of more than $50,000,000,000 of wealth either not produced, solely because of the lack of a sane spread of purchasing power, or produced to be destroyed and to destroy the lives and wealth of like miseducated millions in other nations.

What better proof for the statement that people in public office who do not understand social forces are civilization's deadliest enemies.

A nation's medium of exchange is its economic bloodstream. If our doctors understood as little about the human bloodstream as the public officials of this and other private profit economies understand about their Nation's economic bloodstream the resulting premature deaths and human misery would be no more than the present and past casualties from untrained and untested unfits in public office.

All that each of us need do to fulfill our obligation to true democracy and end the present ravages of social ignorance of social forces is:

(A) Stop voting until we first gain an understanding of social forces;

(B) Spend a few hours of study necessary to gain a clear understanding of social forces; and

(C) Vote only for those candidates for public office who first prove to us that they possess a clear understanding of social forces, the fundamentals of government.

## The Silent Delegate to the Disarmament Conference: The Unknown Soldier

REMARKS
OF
### HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. RANKIN. Mr. Speaker, officially, this is Armistice Day.

On November 11, 1918, the First World War closed; and for every man in uniform at that time it was the greatest day he had ever seen. It meant the greatest homecoming the American people had ever known.

On November 11, 1921, we buried the Unknown Soldier in Arlington Cemetery. To me that was one of the most solemn events I have ever attended.

On the next day, November 12, 1921, just 24 years ago today, the Disarmament Conference met here in Washington. I attended that conference, and wrote the following report of the opening session:

WASHINGTON, D. C., November 12, 1921.—These are eventful days for Washington. Things are happening so "thick and fast," that we can hardly keep pace with the procession.

The most powerful and important delegate to the disarmament conference arrived a few days ago—the dead body of an unknown soldier—one of these countless thousands whose names disappeared with their bodies as they went down in the recent contest for the military and naval supremacy of the world.

President Harding had to have an amplifier, radio service, telegraph and telephone wires to make his voice heard throughout the country; but this delegate of delegates needed no assistance to carry the voiceless eloquence of his silent protest against war and militarism throughout the length and breadth of the land, and to find a responsive chord at the fireside of every American home.

He was accompanied by the world's greatest interpreter, the sorrowing figure of a widowed war mother who had lost a husband and three stalwart sons in the recent conflict and who had come 3,000 miles to place a wreath upon his bier. If there were those who could not appreciate his appeal, or who did not realize the sacrifice he made, they could not have failed to understand it when they looked upon her withered form and saw his message translated into the terms of a mother's sacrifice, a mother's love.

He was given a great reception, such as no king, prince, or potentate has ever received. The procession down Pennsylvania Avenue surpassed all description, and the floral tributes, coming from every quarter of the globe, have possibly never been equaled in the history of the world. More than 50,000 people bowed in reverence as he was consigned to his resting place of vantage in Arlington Cemetery, overlooking the city of Washington, which, for the time being, is the Capital of the world.

I witnessed the opening of the disarmament conference, and I must say that it was one of the most impressive spectacles of all times. In the words of Irvin Cobb, I had a reserved seat at the greatest show on earth.

Before me, seated around the conference table, were the chosen representatives of the leading nations of the earth, while back of them sat the foreign diplomats, heads of the various armies and navies, other high-ranking officials and visiting dignitaries without number. The delegates proper were all dressed alike, or nearly alike, except the one from British India. He wore a white turban on his head, which together with his long cloak, gave him the appearance of some Biblical character. The galleries were packed with Senators, Congressmen, and other American officials. The stage was set for action, and action of the most far-reaching character was not long delayed.

It was announced that French and English would both be the official languages of the conference. In the hollow square surrounded by the conference table, a French stenographer took down everything that was said. If a man spoke in English, he rapidly translated it into French and repeated it to the French delegates in their own language; if one spoke in French, he recorded it in French, translated, and repeated it to the rest of the delegates in English. He is a wonder. All the delegates spoke in English, or tried to, except the French, and this marvelous man took down their rapidly spoken and badly broken English and translated it into French with the greatest ease and rapidity.

After the opening prayer and the President's welcome address, Secretary Hughes was nominated for chairman by Mr. Balfour and elected without opposition. He arose and proceeded to thrill the world with a program for a reduction of armaments, which, if carried out, will lift hundreds of millions of dollars in yearly taxes from the shoulders of the American people, as well as from those of every other country involved. If there

had ever been any doubt as to how the American Congress stood on this proposition, it was certainly dispelled when Mr. Hughes laid down his proposition. With one spontaneous accord every Senator and every Congressman present leaped to his feet—as did diplomats, generals, admirals, visitors, and reporters—and made that great auditorium ring and resound with unbounded enthusiasm.

Secretary Hughes did not take time to argue the case but confined himself largely to the statement of a concrete proposition, which promises to mark the turning point in the history of the world.

He did not need to argue. That had already been done by the silent delegates at Arlington, whose mute but thrilling message had touched the hearts and awakened the conscience of a war-torn civilization. His appeal had been heard at last, and by it he had possibly ushered in a new day, when war between civilized nations shall cease, at least for years to come, when the great burden of taxation which war and armaments entail shall be lifted from the masses of the world, when Christianity shall take on new life and civilization be given a new birth.

## The Executioner Again at Work

EXTENSION OF REMARKS
OF
### HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. HOFFMAN. Mr. Speaker, Thursday, November 8, there appeared in the Old House caucus room, several hundred retail automobile dealers from all over the country, protesting the threatened issuance of an order which would compel them to pay more for every car purchased of a manufacturer, but to sell at the same old price to every purchaser.

The proposed order, in its purpose and effect, is similar to many previous OPA orders which have aided in the liquidation—execution—of so many small businessmen during the past few years. The number of small businessmen, as estimated by Henry Wallace, who have been put out of business exceeds a half million.

These automobile dealers, many from the smaller towns and cities, see in this order the end—the bankruptcy—of the businesses which they have spent a lifetime in establishing. They see the end of the business which for many years gave them a livelihood, the only business they have. During the war, they willingly suspended business. They cooperated wholeheartedly with the Government. They obeyed every rule and regulation which they were told by the administration would aid in the war effort.

The fighting on the battlefield is over. They cannot understand why their Government should continue to fight them; make it impossible for them to give employment to others; put into the hands of their customers, who are waiting to buy, automobiles, trucks and farm machinery—all so greatly needed.

And so they came to Washington, representing hundreds of thousands of mechanics, clerks, bookkeepers and businessmen, who depend for a livelihood upon the retail automobile dealers. Some of them are amazed; some are confused; some are bewildered, that such an order, so destructive in its effect, can be even contemplated—much less issued—by an administration to which they are forced to look for protection; which they support.

At the invitation of the gentleman from Texas, the Honorable WRIGHT PATMAN, they made their protests to the committee of which he is chairman, little realizing that the gentleman has been the staunch friend, supporter, and advocate of the OPA. They might just as well have appealed to Harry Hopkins or to Chester Bowles.

Undressed, OPA's proposed regulation is just another order which, in effect, will deprive businessmen and industrialists of an opportunity to make a profit, to continue in business. This time the order catches the retail automobile dealers, as others heretofore have caught many another small businessman. It is a shifty scheme to get the 30-percent increase in wages now demanded of automobile manufacturers paid, not by the manufacturers, but by the retail dealers out of profits which it is thought they may make.

Automobile workers demand that their wages, while making cars, be increased 30 percent, but Reuther, their representative, insists that the added cost shall not be included in the price of the car. The manufacturers say they cannot pay it. So this is an attempt to pass it along to the dealer.

Some day there must be a test of the proposition that taxes, wages, materials and insurance can be increased, but that, when the sum total is added, it will be no more than a previous price based upon lower costs. Secretary of Commerce Wallace and his associates, including some labor politicians, insist that two plus two plus one do not make five; still make four.

What will happen if General Motors, Ford and other manufacturers quit making cars; if dealers, because of this order, refuse to handle cars, because they cannot sell for less than they buy; just go out of business? Will we have more or fewer jobs in this country?

The OPA, the New Dealers, the CIO and the Communists, although there may be no connection between them, all advocate a course which in the end will destroy private business, lead to Government control, not only of business, but the American worker, who apparently does not see what is at the end of the road down which he is being led.

Will Congress make its bad boy, OPA, behave?

## Full-Employment Study

EXTENSION OF REMARKS
OF
### HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. GOSSETT. Mr. Speaker, last Thursday, November 8, I addressed this House on H. R. 2202, the so-called full-employment bill. On last Friday, November 9, there appeared in the New York Times an editorial titled "For a Full-Employment Study." This editorial should be read by each Member of this House, and I therefore insert it herewith in the CONGRESSIONAL RECORD:

FOR A FULL EMPLOYMENT STUDY

After 7 weeks of testimony, the House Expenditures Committee has closed its hearings on full-employment legislation by appointing a subcommittee of five, which the chairman hopes will draft some sort of compromise measure.

No sound full-employment legislation is likely to be drafted unless we know precisely what causes unemployment and how the private-enterprise system works. The policies that are necessary to assure full employment in a genuinely free society are the same policies that would assure a stable and expanding economy and the maximum possible production. It is highly unlikely that all these policies could be embodied in a single new bill. The achievement of many of them, in fact, would require the repeal of a great deal of legislation that is already on the books.

Even if we assume that the House subcommittee could draft a satisfactory bill and have it passed in the same form by the House, that bill would have to go into conference with the measure already passed by the Senate. The Senate measure is a highly unsound proposal. Notwithsanding its amendments and supposed safeguards, it rests at bottom on the assumption that full employment is to be chiefly attained by increased Government spending, deficit financing, and added doses of inflation. While the measure pays lip service to the private enterprise system, it rests on a basic distrust of that system and embodies policies that would seriously undermine that system. The Senate conferees would probably insist that at least part of these Murray bill policies should be embodied in the compromise bill. If that occurred, the final bill could not be a sound one.

Nothing would be achieved, on the other hand, by any empty declaration. President Truman remarked in his letter to JOHN H. MCCORMACK, the House majority leader, a few days ago: "It is time that the people be reassured by the Congress that the Government stands for full employment, full production and prosperity, not unemployment and relief." If a resolution were drafted simply making this declaration, it could perhaps be passed unanimously. But such a resolution would hardly carr us very far. It would be the equivalent of saying that Congress was for virtue and against sin. The American people are probably willing to assume that Congress is for full employment, full production and prosperity, without any formal declaration to that effect.

The real problem concerns the most appropriate means by which these important aims are to be achieved. About these most appropriate means and methods there has been the greatest variety of opinion. President Truman took a real step forward when he wrote to Representative MCCORMACK that he was not insisting on "any specific bill" but merely on "the general purposes and principles of full employment legislation." This leaves it to Congress itself to decide the proper means.

But this puts upon Congress the task of determining precisely what the most appropriate means are to obtain full employment. Congress must admit in all candor that it does not know the answer at the present time. The most promising way to obtain that answer would be to appoint a temporary commission of outstanding and impartial economists, not selected in such a way that their answer was practically known in advance, to study this great problem.

It would probably be wiser to call this a commission on full employment and full production than a commission on full employment alone. In any case, Congress should make clear in its instructions to such a commission that it wanted it to study the question in its most comprehensive aspect, and to propose the policies that would be most likely to insure the maximum of production and full employment, under a system of private enterprise and economic liberty, and without resort to inflation. Such a committee should be free to state not only what new laws might be necessary to put the recommended policies into effect, but also what old laws might have to be amended or repealed to make these economic policies effective.

If a procedure like this were followed, the subject of full employment would be taken out of the more heated areas of politics and given over to the more important and scientific study of facts and principles that is now so urgently necessary.

## Communism Spreads in the United States

EXTENSION OF REMARKS
OF
### HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. DONDERO. Mr. Speaker, the following item from the Redford Record ought to arouse every citizen in our fair land to be on guard against the enemies of his country. It is time to be afraid. Will we be destroyed from within? Communism is slavery.

DETROIT RED GROUPS NOW OUTNUMBER SERVICE CLUBS

It will probably come as a surprise to most members of service and luncheon clubs to know that there are more Communist organizations in the Detroit area than there are Rotarian clubs or Exchange clubs or Kiwanis clubs or Lions clubs in each case.

Not counting the insurance-front organization known as the International Workers' Order, of which there are many clubs scattered throughout the city, particularly in areas housing residents from middle Europe, there are dues-paying and money-raising organizations in behalf of Joe Stalin active on the entire Detroit political, labor-union, and social-penetration front.

This was again evidenced Tuesday evening, October 23, when the twenty-sixth anniversary of Communists in America was celebrated at the Book Cadillac, where a packed meeting heard the Red "fuehrer" of America, William Z. Foster, deliver the new party line. This new party line involves continued worming into labor unions, into educational and social organizations, as well as doing a frontal attack politically through the Communist Party.

The best way to give an index of the more active Communist organizations, not counting those such as the Lawyers Guild, the American Polish Democratic Committee, the Slav Congress, the NAACP, Friends of Soviet Russia, and a dozen more, and not counting the International Workers Order chapters, the following paid in money at the Tuesday night meeting, to Phil Raymond, Michigan, treasurer of the Communist Party, who announced:

| | |
|---|---|
| Michigan Communist Club | $100.00 |
| Russians | 100.00 |
| Oakland Club | 100.00 |
| Croatian Group | 205.00 |
| Hungarians | 105.00 |
| Twelfth Street Club | $150.00 |
| South Dexter Club | 100.00 |
| Dearborn Communist Club | 150.00 |
| Polish Communists | 100.00 |
| Rumanians | 100.00 |
| Fenkell Communist Club | 50.00 |
| North Dexter Club | 100.00 |
| McGraw Club | 46.00 |
| Midtown Communist Club | 75.00 |
| 14th Congressional Club | 55.00 |
| Hellenic-American Fraternal Society—IWO | 75.00 |
| Armenians | 100.00 |
| Hamtramck Communist Club | 75.00 |
| Ben Davis Club | 50.00 |
| Russian Organizations | 280.00 |
| Downtown Communist Club | 47.00 |
| Grand Rapids Communist Club | 25.00 |
| Bulgarians, etc | 25.00 |
| Southfield Club | 25.00 |
| Serbian Club | 37.50 |
| Uptown Communist Club | 25.00 |
| Bohn Aluminum Club | 15.00 |
| A Friend | 10.00 |
| Ukranians | 35.00 |
| Finnish Group | 11.00 |
| Ford Club (wait until next year) | 13.60 |
| Nat Turner Club | 12.50 |
| Professional Club of the Communist Party (plus $400 pledge) | 50.00 |

## What Fate for Lithuanian Refugees and Deportees?

EXTENSION OF REMARKS
OF
### HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. O'KONSKI. Mr. Speaker, Lithuania is now living under the third foreign occupation to be forced upon her since the beginning of the Second World War. Each of these occupations has resulted in the uprooting of thousands of Lithuanians from their homeland.

On January 10, 1941, Soviet Russia signed an agreement with Germany concerning the repatriation of Germans from Soviet-occupied Lithuania. Under that agreement, 52,600 persons of allegedly German origin were transferred from Lithuania into Germany. Official German sources had never claimed the existence of more than 30,000 persons of German origin in Lithuania. Actually more than half of the repatriates were persons of pure Lithuanian stock who sought by this means to escape the Bolshevik terror. Concerning this repatriation, see Current News on the Lithuanian Situation, No. 10 (22) of 1942.

Tens of thousands of Lithuanians were deported to Asiatic Russia by the Russians in 1940–41. Up to the present, the Soviets have not allowed any organized assistance to be extended to these deportees by Lithuanian charity or religious groups in the United States, or by any international organization. It is presumed that most of the deportees have already perished in the Siberian wastelands.

The 3-year German occupation—1941–44—resulted to a particularly great extent in the displacement and annihilation of Lithuania's population. The Germans forcibly mobilized Lithuanian youth into their armed forces, and recruited them for slave labor in Germany. The number of persons rounded up for slave labor alone exceeded 100,000. Due to the Germans' barbarous extermination policies, only about 30 percent of Lithuania's Jews survived.

When in the summer of 1944 Soviet troops again approached Lithuania's borders, the Germans intensified their policy of forced evacuation. At the same time, large numbers of Lithuanians, fearing the much-dreaded Soviet political police—NKVD—sought to leave Lithuania and to escape abroad. The only path open to the majority was escape to Germany, where slave labor and starvation awaited them. Others attempted the perilous journey to Sweden. However, since both the Germans and the Russians did all they could to prevent the escape of refugees to Sweden, even shooting at the boats and sinking them, many perished on the way, and only about 300 persons were successful in reaching Swedish shores. These refugees are termed "enemies of the people" or "Fascists" by the Soviets simply because they stand for an independent and truly democratic Lithuania, and cannot endure a totalitarian order. The refugees from Lithuania in Sweden represent nearly all walks of life as may be seen from the following table:

| | *Percent* |
|---|---|
| Fishermen | 11.7 |
| Unskilled laborers | 6.5 |
| Shoemakers, bakers, locksmiths, etc | 8.9 |
| Housewives | 14.5 |
| Office workers | 13.9 |
| Students | 17.6 |
| Small shopkeepers and retailers | 5.6 |
| Professionals (doctors, dentists, engineers, lawyers) | 4.9 |
| Children under 7 years of age | 8.6 |
| Unclassified | 7.7 |

Swedish press dispatches indicate that Soviet officials are trying to induce Lithuanian refugees in Sweden to return to Lithuania. So far not a single one has shown any desire to do so, so long as the Soviets remain in occupation. There are also several hundred such refugees in France. Ominous news from that country indicates that some Lithuanian refugees there were turned over to the Soviet authorities against their will and are being deported to Siberia or "repatriated" to Lithuania where reprisals, if not liquidation, await them.

The plight of the hundreds of thousands of Lithuanians in Germany is desperate. No exact figures are available, but it is estimated that about 300,000 Lithuanian refugees and evacuees were in Germany at the time of her collapse. What will happen to these people, especially those in areas under the Soviet occupation? It is said that Soviet officials are rounding up all such Lithuanians as "Soviet citizens" and sending them eastward. It is reported that about 50,000 were rounded up in East Prussia. There are grounds for fears that many innocent people will be labeled "pro-Nazis" and doomed to liquidation. It is to be hoped that the Lithuanian citizenship of Lithuanians in areas under American-British occupation will be honored and that "repatriation" against their will to Soviet-occupied Lithuania will not take

place. A Lithuanian Citizens' Association has been formed in Wurzburg, Germany, to assist allied commanders in caring properly for all Lithuanians who are the unfortunate victims of Nazi war and aggression.

It is reported that 83,000 Lithuanians were recently deported from the eastern regions of Lithuania to the Soviet Union for slave labor. The tragic situation of Lithuanian deportees and refugees is causing the greatest uneasiness, not only to those directly concerned, but also among Lithuanian-Americans in the United States who fear for relatives and friends.

---

## Peacetime Conscription: The Promise Is Security—the Record Is Disaster—Ambitious Leaders Involve Nations in War to Perpetuate Their Power and Position

EXTENSION OF REMARKS
OF
## HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. BUFFETT. Mr. Speaker, compulsory peacetime military training would constitute the most far-reaching permanent surrender of individual freedom in the history of America. This sober fact measures the significance of the proposal. In the absence of a clear expression by the people, it should also serve as a solemn warning to Members of Congress.

Because, if Congress passes a conscription law, regardless of the form it takes, Congress will be delivering America into a system of militarism that has brought to ruin every major nation using it. That is the record of the history books.

The need for adequate preparedness, military security, and national safety generally are not debatable. These aims are the common goal. The issue here is: Will conscription give us the safety its sponsors claim for it? Will conscription save us from being attacked or assure us of victory in case of attack? These are the practical questions involved. In short, will it work?

Fortunately, this proposal can be appraised and evaluated by facts instead of theory and argument. Complete factual data is available to guide us to sound conclusions.

### FRANCE WAS FIRST VICTIM

The first modern major country in which conscription became a national policy, was France, where it was initiated in 1792. After a few exciting years of conquest under Napoleon, France suffered overwhelming defeat at Waterloo. Conscription was dropped, but was revived in 1848 by Napoleon III. It prevailed in France before World War I and World War II. Never has it prevented France from being attacked. Never did it provide France with the defense necessary for safety. France, saddled with conscription, has become one of the weak, second-rate powers of the world.

In Germany conscription was started in 1814 as a defensive measure. What happened? Germany's tragic cycle of militarism began. Here again conscription sprouted the same fruits as in France. First came militarism, then imperialistic conquests, and then defeat and disaster.

What was the record in Japan? Japan adopted peacetime conscription in 1873. Again came the telltale sequence of militarism, imperialistic conquest, and then defeat and disaster.

The fourth victim of conscription was Italy. The people of Italy have always been unusually peace-loving, but when Italy adopted conscription it had taken the irreversible step toward destruction. First came costly militarism, then imperialistic conquests, and then defeat and disaster.

The foregoing summarizes the record in every major nation using peacetime conscription as a national policy. Perhaps some mention should be made of Russia, although the revolution in Russia prevents a completely valid comparison from being attempted. However, the record there also is clear. Conscription under the czar never kept them from being attacked, nor saved them from defeat. Similar comment applies to communistic Russia. Conscription did not prevent them from being attacked by Hitler in 1941. Moreover, they were at the point of unlimited disaster when supplies from the two nonpeacetime conscription lands, England and the United States, saved them.

### PEOPLE ARE PEACE-LOVING

Was the disaster in these conscript nations brought about because the people were militaristic? Or was it because peacetime conscription carried in it the seeds of destruction? The history of these nations offers sobering testimony that conscription brings about this sequence automatically: First, militarism; second, imperialistic conquest; third, defeat and disaster.

A closer study of developments in conscript nations reveals the factors inherent in compulsory peacetime training that make it a certain road to defeat and desolation.

What is the pattern of these factors? Obviously, each nation adopts compulsory training for purposes of national defense. In doing so, they authorize a military organization to train the masses of conscripts. It is at this stage in conscription that the fatal weaknesses automatically develop.

The first action of the compulsory military set-up is to respond to nature's first law—self-preservation. This brings about expansion, or in military terminology—empire building. In this respect the military are not unlike other governmental bureaus or a private business. They know that more activity means more pay, more generals, and more position-security for those at the top.

So, those in charge of conscription, like any businessman or bureaucrat, vigorously plan both to entrench and expand their organization. The next steps follow automatically. The first move toward expansion is to excite the fears of the people. Accordingly, carefully prepared tales about the dangers of sudden attack from a possible enemy nation are circulated in every conceivable way.

In Japan, the military authorities indoctrinated conscripts with the imaginary danger of attack by the United States, and justified it by this argument:

> To make a good soldier, there must always be an immediate enemy. He must be led to believe that this enemy may strike today. He must be convinced that the enemy is prepared to annihilate our country at the first opportunity.

Then activities of the military expand, either by extending time service for conscription or in other ways. With this increase, the military costs mount. In prosperous years this load is endured by the people with some grumbling. Then come years of depression. Soon the people demand relief from the impoverishing burden of armaments and conscription. What happens?

### OPPOSITION SUPPRESSED BY WAR

The leaders are confronted by an economy-minded people demanding drastic cut-backs in military expenditures and the carefully built-up empires of personal power. Unlike ordinary governmental bureaucracy, however, at this point the military chiefs have an ace up their sleeve. A method is available for refusing retrenchment and evading the loss of face and demotions involved in reduced establishments. That method is to arrange the incidents that bring about a full-fledged war.

This pattern of events has happened again and again. For the military chiefs the declaration of war not only suppresses criticism and protects their power but also has other seductive charms, including rapid promotion, prestige, glamour, and publicity—all dazzling prizes of war for military officers. With or without the collaboration of civilian officials, this has been the record in Germany, Italy, France, and Japan.

Mr. Speaker, if the Congress of the United States gives up the freedom of the people and delivers them into military conscription, it will surely happen here.

A specific example is Japan. In 1931, the civilian government in Japan was being urged by the people to reduce the heavy burden of military expenditures. In the world depression the military costs were becoming unbearable. How did the military respond? They started a war in Manchuria. That stopped all public criticism and effectively suppressed civilian opposition from the Japanese Diet.

Has every war provoked by a nation using conscription since Napoleon's ambitious conquests been generated in similar fashion? Without vouching for the exact pattern in every instance, careful study reveals it with sobering regularity. Despite the cunning efforts made by war-creators to hide their tracks, the pattern is usually discernible. The record is so parallel, in these nations of diverse national characteristics, that this conclusion seems inescapable:

Wherever the rulers of a major nation have established conscription, the people have been marched into militarism, imperialistic conquest, defeat, and disaster.

PROMOTERS FLATTER US

Against this record in other lands, the advocates of conscription in America declare with patriotic fervor that we are different. The promoters of conscription claim that America will not be subject to the cycle of militarism, conquest, disaster, that has resulted elsewhere. They claim that the United States is not militarily ambitious; that we have no imperialistic schemes; and that the rest of the world does not need to fear us.

They know such statements appeal to the people, because the people are honestly peace-loving. But the people of other lands are also peace-loving. Certainly that is true of the Italian people, who are perhaps more peace-loving than almost any other. The fallacy in this argument is that the people do not start the wars—nor are they able in a conscript nation to prevent the leaders from involving them in war.

No, Mr. Speaker, conscription is not the way to national security for America. The genuine road to national safety is a thoroughly modern army and navy, equipped with the latest technical and scientific weapons, plus an efficient air force, personnel for all of which can be secured by adequate military pay schedules. Beyond the foregoing, an invigorated ROTC, CMTC, and National Guard in the several States can furnish specialized training for reserve forces.

END WAR BY NOT SUPPLYING AGGRESSORS

Beyond our own defensive preparations, however, the effective way for the United States to discourage war lies in another direction. It is for the United States to stop supplying the armaments for war to the rest of the world.

Without financial and material aid from the United States and England neither Germany nor Japan would have started World War II. Ambitious politicians in our Government and England, combined with selfish commercial interests, provided Hitler and Tojo with their arsenals of war.

Mr. Speaker, many contend that conscription fails because it undermines the home, church, and school. However, I have simply outlined the cold practical facts against it—that it produces not security but disaster. The people sense this truth. But the people have neither radio networks, nor newspaper chains to express their beliefs.

THE PEOPLE PAY—LET THE PEOPLE DECIDE

The promoters of conscription, both public and secret, have tremendous facilities for propagandizing purposes. The military clique is well organized. It is getting cunning support from imperialistic quarters. More powerful than either of these in the New Deal political machine. It must keep America in fear and hysteria to conceal the continuing regimentation, inflation, and governmental corruption. Against this spiritual wickedness in high places, the humble American, who bears the heartache and broken home of Army service, has little chance—unless this Congress will protect him.

Accordingly, I make this plea to the sincere advocates of this proposal who, I know, want to be fair with the people. This decision should be made by the people. It is their future and their children's destiny that are at stake.

If mistakes are made in our national policy, it is the people who pay for these failures—in blood, tears, and treasure. So the people should have the deciding voice on this proposal—either through its consideration by means of a constitutional amendment, or by making it an issue in the next general election. Certainly with 12,000,000 men now trained, sufficient time is available to make this decision in an orderly way.

Unless the administration is willing for the people to determine this issue, then it seems clear that it does not trust the people. That would be a tragic sequel to the sacrifices by the American people in the conflict just ended.

Mr. Speaker, the advocates of conscription claim to be practical and cool-minded realists. Yet by the practical test and the vaunted realistic approach, peacetime conscription is a sickening failure.

America's national security can only be preserved by a free, strong, and productive people. Let Congress, by defeating this scheme, reaffirm its faith in America's destiny as "the land of the free and the home of the brave."

## Our Right to Know About UNRRA Money

EXTENSION OF REMARKS
OF
### HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. MUNDT. Mr. Speaker, under leave to extend my remarks, I call attention herewith to an editorial appearing in a recent issue of the Daily Argus-Leader, of Sioux Falls, S. Dak. It is especially pertinent in view of current congressional interest in UNRRA appropriations, UNRRA activities, and UNRRA ambitions:

OUR RIGHT TO KNOW ABOUT UNRRA MONEY

If a man gives another some money as a matter of charity, he is usually interested in knowing how it is expended.

This explains why charitable organizations customarily provide full and complete reports of their activities. The donors have a right to be assured that their money is being spent for the proper purpose and that waste is kept at a minimum.

So it is that we as a nation are concerned about the expenditures of UNRRA. It is our money—the money of the American taxpayers—that is financing the UNRRA operations and we'd like to know how it is being spent.

This is the reason why the House of Representatives inserted in the $550,000,000 appropriation for UNRRA a clause requiring that American newsmen be permitted to visit the countries receiving the assistance and to describe the expenditures without censorship.

Stimulating action by the House was the realization that some UNRRA resources already had been employed in ways sharply contrary to the spirit and the purpose of the fund.

No one can question our right to obtain this information through our own sources. Surely no one expects us to hand over $10,000,000, $15,000,000, or $20,000,000 to some foreign group and receive in return only the group's assurance that the money was wisely spent.

We would be naive, indeed, to assume that all such intermediaries would absorb and be directed by our restrictions on the fund unless some system of checking were maintained.

The Argus-Leader sympathizes with the viewpoint that starving people should not be denied assistance because their overlords are too secretive. But if we do not make some requirement, how will we know that the starving people are the beneficiaries instead of the overlords? We are asking no country to change its form of government for this purpose. We are merely seeking the normal right to ascertain for ourselves how our money is being spent.

## Lithuanian Refugees and Deportees in Western Europe

EXTENSION OF REMARKS
OF
### HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. O'KONSKI. Mr. Speaker, among the prisoners liberated from the dread Dachau concentration camp after the Allied victory were about 30 Lithuanians who were found in the most deplorable condition. The Lithuanian-American press carried an account of an interview with the Reverend Jurgis Parancevicius, of Vistytis—Vilkaviskis diocese—a Lithunian priest who survived 46 months of imprisonment in Dachau, where he was sent because he opposed Nazi efforts to mobilize the Lithuanian youth into SS units. According to Rev. Parancevicius, the brutalities and horrors suffered by the prisoners are beyond description. Other Lithuanian priests and pastors imprisoned in that same camp were Vytautas Pikturna, of Kaunas; Stanislovas Puida, formerly of Seta and Nasielsk; Antanas Giedgaudas, formerly of Vevirzenai and Ratnycia; and Siegfried Loppe, of the city of Vilnius.

Erdmonas Simonaitis, a well-known Lithuanian of the Klaipeda region, was also imprisoned in Dachau. Simonaitis, the first president of the directorate of the autonomous Klaipeda territory, fled to Greater Lithuania after Hitler's annexation of Klaipeda in 1939. Simonaitis was arrested by the Gestapo in 1941, and before his transfer to Dachau, spent many months in the concentration camp of Hauthausen.

The Rev. M. Krupavicius, an outstanding leader of the Christian Democrat Party in Lithuania whose name is associated with the Lithuanian agrarian reforms, reported in a recent letter to his sister in this country that he had been released by the western Allies from the

Regensburg concentration camp. He was deported by the Nazis in 1942 because, together with Dr. K. Grinius, former President of Lithuania, and Professor Aleksa, he had protested against the Nazi disregard of Lithuania's sovereign rights. After about a year's imprisonment in Eastern Prussia, the Rev. Krupavicius was moved to Regensburg.

About 250 of the 1,600 Roman Catholic priests of Lithuania are now living in exile in western Germany. Under the Soviet occupation 18 priests were imprisoned, 15 were executed, and 10 were deported to Siberia. One such deportee, a priest who was formerly a visitor to this country, is now in western Europe. He managed to survive the death march to Cherven, near Minsk, in June 1941, and describes his experiences in a letter recently published in the Lithuanian-American press. During his imprisonment this priest was cruelly tortured and underwent cross-examinations, averaging 8 hours each, 42 times. After his escape from the NKVD executioners he hid for a week in the swamps, and finally managed to make his way to Kaunas through the Nazi-Soviet battle lines. The sufferings of the prisoners on the march to Cherven have been vividly described in the memoirs of Col. J. Petruitis, whose story was recently published in English translation under the title "Lithuania Under the Sickle and Hammer."

The following Lithuanian victims of the Nazis are known to have been buried in the cemetery at Rottenburg, Germany: Jonas Sitkovicius, Motiejus Simerlaitis, Vincas Milkovicious, and one Malinauskas.

Soviet agents are at large in many localities where there are groups of Lithuanians, urging them to return home, and the Soviet Union continues to press for the forced repatriation of Baltic refugees. However, the citizens of Lithuania as well as the other Baltic countries overwhelmingly oppose return to the Soviet-occupied homelands. For example, only 3 of the 460 Lithuanian refugees at Celle, Hanover, chose to return, despite propaganda repeatedly disseminated by Soviet agents.

The New York Herald Tribune of September 9, 1945, commented on the situation:

It was learned that the Russian Government is pressing for help from the western Allies not only in forcing the repatriation of Russians who do not wish to return, but also the return of 65,300 Estonians, Latvians, and Lithuanians who are in the American zone of occupation.

The Russians say that these Baltic peoples are Soviet citizens, by virtue of the 1940 annexation, and as such they come under the Yalta agreement.

Although responsible officials at Gen. Dwight D. Eisenhower's headquarters here refused to comment on this delicate situation, it was learned from other sources that the United States is unwilling to concede Russian nationality of citizens of the Baltic States and will tell the Russians so in response to their newest demand.

According to the same source, the British and the American occupation forces in Germany are extremely unwilling to participate in forced repatriation to Soviet-occupied territory. The paper says that the situation is coming to a point where blood may be shed in skirmishes with unwilling repatriates.

The tenth meeting of the UNRRA Council in London, held in August 1945, passed a resolution approving UNRRA assistance to displaced persons forced to leave their homelands due to racial, religious, or political persecution, until some time as they shall have returned to their homes. This policy will stand for at least the next 6 months, until the following UNRRA meeting.

Up to the middle of September 1945, about one-third of the Lithuanian refugees in Germany were living outside the camps installed for displaced persons by UNRRA. Lithuanians housed elsewhere were receiving, up to the end of August, cards entitling each person to food averaging 2,000 calories a day. In some cases, however, they had to subsist on rations of from 1,000 to 1,200 calories, which is the amount allowed for the Germans. In regard to the rations allotted to displaced persons, the New York Times of October 11, 1945, carried a dispatch from which we quote:

SHOWS DISPLACED ARE NOW WELL FED

The United Nations Relief and Rehabilitation Administration issued a statement on their diet today.

The minimum ration for displaced persons is 2,300 calories, as compared with 1,300 for the normal German ration, this report said. The displaced persons will eat white bread baked from flour obtained from the military government, whereas the German civilian population will have dark breads made from mixed domestic flours.

Displaced persons also have priority over German civilians on German-grown potatoes and "on fresh fruits and vegetables when available," but very little will be available. The DP ration also includes butter and other fats, sugar, tea, and coffee which may disappear from civilian German stocks this winter.

Children of former slave laborers will this winter have milk rations whether or not milk may be available to the previously favored children of Germany.

It is estimated that almost one-third of the Lithuanians have been separated from their families. Consequently, many of them are constantly moving from one locality to another, seeking their parents, wives, husbands, or children.

Lithuanian refugees in Lubeck handed over to the appropriate Allied authorities a notorious Nazi war criminal named Richard Schneizer. A high official of the German security organization in Lithuania, Schneizer was known for the many atrocities he had committed against Lithuanian patriots. He was found in possession of several falsified Lithuanian passports.

British occupation authorities have arrested two Nazi officials who are well known in Lithuania: Heinrich Lohse, former Reichskommisar for Eastern Territories (Ostland); and Otto Drechsler, former SA Brigadenfuehrer and Kommissar for Latvia.

In the Scottish-Lithuanian weekly Iseiviu Draugas (Emigrants' Friend), a Lithuanian serving in the British Army gave an account of his meeting with Lithuanian refugees in Blomberg, near Herford Germany. He describes the installation ceremonies of the new Lithuanian camp established there on August 5, 1945, which began with the raising of the Lithuanian tricolor. Lithuanian Boy Scouts and girls in national dress participated. The program included religious services during which the officiating priest led the congregation in an impressive prayer, "Lord, give us back our country."

Lithuanian-American papers described the religious services organized by Lithuanian refugees in the Austrian Tyrol in commemoration of those Lithuanians who were deported by the thousands to Siberia by the Soviets in 1940-41. Mass was held in Innsbruck on June 17, 1945. The Reverend Gureckas, president of the local Lithuanian association, delivered the sermon in which he exhorted his listeners to pray for those who had perished and to implore the Almighty to protect those who still survive.

Lithuanian refugees in Yverdon, Switzerland, numbering about 300 persons, participated in the commemoration ceremonies held on the Swiss national holiday, August 1, 1945. Dressed in Lithuanian costume and carrying the Lithuanian flag, they marched in the traditional parade. The Lithuanian program, consisting of music and folk songs, was attended by local Swiss officials and by representatives of Lithuanians residing in Switzerland.

Among the refugees in Switzerland are several university students (Lithuania), 17 of whom are continuing their studies in Zurich at the Ecole Polytechnique Federale and in various schools of the university.

The Lithuanian colony in Rome expressed happiness in the Allied victory against the Axis in a letter to Gen. Mark W. Clark, commander of the American Fifth Army. We quote in part:

In our quality of faithful sons of the Lithuanian Nation, which has repeatedly suffered cruel violations of her right and her will to be independent and who still continues a dangerous clandestine struggle against the invaders, we realize that the triumphant entry into Rome is a gage of the approaching liberation of all oppressed nations suffering alien domination.

Unanimous with the people of Lithuania and with many hundreds of thousands of the United States citizens of Lithuanian extraction, we firmly believe that victory of arms as well as of ideals will restore the independence of the Republic of Lithuania which was one of the first states of Europe daring to take a position against the oppressive goals of the Nazi Reich.

Archbishop J. Skvireckas, of Kaunas, according to the latest reports, has completed his journey from American-occupied Germany to Rome. He carries with him a petition signed by thousands of Lithuanian refugees in Allied-occupied western Germany addressed to His Holiness Pope Pius XII.

According to reliable sources, the British Red Cross is sending assistance to Baltic refugees. Shipments have already gone forward to Copenhagen, Lubeck, and Paris. The committee for the assistance of Baltic refugees, headed by

the Duchess of Atholl, is located in London.

Of the group of Lithuanian war refugees in France, more than 50 men are known to have voluntarily enlisted in the French Foreign Legion.

## The People Not To Blame for Pearl Harbor

EXTENSION OF REMARKS
OF
### HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. CLEVENGER. Mr. Speaker, certainly the President was in error in assessing the responsibility for the debacle at Pearl Harbor. Where were the Secretaries of War and Navy, the Joint Chiefs of Staff, foregathered that fatal night and morning of December 6–7, 1941? With whom were they conferring while war clouds gathered and watchdogs slumbered? I would like to know; the country would like to know.

Under leave to extend my remarks, I include the following editorial from the Chicago Tribune of November 9, 1945:

THE TRUTH AT LAST

The horrible truth of the Pearl Harbor catastrophe is now known. President Roosevelt and his administration invited the Japanese attack. They had been told when it was coming and where it would come. They deliberately withheld adequate warning from the Hawaiian commanders, Admiral Kimmel and General Short. They permitted our battleships in Pearl Harbor to be sunk and our war planes on the airfields of Hawaii to be destroyed. They sacrificed the lives of 3,000 Americans. All this they did to have war.

The cost they exacted at Pearl Harbor to achieve their ambition was only the beginning. By the end of the war 262,000 Americans were dead. More than three-quarters of a million others were maimed or left broken in mind. More than a third of a trillion dollars was spent on destruction. The future of America is mortgaged.

The facts disclosed in Congress by Representatives KEEFE and GEARHART and Senator BREWSTER have finally shattered a secrecy which was maintained for 3 years and 11 months by Mr. Roosevelt and his successor, using every unfair means at their disposal. The facts are as unanswerable as they are shocking. The defendants are no longer Kimmel and Short. They are Mr. Roosevelt; his Secretary of State, Cordell Hull; his Secretary of War, Henry L. Stimson; and his Secretary of the Navy, Frank Knox.

The present Secretaries of War and Navy, Robert P. Patterson and James Forrestal, are faced with the necessity of proving that they did not share the guilty knowledge. The Army Chief of Staff, General Marshall, and the former Chief of Naval Operations, Admiral Stark, are in highly suspicious positions. They should come very clean if they are to save themselves from the general condemnation.

It is now disclosed that we had cracked the Japanese code by November 5, 1941, a month and 2 days before the Pearl Harbor attack. From then until the day of slaughter Mr. Roosevelt's government knew everything the Japs were saying among themselves, every intention they had, every action they planned. All of this vital intelligence was, as Representative GEARHART says, "purposefully withheld" from Kimmel and Short.

The texts of the intercepted and decoded Jap messages remove the last doubt that Mr. Roosevelt and his inner circle knew positively that the "surprise" blow—no surprise to them—would fall on Pearl Harbor. On November 5 Tokyo notified its diplomatic corps abroad that war with the United States would be announced by the phrase "East Wind Rain" in a false radio weather report. On December 5, 2 days before the attack at Oahu, Washington heard these fatal words. No word went to Hawaii.

A whole series of intercepted messages, hitherto classified "top secret" to keep them from the knowledge of Congress and the people, all pointed unmistakably to war. By December 5 the Roosevelt government knew war was an actuality, despite the absence of a declaration. The only question left was where the attack would come. Three pieces of code information left no doubt even as to that.

The first was a message radioed November 18 to Tokyo by Nagao Kita, Japanese consul general and director of Jap espionage in Honolulu. It brought Tokyo up to date on the identity of American warships in Pearl Harbor and gave the course of eight destroyers leaving the harbor. On November 29 came the clincher. Tokyo radioed Honolulu: "We have been receiving reports from you on ship movements, but in the future will you also report even when there are no movements."

Tokyo was not concerned about warships in harbor at Hong Kong, Singapore, Soerabaja, or San Diego. It wanted to know what was at Pearl Harbor. It said, in so many words, that its principal interest was in the ships remaining tied up in harbor. What could that mean except that it wanted the knowledge that they were staying in Pearl Harbor because it intended to attack them in Pearl Harbor?

Washington says this message was not decoded for a week after receipt, that is, on December 5, the same day as the "East Wind Rain" war warning, and 2 days before the attack. There was ample time to have warned Kimmel and Short, but they were not warned.

The final, conclusive evidence that the attack was intended to take place at Pearl Harbor, and no place else, came in the early hours of December 7. It was the "give-away" message from Japan setting the hour for the attack through instructions radioed the Japanese envoys in Washington to present their reply to Secretary Hull's ultimatum of November 26 at 1 p. m. Washington time the same day—sunrise in Hawaii—the time for surprise air attack.

Lieutenant Commander Kramer, on duty in the Navy Department, handed Secretary Knox a memorandum pointing out this fact of transcendent importance at least 3 hours before the bombs fell. Everybody stalled. Finally, an hour and seven minutes before the attack in Hawaii, General Marshall sent a warning to Short. He used ordinary commercial radio, instead of the powerful Navy or FBI transmitters at his disposal, or the scrambler phone on his desk with a direct wire to Hawaiian headquarters. The message to Short was in code. It was not decoded until 2:58 p. m. Hawaiian time, hours after the great base was in ruins. Admiral Stark, who had received the same information as Marshall on the morning of December 7, cried, "My God! This means war. I must get word to Kimmel at once." Why he did not do so is a mystery he must explain.

No such offense as has been brought home to Mr. Roosevelt and his inner circle was ever committed in this country before. It is obvious that gnawing anxiety lest the truth become known contributed to the premature deaths of Roosevelt and Knox. Some of the surviving conspirators have made matters worse by seeking to conceal the truth. They have even attempted to get laws passed to imprison anyone who might bring out the truth.

Stimson has added to his infamy by sending Col. Henry C. Clausen around the world in the hope that various Army witnesses who testified before the Pearl Harbor Board of Inquiry would change the stories they had given under oath. This attempt succeeded in at least one instance. Col. R. S. Bratton, chief of the G-2 far eastern section, was induced to alter his testimony that he personally had delivered to General Marshall on the night of December 6 an intercepted Jap message pointing to immediate hostilities. Congress has been told that Commander (now Captain) Kramer, who had told Knox that Pearl Harbor was certain to be the target of attack, has been hounded into a psychiatric ward by Navy officers seeking to make him change his testimony. Beyond that all records of the four Navy radio monitoring stations relating to the "East Wind Rain" interception of December 5 declaring the existence of a state of war have disappeared.

The story of Pearl Harbor is the blackest page in American history. Nothing is left now but for Congress to impeach all still living who may have played a guilty part and bring them to bar.

## Peace Demands Action

EXTENSION OF REMARKS
OF
### HON. HERMAN P. KOPPLEMANN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD an article which appeared in the Washington Post, November 7, by Sumner Welles, former Undersecretary of State, urging the importance of granting the American representative on the Security Council authority to use our armed forces to quell aggression.

It is gratifying that the administration is supporting legislation to this end and that a comprehensive measure implementing the provisions of articles 41, 42, and 43 of the United Nations Charter is now before the Senate.

We have only to go back into recent years of world history to determine the urgency of this legislation. The leadership we have demonstrated in garnering world support for an international organization to keep the peace makes it mandatory that we assume like leadership in advocating steps that will make our plans for peace effective.

Because of the instability of conditions today, due to the irritations and doubts that are somewhat natural to the easing of the tense cooperation which so largely contributed to Allied victory, it is urgent that we lay the groundwork now for action that may be necessary sometime in the future against a hopeful aggressor, whether he embarks on a campaign for world or territorial domination. Every intention we have pronounced respecting the independent development of nations and peoples will be nullified unless we show that we intend

to back up our spoken intentions by practical means.

Article 41 of the Charter provided for measures short of the use of armed force to put down any disturbing situation. Article 42 provided that when such measures fail the nations on the Security Council, acting by mutual agreement, should use their armed forces, whether by sea, air, or land to keep the peace by force. We have fought for victory. Let us be ready to fight for peace, in the full realization that such concerted immediate action on a small scale may well prevent concerted action on a world-destructive scale.

That principle is contained in the resolution I presented to the House on October 11, and in the measure now before the Senate. Time may decree amendments to these measures, depending on changing conditions, such as developments as we progress into the atomic age. But regardless of what physical changes may determine changes in methods and thinking, the principle remains the same—immediate concerted action to stop any nation which is bent on aggression, or the disruption of peaceful relations between any individual countries or groups of nations.

Mr. Welles' article follows:

PEACE DEMANDS ACTION

(By Sumner Welles)

SETTING THE UNO TO WORK

With the deposit by the Soviet Union at our State Department of its ratification of the Charter, the United Nations Organization came officially into being. In this new international organization are represented all of our present hopes for a peaceful and a better world.

It is profoundly discouraging that so little significance has been attached to this great step forward. Yet the reason is easy to understand.

Public opinion is disheartened and perplexed by the mounting cloud of suspicion and of antagonism between the United States and the Soviet Union. Increasing civil strife throughout the world, the ominous signs that millions of people in Europe may starve or freeze this winter, and the utter failure of the major powers as yet to show that they can agree upon even one of the foundations needed before world reconstruction can be commenced, are rapidly undermining popular faith in the United Nations Organization as a means of obtaining physical and economic security.

I cannot reiterate too strongly my own conviction that the United Nations Organization cannot function successfully unless its establishment is accompanied by a practical understanding between Moscow and Washington. Such an understanding alone can enable the two greatest powers to cooperate to make the United Nations Organization work.

But at the same time most of us seem to underestimate the inherent capacity of the United Nations Organization to become under such conditions a guaranty of world progress and of world peace.

No realistic supporter of the United Nations Charter will maintain that the Charter is a perfect instrument or that, as the years pass, it must not be radically revised and improved. We are, however, seeing two highly dangerous trends in public thinking.

An increasingly noisy number of propagandists insist, because of existing international difficulties, that these constitute conclusive evidence that the United Nations Organization cannot succeed. They urge that we must consequently maintain vast armaments, and occupy bases, even those of our allies, all over the world. This is nothing more than an imperialistic development of that same policy of isolation which was so directly responsible for the Second World War.

Another group, also rapidly growing in number, maintains that there can be no hope of our survival in this atomic age unless national sovereignties are scrapped and a world republic is immediately instituted. According to them, the United Nations Charter must be discarded before it even begins to function.

The only way in which such hysterical and defeatist doctrines as these can be checked, and public confidence in the Charter can be stimulated, is for the United States to take the leadership in putting the United Nations Organization to work, and in seeing to it that it succeeds.

No step at this time could be more helpful than for the Congress before the end of the present year to fix the duties and responsibilities of the United States representative upon the Security Council and to intrust him with the necessary authority to carry out our national obligation to cooperate in preventing war.

This would be positive action. It would tend to dispel the persistent belief on the part of other peoples that the American Government is long on professions of self-righteousness but lamentably short on action when its help is needed to maintain world peace.

President Truman's recent speech on foreign policy tended again to reinforce that fatal inclination on the part of the American people to believe that the mere pronouncement of pious principles is all that is needed to make those principles come into operation. The President's address also offered no hope that any real understanding between the Soviet Union and the United States was as yet in the making.

Fortunately, however, the administration is already discussing with the Senate Committee on Foreign Relations legislation which will delegate authority to the American representative on the Security Council.

On October 11 Congressman KOPPLEMANN, of Connecticut, introduced a joint resolution, which is well worthy of consideration as a basis for such legislation.

Congressman KOPPLEMANN's resolution provides in section 1 and in section 5 (a) that the American representative on the Security Council shall have authority, provided he is so instructed by the President, to pledge, subject to the special agreements made under article 43 of the Charter of the United Nations, such part of the armed force of the United States as may be required to enforce the decisions of the Security Council when the Council decides that the use of force is necessary to maintain or restore international peace and security.

Section 2 provides that any pledge of the use of the armed forces of the United States which may be given by the American delegate on the Security Council shall not only be binding on this Government but shall also be immediately implemented by the appropriate American authorities.

Section 3 makes it clear that any such use of the armed forces of the United States "shall be regarded as being in the nature of international police activities for the prevention of warfare through the exercise of joint international responsibility," and that the joint resolution conferring these powers upon the American representative "shall not be regarded as in any way abrogating or altering the constitutional right of the Congress of the United States to declare war."

Finally section 5 (b) of the resolution obliges the President to provide the Congress with complete information concerning any decision which the Security Council may take under article 42 of the Charter, and which involves the use of armed force.

If the Congress will promptly enact legislation of this kind, the United States will be able to give the United Nations Organization that kind of concrete support which it greatly needs at this moment. Such a step will also help to convince public opinion in the other United Nations that the people of the United States are determined to act as well as to talk in order to maintain world peace, and in order to make international organization succeed.

## What's Wrong With Demobilization?

EXTENSION OF REMARKS

OF

### HON. CARL T. CURTIS

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. CURTIS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Hastings (Nebr.) Daily Tribune:

WHAT'S WRONG WITH DEMOBILIZATION?

There is growing evidence that there is a need for more efficiency and coordination in the demobilization program. Military teaching and training is such that higher authority is not to be contested but apparently conditions are such that men in uniform have come to the point of calling their plight to the attention of the public and their elected representatives, taking the chances of going over the heads of their superiors with their complaints.

Recently, several such letters have been made public here. From the men overseas come allegations that ships are lying idle in ports; that the public is led to believe by announcements relative to the discharge program that men are coming home rapidly, when, according to the letters, they are not being discharged on the point basis as announced, causing their wives to ask why they have not applied for discharges. And a protest has come from enlisted men at Harvard that they are being sent overseas even though the majority have been in service 2 years and more when it has been announced that except for essential men, 2-year veterans were to be discharged beginning at the end of the year.

There is no doubt that there is another side to the story; that there is sound and good reason for some of the delay and for some of the actions being taken. But when enlisted men, trained in military discipline to fight battles, are so strongly moved that they will go beyond the authority of their superior officers in voicing their complaints and disappointments there must be something wrong.

## News From Soviet-Occupied Lithunia

EXTENSION OF REMARKS

OF

### HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. O'KONSKI. Mr. Speaker, news from reliable sources confirms the reports of Soviet terror, executions, and deportations. On July 30, 1944, the first blood bath is said to have been organized at Zarasai. The officials and clerks

of the local institutions and the families of the rebels of 1941 were tortured and executed. Women and children were compelled to watch this crime. Further executions were organized at Utena, Vilnius, Daugaliai, Deguciai, Salakas, Dusetai, Antaliepte, Kamajai, Svedasai, Daugai, Verena, Siauliai, Rumsiskes, Jonava, Ukmerge, Kupiskis, and Rokiskis. All the population found in the Leliunai, Moletai, and Daugai parishes were shot. Only a small number who were in hiding managed to escape the massacre. Lithuanian sources state that at several places near Panevezys and Kedainiai the local population was ordered to dig up the bodies of the Communists who had been executed by the Germans. After the exhumation, executed Lithuanians were buried in the same graves. There are repeated reports of mass deportations to Siberia. The figure 83,000 is often mentioned as an estimate of persons deported during the second Soviet occupation.

Mobilization for the Red Army was proclaimed by the Soviets as soon as they entered Lithuania. This involved all men born in the years 1908 to 1926. It is estimated that only about 30 percent of the men who were called up appeared for registration.

Reports indicate that communication facilities in Lithuania, disrupted by the Nazi-Soviet warfare, are still in a bad state of repair. Horses and carts owned by farmers living near the more important localities are being confiscated for military purposes. Every community, isolated from the larger centers, lives its own life. The inhabitants of the country are fed on all sorts of rumors. Though two Lithuanian newspapers, Tarybu Lietuva (Soviet Lithuania) and Tiesa (Truth), are published in Vilnius, they rarely reach the provincial towns and villages since transportation is poor. All the good radio sets were confiscated some time ago, and the people are allowed to possess the most primitive radio receivers only.

Soviet authorities are still examining the identification documents of the entire population. It is reported that on Laisves Aleja (Freedom Avenue), main street of Kaunas, passersby are being stopped and asked for their documents the whole day long.

After its experience under three consecutive occupations, the nation's determination to fight foreign enslavement has strengthened. Their achievements during the uprising of 1941 and their stubborn resistance against the Germans have given the Lithuanians increased self-confidence. It is stated that the patriotic partisan movement in Lithuania has become so strong that in December 1944 they set free the town of Ukmerge and kept it under their control for 3 days. When Russian forces approached Ukmerge, these Lithuanian patriot fighters took to the woods. The morale of the Lithuanian people is unbroken. In many places in Lithuania Soviet authorities are unable to organize local Communist committees, for the persons appointed by them are usually found dead the following night. The Soviets, unable to find the necessary number of collaborators, have been forced to appoint several non-Communists to relatively important municipal positions.

SOVIET BROADCASTS IN LITHUANIAN FROM VILNIUS IN FEBRUARY 1945

Reports about events on the Eastern front are broadcast every day—except on those days when the Vilnius radio station does not function, which has happened quite often of late; indeed, several times weekly. During its "working days" the Vilnius station transmits war news, Communist propaganda, and Russian music. Often Russian songs and vulgar couplets are sung. In their broadcasts the Soviets try to give the impression that they are interested in Lithuanian problems. However, their listeners are well aware that this is merely propaganda, since the broadcasts completely neglect Lithuanian political or cultural interests. The broadcasts deal with local matters only so far as to instill into the minds of the listeners that their country is incorporated into the Soviet Union forever, and that they should cease to think of Lithuanian independence. Such propaganda, however, has an effect quite opposite from that intended, as is proved by direct information from Lithuania.

During February one of the most popular subjects in the radio broadcasts was the alleged zeal of the Lithuanian workmen in the factories and their supposed loyalty to the Communist regime. Names of workers who have thus distinguished themselves are constantly being read. These are nearly always Russians, such as Comrade Vetrov, a railway worker from Kaunas. On February 1 and a few days later, the broadcasts described several public meetings wherein the Lithuanians were said to have shown "the greatest satisfaction at the reincorporation of Klaipeda (Memel) into Soviet Lithuania." On February 2 the announcer stated that Klaipeda, said to be burning and totally abandoned by its population, was a "dead town." He added that, nevertheless, "life will blossom there again—the harbor has good prospects." The reason given for this optimism was the alleged fact that "a few hundred people from the east had arrived there and had already organized a Communist Party and its committee."

On February 5 the announcer read a communiqué about some slight amendments which aim at the centralization of control to be made to the so-called "Soviet Lithuanian Constitution."

The frequent mention of Russians appointed to office proves the Soviet determination to Russify Lithuania. Among new appointments broadcast on February 5, the announcer mentioned, for example, Ponomarev, a Russian, as the commissar for Lithuianian forests. The announcer also stated that Paleckis, head of the Soviet puppet government, had decorated some distinguished Lithuanians with Soviet orders and medals. However, their names, such as Morozov, Kapralov, and so forth, sounded completely Russian.

Instructors of Communist youth circles, Russians such as Loza, Mironcov, and Mrs. Sroll, have become famous throughout Lithuania as zealous organizers, and in a broadcast on February 7 were mentioned as having devoted themselves to the task of the "liquidation of the former agricultural system in Lithuania."

Another popular theme is the alleged fact that all previous regimes of independent Lithuania "put obstacles in the way of the education of the people." On February 8 the announcer claimed that the universities of Kaunas and Vilnius as well as the agricultural academy of Dotnuva were functioning again. However, nothing was said of the national origin of the students or of the professors of these institutions. In this same broadcast the announcer mentioned the names of several pupils at the Vilnius radio school, such as Alexey Baukov, Mitrovanov, and so forth, which sounded pure Russian.

The broadcast of February 17 was devoted to propaganda for Soviet sports activities. The Lithuanian young people were urged to take more interest in skiing, which was said to train better soldiers for the Red Army. Among the instructors of this sport a certain "Comrade Timofeev," secretary of the Communist youth circle at Rokiskis, received high mention. Lithuanian young people were urged to form sports clubs all over the country.

---

## The Palestine Question—King Ibn Saud's Letter to President Roosevelt and His Reply

---

REMARKS

OF

### HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Friday, October 19, 1945*

Mr. RANKIN. Mr. Speaker, several days ago I was taken to task on the floor when I suggested that a certain element in this House was marching into Palestine waving a red flag in the face of the British Empire.

I call attention to the fact that Secretary Byrnes has given to the world a statement showing that President Roosevelt guaranteed King Ibn Saud that no interference in Palestine would be taken without consulting the Arabs, many of whom are of the Christian faith.

Now, do not cry "anti-Semitism" at me, because both of these factions are Semites.

Besides, this is an affair in which we have no right to interfere.

KING IBN SAUD'S LETTER TO PRESIDENT ROOSEVELT AND PRESIDENT ROOSEVELT'S REPLY

The following correspondence between King Ibn Saud and President Roosevelt should be very enlightening to the American people, and especially to the American Congress, on that much-publicized issue.

You remember President Roosevelt in effect said that he learned more on this subject in talking with Ibn Saud 5 minutes than he had learned about it all his life up to that time.

The correspondence between them on this subject reads as follows:

KING IBN SAUD'S LETTER TO PRESIDENT ROOSEVELT

MARCH 10, 1945.

To His Excellency Mr. ROOSEVELT,

*President of the United States of America.*

YOUR EXCELLENCY: This is indeed a happy occasion for us to join with you in rejoicing at the triumph of those principles in defense of which war was declared and to remind those great personalities in whose hands, after God, the fate of the world order rests, of a right which has existed unquestioned since the dawn of history.

This right men now seek to destroy by injustice unparalleled and unequaled in history. Such is the right of the Arabs in Palestine, which the spokesmen of Jewish Zionism wish to scorn and abolish by the use of various forms of lying propaganda, invented, concealed, and employed by them throughout the world.

They have acted unjustly and are making hostile preparations against the Arabs, some of which are known, although much remains undetected. They are preparing to create a form of nazi-fascism within sight and hearing of the democracies and in the midst of the Arab countries, as well as in their very heart and in the heart of the East, which has proved itself loyal to the Allied cause in these critical times.

RIGHT TO HOMELAND

All people have the natural right to live in their homeland, a right guaranteed to them by natural law established by the principles of humanity which the Allies have proclaimed in the Atlantic Charter and on numerous other occasions.

The Arabs have a natural right in Palestine which needs no explanation. We have on a separate occasion mentioned to Your Excellency, as we have many times to the British Government, that the Arabs have inhabited Palestine since the beginning of history and that they have throughout the ages been its masters and enjoyed an overwhelming numerical superiority.

We would now make a brief reference to Palestine's history, ancient and modern, up to the present day, to make it clear that Zionist claims in Palestine are not based on historical facts.

The earliest recorded history of Palestine begins in the year 3500 B. C., its first inhabitants being the Canaanites, an Arab tribe which emigrated from the Arab peninsula and had its first abode in the lowlands, hence the name Canaanites. In 2000 B. C. a section of the Jews under the leadership of the Prophet Abraham emigrated from Iraq (Ur of the Chaldees), settled in Palestine and then immigrated because of famine into Egypt where they were delivered into bondage by the Pharaohs.

The Jews remained scattered there until their delivery from exile by the Prophet Moses, who brought them back to the land of Canaan by the southeastern route, either in the time of Rameses II, i. e., 1250 B. C., or his son, Munfitah, 1225 B. C.

If we accept the text of the Bible, we find that the conqueror of Palestine was Joshua, the son of Nun, who crossed with his army and captured the city of Jericho from the Canaanites, with great cruelty and barbarity; witness his words to his army:

"Burn ye all that is in the city and slay with the edge of the sword both man and woman, young and old, and ox and sheep, and burn the city with fire and all that is therein." Joshua, chapter 7, verses 21 to 24.

Thereafter the Jews split up into two kingdoms. One the Kingdom of the Israelites, with its capital Samaria (Nablus), lasted 250 years and then fell into the hands of Shalmaneser, King of the Assyrians, in the year 722 B. C., and was led into captivity. The other, the Kingdom of Judah, with its capital Jerusalem, lasted 130 years after the Kingdom of Israel had perished.

It was later destroyed by Nebuchadnezzar, King of Babylon, who burned down the city and the temple with fire and led the people into captivity to Babylon in the year 580 B. C.

The captivity in Babylon lasted 70 years, and then the Jews returned to Palestine by order of Cyrus, King of the Persians.

The Greek conquest followed in 332 B. C., under the command of Alexander the Macedonian, their rule continuing in Palestine for a period of 272 years.

The Roman conquest took place next in the year 63 B. C., under the command of Pompey, their rule lasting in Palestine for 700 years.

In the year A. D. 637 the Arabs occupied Palestine, and their rule lasted continuously for 880 years.

The orders of the Caliph to the conqueror were: "You shall not act treacherously, dishonestly, commit any excess or mutilation, kill any child or old man; cut or burn down palms or fruit trees, kill any sheep, cow, or camel, and shall leave alone those whom you find devoting themselves to worship in their cells." This was related by Ibn-al-Atheer, the famous historian.

Palestine then passed under the rule of the Turks in A. D. 1517, during the reign of Sultan Saleem the First, and their rule lasted for 400 years. The Arabs were the inhabitants and participated with the Turks in the government and administration of the country. It was then occupied by the British, who are still there.

This history of Palestine, an Arab country, shows that the Arabs were its first inhabitants and that they dwelt there for a period of 3,500 years before Christ and have remained there since Christ until the present day.

They ruled it alone or with the Turks for a period of about 1,300 years, whereas the disjointed reign of the Jews did not exceed 380 confused and sporadic years.

No Jewish rule has existed in Palestine since 332 B. C. nor until the British forces entered Palestine in 1918, i. e., for 2,200 years there have been few Jews there and they have had no influence. They numbered not more than 80,000 when the British entered Palestine, and lived comfortably, happily, and prosperously in that country with the original inhabitants, the Arabs.

The Jews were merely aliens who had come to Palestine at intervals and had then been turned out over 2,000 years ago.

The permanent rights of the Arabs in Palestine rest on the following:

(1) The right to dwell there. This they have done since the year 3500 B. C. without ever leaving the country.

(2) The natural right of life.

(3) The existence therein of the Holy Land.

(4) The Arabs are not aliens in Palestine and there is no intention to bring any of them from other parts of the world to settle there.

The historical claims of the Jews is, however, a fallacy. As already mentioned, their brief and sporadic rule gives them no right to claim that they own the country, for to occupy a country and then leave it entitles no nation to claim and demand ownership thereof. The history of the world is full of such examples.

The solution of the problem of the persecuted Jews in the world differs from the fictitious problem of Zionism. For to provide homes for the scattered Jews is something in which the whole world can cooperate, and here Palestine has borne more than its full share. But to bring these scattered people, put them in countries already occupied, and do away with the original inhabitants is an act unparalleled in human history.

We state frankly and plainly that to help Zionism in Palestine not only means to endanger Palestine but all neighboring countries.

The Zionists have given clear evidence of their intentions in Palestine and in all neighboring countries. They have organized dangerous secret military formations. It would thus be a mistake to say that this was the action of a group of their extremists and that it had met with the disapproval of their assemblies and committees.

We declare that the actions of the Zionists inside and outside Palestine are based on a program agreed upon and approved of by world Jewry.

These people began their vile work by wronging the government that had treated them kindly and sheltered them, namely, the British Government. Their assemblies declared war on Britain and organized dangerous military formations, which at present hold in Palestine all the arms and military equipment they require.

Their members have carried out various attacks of which the most shocking was the attack on the outstanding figure, so kind and charitable toward all men and with the greatest sympathy for persecuted Jewry, Lord Moyne.

LAYS TERROR TO ALL JEWS

The proof that all Jews aided and abetted their vile deed is to be seen in the demonstrations and efforts made by Jews everywhere, demanding a light sentence for the criminals in order to encourage others to do the same.

This, then, is the way they behave with the government which has treated them so kindly. What would be the position if they were able to realize their objects and make Palestine entirely their own country, in which and near which they could do as they pleased?

If the matter were left to the Arabs and these aggressors it might perhaps be easy, but they are protected by the British Government, the friends of the Arabs. The Zionists did not respect the sanctity of this protection, but plotted mischief, beginning first with Britain and threatening the Arabs after Britain with similar and more dangerous plots.

Thus, if the Allied Governments, whose friendship the Arabs are aware, of, wish to see the fires of war break out and bloodshed between Arabs and Jews, their support of the Zionists will surely lead to this result. What we and the Arab countries fear from the Zionists are:

(1) That they will carry out a series of massacres as between themselves and the Arabs.

(2) That the Zionists will be one of the main causes of dissension between the Arabs and the Allies. The latest proof of this is the case of the two Jews who killed Lord Moyne in Egypt. Had the Jews been able to hide the criminals, a dispute would have occurred between the British Government and Egypt.

(3) That the ambitions of the Jews are not confined to Palestine alone. The preparations they have made show that they intend to take hostile action against neighboring Arab countries.

(4) Supposing that the Jews obtain their independence somewhere in Palestine, what is to prevent them from coming to an agreement with any power that may be hostile to the Allies and to the Arabs? As it is, they have begun taking hostile action against Britain while under her protection and mercy.

NO BASES IN HISTORY

Such factors should no doubt be taken into consideration in regard to the establishment of peace in the world when the problem of Palestine is discussed. Not only is the gathering of Jews in Palestine based on no historical argument nor on any natural right, and is in fact absolutely unjust, but it constitutes at the same time a danger to peace, to the Arabs and to the Middle East.

The crux of the matter is that the formation of a Jewish state in Palestine will be a deadly blow to the Arabs and a constant threat to peace, for disturbed conditions are bound to prevail between the Jews and the Arabs, and if the patience of the latter is one day exhausted and they despair of their future then they will be obliged to defend themselves and future generations against this aggression. No doubt the Allies, who are working to uphold peace and respect for men's rights, are aware of this. We have no doubt that they are dissatisfied with this uneasy situation which threatens peace in the Middle East.

We did not wish to bother Your Excellency or your ministers with this matter during the present titanic struggle in which you are engaged. Confident that the Allies will treat the Arabs fairly, however, we would have preferred the Arabs to forbear until the end of the war had it not been for the provocative and offensive acts committed by the Zionists who, regardless of war conditions and the preoccupation of the Allies, seek to bring every form of pressure to bear on them to adopt a policy which is inconsistent with the principles of right and justice which the Allies have proclaimed.

That is why we wished to explain the true rights of the Arabs in Palestine so as to refute the flimsy arguments of the Zionist party, counter their aggressive tactics, and set out the facts in order that the Allies may fully understand the rights of the Arabs in their country, the country of their fathers and forefathers.

The Jews should not be permitted to exploit the forebearance of the Arabs or their desire to avoid any embarrassment to the Allies, to obtain concessions to which they are not entitled.

All we ask is that the Allies should fully realize the rights of the Arabs and for the present prevent the Jews going ahead in any new matter which may be considered a threat to the Arabs and to the future of every Arab Nation, in order that they, the Arabs, may be assured of justice and equity in their lands.

With highest respects,

Your friend,

ABDUL AZIZ AL SAUD.

PRESIDENT ROOSEVELT'S ANSWER TO KING IBN SAUD'S LETTER

APRIL 5, 1945.

His Majesty ABDUL AZIZ IBN ABDUR RAHMAN AL FAISAL AL SAUD,

*King of Saudi Arabia, Ryadh:*

GREAT AND GOOD FRIEND: I have received the communication which Your Majesty sent me, under date of March 10, 1945, in which you refer to the question of Palestine and to the continuing interest of the Arabs in current developments affecting that country.

I am gratified that Your Majesty took this occasion to bring your views on this question to my attention and I have given the most careful attention to the statements which you make in your letter. I am also mindful of the memorable conversation which we had not so long ago and in the course of which I had an opportunity to obtain so vivid an impression of Your Majesty's sentiments on this question.

Your Majesty will recall that on previous occasions I communicated to you the attitude of the American Government toward Palestine and made clear our desire that no decision be taken with respect to the basic situation in that country without full consultation with both Arabs and Jews.

Your Majesty will also doubtless recall that during our recent conversation I assured you that I would take no action, in my capacity as Chief of the executive branch of this Government, which might prove hostile to the Arab people.

It gives me pleasure to renew to Your Majesty the assurances which you have previously received regarding the attitude of my Government and my own, as Chief Executive, with regard to the question of Palestine and to inform you that the policy of this Government in this respect is unchanged.

I desire also at this time to send you my best wishes for Your Majesty's continued good health and for the welfare of your people.

Your good friend,

FRANKLIN D. ROOSEVELT.

## Set the American Indians Free

EXTENSION OF REMARKS

OF

## HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. STEFAN. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following article by O. K. Armstrong from the Reader's Digest:

SET THE AMERICAN INDIANS FREE

(By O. K. Armstrong)

A young fullblood Indian, sergeant in the Army Air Corps, stood before his tribesmen on the Winnebago reservation and told of his experiences on many fronts. Then he said: "I'm leaving again, to finish this war. When we Indian servicemen get back, we're going to see that our people are set free to live and act like American citizens."

There was silence. One by one the older men came forward and threw their arms about his shoulders, their faces tense with emotion. Then the younger men, among them two boys in Navy uniform, gathered about the sergeant in earnest talk. He had given voice to an unmistakable determination on the part of American Indians to demand full rights of citizenship.

Speaking with grim accents, this Winnebago told me: "We're tired of being treated like museum pieces. I'm a mechanic. I want a real job. They're not going to send me back to live in a shack and loaf around in a blanket."

Few know the shameful story of the present status of the Indians. By fire and sword the settlers drove them from their lands. Then, in 1824, the Government established a Bureau of Indian Affairs to civilize and emancipate the Indians. Reserved areas were set aside for the tribes, where they could live while they learned the white man's ways.

Today about 220,000 Indians still live upon 210 reservations. Legally they are free to come and go as they please, and to take up any work they choose. Actually most of them are tied to their reservations and to old tribal ways.

In three important respects they have never been emancipated. They are restricted in property rights. Without consent of their superintendent they cannot own land on the reservation, or sell it, or mortgage it, or lease it. They live under conditions of racial segregation. And they are subject to special limitations and exemptions because they are Indians.

In recent months I have visited many reservations. I talked with tribal chiefs, farmers, teachers, with Indians prominent in business and politics. I talked with agency superintendents and employees—able, conscientious men who are working tirelessly to better the lot of the Indian. All agreed that the Indian problem is a national reproach.

The great majority of the Members of Congress heartily applaud the stand of Representative WILLIAM G. STIGLER, of Oklahoma, himself a Choctow-Chickasaw Indian. Speaking to the House last April, he said: "There should be an early and complete rehabilitation of the Indian so he may go forth in the world and take his place by his white brother, asking only an opportunity to prove his worth."

More than 22,000 Indians are serving with our fighting forces. Many have given their lives; many more have won decorations. There can be no doubt that all who return from the service will seek a greater share in America's freedom. About 45,000 other Indians from reservations have been working in war industries. Most of these have tasted economic opportunity for the first time, mastering skilled trades. They're not going to forget that they made a good living on their own.

Why aren't the Indians free? The policy of segregation and special treatment is deeply rooted in the past. Early reservations were concentration camps, where troops kept the inmates subdued. By the middle 1870's, reservations had become centers of paternalistic control, where able-bodied Indians waited from week to week for the agents to distribute beef and clothing.

It became apparent that the reservation system was pauperizing these wards of the Government, so in 1887 an Allotment Act was passed presenting individual Indians with tracts of land, usually 160 acres. The act provided that for 25 years title to the land would be held in trust by the Government, after which ownership would pass to the Indian and he would be a full citizen. The motive was good: to keep the Indian from being cheated out of his land by unscrupulous tribesmen or white men. But there was no sound program for educating the Indian to be self-supporting on his land or to be assimilated into industry.

When, in 1891, the act was amended to extend the 25-year trust period, other amendments closed the door to full citizenship. If the ambitious and industrious Indian left the reservation he risked losing his rights in tribal land and money. If he stayed he could not own a farm or add to it by purchase. The policy of perpetual guardianship took firm root.

Although all native Indians were declared citizens of the United States by act of Congress in 1924, the act made no provision for the details of their emancipation. Today only Congress or the Great White Father, the Secretary of the Interior, can remove restrictions upon ownership of property. With their land held in trust by the Indian Office, Indians are in the anomalous position of being both citizens and wards of the Government. They cannot use funds owned by the tribe without consent of the Office, even for cooperative enterprises. Their money is not their own until the superintendent doles it out for a specific purpose.

Young people in Indian schools, at ages when white children are taught self-reliance, are trained in dependency. They are required to ask superintendents for spending money and must get permission to purchase books, clothing, and personal effects. If an adult Indian secures a Government loan for purchase of livestock, machinery, or household goods, the agency assumes control of all such personal property. If the Indian farmer's cow produces a calf, he must not sell the calf without permission.

Lands held by reservatian Indians—56,000,000 acres—are not subject to State, county, or local taxes. Hence they cannot vote in Idaho, New Mexico, and Washington, because of constitutional provisions forbidding suffrage to Indians not taxed. They cannot vote in Arizona because of a law denying the ballot to "persons under guardianship." North Carolina requires that voters be able to read and write to the satisfaction of the election registrar—and a Cherokee holding an M. A. degree from the University of North Carolina was told by an election judge: "You couldn't

read or write to my satisfaction if you stayed here all day."

Surplus reservation lands not allotted to individual Indians have been opened by tribal councils for settlement by whites. Individual Indians can also lease part of their allotments. The Indians have found it more convenient to lease to whites than to farm for themselves under Government restrictions. Not more than 1 acre out of 4 on reservations is now used by the Indian.

Many Indians to whom land was alloted have died, but their lands could not be sold nor their estates settled without the Government's permission. Heirs were given "bookkeeping equities" in the original allotments. Continued dividing of the tracts has gone on until now the problem of "fractional heirships" has reached fantastic proportions. Some bits of land have as many as 200 heirs. The Indian Office must find them and get their consent before the land is leased. Thousands of acres of Indian lands lie idle because heirs cannot be found. I talked with a returned veteran who had tried to rent a 40-acre tract. "There are more than 100 heirs for that piece. Some are lost. We can't rent it," the supervisor finally informed him.

The latest Government efforts to meet the Indian problem have been in the wrong direction. In 1934 Congress passed the Indian Reorganization Act, by which the Department of the Interior was authorized to purchase land and hold it "in perpetuity" for tribal use. Further allotments to individual Indians and sale of Indian lands were were banned. The act provided for organization of tribes into "corporations" and for "communal" use of land and machinery.

One effect of the Reorganization Act has been to force a collectivist system upon the Indians, with bigger doses of paternalism and regimentation. Under the plan, the tribal council is the ruling power, but since the council is completely dominated by agency officials it actually functions only with the advice and consent of the Indian Office. The tribe assigns each member Indian the plot of ground he is to work—in true collectivist pattern.

Since the plan went into effect, the Office has spent about $2,000,000 per year buying land—often for tribes that have more acres by far than they ever use. The Shoshones and Arapahoes, at Wind River, Wyo., have 1,500,000 acres of land, 300,000 of which are not needed by the Indians and are rented to whites, yet the Indian Office has spent nearly half a million dollars to add ranch land and equipment to the tribal estates. For the Blackfeet tribe in Montana $95,252 was spent for land, although the tribe has leased out 747,068 acres of its vast holdings.

In a recent report Senators THOMAS of Oklahoma, WHEELER of Montana, CHAVEZ of New Mexico, and SHIPSTEAD of Minnesota, members of the Indian Affairs Committee, offered this stinging indictment:

"While the original aim of the Indian Service was to make the Indian a citizen, the present aim appears to be to keep the Indian an Indian, and to make him satisfied with the limitations of primitive life. The Bureau has been concerned with segregating the Indian, condemning him to perpetual wardship, and making him the guinea pig for experimentation."

The most advanced tribes are those that have had the smallest connection with the Indian Office. The Choctaws, Chickasaws, Cherokees, Seminoles, and Creeks in Oklahoma show how our Indians, through freedom rather than restriction, may become an integral part of our national life. During the settlement of the Indian Territory, Indians mixed freely with the whites and adopted white ways. Lands were granted in fee to Indians individually.

In 1908 Congress gave full citizenship to 60,000 (about 80 percent) of these Oklahoma tribes. Their members helped found the State and have occupied high positions in business, education, and public affairs. Every Oklahoma legislature has found Indians in positions of leadership. Former Senator Robert L. Owen is a Cherokee. Chief Justice Samuel E. Welch of the State supreme court, is a Chickasaw. The late Will Rogers was a Cherokee. In the courthouse at Claremore (Rogers' home town) I asked J. C. Gipe, deputy sheriff, how many county officials are Indians. Sixteen of the 20 proved to be of one-quarter blood or more.

Yet every major policy of the Bureau in recent years has tended toward revival of tribal autonomy and ancient customs. Separate CCC camps were maintained for Indian youths. There were separate sewing rooms for Indian women and separate projects for Indian men under the WPA. Segregated hospitals are maintained on the reservations. A restricted Indian is not permitted a loan from the Farm Security Administration; he must deal with the special loan service of the Indian Office. Proposals have been made by Bureau officials that problems of Indian war veterans be handled by a special division of their office.

Tribal control and governmental regulations constantly remind the Indian of his inferior status. Indians loll about agency offices, waiting to ask permission on matters that a free farmer would decide in an instant. Congressmen from reservation States are familiar with letters such as this one from Charlie Red Shirt to Congressman FRANCIS CASE, of South Dakota: "My oldest daughter receive Sioux benefits. She want to buy milk cows because we like dairying. But they want her to buy beef cattles and they make her feel bad. If they let her go and buy what she want in the first place she would have about 30 or 40 head of cattles by this time."

One Sioux farmer, disliking an old horse, sold him for $75 without permission and reported he had disappeared. The horse had to be found. The superintendent's report fills a small volume. Two field men after long search and the expenditure of about $2,500 of taxpayers' money, settled the matter. The Indian was given a strong reprimand—and the horse.

Every agency official I talked with cried out against the bureaucratic red tape of the Service. Nothing, it seems, can be done simply or promptly. Suppose Jack Muskrat wants to borrow money to plant a crop. He takes up the subject at the agency office. The matter must come before the tribal council. A "farm plan" must be worked out especially for Jack. The superintendent must approve. The credit unit must study and approve the plan. A loan agent showed me a stack of complicated forms, reports, letters and printed instructions. "That's what it takes to get one Indian farmer a loan," he said. "No wonder they'd rather rent the land and loaf."

The cost of keeping Indian wards has risen year by year. In 1928 the appropriation for the Indian Office totaled $10,000,000, supporting 4,000 employes. Critics in Congress declared it was time to emancipate the Indians and let the Office "work itself out of a job." Yet by last year the number of employes had increased to 7,383. And in the appropriation bill for 1946 the Indian Office requests $32,000,000 and 306 new positions.

For all the vast expenditure, how many Indians are there? Nobody knows.[1] In 1934 the number was put at 234,792, including 30,000 in Alaska. Now the Indian Office "estimates" a total of 419,970. Congressmen say that the figures are padded to obtain ever-increasing appropriations. Persons with no more than 1/256th Indian blood help to swell the total.

Despite Government outlays, most reservation Indians live in poverty. Until war work came to their aid, not more than two percent of reservation families averaged more than $500 income a year. Living conditions are often extremely bad. Disease is prevalent and infant mortality is high.

Two pressing tasks confront Congress and the Indian service:

The first is to provide legislation that will remove restrictions from—and thus emancipate—every Indian who is able to manage his affairs.

The second is to chart a new course for the Office of Indian Affairs, whereby its efforts, during the time it remains in existence, are directed toward assisting all Indians to be self-supporting.

What Indians, now restricted, should be declared competent? Opinions vary, but agreement is possible on immediate emancipation of:

1. Honorably discharged veterans of the present war. This would be an act of simple justice for those who have fought for freedom.

2. All Indians born from this time forward.

3. All persons of less than one-quarter Indian blood.

4. Graduates from a standard high school or its equivalent.

5. All others who are competent to manage their affairs. Definite provisions should be made for determining competence. Any Indian should be permitted to apply. Veterans of past wars might automatically obtain removal of restrictions.

Ownership of real and personal property will bring responsibility for support of schools and other public services. It will furnish the same incentive for thrift and good management that are enjoyed by the Indians' white neighbors. I asked a young Indian farmer, plowing with a shaggy team, what he needed most. He replied, "Tractor. Not agency tractor. Mine!"

The assumption that most Indians are agricultural has been a tragic mistake. Many are skilled craftsmen. They are potential engineers, mechanics, and technical workers. Iroquois and Onondagas in industrial centers are recognized as among the best structural steel workers in the world. Navajos who have been trained off the reservation have become competent draftsmen, laboratory assistants, and nurses. Indian girls from Haskell Institute in Kansas are noted as accurate stenographers and efficient secretaries. Graded on careful tests for mechanical aptitude, Indian youths from 15 to 22 years old at the Flandreau, S. Dak., school scored a higher average than white students of corresponding age in Detroit.

Frank Beaver, veteran leader of the Winnebago Tribe, told me: "Give our boys and girls training as Americans, and not as Indians, and they'll set themselves free."

The words of Lincoln's Secretary of War now sound with new significance. To a Congressman seeking an interview for a bishop who protested conditions among the Indians, Mr. Stanton exclaimed: "The Government never reforms an evil until the people demand it. Tell the good bishop that when he reaches the heart of the American people the Indians will be saved."

It is time for the people to demand that this evil be reformed.

[1] There is no official definition of what constitutes an Indian. Census Bureau enumerators in 1940 were directed to list as Indians "any person of mixed blood if one quarter or more, or if the person is regarded as an Indian in the community in which he lives."

## Henry Wallace's 1950

EXTENSION OF REMARKS
OF
## HON. ROBERT A. GRANT
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Lawrence Sullivan, from Nation's Business for November 1945:

HENRY WALLACE'S 1950

(By Lawrence Sullivan)

Most businessmen will have difficulty following the economic theories set forth in the latest of Henry Wallace's trilogy—Sixty Million Jobs. The predecessor volumes, America Must Choose, published in 1933, and New Frontiers, in 1943, were but the rough scaffolding for the present comprehensive outline of managed economy within the framework of political democracy.

The volume is perhaps more significant than important. It offers a guide and index to the philosophy and social attitudes of the Secretary of Commerce—a matter of deep significance in this critical era of reconversion. The want of historical importance which marks the work on every page arises, probably, from the fact that not many workaday citizens will regard the book with more than passing curiosity.

During his entire public career since 1933, Mr. Wallace always has had a new book in preparation. As Secretary of Agriculture, he surrounded himself with a group of fervid thinkers and plausible reformers. They began by writing, not books, but legislative bills to be sent to Capitol Hill for prompt enactment.

Their first bill created the Agricultural Adjustment Administration, which aimed at a permanent balanced abundance, to be achieved by the simple mechanics of mass destruction of surplus farm crops and the future control of production through acreage allotments on each major crop. In the panic of the banking crisis, this measure was whipped through Congress almosts without reading or debate. But when a moment of reflective contemplation revealed to Members of the House and Senate what they actually had writtten into the Federal Code, the word passed informally among congressional leaders that all future bills touching farm policy should be written—or at least rewritten—on Capitol Hill.

A GROUP OF PLANNERS

From about that point, in the late summer of 1933, the Wallace group have been interested primarily in books. In 1935 they were leaders in the Washington political tempest which led to establishment of the Temporary National Economic Committee. In 1940, when the pamphlet alarms of TNEC had been forgotten by a Nation which now found itself drifting into World War II, the planners set themselves up anew in the National Resources Planning Board.

This agency, Congress summarily abolished in 1943 by striking out the appropriation for the next fiscal year. For the unemployed planners, a new lease on official life was obtained soon afterward by the creation of the Board of Economic Warfare, which the then Vice President Wallace headed. This agency at length was liquidated by creation of the Foreign Economic Administration, which Mr. Wallace did not head.

Over some 13 years, Mr. Wallace has thus held within his orbit some of the most far-seeing thinkers and most searing phrase makers in America. As one who watched the planners' GHQ as it moved from one aphabetical designation to another, I feel little hesitancy in describing "sixty million jobs" as the flower of their decade's work.

COLLECTION OF REPORTS

In the entire book there is hardly a thought or a statistic which had not been presented earlier in either the pamphlet reports of TNEC or the hefty tomes of NRPB. Throughout the text there recur constantly the favorite themes and shibboleths of David Cushman Coyle, Mordecai Ezekiel, Rexford Guy Tugwell, Richard Hippiehouser, Oscar Altman, Luther Gulick, Eveline Burns, Adolph Berle, and Alvin H. Hansen. Without naming them, Mr. Wallace acknowledges his debt to the various Government research staffs, in his introduction.

"It has been my good fortune during the past 13 years of official life in Washington," he says, "to contact the minds and share the aspirations of many thoughtful men and women in the various Government agencies and in business, labor, and agricultural groups who are thoroughly devoted to the common good."

Mr. Wallace uses 60,000,000 jobs "as the symbol, if not the arithmetically exact symbol, of the full employment we can have. * * *"

Because of technological advances and higher productivity per man-hour, he explains, it may develop that we can attain a national income of $200,000,000,000 a year with only 55,000,000 people at work.

"If so, then we are so much healthier a Nation."

Having opened this escape hatch of 5,000,000 jobs, Mr. Wallace then goes on to chart the legislative and administrative steps required to set up his Civic Index of the People's Peace of Full Employment. This index is made up of 10 points. They call for higher minimum wages and a federally enformed minimum standard of living; maintenance of farm prices, a considerably broadened public-works program in rural electrification, river valley development, and soil conservation; a housing program to "assure adequate homes for all groups"; health insurance, socialized medicine, and Federal grants-in-aid to provide better educational facilities everywhere.

And all of this is to be accomplished during the next 5 years, under Mr. Wallace's plan, concurrently with a gradual reduction in taxes "in a balanced manner, so as to stimulate private initiative, to increase consumption, and to protect the public interests against special tax privileges."

Yet all of this, Mr. Wallace believes, may be attained "without a planned economy, without disastrous inflation, and without an unbalanced budget that will endanger our national credit." But at this point Mr. Wallace veers off into semantics—the science of giving new meanings to old words. Without an understanding of the new definitions Mr. Wallace has in mind, his paragraphs often do not make sense.

He is, for example, perfectly sincere when he speaks of doing all these things without an unbalanced budget that will endanger our national credit. But when he uses the term "unbalanced budget" he is not talking about the same thing most people have in mind. To the lay reader, the budget is the business-like itemization of governmental receipts and expenditures, with the annual deficit to be financed by public borrowing.

THE NEW STYLE BUDGET

But the Wallace civic index is constructed on the conception of a national budget in which all personal and corporate incomes and expenditures also are included, along with all governmental transactions. The whole then is balanced off at the bottom with the term "gross national product." All incomes combined always add up to all expenditures combined, with the Government deficits balanced off against private and corporate savings. The gross national income is the sum of all subsidiary incomes, and the gross national product every year is the result—obviously too clear and simple to be misunderstood. Hence, we shall always have a balanced budget, no matter how much the Government spends, or how little it takes in. By thus broadening and reconverting words as he writes, Mr. Wallace achieves a degree of logic and plausibility almost beyond belief.

To arrive at his calculation of 60,000,000 jobs, Mr. Wallace takes the Census Bureau's graph of population growth since 1900. This gives a total labor force of 40,000,000 as of 1920, 54,000,000 as of 1940, and 62,000,000 as of 1950. Allowing for normal frictional unemployment of 1,400,000 (temporarily sick or incapacitated, changing from job to job, and seasonal unemployment), he finds 60,000,000 jobs the goal for 1950. He then constructs the following break-down of working assignments, the table showing comparative figures for 1940, as reported by the Labor Department, and the theoretical figures set down by Mr. Wallace for 1950:

| | 1940 (actual) | 1950 (Wallace estimate) |
|---|---|---|
| Armed forces | 600,000 | 2,500,000 |
| Civil service | 3,900,000 | 4,500,000 |
| Agriculture | 9,100,000 | 8,000,000 |
| Domestics | 2,000,000 | 2,000,000 |
| Self-employed | 6,400,000 | 6,000,000 |
| Manufacturing and mining | 10,900,000 | 15,000,000 |
| Transport and utilities | 1,600,000 | 3,500,000 |
| Construction | 2,700,000 | 3,500,000 |
| Trade | 6,100,000 | 9,000,000 |
| Finance and miscellaneous | 3,600,000 | 6,000,000 |
| Unemployed | 7,400,000 | 1,400,000 |
| Total | 54,300,000 | 61,400,000 |

In its essences, then, Mr. Wallace's program is to reduce the 1940 unemployment of 7,400,000 to 1,400,000 by 1950. To absorb these 6,000,000 workers, he places 2,000,000 in the armed forces. That leaves him with 4,000,000 new jobs to be created under his 5-year plan. That's nothing to be alarmed about, is it? It could happen very easily.

The only thing we may be certain of at this point, if history is a guide, is that if it does happen, it won't be after Mr. Wallace's plan. This book will have nothing to do with whatever happens in America in the next 5 years, because not enough people understand Mr. Wallace's semantics. If some brash political demagogue should jump to the rostrum and shriek, "Let's make 4,000,000 more jobs in this great country of ours," he probably would command a landslide following overnight. Few would even ask, How?

But Mr. Wallace says we must first construct an elaborate civic index of the people's peace of full employment, and then implement it with a new national budget which would forever take the lid off of Government spending. The old American conception of a balanced Federal budget would be cast into the limbo, and Government would gear itself to spend from year to year whatever might be needed to give everybody a steady job at good wages.

True, it is no simple matter to create 4,000,000 additional jobs in the postwar years. But many still hold sufficient faith in the energy and vitalities of the American people to believe it is much easier than Mr. Wallace's circumlocutions make out.

## Reactions to Anti-Baltic Moves

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. O'KONSKI. Mr. Speaker, in a letter to the editor, published in the New York Herald Tribune of September 9, 1945, the Honorable Robert P. Skinner, former American Minister to Estonia, Latvia, and Lithuania, said:

THREE BALTIC STATES

There seems to be no ground for doubt that the American position with regard to the status of Estonia, Latvia, and Lithuania is in need of clarification. It is a fact that representatives of these states are accredited to this Government and the United States still recognizes them. Nevertheless, while certain measures are announced respecting Italy, Poland, Rumania, Bulgaria, Hungary, and Finland, to mention a few, no statement is available which in any manner affects a tacit recognition that the three Baltic States are under the jurisdiction of Soviet Russia.

If our recognition of the three Baltic states means anything beyond empty words, if the Atlantic Charter possesses real validity, if the right of small nations to exist continues to be a part of our credo, there must be some way of bringing the issue to an acceptable settlement. Although the Potsdam communique contains no direct reference to the Baltic question, the Council of Ministers now set up certainly possesses the authority to consider the subject. The immediate important task of the Council is to draw up treaties of peace with five enemy countries "and to propose settlements of territorial questions outstanding on the termination of the war in Europe."

No fair-minded person will deny that Estonia, Latvia, and Lithuania are entitled to a hearing, nor that we should give something more than lip service to our recognition

A letter written by Constantine R. Jurgela, president of the Lithuanian-American Council of Societies of Greater New York, was printed in the New York Times on September 21, 1945, as follows:

TROUBLE IN BALTIC STATES—ACTION BY RUSSIA VIEWED AS VIOLATION OF ATLANTIC CHARTER

Your editorials seem to take it for granted that the Russian territorial acquisitions of 1939-45 are to be permanent annexations along the eastern fringe of Czechoslovakia, the Curzon line, and across east Prussia.

However, a delegation of the Lithuanian-American Council, uniting the preponderant majority of Lithuanian-American organizations, called at the State Department on August 22 and was told that the American policy of nonrecognition of the Soviet conquest of the Baltic states, namely, the statement of July 23, 1940, remains unchanged, and that the principles of the Atlantic Charter continue to guide the American policy.

Unfortunately, as recently as at Potsdam, the Anglo-American policy toward Russia seems to have been that of give and hope, not give and take. With the hostilities ended in Europe and Asia, the democracies must now face the vital issues affecting the destinies of some 100,000,000 people of eastern and central Europe, and compel Russia to live up to its commitments and its adherence to the Atlantic Charter in the declaration of the United Nations.

Meanwhile, the Baltic peoples, who had built an excellent record of political maturity and self-government, lie submerged under the vilest conditions of terror, oppression, deportations, forced labor, and colonization at the hands of the Russian NKVD.

Your reporters have been able to depict the conditions of life under the Soviet occupation in Austria, Czechoslovakia, Hungary, Bulgaria, and, to some small degree, in Poland. However, the conditions in these countries do not approximate the conditions in the conquered Baltic states. There is a total blackout of news from the Baltic states except the odds and bits that emerge through the lucky few refugees.

There are 200,000 to 400,000 Baltic refugees in western Germany, Austria, and Denmark, plus some 35,000 in Sweden. About 50 refugees in Sweden agreed to go back—including 4 Lithuanians, of whom 1 managed to escape back to Sweden. All the rest refuse to go into Russian slavery, despite the terrorizing effect of the visits of armed Soviet officers who circulate freely in the Anglo-American zones of occupation. Besides the hosts of farmers and laborers, the Baltic refugees account for practically all of the intellectual elite—professors, scientists, teachers, physicians, nurses, engineers, opera singers, artists. The priests generally remained at their posts, except the few hundred who had been forcibly deported by the retreating Germans.

American Catholic bishops have already spoken in behalf of their fellow Christians of the Baltic states. The Latvians and Estonians are predominantly Protestant, and British Protesant organizations have spoken in their behalf. These are encouraging signs of sympathy for the progressive and democratic neutral Baltic peoples who had suffered manpower losses greater than any of the belligerent states, 40 percent in the case of Lithuania The friends of the Baltic peoples in this country will certainly continue to act and strive for the implementation of the war aims of the democracies with active deeds, such as demand for evacuation of the Soviet troops and NKVD terrorists from Lithuania, Latvia, and Estonia.

NEWS FROM OCCUPIED LITHUANIA—"LITHUANIAN PARTISANS" ARE NOT LITHUANIANS

This bulletin has repeatedly stated that the "Lithuanian Partisans," much propagandized by the Soviets and active in German-occupied Lithuania, were mainly non-Lithuanians; most of them were Russians who had parachuted into Lithuania. That this is true may readily be seen from the fact that the list of "Lithuanian Partisans decorated by the Soviet Government," provided by Soviet sources, is composed almost entirely of Russian names. Any person familiar with the Lithuanian language will admit that none of the following names, taken from the list published on July 5, 1945, in Pravda, official publication of the Soviet Communist Party, can be considered Lithuanian: Konstantin Yugosovich Rodion, Rava Ivanovich Bukin, Ivan Ivanovich Vasilyev, Karp Pinovich Ivanov, Konstantin Mihailovich Izvekov, Gavril Karpovich Klychev, Fedot Antipovich Krugliakov, Mihail Danilovich Markovski, Andrei Markovich Murnikov, Sergey Grigoryevich Nevedomski, Yosif Dmitrevevich Nikitin, Sergey Stepanovich Sergeyov, Yakov Vasilyevich Streitsov, Fedor Kornetevich Antonov, Feoktist Aristorchovich Lebedev, Dmitry Andreyevich Perfenov, Ekaterina Zaharovna Radionova, Klementy Ivanovich Sokolov, Ivan Kuzmich Avdeyenko, Grigory Yuryevich Ankudinov, Yefim Grigoryevich Belenki, Yakov Osipovich Bielov, Dmitry Konstantinovich Borisov, Vyacheslav Romanovich Braziuka, Nikifor Kondratyevich Bursov, Sergey Nikitovich Vakulenka, Vassily Nikolai Yosifovich Ginko, Timofey Grigoryevich Golubov, Kuzma Andreyevich Gorkin, Aleksamdra Aleksandrovna Gratska, Aleksander Nikitovich Gromenkov, Vasily Mitrofanovich Gusev, Vasily Stefanovich Dorofeyev, Fedor Kapitonovich Dyakov, Konstantin Yevgenevich Yevseychik, Arten Ivanovich Yelkin, Kuzma Yagorovinovich Yefishov, Ivan Lariyonovich Yefremov, Aleksander Mihailovich Zolotov, Leonid Andreyevich Kair, Ivan Afanasyevich Klaus, Danil Semyonovich Kostoshka, Vasily Yefremovich Koshkin.

The above list constitutes about one-third of the decorated partisans bearing similar names, as published by the Soviets. Not only are the Lithuanian names very few, but, they include members of the Soviet puppet government in Lithuania and a few pro-Soviet journalists; during the German occupation of Lithuania all these persons resided, not in Lithuania, but in Soviet Russia.

The partisan movement sponsored by the Soviets, which was designed to abolish Nazi rule in Lithuania and replace it with the Soviet occupation, is not to be confused with the Lithuanian patriotic underground movement which is still in existence. These underground fighters, who actively resisted the Germans, seek to protect Lithuania from foreign enslavement, Russian as well as German.

The Soviet official organ Pravda, in its issue No. 166, instructed the Lithuanian Communist Party to see that Lithuanian farmers harvest the sugar-beet crop between October 20 and November 1. This is the first time that Lithuanian farmers have been ordered by the central government in Moscow to accomplish their work by a specified date.

Paleckis, the Soviet puppet premier of Lithuania, in a speech given at the Twelfth Supreme Soviet Council, reminded his audience of Lenin's statement to the effect that, "no nation which holds other nations in bondage can be truly free." These words apply perfectly to the Soviet Union in its present policies toward Lithuania.

Soviet efforts to bolshevize Lithuania may be seen from the following list, published in Pravda, of Communist educational institutions opened in Lithuania by the Soviets: two Marxist-Leninist evening universities, 10 evening Communist Party schools, and one seminar to prepare Communist leaders for Lithuania. All this in a country where communism was never popular among the people; in 1941, as admitted by the Soviet orgen arybu Lietuva (Soviet Lithuania) in its issue No. 35 of 1941, the Lithuanian Communist Party had barely 1,500 members.

Museums and libraries in Vilnius have been robbed of 8,000 museum pieces and 36,000 volume. According to the Soviet paper Izvestia, in its issue No. 169, all this property was taken to Minsk. Need-

less to say, the wishes of the Lithuanian people were not consulted.

According to broadcasts over the Vilius radio, two monuments associated with Lithuania's wars of independence—the tomb of the Unknown Soldier and the Statue of Liberty, both on the grounds of the War Museum in Kaunas, have been destroyed.

Father Matulaitis was a Lithuanian patriot whose work for his country's independence during World War I and in the period immediately following will long be remembered.

## Relief and a Free Press

EXTENSION OF REMARKS

OF

### HON. WILLIAM S. HILL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therein an editorial from the November 5, 1945, edition of the Sterling Advocate, Sterling, Colo., on the need for a free press in the world if there is to be mutual sympathy and understanding among nations:

RELIEF AND A FREE PRESS

Action of the House of Representatives in tying a free press provision to the $550,000,000 appropriation for relief in liberated countries, was an untimely, though well-intentioned move.

Secretary of State James Byrnes, in a letter to House Appropriations Committee Chairman CLARENCE CANNON, stated the objection to this action very plainly when he said:

"We cannot put curselves in the position of denying promised relief to millions of human beings because we have failed to secure our other objectives in advance."

The willingness to grant relief money should not be tied to irrelevant "ifs." Either we are willing to aid the suffering peoples of the world, or we are not, and there should be no political questions involved.

The motive behind the House action is apparent. It aims directly at Russia, where tight censorship continues despite the fact that wartime need for such secrecy no longer exists. Naturally, if we are going to send huge sums abroad for relief, we will want to know how that money is being administered, whether the goods which that money buys are being used for political purposes.

More than that, we want to know what is going on inside the other nations of the world. We can trust the officers of UNRRA to keep a sharp eye on the administration of its funds and to report to UNRRA members honestly, but there is more to it than that.

There has been much talk of one world, and international cooperation as the guaranties of lasting peace.

But can there be one world in the true sense if any country prohibits free reporting to the rest of the world of conditions within that country? Is that international cooperation? Is that the sort of attitude that will promote the trust and confidence that is necessary to peace?

There must be a free press in every corner of the world if there is to be mutual sympathy and understanding among nations. We are wholeheartedly in favor of the United States pressing for free reporting in all nations, but it should not be a restriction on any move to alleviate suffering.

## Religion and Morality Are Indispensable Supports of Political Prosperity

EXTENSION OF REMARKS

OF

### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith submit a transcript of the record of an audience granted myself and other members of a congressional committee by His Holiness Pope Pius XII in Vatican City on June 27, 1945. It follows:

The following remarks were made by His Holiness Pope Pius XII to the Honorable ROBERT SIKES, of Florida; the Honorable CHET HOLIFIELD, of California; the Honorable MELVIN PRICE, of Illinois; the Honorable J. LEROY JOHNSON, of California; the Honorable CHARLES R. CLASON, of Massachusetts; the Honorable THOMAS E. MARTIN, of Iowa; the Honorable JESÚS PIÑERO, of Puerto Rico, members of the Military Affairs Committee of the House of Representatives, when they were received in private audience by His Holiness at the Vatican on June 18, 1945:

"You are most welcome, gentlemen, welcome to Rome, welcome to the Vatican City State.

"Recently we have had the pleasure of receiving on different occasions several groups from both Houses of your American Congress, who were visiting war-torn Europe in search, it would seem, of first-hand knowledge of what has been happening and is happening over here. We take this as a very good sign. It shows that you and your colleagues are very much alive to the responsibilities weighing heavily today on the legislatures of the world, on the legislatures of the free peoples of the world. Men expect, and with reason, that law will be for them the bulwark of justice and truth, that in law they may find safe protection for those God-given human rights, whose free exercise is basic in any world order wherein peace may hope to take root and flourish; among others the right of every nation, small or weak as well as great or powerful, to its own life and independence; the right of every individual to worship God publicly as well as privately, and to serve Him according to the dictates of conscience. When in any part of the world these fundamental rights are not safeguarded, or, what is worse, are infringed upon or grossly violated, however adroit or specious the pretext, that man would be very credulous who would promise himself any long respite from war; and millions of precious human lives would have been sacrificed in vain. The world of your day is too small not to be affected by the moral ideas and conduct of any one of its component nations; and the words of your first President have lost none of their meaning and force, that religion and morality are the indispensable supports of political prosperity. Without them how can you hope for obedience to law? Without them there remain only despotism, brute force, and slavery.

"May God protect Europe and the world against such a calamity. That is the burden of our prayer as we beg God to guide you in your deliberations and to bless you and your dear ones at home abundantly."

## OPA Policies

EXTENSION OF REMARKS

OF

### HON. A. L. MILLER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, the OPA seems determined to change the business methods of the car dealers in America. I have had a great many wires and letters from the dealers in my district protesting the new directive which changes the regular order of business of automobile dealers. The OPA Act, subsection H of section 2 specifically states as follows:

The powers granted in this section shall not be used or made to operate to compel changes in the business practices, cost practices, or methods or means or aids to distribution established in any industry.

Mr. Speaker, it seems that this section is crystal clear. It is put in as a restriction upon OPA. We now find this organization trying to evade this section of the law and attempting to change the business practices of the automobile industry.

The OPA seems intent upon controlling profits. Their actions have been one which is not that of controlling inflation but antibusiness. It seems that the OPA wants to get a stranglehold on industry. They want to prevent competition which is the best governor to business. They fail to understand that efficiencies in business and competition will decide the price of many articles.

Our pattern of living and of producing is so complicated that it cannot be blueprinted and regimented by the OPA making every individual travel the same path.

Many regulations imposed upon business by the OPA have been done with a ruthlessness and a pettiness far beyond the law or any conception of Congress. This Congress ought to do everything possible to get Government off the neck of business. Industry working with its own special problems in its own special market will make adjustment under competitive prices without regulations being prescribed by the OPA.

Mr. Speaker, I am convinced that many of the policies of the OPA have encouraged inflation. They do this because they discourage production. There are thousands of businessmen with factories, materials, and labor ready to go to work, but they are waiting upon the OPA to give them a price upon the article they wish to sell. Many of these small businesses being denied a price which will reflect a reasonable profit are turning the keys in their places of business and going fishing. This will cause not only a shortage of consumer goods but unemployment.

The automobile dealers of this country should be left alone. This Congress should speak in no uncertain terms. They should insist that OPA follow the law and not make interpretations which permit them to change long-established business practices.

## The Principles of Democracy

EXTENSION OF REMARKS

OF

### HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to extend my remarks in the RECORD, I enclose comments from a letter of a former employer of mine who is a member of the Marine Corps and has been overseas in the Pacific area for the past 3 years. I think it is well for us who have been following the war in the States to give heed to these thoughts of a fighting marine who believes in the principles of democracy being applied to all people and Americans in particular:

At this point, I am a somewhat confused person. Judging from what I can gather through various sources, racial conflicts are bursting forth in rather odd places. I am told that school children are even involved. Believe me, if all this is true I am a disappointed man. My despair has found an entirely new low, surpassing all others considerably. To think that parents (for this could come only through them) would stoop so low as to undermine the roots of youth and poison their own children so that their minds shall forever be warped!

We are a people of a Nation based on the principles of democracy. The eyes of the world look to us for guidance. Gladly we dictate the policies of the other countries, yet we pitifully fail to practice them at home. We even fail to educate our own citizens on how to appreciate our democracy to the fullest extent. At this point, every school should be teaching a subject called democracy. Instead, Americans in various portions of the country are slowly falling in line with those radical agitators that seek to gain through others' failures.

Perhaps some people don't realize the seriousness of the existing circumstances. If those agitators succeed at all, then they are stronger than our Government itself. For every democratic principle they break and remain unpunished, then there lies another weak spot in our own executive legislative and judicial body.

Surely some one can start a movement somehow, to rid the country of these heretics. Am I to return and be pushed about by a German who just decided to become a citizen of the United States merely because his country failed to conquer us all? Under the existing set-up this can happen. Frankly I have no intention of being trod upon by anyone. I am quite firm in my own convictions. I'll die for what I believe in my own way to be my rights. By the same token, I'll go out of my way to avoid trouble. Just think, 10 Nazis distributed cleverly in 1 city could turn it into a complete and destructive storm. People are gullible, some to a pitiful extent, some merely follow the crowd, while still others choose to avert trouble. When is our Government going to take drastic action and quell the storm? Can we truthfully say Germany lost her war of exploitation and subjugation? No! Every bit of successful racial agitation is a victory far greater than any she could have possibly won in the field. Those victories will live in the hearts of men. They breed discontent. They flow in the bloodstream and stab the heart.

## The American Legion, Seventh District, Department of Wisconsin, Pledges Support of H. R. 3939 To Wipe Out Cancer and Infantile Paralysis

EXTENSION OF REMARKS

OF

### HON. WILLIAM H. STEVENSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. STEVENSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am setting forth a letter and resolution of the seventh district of the Department of Wisconsin of the American Legion endorsing my efforts toward an appropriation of $500,000,000 for research with respect to the causes and cure of cancer and poliomyelitis:

ROY L. VINGERS POST, NO. 52,
*La Crosse, Wis., October 15, 1945.*

Hon. WILLIAM H. STEVENSON,
*United States Congress, House Office Building, Washington, D. C.*

DEAR CONGRESSMAN STEVENSON: The Seventh District of the Department of Wisconsin of the American Legion, in session at Tomah, Wis., on October 15, 1945, went on record as heartily endorsing your efforts toward an appropriation of $500,000,000 for research with respect to the causes and cure of cancer and poliomyelitis.

The scourge of cancer and infantile paralysis causes untold suffering and anguish to the human race throughout the world. We commend your stand and pledge our support to you in helping to wipe out disease by the passage of your bill, H. R. 3939.

Very sincerely yours,

C. F. EVANS,
*Post Adjutant, Post 52.*

Approved:

DR. MYRON H. MOEN,
*Commander, Seventh District.*

## Relief and Politics

EXTENSION OF REMARKS

OF

### HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of November 12, 1945:

RELIEF AND POLITICS

The Brown amendment which the House on Thursday tacked onto the UNRRA appropriation is at once a mischievous irrelevancy and an administrative absurdity. It pretends to assure freedom to American newspapermen in countries where UNRRA operates. Press freedom is, of course, a laudable goal. And espousal of it, like espousal of the sanctity of American motherhood, seems an easy avenue to political glorification. It has nothing to do, however, with the filling of bellies which crave not news but food. We do not believe that the House Republicans were prudent, or even politic, in making a party issue of this specious amendment. They have laid themselves open to the ugly charge of playing politics with relief.

The Brown amendment has to be read to be believed. It provides that none of the funds appropriated "shall be furnished to or used in any country of which the controlling government * * * maintains any barrier—technical, political, legal, or economic—to obtaining, dispatching, and disseminating the news." Such barriers, wherever they exist, are lamentable. But the fact is that they do exist and are certain to be continued to some extent in a number of the countries which have undergone recent political upheavals. The people who live in those countries may be no less hungry, however, than the people in countries adhering more closely to our own concepts of press freedom.

In point of fact, every country maintains some barriers to obtaining news. Newspapermen were excluded, for example, from the executive session of the House Appropriations Committee, which acted on the UNRRA request for funds. A literal interpretation of the Brown amendment would mean, therefore, that not even the United States would be eligible for UNRRA aid. General Eisenhower necessarily maintains certain barriers to dispatching news from Germany. The Brown amendment would make it impossible, therefore, for UNRRA to give assistance to the displaced persons now inside the Reich. The Russians—at whom the Brown amendment is patently aimed—are not going to be forced into an abandonment of their deplorable censorship by this sort of blackmail. All that we can get out of such tactics is a further deterioration of our relations with them.

The Republican Congressional Food Study Committee reported just a few days ago that "the $550,000,000 remaining to complete the current contribution of the United States toward UNRRA's operating expenses should be made available immediately. This is a national obligation. It is unthinkable that the United States should now default on the commitments it has made to UNRRA and which UNRRA in turn has made, in reliance upon us, to the people of the liberated countries of Europe." We cannot now impose a special condition upon our contribution to UNRRA without just such an unthinkable default on our commitments. The Brown amendment imposes a condition which is, in any case, impossible of fulfillment and which, if enforced, will condemn millions to hunger. UNRRA was established not for the purpose of opening foreign doors to American newspapermen but for the simple, humanitarian purpose of getting food to starving human beings. We hope the Senate will have a better sense of values.

## UNRRA—Our Tragic Let-down

EXTENSION OF REMARKS

OF

### HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend by remarks in the RECORD, I include the following editorial on UNRRA entitled "UNRRA—Our Tragic Let-down" which appeared in the Washington Post of Sunday, November 11, 1945:

UNRRA—OUR TRAGIC LET-DOWN

American prestige in the world had never before reached such a peak as was attained

at the close of the war. Millions of people in all parts of the earth looked upon the United States as their chief liberator. By our tremendous contribution to victory we had earned and won the moral leadership of mankind in the fight for a better world. Now—less than four months after VJ-day—it must be acknowledged that our influence in the shaping of tomorrow is critically sagging.

In our opinion, every citizen ought to be asking himself with the utmost gravity what is the reason for this tragic let-down. Why have we suddenly relinquished our vigor in pursuit of aims which only a few months ago were deemed worthy of the sacrifice of our sons? Can it be that peace and democracy and decent regard for human life are any less desirable than they were at the height of our military effort? That is unthinkable. Yet we are confronted by a shocking failure to carry through some of our simple obligations growing out of the war.

The most glaring example of this dereliction is the failure of Congress to appropriate the funds that it had previously pledged for the relief of the starving people of Europe and Asia. The United Nations Relief and Rehabilitation Administration, which celebrated its second anniversary on Friday, is nearly at the end of its rope. Its food shipments to war-devastated Europe are being curbed for want of funds. For the great democratic power which poured out billions to supply the world with weapons is quibbling over a relatively small sum for starving women and children.

Our shameful position is exposed by a roll call of the nations in default in their obligations to UNRRA. A total of $598,594,000 is due that life-saving agency, and of that total the United States owes $550,000,000. In other words, the richest and most powerful Nation in the world is alone in default in any substantial amount. We were expected to lead the world in binding up the wounds from battle and in salvaging the wrecked lives of people in the formerly occupied countries. Instead, we are trailing so far behind that the whole idea of world-wide relief for the victims of war is hanging in the balance.

Foremost among the causes for this critical situation at the moment is the confusion of rescue operations with freedom of the press. No one is more interested in promoting world-wide freedom of expression than ourselves. But when people are suffering cruelly from hunger we can no more ask them to embrace freedom of the press in return for food than we can buy a change in politics or religion by domestic relief grants. It is an outrageous misconception of democratic principles to suppose that they can be fostered by this means. Throw up freedom of the press as a barrier between starving people and the food they crave and we shall create everlasting hatred of that principle and those who so stupidly espouse it.

It is time for the American people to wake up to the fact that we are losing the precious advantages purchased with the blood of our sons because of petty and short-sighted deviation from our main course. To suffer a million casualties for the sake of peace with freedom and then leave a sick, devastated, hungry, and disorganized world to its own misery would be nothing short of insane. The American people would never deliberately consent to such a profligate deflation of our victory. Yet we are drifting into a situation of disillusionment, despair, and lack of unity for want of an aggressive policy of pulling the world together in reconstruction and peace. That drifting cannot continue without disaster. And we do not believe that it will continue if the leaders who see the dangers ahead let the people know what is happening and use all their power to swing the Nation back onto its true course.

## Supreme Court Justice Answers the Question, "Why Vote Republican?"

EXTENSION OF REMARKS

OF

### HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. MUNDT. Mr. Speaker, because of its unusual interest and because of the high regard in which Mr. Justice Burton, of the United States Supreme Court, is universally held, I am placing in the RECORD at this point an article which appeared in the October issue of the Republican magazine and which was written by Mr. Burton shortly before his appointment to the Supreme Court.

In this article the former United States Senator of Ohio and the former mayor of Cleveland, places strong emphasis on some persuasive arguments demonstrating why the citizens of this Republic should vote Republican in 1946 and 1948. In justice to Mr. Burton, the editors of the Republican included the following notice in an announcement at the beginning of the article as it appeared in that magazine:

It is with pride that the editors of the Republican offer you this last partisan article of former Senator Harold H. Burton, who now takes an impartial position in the United States Supreme Court. In all fairness to Harold Burton, we want to emphasize the fact that this article of Justice Burton's was written before his late appointment to the Supreme Court, and at a time when he was in the full vigor of his partisanship and public service combined in his United States Senate work.

Mr. Speaker, the fact that the present administration places such high confidence in the judgment and ability of Mr. Burton as to appoint him to a position on the Supreme Court of the United States tends to underscore and emphasize the importance of Mr. Burton's answers to the question "Why vote Republican?"

The Republican magazine is edited and published in Chicago by Mr. Richard Nowinson, its editor and manager. Since 1935 the Republican has been the national party magazine and it has been designated many times as an official party publication. Consequently, Mr. Burton's compelling arguments calling upon his fellow citizens to vote Republican because "the Republican Party is the natural meeting place today for the conservatives, the progressives, and the liberals who believe in Jeffersonian freedoms, in Lincolnian sympathies, and in the principle of individual liberty as opposed to ever-increasing regimentation" merit most careful consideration. They accurately reflect the thinking of the Republican leadership in America today.

The Republican magazine adds another service stripe to its long record of constructive party service in the publication of this important article, and citizens generally will benefit by the thoughtful reading and analysis of Mr. Justice Burton's compelling arguments:

WHY VOTE REPUBLICAN?

(By Harold H Burton)

Why vote Republican? Because the Republican Party best fits the time.

It is time for a new birth of freedom from regimentation in our America.

It is time for freedom from all forms of intolerance.

It is time for America to live within her income.

It is time to demonstrate that constitutionally organized freedom and truly representative government are far better for America than communism or national socialism.

It is time to emphasize the value of a reasonable separation of local from Federal functions and of the executive from the legislative branch of our Federal Government.

It is time to develop dependable prosperity through increased production and widened distribution of newly created wealth.

It is time to liberate the natural strength of large and small private enterprises and to encourage the production, distribution, and sale of the products of American shops and farms, both at home and abroad. This means seeing to it that our economy and our Government are agencies of freedom and progress suited to our needs and equal to the hopes of our young people who have fought this war and who are looking for results worthy of their sacrifices and their efforts.

The Republican Party is destined to become the majority party in American just as soon as it demonstrates that it best meets these timely needs of the country.

PARTY NEEDS CANDIDATES

In addition, the party must have candidates who reflect the invincible spirit and the deep-seated loyalty of our service men and women. They must reflect the tolerant, sympathetic spirit of Jefferson and Lincoln toward all men, regardless of their wealth, position, race, or religion. They must believe deeply in our Declaration of Independence and in our Constitution. They must show the combined vigor of pioneers, vision of scientists, and faith in God and man that typifies America and is the hope of all humanity.

I say it is time for "a new birth of freedom" from regimentation in America—and the Republican Party is the best agency to insure it, because for 12 years the economic, social, and political regimentation of America has increased steadily, first to meet the scarcity of depression days, and then to meet the scarcity of wartime. As both the depression and the war have now ended, we face the critical necessity and the priceless opportunity of developing greater industrial and agricultural activities in America and abroad than ever before have been attained. Regimentation is a natural mechanism in time of scarcity. It is the enemy of dynamic prosperity. Without even arguing whether the regimentation of America has been necessary or wise, it is clear that the political party now best fitted to end it quickly is the party that is and has been seeking to reduce it, and not the party that established it, developed it, and manned it with hundreds of thousands of appointees who are dependent for their own employment upon the everlasting extension of it.

I say it is time for freedom from intolerance—and the Republican Party is the party best able to lead the way to such freedom, because never before has the whole world been as nearly united as it is now in support of the common interests of humanity. Never before has America as clearly supported an international agreement dedicated to the practice of the principles of the universal brotherhood of man. Never before has it been so vital to the survival of humanity that there be cooperation rather than controversy among all peoples. In this light,

America stands before the world as a natural champion of tolerance. To make good its traditional pledge and current teachings, the Government of the United States must put into practice the principles of tolerance proclaimed in its Declaration of Independence.

The primary principle of our political faith was written into our Declaration of Independence by Thomas Jefferson, who then identified himself as a "Republican" while basing such identification largely upon his deep faith that all men are created equal and are endowed by their Creator with certain inalienable rights, including life, liberty, and the pursuit of happiness.

Lincoln testified later to that same faith. While laying the foundation of the new Republican Party, he quoted Jefferson's famous phrase, to which I have just referred, and then illuminated it with this statement:

"This was their majestic interpretation of the economy of the universe. This was their lofty, and wise, and noble understanding of the justice of the Creator to His creatures—yes, gentlemen, to all His creatures, to the whole great family of man. In their enlightened belief, nothing stamped with the divine image and likeness was sent into the world to be trodden on and degraded and imbruted by its fellows: They grasped not only the whole race of men then living, but they reached forward and seized upon the farthest posterity. They erected a beacon to guide their children and their children's children, and the countless myriads who should inhabit the earth in other ages. Wise statesmen as they were, they knew the tendency of prosperity to breed tyrants, and so they established these great self-evident truths, that when in the distant future some man, some faction, some interest, should set up the doctrine that none but rich men, none but white men, or none but Anglo-Saxon white men were entitled to life, liberty, and the pursuit of happiness, their posterity might look up again to the Declaration of Independence and take courage to renew the battle which their fathers began, so that truth and justice and mercy and all the humane and Christian virtues might not be extinguished from the land; so that no man would hereafter dare to limit and circumscribe the great principles on which the temple of liberty was being built."

GOP IS TOLERANCE PARTY

Tolerance and mutual understanding among all men and women is of the very essence of the American Bill of Rights and of the Republican Party. The Republican Party, by tradition, precept, and practice, is the party of racial and of religious tolerance.

I say it is time for America to live within her income—and the Republican Party is the best party to help her do so, because for 12 years, under the pressure, first, of a depression and then of the war, America has each year deepened her deficit, usually by a larger amount than in the preceding year, until now the debt is over 10 times greater than it was after World War I. Our Federal Government has been borrowing against the credit of our grandchildren and our great-grandchildren to pay its current operating expenses. This profligate policy points the way to inflation, national bankruptcy, and the final breach of America's pledge to her citizens, and to the world, that every bond of this free Republic is worthy of infinite faith and confidence. The financial standing not only of the United States, but of all self-governing republics, depends upon the reputable standing of America's bonds.

There is no more insidious habit than that of living on borrowed capital. It is an easy habit to start and a hard one to stop. We, of this generation, are the trustees of America for our children and our children's children. We owe a sacred obligation to them to keep our Nation solvent and to stop at once spending today the resources that should be theirs a generation from now. Officials, who for 12 years have been paying current expenses out of borrowed capital, are not the best ones to be entrusted with the responsibility of breaking that habit. The Republican Party—traditionally, the party of sound money and balanced budgets—is the party best fitted to put an end to the profligate policies it has condemned and sought to restrain.

I say it is time to demonstrate that constitutionally organized freedom and truly representative government are far better for America than communism or national socialism, and this is the essence of the creed of the Republican Party. Today the United Nations are trustees of the future of the world. Among the leading United Nations, as separate nations, there exist three marked trends. One is toward communism as exemplified by Russia, standing for the dictatorship of one party of workers over all other people. One is toward national socialism as exemplified by Great Britain, presenting the solution of a tired nation faced with scarcity. The third is that of organized freedom exemplified by the representative self-government of the United States. Under this, our elected officials serve as trustees for all the people in accordance with a written Constitution. Under this, also, there has developed that extraordinary freedom of individual enterprise, which has fostered the irresistible economic strength that produced the astounding quality and quantity of materials and supplies that enabled the world to beat back the greatest and most ruthless attack ever made upon civilization.

America was founded, in part, to get away from the handicaps and mistakes of Europe. It was founded, in part, to establish here a freedom of opportunity, under which people from all over the world have demonstrated the feasibility of such organized freedom.

The Republican Party is dedicated to this principle of organized freedom and to the mechanism of truly representative government. The Republican Party is vigorously opposed to communism, and Communists in America have demonstrated this by their opposition to Republican candidates. The Republican Party is opposed to national socialism, and the advocates of national socialism have demonstrated this by their general opposition to Republican candidates.

It is the purpose of the Republican Party to support, for America, the policy of organized freedom, with as little regimentation as is consistent with the protection of all from unfair interference by others. It is the belief of the Republican Party that such a policy best serves America, regardless of the drift of certain other great and friendly nations in other directions. While recognizing the right of other nations to choose their own domestic policies, the Republican Party believes strongly that America's best interests lead neither to communism nor to national socialism. America is still the dynamic vehicle of a vigorous new Nation seeking ever-rising standards of living. America's demonstration of the success of such policies will be the greatest possible source of encouragement to people everywhere to follow us on this road to freedom. If America believes in organized freedom and in a representative government for America serving as a trustee for all, and if America wishes to outdistance the advocates of communism or national socialism in this country, the party to serve in office for such a purpose is the Republican Party.

I say it is time to emphasize the value of a reasonable separation of local from Federal functions and of the executive from the legislative branch of our Federal Government, and the Republican Party is now the leading exponent of this doctrine. Jefferson, as founder of his Republican-Democratic Party, emphasized the value of local and decentralized government at every possible point, in contrast to any over-centralization of Federal functions. No doubt, today, he would resist vigorously the trend toward over-federalization of functions which has characterized the New Deal program in a substantial reversal of Jefferson's principles. Today, the Democratic Party is, at best, deeply divided within itself on this issue. The Republican Party, however, has resisted the veritable extinction of many State and local functions by the Federal Government under the New Deal program, until today the Republican Party, rather than the Democratic Party, stands as the champion of the preservation for local and State governments of as many of their functions as can be administered by them in the public interest.

The time has come when the cumbersomeness, arbitrariness, and wastefulness of overfederalization of functions has demonstrated itself under the New Deal. Today, the Democratic Party—if it wished to do so—could not separate itself from this New Deal tendency, nor could it separate the hundreds of thousands of Federal employees from the Federal pay roll, whom it has placed there in its drift toward overfederalization. The happy medium between local governments administering local functions and the Federal Government administering Federal functions can now best be attained by the Republican Party which has not encumbered itself with almost countless appointments of its members to overfederalized bureaus that should be abolished.

Similarly, the past 21 years have marked as astounding advance of executive authority into the legislative field of our Federal Government. While the line between legislation and administration cannot be sharply defined and while the separation of executive from legislative functions will always rest in some uncertainty, the recent advances of the executive into the frontiers of the domain of Congress have been so marked as to call for a prompt reversal of policy.

In order to permit our Chief Executive to be effective, our Constitution has given him wide discretion in interpreting the extent of his own executive authority. If the President decides to extend his authority as far as possible, he can push far into normally legislative fields before he will be held to have actually violated the Constitution. To some extent, his Executive orders can be checked and overridden by express legislative action; yet, the only really practical control over such executive intrusion upon the legislative functions of Congress rests in the self-restraint which the Chief Executive imposes on himself by limiting himself primarily to the execution of policies determined by the Congress, rather than attempting to initiate the policies himself without legislative approval.

During the past 12 years—since the inauguration of President Franklin D. Roosevelt in 1933—there have been issued over 3,750 executive orders, far exceeding the number of executive orders previously issued in any corresponding period of our American history.

The Republican Party, therefore, stands today as the natural champion of reasonable limitations both on the intrusion of the Federal government into the field of local government and on the intrusion of the Federal executive into the field of Congress.

I say it is time to develop dependable prosperity through increased production and widened distribution of newly created wealth. It is time to liberate the natural strength of large and small private enterprise and to encourage the production, distribution, and sale of the products of American shops and farms, both at home and abroad. This is a Republican doctrine contrasted with New Deal doctrines of synthetic purchasing power based upon subsidies to some paid from taxes on others, but not representing new products.

There can be no progress without the human effort needed to produce the standards or facilities sought. Every advance in our standards of living comes from the efforts of someone who produces those benefits.

One man alone on an island knows that his condition can be no better than he makes it by his personal efforts. He, therefore, gets to work on new facilities to improve his condition. There is nothing in the presence of 2 men on the island, or of 2,000,000,000 men on the earth, that changes that simple fact. It is through the combined efforts and exchange of efforts, that men do more together than they can alone. In any case, however, the gain depends upon someone's real effort.

Today, great progress is being made through countless scientific advances, labor-saving devices, and inventions. These benefits now contribute so widely to the advance of mankind that each generation is better off than its predecessors, although each individual expends less physical labor than did his ancestors. The advance of mankind will be substantially in proportion to the efforts of mankind, and civilization will suffer substantially in proportion as men fail to make the best productive use of their abilities.

The Republican Party is destined to become the majority party in America just as soon as it demonstrates that it best meets the above timely tests.

The Republican Party best fits our time because it is best fitted to develop the assets of America in accordance with American tradition and experience. The Republican Party will not sell America's unique heritage of individual freedom for any "mess of pottage" brewed in the old world cauldron of international or class conflict.

WANT AMERICA TO STAY AMERICAN

A majority of Americans, and especially our returning veterans, want America to stay American and to meet the needs of our time in accordance with the principles on which America was founded and for the preservation of which this war has been fought. Americans appreciate the increasing need of international stability as a basis for domestic stability, and they also appreciate the leading part that America, hereafter, must play in order to secure international peace, justice, and stability. Most Americans, however, ask that America lead the way in accordance with the American principle of constitutional freedom for all.

The Republican Party is now the natural vehicle for those who believe in the traditional American programs of freedom for the individual and of a Nation's dependence upon the consent of the governed as the source of its political power. The Republican Party is the rallying point of those whose conservatism means faith in the basic principles of the Declaration of Independence and the Constitution of the United States. In addition, the Republican Party is now the natural vehicle for those who seek to advance into new fields of modern economic, social, and international progress without abandoning the purpose for which America was founded: the greatest possible freedom for the individual.

If America is to overcome the greatest financial handicap of her history, her $300,000,000,000 national debt, without bankruptcy, she must develop a dynamic system of peacetime production of real wealth that will far exceed her prewar production but need not equal the peak of her wartime production. With international stability, domestic stability, and the preservation of individual opportunity, such production needs can be met. We have ample plants, machinery, raw materials, skilled workmen, skilled supervision, transportation, and demand for new goods to do this. It cannot be done, however, by reliance on the dole, or a subsidy, or governmental operation, because those procedures do not unlock American genius and enterprise. The keys we need are those of freedom of opportunity to seek individual success and such freedom of competition as will call forth the best efforts of each competitor.

The Republican Party is the natural meeting place today for the conservatives, the progressives, and the liberals who believe in Jeffersonian freedoms, in Lincolnian sympathies, and in the principle of individual liberty as opposed to ever-increasing regimentation.

Freedom is our goal—and the Republican Party is the American party of universal freedom.

## Armistice Day, 1945

EXTENSION OF REMARKS
OF

### HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. WHITE. Mr. Speaker, this is Armistice Day and we are celebrating again the winning of the First World War.

In viewing all the misery and destruction, with the backset to the advancement of civilization, I thought the time had come to gather all remnants of armaments and munitions of war and hand them over to an international commission for the enforcement of universal peace and the prevention of all future wars.

We remember when this country was being importuned on every side to come to the rescue of the Allies in that war and America sent her boys forth to save democracy and fight a war to end all wars. Our great President had the foresight to announce the humanitarian principles comprising Fourteen Points for which we entered the fight; principles which were universally subscribed to by our co-belligerents.

Then came the armistice and the Versailles Treaty, based on the selfish manipulation of our former allies, soon to be followed by the disheartening disregard of international security and fair dealing: The attack by Turkey on Greece when Smyrna was sacked and its innocent people were driven to the sea. Italy was permitted to overrun and destroy the government of Ethiopia. Japan descended on helpless China, proceeded to wreck Shanghai and destroy its people and then overrun all of China's richest provinces, while America provided most of the munitions used in this conquest.

Mr. Speaker, after our disillusioning and disheartening experience following the last war and all the sacrifice and contribution we have made to bring peace to the world again after this war, for which so many American lives have been lost, we must see to it that all the promises of freedom, security, and the blessing of good government so devoutly made to all the people of the world were not made in vain.

That we may know something of the difficulty to be overcome in keeping these sacred promises, I commend for consideration the condensation that has been made of an article by William Hard, printed in the Reader's Digest and inserted herewith:

We are urged to have good will toward the Soviet Union. But peace does not come just by good will.

In almost all of central eastern Europe, "liberated by the Red Army," the Soviet Union proceeds to practice deportations and liquidations, and proceeds to exclude—or narrowly restrict—all observers from other countries, and proceeds to set up governments controlled by Communists responsive to Moscow only. It proceeds to make half a dozen countries—running from Poland on the Baltic to Yugoslavia on the Adriatic—into Soviet annexes.

But now why did Britain and the United States allow this process even to start? Why did they bow to that false phrase "liberated by the Red Army"? All countries liberated from Germany were liberated by the joint efforts of all the Allies.

Did Britain erase from its memory the British fleet which had stranglingly blockaded Germany? Did Britain and the United States forget their air forces which had crippled Germany's war industries and transportation system? Did they retain no recollection of the British and American armies which, in Africa, in Sicily, in Italy, in France, in Belgium, in the Netherlands, in Germany, drew hosts of German soldiers away from the Soviet front? Did the United States count as nothing its lend-lease offerings to the Soviet Union?

In lend-lease—to March 31, 1945—the Soviet Union got from the United States, among many other things, the following: 158,000 guns of all calibers, 13,300 airplanes, 312,000 tons of explosives, 1,500 locomotives, 540,000 tons of rails, 496,000 motor vehicles. "These vehicles," say President Truman in his last lend-lease report to the Congress, "carried—on some Soviet fronts—more than half the supplies moving up to the Soviet troops." And the President also remarks:

"During the year ending March 31, 1945, lend-lease fats and oils sent to the Soviet Union comprised more than half of the supplies of these commodities consumed by the Soviet armies and by the Soviet urban population."

Why then did the United States and Great Britain fail to object, from the very beginning, frankly and firmly, to obvious Soviet intention or using an Allied joint victory to add some 60,000,000 non-Soviet central eastern European people to the area of sole Soviet domination?

The answer is abundantly historically clear. The historic "sphere" idea was not the Soviet Union's only. It was, at base, everybody's.

Greece, for instance, passed to the British sphere, just as manifestly as Rumania and Bulgaria passed to the Soviet sphere. In Greece, from liberation till now, the British have exercised sole supremacy.

Italy passed to the sphere of the Americans and the British, especially the British, who (for intance), for a purely British reason and by a purely British edict, forbade the Italians to include their distinguished statesman Count Sforza in their cabinet.

Syria and Lebanon, before the war, belonged to the French sphere. During the war the Free French Government conceded them their independence. Soon, though, the French perceived that the great power theory was getting revived. They thereupon revived their claims to certain special "sphere" advantages in Syria and Lebanon. How could a power be "great" without a great "sphere"?

Now Syria is only about 250 miles from the Soviet Union. Yet Britain and the United States, thousands of miles away, proposed to settle the affairs of Syria and Lebanon in a conference to which the Soviet Union was not invited. Here, to Soviet eyes, was an attempted Anglo-American "front" or "sphere" in the Soviet Union's back yards.

Iran adjoins the Soviet Union. It is part of the oil area of the Near East. The near eastern oil reserves are among the richest in the world. They are virtually monopolized by British and American oil companies. They vastly exceed the oil reserves of the

Soviet Union. Yet, without prior arrangement with the Soviet Union, the United States Government permitted American oil companies to approach the Iranian Government for new oil concessions. Again the Soviet Union could see an attempted Anglo-American front or sphere—this time right across its border.

Tangier is in Morocco, in Africa; but for centuries it has been part of the European political scene. The greatest modern international effort to settle the affairs of Morocco was the Algeciras Conference of 1906. It was attended, automatically, by Russia. Yet France and Britain and the United States have now proposed to settle the future international status of Tangier at a conference without the Soviet Union.

What is all this but a race by the great powers into what George Washington called their "combinations and collisions"?

This is nothing but a relapse into the world we always have known, a world of new divisions of spoils and thereupon, as we already see, of plans for new great conscript armies and navies in preparation for new impending wars.

Let us have friendly relations with the Soviet Union but let us not lose our own self-respect. We cannot and should not ask the Soviet Government to stop controlling the press in its own country. We can and should demand that it stop suppressing the freedom of the press of its allies in regions which it has liberated only with Allied assistance. We can and should do this in the very name of close friendship with the Soviet Union. Let our Government candidly tell the Soviet Union Government the truth: namely, that every day of such Soviet press suppression is a day of decline of Soviet prestige in the United States.

Never forget: Stalin's heart is in Asia. And we Americans and British and Dutch and French, we "western democrats," can never hope to rival him there unless we have a similar nonracial broadmindedness and similar passion for raising Asiatics to modern levels of living.

Approach the Soviet Union immediately on the problem of disarmament. A race with the Soviet Union in the accumulation of arms and armies would be ruinous. At current birth rates, the Soviet Union will presently have more inhabitants than all the English-speaking countries combined. With its European and Asiatic spheres, if world politics is permitted to produce spheres, it will in a few decades, have 400,000,000 people within its military domain. And the Soviet Union is headed toward complete militarization.

The Soviet authorities have abolished coeducation in all Soviet schools, for the openly announced reason that the girls are in the way of the boys while the boys are getting prepared, from their youngest years, for the Red Army. The new Suvorov Military Academies take boys at 8 to be trained for the officers' corps. One of the pupils of the Kalinin Sovorov Military Academy, Vitali Morozov, saw battle action at the age of 12 and wears the "for valor" medal. Does the United States want, does Britain want, to enter this kind of competition?

It is idle to say that the prospective conscript military preparations of the Soviet Union and Britain and the United States and France are directed against Germany and Japan. Germany and Japan are to be totally disarmed. It is idle to say that these preparations are directed against small powers. The small powers, all added up together, are militarily insignificant. These preparations for war by the great powers can be directed only against one another. They make a hypocritical mockery of the whole San Francisco Charter, the central theme of which is the unity of the great powers.

For friendship with the Soviet Union, and in order to try to wrench the great power theory into being a vehicle of peace and not just of greatness, let us approach the Soviet Union on disarmament now.

If we can solve the question of spheres, and if we can solve the question of the armaments race, let us give the Soviet Union what it most sorely needs: American help in repairing the frightful devastations visited upon the Soviet Union by the Germans. I say "if." Because: Would it not be silly to send machine tools and production machines and electric-power generators and railroad equipment and chemical-industry apparatus to the Soviet Union in order to give the Soviet Union strength for more spheres and more arms and armies? Would it not be silly for the Allies to help one another to be more formidable and dangerous to one another?

Let us get on the road of peace, and then let us help one another, unstintingly.

And to get on the road to peace with the surest feet, let us make the very most we can of the General Assembly, of all nations, in the new United Nations founded at San Francisco. Let that General Assembly be in session at all times.

## UNRRA

EXTENSION OF REMARKS
OF

### HON. HERMAN P. KOPPLEMANN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. KOPPLEMANN. Mr. Speaker, under leave given me to insert my remarks in the RECORD, the following radio talk which I gave yesterday on the United Nations Relief and Rehabilitation Administration will, I am sure, give additional weight to the continued need for UNRRA and for the passing of an appropriation to carry on this necessary work through the fiscal year of 1946:

Today for the first time in 3 years we are celebrating Armistice Day in a world of peace. This should be a time for hope and rejoicing. It should be a period of international good will and brotherly love. Instead, millions of men, women, and children will continue to die this winter, not from bombs, but from hunger, disease, malnutrition, and cold. Moreover, the stunted bodies and minds which come out of these conditions are the greatest source of infection for future wars. If we are to carry the torch of peace and freedom left in our care by those millions of American men who did not return from the last World War—whose peace we're celebrating today—and this war, we must win the battle for the life and faith of these people.

We, who have suffered so little in this war, have an obligation to share our abundance with the miserable and suffering hordes left in the wake of occupation and battle. We have an international agency which has undertaken this collosal job. The agency is the United Nations Relief and Rehabilitation Administration, which I shall refer to as UNRRA during this discussion.

Our country has committed itself to a policy of international cooperation. At Bretton Woods, at Dumbarton Oaks, at San Francisco, and at the recent Food and Agricultural Organization Conference in Canada, we have said that we believe in a world community of effort to meet common problems. UNRRA is the first demonstration of our belief, the first actual, concrete operation in this field of international cooperation.

This is as it should be. Why not? If your neighbor's house catches fire, you won't hesitate a second to call the fire department and take the stricken family into your home. What we as a Nation are doing through UNRRA is exactly the same thing. The only difference is that we are doing it on a large scale, to meet the greatest need that ever existed. And we have joined with other nations to help our stricken neighbors rather than try to do it as individuals.

Perhaps, before I go further, I should tell you exactly what UNRRA is. There are 47 nations in UNRRA. Every one of these nations contributes to the administrative costs of the agency. And the 31 nations which did not suffer invasion contribute 1 percent of their national income to the operating fund. Our Congress agreed to such a contribution. We authorized $1,350,000,000 and appropriated $800,000,000 of this amount. But it has not yet furnished the rest of the funds for which, in effect, it signed a note. That amount is $550,000,000. A bill to provide this money has passed the House of Representatives and is now before the Senate. The House put some strings on the contribution, a condition which no other country has imposed as a regulation on generosity. Whether or not the Senate will join in these restrictions remains to be seen. But the Senate must act fast. UNRRA supply schedules show a steady rise from June through October. If they are to continue to ship the immediate necessities for life, UNRRA must have the balance of our obligation this month.

Most of the $550,000,000 is already committed. But the job of relief for Italy and China is just getting under way and the basic agricultural and industrial rehabilitation necessary to get devastated countries on their feet is a long way from finished. To meet these needs the UNRRA council has asked the cooperating nations to make another contribution equal to the first. The House will start hearings on the second request this coming week.

I want to say to you today, above all other things, that this money is necessary. This obligation must be met. The United States must pay its share. If it does not, then we shall be giving only lip service and sham adherence to the principle of international cooperation and the policy of saving suffering humanity.

Let me tell you something about the needs. You have seen the war pictures showing the destruction wrought in the battles in Europe. You know how towns were reduced to rubble and dust. You know that the armies left nothing untouched. For example: When UNRRA went into Crete it first took in powered milk to keep the children from dying of starvation. But there was not a single metal pot or kitchen dish to mix the milk. Luckily the UNRRA workers were able to round up a few clay jugs and jars with which to mix the milk with water. Of course, UNRRA took in other foods afterward. But this is merely an instance of the monumental need, the terrific job that UNRRA is doing and must continue to do.

Now let me cite to you the statement which a Greek girl made to an UNRRA worker.

"The struggle for life was continuous, incessant, implacable during those dreadful years of occupation. You had to go on living. You had to survive. It was a duty you owed to your country. Death was sleep, an eternal sleep, without nightmare. It was easy to die, it was hard to live. Everybody worked, the women, the children, the old men, the sick.

"Boys of 10 and 12 years carried heavy loads of wood or coal from distant villages. Little girls of 8 and 10 years worked as servants in the big Germans' kitchens. All this struggle, this misery, was just for a dry piece of bread. To survive and see the great day of liberation was the inmost dream of all

Greeks. The Greeks had to live. It was their duty. Their children could and should live happily in a peaceful world."

UNRRA workers in Poland, last spring, found farmers in one community tending crops of winter rye. Only a few months before these farms had been a battleground. The UNRRA worker was surprised that a crop had been planted in the autumn. The farmers explained. The Germans had confiscated every bit of grain, leaving nothing for seed. But the Polish farmers, in the night, crept into the military storehouses and stole some of the rye back. Then they went out at night to plow and seed the land so that the Germans would not detect them. Part of the time they were putting in crops in no man's land between the German and Russian forces. These are just tiny, quick pictures, snapshots as it were, of the need and the conditions. The whole view is an appalling one, beyond the imagination of those who have not seen it.

The Allied armies won the military battle against aggression. But we have another war to win. That is the war we now are fighting through UNRRA against misery and filth, against starvation and disease and death. Make no mistake. This war is still on in full force. We have mapped out our program and we have made an important start in the battle. But we are far from sight of victory.

There are some additional things which need to be emphasized. There are those, both in Congress and outside of it, who have belittled the efforts of the UNRRA organization. Nobody questions the need for a relief and rehabilitation program in devastated areas. A recent national poll showed that 90 percent of the American people were willing to share their food with the victims of war. Six percent were opposed and 4 percent were undecided. But there are many good intentioned people who have no conception of the gigantic problems UNRRA has had to face.

Up until VE-day the military was in control. Few supplies and almost no shipping were available to UNRRA. The best personnel was in the armed services. It was not until VE-day that UNRRA could begin to set in motion its vast machinery of supply and relief. It could not, until the war victory was ours, launch the campaign against hunger and sickness and death which it had carefully planned in the long months beforehand. But when the time came, and the physical barriers were down UNRRA went into action fast. One month after the war ceased, UNRRA workers were operating in Czechoslovakia. Jan Masaryk, their foreign minister, said, "We in Czechoslovakia are very grateful to UNRRA. UNRRA came in time, even a little sooner than we expected, with meats, fats, prunes, and also even coffee. We were at the threshold of a typhus and typhoid epidemic. We got the penicillin and other drugs in time and a disastrous situation was averted."

The campaign is now in full swing. It must continue. "We went all-out during the war to see that our armies had everything they needed to carry on the battle against the aggressors. Even so, there were times when we criticized ourselves by saying that our supplies were "too little and too late." As fast as we could, we remedied such conditions. This criticism must not now apply in our drive against sickness and starvation.

Now, we must show the world the full measure of our ideals. We must show it by our actions and our contributions. We must show it by a wholehearted generosity. We dare not fail.

We have announced to the world that we favor international cooperation and we took the lead in making UNRRA the first operating arm of such cooperation. We cannot go backward now. We must give UNRRA what it needs to do the job. Never again shall we face a justified criticism of "too little and too late."

## Deferment of Federal Employees

EXTENSION OF REMARKS
OF
## HON. ANDREW J. MAY
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report:

The President has sent the following letter to the Honorable Edgar F. Puryear, Chairman of the Review Committee on Deferment of Government Employees, following receipt of Mr. Puryear's report on the work of his committee, which is attached hereto:

OCTOBER 31, 1945.

DEAR MR. PURYEAR: Thank you for sending me the report of the Review Committee on Deferment of Government Employees under your chairmanship.

I think that a splendid job has been done in keeping down the number of deferments of employees of the Federal Government. I know that a great deal of this accomplishment is due to your own patience, energy, and patriotic determination to see that the Selective Service System operated fairly and efficiently among Government employees without disrupting the Federal service too much.

I take this opportunity of thanking you and congratulating you on the results achieved.

Very sincerely,

HARRY S. TRUMAN.

REPORT OF REVIEW COMMITTEE ON DEFERMENT OF GOVERNMENT EMPLOYEES

The duties and authority of the Review Committee on Deferment of Government Employees were incorporated in Executive Order No. 9309, dated March 6, 1943 and in the provisions of Public Law 23 of the Seventy-eighth Congress, approved April 8, 1943.

The present chairman and committee members assumed their duties in February 1944, and this report covers the deferment status of Federal employees at that time, the action taken by the present committee and the resulting totals of occupationally deferred Government employees at the close of hostilities on August 15, 1945.

In presenting this report this committee wishes to state its activities have resulted in a far smaller proportion of deferments approved for Government employees than has been secured elsewhere for non-Federal employees during this period. Due to committee policies occupational deferments for Federal employees have been constantly reduced over the past 18 months. As of August 15, 1945, 80 percent of all agencies of the executive branch of the Government had no approved occupational deferments whatsoever.

EMPLOYEES AGED 18-29 YEARS

When the present committee assumed its duties in February 1944, there were 264,378 male Federal employees under 30 years of age. Requests for deferment, or for the renewal of previously approved deferment for employees in this age group were considered by the committee as presented by department officials.

By reference to the statistical summary attached hereto it will be noted that 11,997 occupational deferments were in force for all Federal employees on August 15, 1945. Of this number only 201 men were under 26, and none were under 24 years of age. Approved deferments represent but a fraction of 1 percent of male employees of the Government. The remainder of the 264,378 males under 30 years of age as noted above were made available to the armed forces.

Deferments approved for employees under 30 years of age covered scientific or highly skilled specialists who were irreplaceable at the time because of the lack of trained replacements. The immediate induction of such persons directly connected with the war effort would, it is believed, have delayed the prosecution of the war. The War and Navy Departments were granted 8,881 such deferments consisting chiefly of men engaged on direct war production in arsenals and navy yards in the same category as those engaged in the manufacture of war weapons in industry. Only 3,116 persons who were shown to be directly engaged in war activities were approved for deferment in the other 70 Government agencies. In most cases these employees were engaged in the development, testing, or production of secret war weapons, such as the atom bomb, radar-controlled fuses, etc.

In conferences and hearings held by this committee with officials of the departments and agencies it was the unvarying policy of the committee to place the burden of proof for the necessity of retaining any individual, by means of occupational deferment, squarely upon them. Over the period of its operation the committee received an increasingly favorable reaction to the stated policy of nondeferment of Government employees. Most departments and agencies acceded to the continuing request of the committee that replacements be secured by the appointment of women, of men disqualified for military service or, in every possible instance, by the employment of honorably discharged veterans of this war.

It is pertinent to note that subsequent to the action reflected in this report but shortly after the cessation of hostilities, the induction of all males who had reached their twenty-sixth birthday was halted by action of the Selective Service System.

EMPLOYEES AGED 30–37 YEARS

Induction of men in this age group was general in the early period of the war. Immediately upon assuming its duties this committee was presented with 34,098 cases of pre-Pearl Harbor fathers for possible deferment under Public Law 197 of the Seventy-eighth Congress. The committee authorized short-term deferments for replacement purposes of only 5,050 persons. The balance were made available for the armed forces.

After actual combat was experienced by our troops the War Department requested that only men below 30 years of age be called for induction. Pursuant to this request the Selective Service System, on May 18, 1944, issued their memorandum No. 115–F. This directive stated that draft registrants who had reached their thirtieth birthday could be given a deferred classification by their local draft boards on presentation by employers of a simplified form (No. 42) unaccompanied by detailed supporting data.

Under the provisions of Public Law 23, of the Seventy-eighth Congress, no employee of the Federal Government could be considered for occupational deferment by Selective Service except by full compliance with the terms of Executive Order No. 9309. This order makes mandatory the official processing of every request for reclassification for any Federal employee through the review committee. It was therefore necessary for Federal agencies to submit request forms for employees within this age group. Requests for employees in private industry were filed directly with the local draft boards by employers.

As of February 21, 1945, Selective Service believed it might prove necessary to induct an increasing number of men, including those who had reached their 30th birthday. This age group was divided into those

30 to 33 and those 34 to 37 years of age. The short form of deferment request was continued but an additional statement was required that a man in the 30 to 33 age group was "necessary to" as well as "regularly engaged in" an activity in support of the national health, safety, or interest. The statement that an employee in the 34 to 37 age group was "regularly engaged" in such an activity was sufficient to secure reclassification by Selective Service. Only a small number of men over 30 years of age were actually inducted during this period.

Under date of May 23, 1945, Selective Service regulations were again amended and all men 30 through 37 years of age were considered in one group. Under these amended regulations local draft boards were informed that a registrant aged 30 through 37 years should be placed in class II-A, class II-B, or class II-C if he was "regularly engaged in" an activity in support of the national health, safety, or interest, or an activity in war production, or in an agricultural occupation or endeavor essential to the war effort.

The production of arms, armament, warships, etc., in War Department arsenals and Navy Department yards was facilitated and maintained, to a great degree by reclassification of their employees in this age group under Selective Service policies.

War and Navy Departments secured 80 percent of the total of such reclassifications granted to employees of the Federal Governments.

RELEASE TO ENTER ARMED FORCES

During the past 18 months the Review Committee has reviewed numerous appeals by Federal employees whose request for release to enter the armed forces had been denied by their department or agency.

Hearings on such appeals were held and in every case where the employee submitted evidence to the committee that he was to enter combat duty the release was approved.

ACKNOWLEDGMENTS

The cooperation given this committee by the officials of the various departments and agencies of the Government is appreciated.

It is also very gratifying to be able to report that during the 18 months of operation by this committee cordial relations were maintained with Selective Service System, the Congress, and the press of the Nation.

Respectfully submitted.

EDGAR F. PURYEAR,
*Chairman, Review Committee on Deferment of Government Employees.*

SUMMARY REPORT OF ACTION REVIEW COMMITTEE ON DEFERMENT OF GOVERNMENT EMPLOYEES OPERATING UNDER PROVISIONS OF PUBLIC LAW 23 AND EXECUTIVE ORDER NO. 9309 FOR THE PERIOD FEBRUARY 15, 1944, TO AUGUST 15, 1945

*Total male employees ages 18–29 years as at Feb. 15, 1944*

| | |
|---|---|
| For age groups: | |
| 18–25 years | 195,915 |
| 26–29 years | 68,463 |
| | 264,378 |

ACTION OF PRIOR COMMITTEE

*Occupational deferments in force Feb. 15, 1944*

| | |
|---|---|
| For age groups: | |
| 18–21 years | 13,110 |
| 22–25 years | 20,553 |
| 26–29 years | 62,015 |
| Subtotal, 18–29 years | 95,678 |
| Subtotal, 30–37 years | 113,228 |
| Total | 208,906 |

ACTION OF PRESENT COMMITTEE

*Requests for deferment received Feb. 15, 1944–Aug. 15, 1945*

| | |
|---|---|
| (a) For occupational reasons (18–37 years) including resubmissions for renewal of prior deferments or as appeals from previous denials | 277,986 |
| (b) As pre-Pearl Harbor fathers (filed under provisions of Public Law 197 and part VI of Executive Order No. 9309) | 34,098 |
| Total requests submitted for the period | 312,084 |
| Total requests considered and adjudicated | 520,990 |
| Requests denied or deferments expired, rescinded, or voided after consideration and review in conformity with administrative and selective-service policies | 508,993 |

*Occupational deferments in force August 15, 1945*

(Classification: Physicists, chemists, aeronautical or electrical engineers, arsenal-navy yard skilled craftsmen; men on secret, confidential, foreign assignments, etc.)

## Analysis of President Truman's Speech On Wage Policy

EXTENSION OF REMARKS
OF
## HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. SHAFER. Mr. Speaker, Dr. Willford I. King, nationally known and highly regarded economist, has made a very interesting analysis of President Truman's recent speech on wage policy. Because it offers a clear-cut appraisal calculated to clarify the significance of the President's important message, I believe it should be made available to all who are interested. Therefore, under permission to extend my remarks, I include Dr. King's analysis:

PRESIDENT TRUMAN'S SPEECH OF WAGE POLICY

(By Willford I. King)

In his October 30 radio speech on wage policy, President Truman took a position which in many respects is thoroughly defensible. He points out that "There are important limits upon the capacity of industry to raise wages without getting price increases."

He warned labor that "It has a strong responsibility to see that demands for wage increases are reasonable. Excessive demands would deny to industry reasonable profits to which it is entitled, and which are necessary to stimulate an expansion of production. We must not kill the goose which lays the golden egg.

"Labor itself has the responsibility to aid industry in reaching this goal of higher production and more jobs. It must strive constantly for greater efficiency and greater productivity—good work done, for good wages earned. Only in that way can we reach the mass production that has brought this country to the front of the industrial countries of the world.

"Labor must constantly find ways within its own ranks of cutting down on absenteeism, producing turnover, avoiding jurisdictional disputes and wildcat strikes."

If labor heeds this advice, production will advance to such an extent that industry can pay wage rates materially higher than those now prevailing. If such is the case, it is almost certainly true that competition will force an advance in wage rates, and labor will find itself enjoying a higher scale of living than it has ever known in the past.

Among the policies which the President has laid down, those of starting forward maximum production of civilian goods, removing Government controls, and avoiding both inflation and deflation are all thoroughly sound from an economic standpoint. All reflect that hardheadedness and common sense which have given the people confidence in the President's judgment.

One of the peculiarities of the President's message to the American public is that there is a wide gulf between the logical, well-balanced conclusions stated above and the premises upon which these conclusions are presumably based. These premises contain such a goodly collection of current economic fallacies that one can scarcely escape the conclusion that they have been foisted upon the President by certain unorthodox expositors of views which he accepted as sound economic principles. In the first part of his address appear at least five such fallacies.

The first is the assumption that higher wage rates give to the laboring class higher total earnings and, therefore, greater ability to buy the products of industry. As a matter of fact, this assumption is almost the exact reverse of the truth. At any time when unemployment appears, an increase in wage rates invariably accentuates the difficulty, throws additional people out of work, lessens the aggregate take-home pay of all the employees in industry, and lowers the national income. This means, of course, that the ability of the working class to buy the products of industry is diminished rather than increased.

The second fallacy is the assumption that the total volume of spending power of the Nation is increased by the payment of unemployment compensation to those not at work. Clearly, if the money to pay doles to the unemployed is taken from the taxpayers, the total buying power of the community will be no larger than it was before the transfer took place. Furthermore, experience everywhere shows that the payment of unemployment insurance always insures unemployment. When men can obtain pay for not working, the common tendency is for them to hold out for higher pay than their services are worth. Hence national production and national income are diminished, the total spending power shrinks and more unemployment results.

The only way that unemployment compensation can be paid without increasing unemployment is to print, directly or indirectly, the money needed to pay the doles. This inflationary process brings about evils even worse than the unemployment which it is intended to remedy.

The third fallacy in the President's address is the inference that workers can be expected to get as much pay for working 40

as for working 48 hours. Unless the work is very strenuous, the probabilities are that a man who works 40 hours will produce only about five-sixths as much as the man who works 48 hours. The employer's ability to pay depends upon production. If any group of employees prefers to work fewer hours and draw proportionately less pay, that certainly is their privilege. It is unreasonable and illogical for any group to sharply reduce the working time of its members and their output without having a corresponding reduction in the contents of their pay envelopes. If the American workingman wishes to retain his high wartime pay, he ought to insist upon working high wartime hours.

The fourth fallacy is related to the third. The President assumes that workers transferring from wartime to peacetime industries should suffer no loss of pay when they make the change. It is, however, a matter of common knowledge that during the war emergency it was necessary, in order to obtain sufficient help in the war plants, to pay the workers exorbitant wages. Without such unusual compensation, it was impossible to induce the necessary number of persons to move to out-of-the-way places and suffer many inconveniences. Most of the war workers were frankly told that employment and pay were both temporary and that they should save up for the days when their jobs would disappear. Such being the case, it is unreasonable for them to expect that they can now return to the more stable conditions of peacetime production and still enjoy the inflated pay made possible solely by the fact that in conducting a war, government must pay whatever is necessary to get the earliest possible delivery of material.

The fifth fallacy in the President's message to the public is implied rather than stated. He implies that prices can be kept from advancing if Government agencies like the OPA are given sufficient authority and funds. This assumption is contrary to the experience of all nations over hundreds of years. As long as governments indulge in deficit financing and use newly created currency to pay their bills, prices will advance regardless of all efforts of government officials to prevent such an outcome. If the President really wishes to stop inflation—and there is every reason to suppose that he does—he should forget about strengthening Government controls and devote all of his energies to balancing the Budget, and especially to eliminate at once the dangerous and destructive procedure of borrowing from the banks to meet Government expenditures.

On the whole, the President's address on wage policy is far more reasonable in tone and content than most of his critics expected it would be. If the President is wise, he will hasten to rid his staff of the group of unorthodox theorists whose pseudoeconomic reasoning runs so counter to the President's inherent, basic common sense.

## We Are Told Officially That Arizona Has Another Great Reclamation Opportunity

EXTENSION OF REMARKS

OF

### HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. MURDOCK. Mr. Speaker, there has lately come to my desk a voluminous official report from the Department of Interior, Bureau of Reclamation, which is a preliminary draft of the partial report comparing the various proposed diversion routes to bring water from the Colorado River into Central Arizona. To me this is an absorbingly interesting report, although filled with engineering data of a highly technical nature. It is interesting because it deals with a problem so very vital to the future development and continued prosperity of the State of Arizona.

For much more than the quarter of a century just passed, during which time I have lived in Arizona, the question of diverting some of the waters of the Colorado River into our State has intrigued me and every thoughtful citizen, and has been the subject of extensive study by the leaders of the State and often the cause of great controversy between groups with conflicting opinions. This report I have just received is a more thoroughgoing scientific study than any we have thus far had. It is more authoritative and official in this respect; that it is a combined effort on the part of the United States Bureau of Reclamation, working with the proper officials of the State of Arizona, to determine which is the best and most feasible method of obtaining Colorado River water for maximum use in Arizona. Somewhat over a year ago the Legislature of Arizona appropriated $200,000 to be matched by an equal sum from the Bureau of Reclamation to finance this thoroughgoing study of the vital problem. The report I refer to is a partial fulfillment of the task set before our reclamation engineers by this combined effort financed by joint contributions of the Federal Government and the State of Arizona.

It is trite to say it, but it needs to be said—that there is far more good land in the State of Arizona capable of being irrigated and tilled than there is water from all sources which might be furnished to those millions of thirsty acres. Therefore a correct answer to our water problem will mean a hard choice between different degrees of scarcity. In view of the fact that the rainfall in Arizona is inadequate for agriculture, irrigation is necessary for the State's agricultural development. We have a great area of rich soil and a splendid climate in many sections of the State permitting the growing of crops 12 months in the year, and with that situation a limited supply of water to bring only a fraction of these possibilities to reality. That explains in part why this study is so important to the future of Arizona.

During the last quarter century at least half-dozen different plans have been proposed to bring water from the main stem of the Colorado River into the agricultural portions of Arizona. In view of the fact that throughout most of its length in northern Arizona, the Colorado River is in an awe-inspiring canyon—the greatest gorge on earth, more than a mile in depth—the engineering problem of getting its waters onto the tillable areas of the State has been most challenging to the hydraulic engineers. Some of the proposals previously made have been wild and fantastic. Perhaps some of the later proposals may be regarded as visionary, but at last the Bureau of Reclamation and the State officials of Arizona have, during the past 12 months, been giving close study to three of the half dozen proposals to bring water into the central part of the State.

At meetings of a Senate subcommittee in Arizona in August last year, the Bureau of Reclamation sketched, in a preliminary fashion, the three regarded as most feasible proposals to bring water into central Arizona from the Colorado River. This earlier, tentative study may be found in the hearings before the subcommittee of the Committee on Irrigation and Reclamation, United States Senate, Seventy-eighth Congress, pursuant to Senate Resolution 304. The report I first referred to is but a continuation and a confirmation of the preliminary report contained in the hearings before the Senate committee.

In the words of Solomon, "there is a time for everything." There are opportunities and moments of decision in the life of an individual or of a community which, if not properly grasped, may be lost forever. We have now arrived at such a moment for the State of Arizona. It so happens that this moment of choice and decision is in a sense the second for Arizona. In the decade of the twenties there was much discussion as to how the Colorado River should be developed so as to serve best the Pacific Southwest, including seven States in the Colorado River Basin and with special reference to Arizona and California. Naturally, the people of Arizona were tremendously interested and anxious that Arizona should receive her share, her rightful share, in the total development. Receiving her rightful share did not occur. With the building of Boulder Dam the way it was built and under the circumstances of its building and all the other accompanying circumstances, the share of Arizona in the total development of the Colorado River Basin was greatly limited. However, the thing has happened, and there is no need of "crying over spilt milk." Arizona and the Nation must take the situation as it is and make the best of it.

And now once again we have come to a time when Arizona and the Nation must decide how we shall get Colorado River water on a maximum number of thirsty acres in order to approximate the greatest possible good. If no solution is worked out soon, Arizona stands to lose untold wealth in the waters that flow through her mile-deep canyons and along her borders to go elsewhere to enrich others who have very little shadow of claim to their use.

As chairman of the House Committee on Irrigation and Reclamation and as senior Congressman from the State of Arizona, I am so personally and officially interested in this problem that I can give little time to anything else. However, I do not feel that I should try to determine the choice of projects, since all have the objective of bringing a given quantity of

water into that part of the State where it can be used most effectively. Not being an engineer, I hesitate to speak out about the physical problems, and I also hesitate to take a hand in the political phases of the question, because that is a matter properly resting with the State and the reclamation officials. Yet I do want to help get the thing done.

I note from the report which I received that interested persons or officials concerned who have criticism to offer of this report or any of its findings are invited to offer those criticisms on or before the middle of November. I intend, Mr. Speaker, to avail myself of that invitation and shall have some suggestions to make at a later date both to the Bureau of Reclamation and to the State officials of Arizona before a final complete report is submitted for official action.

## We Must Make This Armistice One From War to Enduring Peace, Not an Armistice Between Wars—Let Us Dedicate Our Hopes, Our Prayers, Our Deeds

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. DOYLE. Mr. Speaker, November 11, 1921, seems ages ago as I think of just a few of the world transitions occurring since. Yes; the world has walked into every home in America, every shop, every school, every church—the world has shrunk into one neighborhood since 1921. Space has shrunken into insignificance by reason of transportation advancement; communication improvement has resulted in almost instant questions and answers—to every place and from every race on the face of the globe. So our great Nation today, on the peacetime Armistice Day, has been catapulted into a world neighborhood of daily world responsibilities, privileges, misunderstandings. We must now learn to get along in this world neighborhood, else it will fall apart. If it does fall apart as a world neighborhood, then another world conflagration naturally results. We have but one choice: It is to do our dead level best to build a world neighborhood, and live in it—in sincerity and truth—as a world neighbor.

Suspicion, ill will, greed, corruption, unjust condemnation, envy—these evil things which tear apart friendliness and neighborliness in a small town community will also destroy the workings of a world neighborhood.

Let us here highly resolve that America will steadfastly do her utmost to have it come to pass that the world peace which came with the capitulation of Germany and Japan shall be an enduring world peace. Let us here search our own national heart and soul and cast out any speck of selfish greed or material ambition which might grow into full size and stature if nurtured. Let us help create a world whose heart is full of faith and good will as between world neighbors. Only thus will there be enduring peace.

And only with enduring world peace will there be material plenty and prosperity which will endure. A material prosperity built upon less than mutual good will and respect for the other neighbor's rights and merits, too, is but temporary gain and rests upon the sands of an ego and greed which already condemns to destruction and utter collapse the man or the nation who builds upon such shifting sands instead of upon the rock.

This day, Mr. Speaker and my colleagues, let us so view and look at ourselves that on tomorrow this world neighborhood in which our beloved Nation now has its being will be firmer in clear thinking; fairer in its judgments of one another; less hasty to condemn; radiant with a determination to do our utmost for an enduring world peace.

Let us recognize that enduring world peace is not only the most desired thing in the world; let us dedicate our hopes, our prayers, our daily deeds to its coming to pass, because we have done our part to make it so.

## Japanese Brutality Toward War Prisoners—By Gen. Jonathan M. Wainwright

EXTENSION OF REMARKS
OF
### HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. RANKIN. Mr. Speaker, every Communist in this country who belongs to what they call a minority racial group continues to attack the white majority of our people and charge them with race prejudice.

They wreak their own race prejudice by their accusations.

If anybody wants to know what would happen to the white people of America if the un-American element of some of these racial minorities got control, let him read the following excerpts from an article written by Gen. Jonathan M. Wainwright, describing the beastly brutality of the Japanese toward our American fighting men who were unfortunate enough to be captured by them during this war.

It is one of the most horrible stories in history.

Note the manifestation of their inferiority complex by Japanese in their attacks on those helpless American heroes.

I wish every newspaper in the country would carry General Wainwright's articles, so that everyone could read them and realize the vicious, sadistic, savage brutality of these atheistic apes, even toward the helpless white women and children who fell into their hands.

General Wainwright's article follows:

WAINWRIGHT BEATEN TO GROUND BY JAP; SLASHED WITH BAYONET—STARVATION BECOMES ACUTE AND GENERAL MOORE IS CHOSEN BY PRISONERS TO DIVIDE RATIONS

(Today's installment of General Wainwright's story paints a graphic picture of the starvation and beatings suffered by the author and other prisoners at Karenko. The article also tells of the ruse General Wainwright used to evade Jap censorship, and in a letter to his wife inform her of his severe loss of weight.)

(By Gen. Jonathan M. Wainwright)

Our starvation was so acute at Karenko Prison camp by the fall of 1942 that we took to counting the two or three beans which sometimes appeared in the bottom of our watery soup pail, and if a man received a bean in his soup and another did not, it made for hard feeling. This must be hard to imagine, but it is true.

In fact, the division of our pathetic ration became so important to us—for we were on the very border line of serious and perhaps fatal malnutrition—that we asked an officer to divide our food for us as impartially as possible.

Our craving for sustenance was such that we stood over this man while he attended to each split-up of the food that came to us from the kitchen. Finally he said he could not do this job any longer, and quit. We then voted for Maj. Gen. George F. Moore to divide the food. He accepted, but with the reservation that he could attend to the splitting of the rice and the soup behind a closed door, so that there could be no supervision. We would wait outside, bereft of anything in our minds except our never-ending, excruciating hunger.

Major General Beckwith-Smith died on the morning of Armistice Day, 1942, of diphtheria and heart failure—and starvation. The American officers had become very fond of this plucky Englishman, but while we were grieved to see him go, some of us felt in our hearts that he was better off than the rest of us.

Though Beckwith-Smith was gone, we nevertheless went through with our plan to observe Armistice Day. He would have been a party to that plan. At 11 a. m. that day every one of the prisoners in camp stopped whatever they were doing, or saying, and for the next 2 minutes none of us spoke. We made it as inconspicuous as possible, and felt a little better for having done it.

Beckwith-Smith's body was cremated and the senior British, American, and Dutch officers attended the burial of the urn.

By December 12, 1942, my weight was down to 125½ pounds. It was on this day that I was permitted for the first time to write to my wife, with the usual restrictions. There were so many rules, however, that there was little to write, unless a man wanted to lie to keep up his own or his family's courage.

On this day—just 36½ years since the day I graduated from West Point—I did not give my wife the figure of my weight. I just told her, in the most innocent-appearing phrasing possible, that I now weighed exactly what I did when I graduated from the Point. That was all she needed.

ILL WITH STARVATION

I was taken sick the night of December 12 and for the next few days lay on my bunk with a fever and chills. It was a combination of ailments, mostly starvation. Among the ailments was beri beri, which I had contracted several months earlier. In my last days at Tarlac I had been walking across a wooden floor when Brig. Gen. Lewis Beebe stopped me.

"Say, you've got the foot slap," he said.

Only then did I notice the tell-tale way in which the soles of my shoes were slapping the floor. The dry type of beri beri causes the muscles in the shins and ankles to lose their sensitivity with the result that when the heel is placed on the ground while walking, the rest of the foot quickly collapses

Beri beri or not, and most of us at Karenko had it, we eventually were forced to work. We decided that it was either work, or death by starvation, which left us little choice. The Jap guards had insinuated that if we did go to work we would be supplied with "work rice," that is, an extra portion allotted to workers.

But the Jap mind is a baffling nest, and going to work was not as easy as expressing the willingness. We had to appeal to them to permit us to work, to make it appear that we were breaking down their lofty resolve to uphold the Geneva Convention.

ABSURD NEGOTIATIONS END

But at last the absurd negotiations were done with, and we were told that we would work on an area just outside the prison barriers, an area which would be cleared for a truck farm. Whatever we raised, they told us, we could eat. Each officer was given a tool which the Japs called a kuha and we called a chunkle, and marched off.

A chunkle is a dull-edged, wide and very heavy adze mounted on a shaft about 2½ feet long. It is used for breaking soil, cutting out brush or grass, and grubbing for roots and rocks.

By this time we were in such atrocious physical condition, however, that for many of the senior officers this work was a dangerous gamble with our lives. It was difficult even to walk on our clogs to the area we had to clear. In my case I came to depend more and more on the light walking stick which General McArthur had left for me on Corregidor when he departed.

But slowly and painfully we did clear our first patch of ground and prepared it for the planting of various seeds. But we were not intrusted with the seeds. The Japs knew very well we would have eaten them.

SOME LOSE 100 POUNDS

As for our "work rice" we soon saw that the Japs were using this promise as another means of mocking us. At least half of the time they refused to give it to us. The "work rice" we did get, therefore, was not enough to compensate for the strength we were expending on our tasks of walking to and from the land and clearing it. The land became much harder to clear, in addition, and our conditions sank accordingly. Some of the heavier Dutch officers lost nearly 100 pounds.

One day in December I was ordered by "Boots"—Lieutenant Nakashima—to get Generals Percival and terPorreten and Governor General Tjarda van Starkenbourg and bring them before him. We lined up and "Boots" waited until we bowed. Then he launched into a long and furious charge that Jap internees in the United States, India, and Australia were being grossly mistreated.

In my case he demanded that I write to the War Department and protest this treatment of Japs in the United States. If I refused, he said, our own treatment at Karenko would become worse. With the help of Generals King, Moore, Beebe, and Funk, I did put a letter together the next day, written in such a way as to underline the fact that it was coerced.

But the Japs never waited for that letter to reach its destination. In fact, after "Boots" dismissed us that day, 24 hours before the letter was written, we saw him march across the parade grounds on his queer, tight riding boots and run up the steps toward the administration buildings.

I went back to my room, and while sitting there I saw "Boots" return, line up the Jap guard, and saw him speak at length to his men.

BEATINGS START

I do not know what he said to them. But I do know that immediately thereafter all of us began to undergo indiscriminate slappings, beatings, and clubbings.

It was on this night that I was first struck. After the 8 p. m. roll call, knowing I had a half hour before I had to be in bed, I picked up my towel and went to the back of the barracks to the vile latrine.

Just as I came out of the latrine and started for the washing spigots on the rear porch of the barracks, I noticed a Jap sentry standing nearby. He was a short, stocky, muscular man.

I turned a bit and bowed to him, with the usual sick feeling in my stomach, and started to go on. But he shouted something at me and then motioned to me to step closer to him. I walked over.

"Yes?" I asked. A group of American officers nearby stopped to watch.

The Jap swung very quickly and slapped me across the face. It was a stinging blow and in my throat I felt a rising gorge of hate and despair.

I stood there. Encouraged by what he had done, he slapped me again, then again, and then a fourth time. Each time he hit me he shouted, "Japanese in America."

The blows made by legs weaker, but I was determined not to fall at the feet of a rat like that.

He saw that I was not going down, so he took a lunge at me and hit me on the left jaw with his fist. And then I fell. I was only half conscious from the blow, but part of my consciousness that was alive told me that here was the very pit of my life.

I shook my head clear, got up and walked slowly over to the water spigot, and after a time I had strength enough to turn on the water and wash my self.

General King was in bed and the light was out when I got back to my room. I told him about it and lay there awake the rest of the night.

The next day was inspection day, and it was my duty to help General King clean and dust our little room. We were at work in there and I was still shaking from the night before, when our door was suddenly flung open and a Jap sentry jumped in and roared something at us.

My back was turned to the door at the moment and I was dusting off the shelf that held our mess bowls, and in my nervousness I accidentally knocked one of the bowls off the shelf.

I tried to catch it before it hit the table below but I missed—and it broke in many pieces.

The Jap sentry let out a bellow of rage, shifted his bayoneted rifle to his left hand, and rushed at me with his right fist drawn back.

BAYONETED IN WRIST

His bayonet went into my left wrist, and he beat me about the face with his right hand for what seemed like a terribly long time. Then, exhausted, he stopped and screamed at me to pick up the broken pieces of the dish.

I picked them up. He got behind me and prodded me out of the room, in front of my silent men, and marched me over to the guardhouse, where he lined me up in front of the sergeant of the guard and made his report.

All I could do was stand there, holding the bits of the dish. My wrist bled badly, the blood running down my fingers and dropping to the ground.

I felt myself growing quite faint, for I was in such awful physical condition. The sergeant of the guard listened to the long report of the sentry, looked at my wrist, and then ordered me to go to the hospital.

Col. Harold Glattley of our Medical Corps bandaged my wrist, cursing quietly while he worked.

Our beatings never stopped at Karenko. Some of the enlisted men were slugged as many as three times every day, and it became a rare sight to find one whose eyes were not blacked, nose mashed, or head and body full of lumps.

Our men were beaten, sometimes with rifle butts, for many undetermined infractions of rules—rules we often did not know about until we found ourselves breaking them. The Jap rules often were made up on the spur of the moment.

BONE MISSING IN ARM

One of the cruelest beatings was the one taken by Lt. Gen. Sir L. M. Heath, a grand and decent man. He had been quite badly wounded in the World War. About 3 inches of bone had been removed from his left arm between the elbow and shoulder. His left arm simply hung by its flesh and muscle. To relieve the drag on this tissue, General Heath had small loops sewn on the left lower pocket of his blouse. He would fit his fingers into the loops to support his arm.

A Jap private watched him approach one day. General Heath saluted as correctly as any man could salute, but the private pretended to believe that Heath had saluted while his left hand was in his pocket.

The Jap raised his gun and beat General Heath unmercifully over the head and face with the barrel of the weapon. Then he beat the butt of the gun into the boneless portion of the British general's bad arm and left him lying there in the dirt hardly conscious and badly battered.

For weeks after that Heath's eyes were like twin pools of blood, and his left arm had to be put in a sling.

The weather turned cold about the time the beatings began, and we had so little meat around our bones that we shivered perpetually. If they would only have given us our shoes it would have been helpful, but they never would.

The cold and our condition had a bad effect on our kidneys. Most of us, young and old, were forced to get up about every hour of the night, find our clogs outside, and paddle through the cold night air to the latrine.

UNBEARABLE NIGHTMARE

The Japs would be waiting for us at the latrine. They knew we had to come and it saved them the trouble of searching for us. Almost every one who went in was slapped, kicked or abused. Sometimes the sentries would line up 20 or 30 of us outside the latrine and then go down the line, hitting us in the faces.

I tell you it was an unbearable nightmare. But there was nothing to do but bear it.

I was badly beaten one night at the latrine for using the wrong door to emerge from the terrible place. There was no use explaining that I had not heard that the rule had been changed. Nothing was an excuse at Karenko. It was deep-dyed hell.

No American can take a punch without a suffusing desire to fight back. Yet we had to swallow our rage and take it. One of our officers could bear no more one day and he instinctively drew back his fist to hit a Jap private who was slapping him pitilessly. But he never threw the punch.

NEARLY KILLED AMERICAN

The Jap private let loose an insane roar, seized his gun in both hands and would have killed the American on the spot if we had not found an interpreter just then and begged him to explain to the soldier that our man had simply raised his arm in self-defense.

The officer's life was spared, but he was placed in one of the solitary confinement cells for days, with next to no food. There were no beds in any of these cells. Men placed in solitary were forced to remain standing in the frigid little rooms from 6 a. m. until 9 p. m. every day, day after day. Most of them had to be dragged out when their sentences were finished.

And thus it went at Karenko until Christmas, 1942.

---

## Foreign-Trade Zone Seeks Expanded Role in Postwar Commerce

EXTENSION OF REMARKS
OF
## HON. EMANUEL CELLER
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of October 26, 1945:

FREE PORT HOPES—FOREIGN-TRADE ZONE SEEKS EXPANDED ROLE IN POSTWAR COMMERCE—RIGHT TO MANUFACTURE FOREIGN WARES FOR REEXPORT SOUGHT; CRITICS CONVERTED TO PLAN—1,000-YEAR-OLD IDEA NEW HERE

(By Paul Goetz)

New York's foreign-trade zone, first free port in the Nation, is about to blossom into new usefulness in postwar foreign trade, the National Council of American Importers hopes.

The importers base their cautious optimism on the prospect of early return of the foreign-trade zone to comparatively commodious quarters on Staten Island, and on the efforts of Representative EMANUEL CELLER to jar loose from the House Ways and Means Committee his bill to expand free port privileges in the foreign-trade zone.

Representative CELLER's current amendments to the Celler Act of 1934 would allow goods to be brought into the foreign-trade zone, sampled, blended, exhibited, and manufactured, then reshipped abroad without paying United States duty. Now, merchandise may only be "stored, broken up, repacked, assembled, distributed, sorted, graded, cleaned, mixed, or otherwise manipulated," but not exhibited or manufactured.

In a free port or foreign-trade zone (the terms are synonymous) no import or export duties are levied. The port's income arises from charges for services rendered, such as wharf dues and warehouse rentals. Import duty is payable only when goods pass from the free port area into the hinterland.

STORAGE PRIVILEGES EXTENDED

Moreover, storage is permitted for an indefinite period, compared to a 3-year limit for storage in a bonded warehouse. While in theory there is a draw-back or rebate of 99 percent of any duty paid if an importer reexports dutiable goods from a bonded warehouse, the remaining 1 percent is definitely lost, and red tape in getting the rebate reduces the net value of the 99 percent. Too, reexport from a bonded warehouse requires goods to remain under the original mark of importation, while goods in the free port can be repacked and relabeled. Zone receipts are as negotiable as any other warehouse receipts.

The free port idea is a thousand years old. It found its most romantic expression in the Hanseatic League, which reached the zenith of its power in the fourteenth century, when its membership extended from towns in Italy through central Europe to Scandinavia and beyond to the ancient Russian principality of Novgorod.

The idea, changed to foreign trade zones rather than entire ports, was revived in Germany toward the end of the last century, and its outstanding success won it followers in other countries. Free ports go naturally with high tariffs like those of the United States; low-duty nations like Holland and pre-1918 England don't need them.

The rise of pre-war Germany, poorly endowed with natural resources, to be a first rate economic power, was greatly aided by her free ports and their skillful administration. An outstanding role was played by Hamburg. This, together with the foreign trade zones in Copenhagen, Denmark, was the only free port where manufacturing of all types was freely permitted.

The Hamburg free port had 5 miles of water frontage and a land area of some 1,300 acres, dotted with warehouses and manufacturing plants, including foundries and shipyards. Cheap foreign spirits from the Baltic and Russia, on which there was a high German import duty, came to the Hamburg free port and were mixed and manufactured into fancy liqueurs, colognes, or tonics, then exported all over the world at great profit.

British-made razors from Sheffield passed through Hamburg's free port for expert honing and transshipment to America.

UNITED STATES SLOW TO ESTABLISH ZONES

Our own steps toward free ports have been irresolute. It took 20 years of investigation and wrangling before the Foreign Trade Zone Act, fathered by Representative CELLER, was finally passed in 1934.

As this act was a compromise between eastern sponsors and western and midwestern opponents, with bonded warehousemen in opposition everywhere, it fell short of giving the free port full usefulness.

The practical demonstration by the New York Foreign Trade Zone has resulted in a change of heart in most or all the former opponents. Even the bonded warehousemen, once fierce foes of the zones, are reported to be trying to obtain zone privileges, or to have their warehouses incorporated in the zone. A recent statement by the American Warehousemen's Association says it is now "in wholehearted accord with the underlying purpose of this (Celler) act, which seeks to foster American foreign trade by freeing it, to a marked extent, of inhibitory customs regulations."

The right to exhibit, competent opinion holds, would permit free port zones to become something like permanent international fairs, bound to stimulate business.

"MANUFACTURING" AN EVASIVE TERM

The much more important right to manufacture would do away with the annoyance and confusion which arise from the difficulty of drawing a line between manufacturing and manipulation. One may add coloring matter to beeswax. That's manipulation, as the substance remains beeswax whatever the color. If gelatin sheets are colored, however, that's manufacturing, because the sheets might be used as color slides.

If one mixes essential oils to produce an agreeable fragrance, that's manufacturing, too. The result is perfume, a new article.

A manufacturer of American radios may place them in Canadian-made cabinets provided the cabinets are a perfect fit. If there's any filing, sawing, or other adjustment, that again is manufacturing. The same is true of Swiss watch movements and American-made cases. All these operations are under the eagle-eyed supervision of customs inspectors.

IMPORTER OF PEAS IS FIRST PATRON

In the face of all handicaps Foreign Trade Zone No. 1, established in the port of New York in 1937, has been impressively successful. It started out with a shipment of split peas from abroad. The importer brought them into the zone, cleaned them of the shells, imperfected peas, and foreign matters, sacked them up again, and saved enough by paying the duty on salable peas alone to pay the free port's charges and come out ahead.

In 1937 the free port's incoming cargo was worth only $1,170,000. This rose to $5,700,000 in 1938, $39,000,000 in 1939, $83,000,000 in 1940, and $89,000,000 in 1941, when 232 kinds of goods from 70 countries entered the foreign trade zone.

Even this was only a tiny fraction of free port trade all around the world, estimated at $7,500,000,000 a year.

Business dropped off sharply after the free port was moved at the outbreak of the war from its first quarter on Staten Island to four obsolete piers in the North River, considered unfit for the Army's needs. Value of merchandise received was $36,000,000 in 1942, $25,200,000 in 1943, and $22,600,000 in 1944.

At that, the zone's facilities are taxed to capacity. The whole space, inside the covered piers and outside in the wire-fenced yards patrolled by armed customs guards, is jammed full of goods. Endless rows of barrels with whisky, rum, and other spirits from South Africa, Great Britain, and the Latin Americas are stacked high in the open as there is no room under cover.

Inside there are piles of small boxes containing Swiss watch movements, each box valued in excess of $30,000, bolts after bolts of Argentine woolens looking like fine English tweeds, and perhaps some 150 other kinds of goods, ranging from precious stones to tungsten from China and Bolivia.

Tungsten, incidentally, was refined in large quantities in the zone during the war—another example of a broad interpretation of the law. Tungsten remained tungsten, whether refined or not, and so its refining was regarded as manipulation, not manufacturing.

MANY ADVANTAGES ON STATEN ISLAND

The zone's deep-water Staten Island piers, built by the city in 1921–23 and rarely used before, had a water frontage, easily capable of expansion of 3,000 feet, 2 miles of dock space, and 26 acres of adjoining land. They were served by eight trunk-line railroads, had sprinkler systems making for low-insurance premiums, and were equipped with heavy-duty, electrically operated cranes, traveling hoists, elevators, conveyors, and escalators.

Retransfer of the zone to Staten Island is taken for granted as soon as the piers there are released by the Government. According to authoritative information, at least part of them will be available by January 1, 1946.

Perhaps the zone's most important accomplishment was the establishment within its confines of the "American Frascati," the world's new trading center in Java and Sumatra tobaccos, formerly conducted in Amsterdam. Dutch merchants had succeeded in salvaging their colonial tobacco crop from the Japs and Germans, and the crop found refuge in the New York foreign trade zone.

Later, two buildings were erected by the Dutch at a cost of close to $400,000 for storage and auctions. There is every reason to believe that the "Frascati" is here to stay.

The New York foreign trade zone is the forty-fourth port to be established in the world. Hamburg, Bremen, Danzig, Copenhagen, Malmo, Genoa, Trieste are some of the best known on the list, and then there are colonial free ports like Hong Kong and Macao.

Operating the New York port is the New York Foreign Trade Zone Operators, Inc., a private corporation headed by Harry C. Shanks. The company is under the supervision of the Department of Marine and Aviation of the City of New York, with Col. Robert S. Allyn the deputy commissioner directly concerned.

## An Eyewitness Report on the Situation of Refugees

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. O'KONSKI. Mr. Speaker, American soldiers stationed in Germany frequently encounter Lithuanian refugees and describe their experiences in letters to this country. One such American soldier from Chicago wrote to his father:

Yesterday I met 10 Lithuanians and had a long talk with them. According to them all the Lithuanians in the American zone are afraid to return to their country, for the Russians take all their possessions and send them to Siberia to work in the mines.

I asked these people if they needed anything such as clothes, money, or food. They said * * * they only wanted their country back so they can rule as they see fit * * * and they do want a democratic country.

They have a visual idea that our country will help them get their country back. * * * I hope these people are not let down. For they seem so ambitious to get their country back and return home so they can build it up to a new and better Lithuania. I was talking to a man named X from Panevezys. He's been traveling this part of Germany on foot for the last month trying to locate his wife and children. * * *

This morning I went to see the military government in regards to these 10 Lithuanians here in this small town. The Russians want them back as slave laborers. The Germans here are jealous for they (the Lithuanians) work in our mess halls, they also claim that these people are eating their food. A month ago there were about 300 Lithuanians here—so one night the German mayor, a Russian captain, and some American military police came to the Lithuanian camp at 3 in the morning and loaded 50 of them on trucks and drove off to Russia. Next morning the rest of them fled to all four winds. Since then our military government released an order stating that these people are not compelled to return to their country. * * * They have been getting papers (from Soviet agents) to sign every week, stating that they want to go to Russia of their own accord and free will—they haven't been signing them—so now the mayor is threatening them verbally.

They are very much afraid that they will be shanghaied some night. There is a Russian captain here in town checking on the Russian citizens. From the information I gathered in town the mayor was aiding him in shanghaiing all the people he needed for the dirty work that's going on in Russia * * * behind fences. The Russian border zone is 30 miles from here. * * *

Those poor Lithuanians, without a home, no clothes, no place to go, are being mistreated. Not intentionally * * * but the American officers don't take an interest in their cases. For example, when I spoke to a major who is in the military government in town here, he didn't know about the special order that was issued from our Government in regards to these people's movements back to their original country—that they are not forced to return. * * *

Gee, Dad, I wish I could do more for these people—to help them find themselves. They are happy now since they are free. * * * But I can see that they never knew what real happiness was, or forgot what it was like to have their own homes and their loved ones near them. The mere thought of them being free is a great joy.

What I can't understand is that they want only one thing and that's to be left alone until their country is freed from Russian rule. I asked them how they'll manage to eat in case the Army camp moves. They said they'll manage. Some of them are working in our camp and receive 100 marks ($10) a month which is not much. The UNRRA gives them a little food such as 200 grams of meat per week.

## Official Termination of the War

EXTENSION OF REMARKS
OF
**HON. ROSS RIZLEY**
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. RIZLEY. Mr. Speaker, I have just introduced a joint resolution declaring December 7, 1945, as the date of the duration of the present war. It is hard for the average citizen throughout the country to understand that we are still at war even though hostilities ceased in Europe several months ago and in Japan almost 3 months ago.

Necessarily, when our country is at war, almost complete dictatorial powers are given to the executive branch of the Government, and the Chief Executive—through agencies set up for the prosecution of the war—has almost full and complete control of the domestic economy of our country and complete regimentation and regulation of the lives and fortunes of our citizens. This is necessary in the best interest of an all-out war effort.

It is quite natural that many people are apprehensive concerning the relinquishment of these vast war powers by the Chief Executive when the war is over and peace comes. Thus far in the history of our country they have been handled wisely and well. In view of a lot of things that have been happening in this country during the past 12 years, one of the questions I have heard most often propounded by the average citizen was this: Will the executive branch of the Government voluntarily relinquish the war power which has been given to it?

There are some signs on the horizon now which indicate that the executive branch of the Government may intend to hold on just as long as possible to many of the vast war powers which were given to it for emergency purposes. I know of no good reason that anyone has advanced as to why the war should not be declared officially at an end, so that the "6 months after the duration" which was written into many contracts, will start running.

The President has the authority and power, by proclamation, to declare the war at an end. His failure, or refusal, so to do authorizes the Congress by joint resolution to declare the war at an end. In my opinion, sufficient time has elapsed; the President has failed to act and, so far, I am advised he has not indicated when, if at all, he expects to issue such a proclamation.

This Congress should not recess for the holidays without giving the people of the country some assurance or reassurance that it intends to recapture and retake these vast powers which it has turned over to the executive branch of the Government and which belong to the people. Accordingly, I have introduced the resolution referred to and I hope that it may have the immediate action of the appropriate committee, to which it will be assigned, so that we may consider this resolution and adopt it before we recess for the holidays.

## Latest Appeal of Lithuanian Patriots to the Western Democracies and to the Conscience of the World

EXTENSION OF REMARKS
OF
**HON. ALVIN E. O'KONSKI**
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. O'KONSKI. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement from the Supreme Lithuanian Committee of Liberation:

The eyes of the world are again turned toward the President of the United States of America and the Prime Minister of Great Britain on the eve of their meeting with the President of the Council of the People's Commissars of the Soviet Union. Perhaps at no time have so many hopes and expectations been placed in the leaders of the two great democracies as on the occasion of this impending conference in Berlin. When the military might of the Reich had been shattered and the power of national socialism and fascism destroyed, an intense feeling of relief manifested itself throughout the world. The Lithuanian Nation, which had tenaciously resisted the Nazi occupation of that country for more than 3 years, and which had never doubted the ultimate triumph of the principles proclaimed by the western democracies, rejoices with all peace-loving peoples in the victory of the United Nations. Unfortunately, however, Lithuania is not yet free; she is still under foreign military occupation—that of the Soviets. Therefore, the Supreme Lithuanian Committee of Liberation, which represents all the Lithuanian democratic political parties and which led the struggle of the Lithuanian Nation against the Nazi occupation, as the exponent of the unshakable will of the Lithuanian people to be free and to have an independent democratic state, has the honor to request you, Mr. President, to permit it to make the following appeal to you, and through you to the conscience of the whole civilized world:

The Soviet Government, continuing the imperialistic policy of czarist Russia, and taking advantage of the European crisis provoked by the Third Reich, had already decided in 1939 to incorporate the Baltic States into the Soviet Union (a statement to that effect was made by M. Molotov, the Soviet Commissar for Foreign Affairs, to the Foreign Minister of the puppet Lithuanian Government, Professor Kreve-Mickevicius, on June 30, 1940). After coming to an understanding with Hitler in August 1939, the Soviet Government began to carry out its

decision by fraud and by force, in violation of the treaty obligations it had contracted and the international pledges it had given (peace treaty with Lithuania in 1920, Nonaggression Pact of 1926, and Mutual Assistance Pact of 1939). Disregarding the traditionally friendly relations between the two countries, the Soviet Government chose the moment of the French debacle, which brought the European crisis to a head, to present to Lithuania the notorious ultimatum of June 14, 1940, and on the next day Soviet forces, concentrated beforehand on the Lithuanian frontier, overran the country. Only after the military occupation was complete and the all-powerful Soviet secret police (NKVD) had spread its net over the country and the first wave of red terror had swept over the land did the Soviet Government take measures to legalize the act of force and violence of the 15th of June. For this purpose elections to the so-called People's Diet, which was convened by July 21, were held on July 14–15, 1940. At the dictate of Miscow this diet passed a resolution humbly requesting that Lithuania be admitted into the Soviet Union. That the so-called diet has no authority to speak in the name of the Lithuanian Nation or to make decisions determining the fate of the Lithuanian people and binding the Lithuanian state is evident, not only from what is stated above but also from the following facts:

1. The composition of the People's Diet was made up in advance by the local Communist Party, controlled by the emissaries of Moscow—the Deputy Commissar for Foreign Affairs, G. Dekanozov, and the Soviet Envoy to Lithuania, N. G. Pozdniakov. This party alone was entitled to nominate candidates for election.

2. Only one list of candidates was submitted to the voters in each electoral district, and it contained the exact number of candidates to be elected.

3. No name could be deleted or added: the elector had no free choice whatever; he had to vote for the list as a whole.

4. The elections took place under the close supervision of NKVD agents who were posted even in the polling booths.

5. On July 11, 1940, 3 days before the elections, the NKVD arrested all the Lithuanian Democratic Party leaders, newspaper editors, and other influential persons who could sway public opinion, about three hundred in all.

6. The Communist Party alone was allowed to conduct an electoral compaign. All newspapers were suppressed and were replaced by a regimented Communist press. No expression of free public opinion was allowed.

7. In spite of the terroristic methods employed by the NKVD and the pressure exerted on individual voters by Soviet soldiers, according to authenticated electoral returns, not more than 18 percent of the electorate actually voted; the rest, driven to the polls by force and intimidation, filled the ballot boxes with empty envelopes or with envelopes containing clippings from newspaper comic strips.

Since the local Communist Party alone was entitled to nominate candidates, obviously no member of the parties which had made up the democratic Lithuanian Diet (Christian Democrats, Social Democrats, Populists, etc.) was elected to the so-called People's Diet. It is noteworthy that the local Communist Party, which did not have a single representative in the democratic Lithuanian Diet, even when it was busy nominating its candidates and having them elected to the People's Diet, had a membership of only 800. Under the Soviet domination of Lithuania, the party's membership rose to 2,500, according to official Soviet figures, but the majority of the members even then were of non-Lithuanian extraction. It is a curious and telling fact that the former Soviet Envoy to Lithuania, Mr. Pozdniakov, and General Kuznetsov, a high-ranking officer of the army of occupation, were also elected representatives of Sovietized Lithuania to the People's Supreme Council of the Soviet Union, in Moscow, although both these Soviet dignitaries were completely alien to the Lithuanian people. The role of the Soviet Union and its armed forces in the rape of Lithuania is reflected even in the resolution of the so-called People's Diet, one paragraph of which reads:

"Now the people, aided by the mighty Red army, have * * * established in their own country the Soviet regime."

The Lithuanian Nation unanimously considers the efforts of Moscow to base its claims to Lithuania on the resolution of the so-called People's Diet to be an unprecedented falsification of the will of the Lithuanian people, and categorically and uncompromisingly rejects all the pretensions founded on this falsification. The incorporation of the Lithuanian state into the Soviet Union based on the said resolution, which was passed while the diplomatic representatives of the Great Powers were still present in Lithuania, was not recognized by the greater western democracies: the United States of America, Great Britain, and France. After the Red Army had occupied Lithuania and the farce of incorporation had been played, the late President Roosevelt made the following statement on October 15, 1940, to a delegation of Lithuanian Americans who had been received in audience at the White House and had expressed their anxiety regarding the fate of the Lithuanian state:

"It is stated that Lithuania has lost her independence. It is a mistake to say so. Lithuania has not lost her independence. Lithuania's independence has only been temporarily suspended. The time will come and Lithuania will be free again. This will happen much sooner than you may expect."

The Soviet Government furthermore endeavored to justify its aggression against Lithuania in the eyes of the world by alleging its need to secure its western frontiers. However, an independent Lithuanian state, traditionally friendly to the Soviet Union, did not and could not imperil the security of the Soviet Union; on the contrary, separating as it does the German and Slavic worlds and holding up German expansion toward the east, it could only strengthen this security. Moreover, at the present time, with the destruction of German militarism and the adoption at San Francisco of the United Nations Security Charter, arguments of this character are obviously inadmissible.

From the very beginning of the present political crisis, Lithuania has sided with the great western democracies and her fate was bound up with their victory. In 1939 Lithuania rejected the Third Reich's suggestion that she attack Poland and thus join the Axis bloc. Instead, she hospitably gave asylum to retreating Polish soldiers and refugees and helped many Poles to reach the countries of their allies. From 1941 to 1944 the Lithuanian people carried on active resistance against the Nazi occupation, refused to be harnessed to the German war machine, and sabotaged and disorganized it whenever and wherever they could. For the most part, the Lithuanian people were unable to inform the outside world about this type of activity. A not inconsiderable number of soldiers of Lithuanian descent have fought and died in the ranks of the American and British Armies. Even in its greatest hour of trial, the Lithuanian Nation proved by deeds that it cherishes liberty and is determined to fight for it.

Three consecutive occupations and the military operations in her territory have inflicted terrible wounds on Lithuania. Many of her towns and villages have been left in ruins; her economy, once so flourishing, has been very nearly wrecked. During the first Soviet occupation, more than forty thousand Lithuanians from various walks of life were deported to the Arctic wastes of Siberia, and to this day their fate causes grave concern to the Lithuanian people. Tens of thousands were done to death solely because they were Lithuanians. The Nazis, who succeeded the Soviets, destroyed hundreds of thousands of Lithuanian citizens; about one hundred and fifty thousand Lithuanian nationals were forcibly deported as slave laborers to Germany. Hundreds of Lithuanian intellectuals were tortured and put to death in Gestapo prisons and concentration camps. Panic fear of a second Soviet occupation caused nearly three hundred thousand Lithuanians to leave their homeland. Today, when Lithuania is for the second time occupied by the Soviets, mass deportations are again being carried out by the NKVD. The Lithuanian people, outlawed, tortured, and deported, appeal to the conscience of the world, praying in despair for help and deliverance. Only a nation which is in possession of its freedom and enjoys independence can heal the wounds caused by war and foreign occupation, can rebuild its devastated towns and villages, reorganize its economic life, and reintegrate its country into the great process of world reconstruction.

The imposition on Lithuania of any arbitrary ties with the Soviet Union, which is so essentially alien to the Lithuanian nation in speech and religion and culture, would plunge the Lithuanian people, who have fought so long and so hard for their liberty, into absolute despair, would paralyze their creative energy, would condemn to permanent emigration about half a million Lithuanians who are today enduring the hard lot of the exile, sustained only by the hope of a speedy return to a free and independent homeland.

Now that hostilities in Europe have ceased and the Allied Nations are well on the way to a durable peace founded on law and justice, the Supreme Lithuanian Committee of Liberation takes the liberty of calling your attention, Mr. President, to the situation of the Lithuanian people and the Lithuanian state, and submits the following requests for your favorable consideration:

1. That the Soviet claims to Lithuania, whether based on considerations of security or on the alleged will of the Lithuanian nation as expressed through the so-called "People's Diet," be not recognized as hitherto.

2. That action be taken to induce the Soviet Union to withdraw without delay its army, administration, and police from Lithuanian territory, in order that the sovereign institutions of the Lithuanian state may be reestablished and may resume their functioning. These institutions will maintain order and tranquillity in the country and will guarantee to the nation the right of freely expressing its will through unfettered democratic elections.

3. That the United States of America, Great Britain, and France take under their protection that portion of the Lithuanian people which has been deported or exiled in consequence of the war. The majority of these people are living at present in Germany, pending the creation of the condition sine qua non for their return to their native country, namely, the restoration of the exercise of the sovereign rights of the Lithuanian state.

4. That the Soviet Government be prevailed upon to return to Lithuania the Lithuanians who were forcibly deported to the interior of Russia. Until this is done, it is requested that the Lithuanian Red Cross and Lithuanian-American relief associations, directly or through the International Red Cross, be permitted to enter into communication with these deportees in order to ascertain their

fate, to enable them to communicate with their relatives and friends, and in order that aid may be organized for them.

The Supreme Lithuanian Committee of Liberation appeals to you, Mr. President, in the name of a small nation of some 3,000,000 people. This nation, which the Supreme Lithuanian Committee of Liberation represents, loves and values liberty as much as do the larger nations. Even as they, it is equally ready to fight and to die for freedom. The high principles of the Atlantic Charter and the "four freedoms" proclaimed by the late President of the United States of America, Franklin Delano Roosevelt, constitute a beacon which lights the way for the Lithuanian people in this, the darkest hour of their history. The victory won at the cost of so much sacrifice and such great suffering would be troubled, and the sacrifices of the Lithuanian people completely in vain, if, at the time when the triumph of the great western democracies has brought the blessings of liberty to other nations, the Lithuanian Nation should be condemned to hopeless slavery and extermination only because, in the words of the Soviet Foreign Commissar, M. Molotov, this state of affairs is demanded by the imperialist Russian policy which has been pursued since the days of Ivan the Terrible.

We avail ourselves, Mr. President, of this opportunity to convey to you the expression of our highest consideration and that of the whole Lithuanian Nation.

THE SUPREME LITHUANIAN
COMMITTEE OF LIBERATION.

JULY 10, 1945.

## Permanent Headquarters for UNO

EXTENSION OF REMARKS
OF
**HON. JOHN W. McCORMACK**
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Globe of November 9, 1945:

MAKE IT THE HUB OF THE WORLD

Will the United Nations Organization establish its permanent headquarters in the Commonwealth of Massachusetts? The only surprising feature of that question is that there has been so long a delay in posing it and in preparing to argue the case before the Preparatory Commission of the UNO, which is open to hearings on selection of the site a fortnight hence, at London.

While the selection of a site for the UNO is still pending, with the western European nations led by Britain making a fight to retain Geneva, the headquarters of the old League of Nations, for the purpose, opposition to any attempt to set up the new world organization in intrigue-wracked Europe has already been sufficiently powerful to induce the subcommittee charged with this matter to go on record as favoring a site in the United States. The headquarters, as the subcommittee puts it, "should be" in the United States.

Support from Latin America and other member states in the UNO for an American headquarters promises to be further strengthened once it becomes clear that Russia's opposition to Geneva remains unalterable. Moscow's veto on Geneva derives partly from the fact that one of her officials was assassinated several years ago at the Swiss city. It stems mainly, however, from Russia's bitter experiences of League partiality and big power snubs administered during the twenties and thirties at this League center.

With Europe probably eliminated, and Asia out of the question, as a site for the new UNO, and with a subcommittee recommendation already supporting selection of a headquarters in the United States, prospects for choice of a site somewhere along the eastern seaboard of this country are very strong. Frowns on San Francisco, as being too far away from Europe and Washington, apparently have eliminated the west coastal area.

Massachusetts will need to work fast and hard, if its case is to prevail at the hearings which open November 23 at London. Other seaboard cities, notably Philadelphia, have been toiling in their own interests on this matter since late last spring. Yet the case for the Bay State as a site for the UNO is formidable, and would doubtless command support from all our sister States in New England. For the benefits which would accrue to them all, were the UNO established within suitable distance from the port of Boston, would be spread throughout the loveliest of all vacation areas in eastern America.

Massachusetts meets the requirements laid down by the United Nations for choice of a site. It proffers adequate rail and highway facilities and a rapidly developing air center. Its availability is further increased by virtue of the nearness of Boston to Europe—an advantage which gives it the edge over New York.

There is ample room in our Commonwealth to permit the setting aside of the requisite territory—which would be approximately a square mile—for internationalization. There are hotel facilities in Boston comparable to any which will be found presently along the eastern seaboard; and provision for the temporary accommodation of UNO staffs, until the great world center is built, is at hand.

Inasmuch as the UNO plans to construct not only its necessary public buildings, but also suitable housing facilities for its personnel at the site selected, no difficulty should be found in managing this part of the plan. But there are other reasons which fortify the plea for choice of a site in the old Bay State.

Here, American freedom was born. Here the first experiment in democracy in the West had its beginnings. Here sprouted the seed which later matured into the American Constitution. The finest libraries, the largest collection of colleges and universities assembled in a single State, the most famous technical schools and laboratories in the country, find shelter here, in a State whose cultural traditions are deep and productive.

If the UNO is coming to America, the Bay State is the logical place for it.

UNCLE DUDLEY.

## Ever Hear of the Praying Mantis?

EXTENSION OF REMARKS
OF
**HON. ROBERT F. RICH**
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article reprinted from the Hartford Courant, October 21, 1945, and the Hartford Times, October 22, 1945:

EVER HEAR OF THE PRAYING MANTIS?

The praying mantis is a useful insect—a friend of man—because he destroys other insects recognized as pests.

But when the female mantis gets angry with her spouse, she pulls off his head. He doesn't die immediately. For a while he staggers around aimlessly, willy-nilly, without knowing where he is going or why. But after a while he dies.

Nothing can exist long without a head, whether insect or industry. In every business someone must chart the course, line up the objectives, keep the ship sailing steadily—else that business, like the headless mantis, goes round and round, getting nowhere fast.

The head, of course, is management.

But being management is not all beer and skittles. Management has four responsibilities which it must fulfill if it hopes to survive.

First of all, management has a responsibility to the customer, to give him full value for what he buys. The customer—the public—is the real boss who always has the last word. When he says "No" too often, it's too bad for both management and the men and women on the production lines. In order to get the customer to say "Yes," management and employees have to produce efficiently and sell at prices to meet competition.

Next, management has a responsibility toward those who produce, sell, and service its products. This responsibility is linked to the first. For management's responsibility to provide continuous work, decent working conditions, and fair wages is dependent on how the customer likes the company, its products, and its services.

Management has the responsibility, too, of operating the business so that it is a community asset rather than a community liability. Fair employers who pay fair wages are an asset to any city or town.

Finally, management has the responsibility toward those who have put their money into the company. The stockholders took a risk to buy the plant and the equipment and furnish the capital so that jobs could be created and goods made, and those stockholders are entitled to a fair return in one way or another.

But what's that got to do with the praying mantis without a head? Merely this: just as rights imply responsibilities on the part of both management and labor, so do these responsibilities imply that certain functions properly belong to management and labor so that their respective responsibilities may be fulfilled.

Management has the function of maintaining orderly procedures in production, of hiring the best men and women for the jobs at hand, of devising new products and seeing that they are profitably marketed. These are functions of management, just as it is the function of the shipping clerk to send out the product, and the function of the machine operator to run his machine.

If management didn't perform its functions, the business—like the headless mantis—after a period of staggering around, would collapse. There would be no products to sell to the customers. The community and the Government would lose a good, growing, taxable asset. The stockholders would lose their investment. And the employees wouldn't have any jobs.

If management failed or refused to fulfill its functions, everybody would lose. Nobody would gain.

It is the responsibility of management to make decisions. When management fails to exercise the functions of hiring the best men, devising the most efficient methods of manufacture, promoting to responsible positions the best talent available, rewarding the diligent and disciplining the sluggard, then, to that extent, management is not fulfilling its duties.

Certainly, in a highly competitive field, the management with the most efficient organization which can make good products, service them efficiently, and sell them in competition with others, is bound to get its share of the business, and its employees will have jobs.

Management and employees, working with a knowledge and appreciation of each other's duties, responsibilities and obligations, work for the good of all concerned.

When management and labor each do a real job with pride and enthusiasm, and fulfill their respective functions, the business has the best chance of succeeding—of making money for its stockholders, its community, its government, and for its employees.

## Principles of the Disabled American Veterans With Regard to Membership in Chapters

EXTENSION OF REMARKS
OF
### HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. VOORHIS of California. Mr. Speaker, I am glad, indeed to take this opportunity to insert with my remarks a copy of the column entitled, "Commander's Message" published in the Disabled American Veterans' News for the Department of California, issued in October 1945:

COMMANDER'S MESSAGE

(By Joseph W. Spedding)

One of our chapters have requested an opinion from our department judge advocate. I consider this question most important and fundamental. It is one that admits of no equivocation or compromise. It strikes at the foundation of our democracy. It is a challenge to us to state our conception of the American ideal, the one thing we have fought to preserve since 1776.

Since the opinion is of interest to all chapters, I am having it printed in my column. Let us read it and do some thinking as true Americans worthy of our heritage and which we must preserve for generations to come.

Yours in comradeship,

JOSEPH W. SPEDDING,
*State Commander.*

OPINION NO. 47, DISABLED AMERICAN VETERANS, DEPARTMENT OF CALIFORNIA, OFFICE OF THE JUDGE ADVOCATE

One of our chapters requests opinion on the following points:

1. Do we have to accept into membership in our chapters disabled veterans who are of (designations deleted) color or racial group?

2. Shall we require that they organize and function through their own separate chapters?

The Disabled American Veterans, Inc., is not a private club. It is not a social or fraternal organization of some disabled veterans serving their own purposes. Prior to 1932 we may have been in such a classification. However, in that year we applied for and received from the Congress of the United States a charter of incorporation (Public, No. 186, 72d Cong., H. R. 4738, approved June 17, 1932. Amended, Public, No. 668, 77th Cong., 2d sess., H. R. 7282, approved July 15, 1942). By the terms of this charter, Congress has prescribed, and we accepted, standards of eligibility for membership and the purposes we must serve. We have not the right or power to vary the terms and conditions of our charter. Only Congress can amend its enactment.

It is helpful to remember that Congress chartered our organization to serve a public purpose. We are given powers and privileges not enjoyed by private or other fraternal organizations. But these powers and privileges were conferred on us not as a gift or outright grant. These were conferred on us for the purpose of enabling us to discharge the obligations which are also prescribed by that charter. The Disabled American Veterans, Inc., is in the nature of a semipublic organization. In some respects it is an instrumentality of the Government, intended to serve the public in a specified field. So we hold and exercise these powers and privileges as trustees of a public trust. And we must account to the public as to what use we make of them.

Section 5 of our charter prescribes the standards of eligibility for membership in the Disabled American Veterans:

"Any man or woman who was wounded, gassed, injured, or disabled in line of duty during time of war while in the service of either the military or naval forces of the United States of America, and who has been honorably discharged or separated from such service or who may still be in active service in the armed forces of the United States is eligible for membership in the Disabled American Veterans. Others who were disabled while serving with any of the armed forces of any nation associated with the United States as allies during any of its war periods, who are American citizens and who were honorably discharged, are also eligible."

We find nothing in this language, express or implied, which could be construed to grant to us the right to discriminate on the grounds of race, color, or creed.

Not only Congress has not left us any such choice, but by express language, has prohibited it. Section 3 of our congressional charter defines the purposes of our organization. We quote in part:

"To uphold and maintain the Constitution and the laws of the United States, to realize the true American ideals and aims for which those eligible to membership fought."

It would require extraordinary moral obtuseness and monumental cynicism to say that we may discriminate on the grounds of race, color, or creed and at the same time fulfill our purpose "to realize the true American ideals and aims for which those eligible to membership fought." Such discrimination is the very negation and the death knell of the American ideal.

Evidently our organization is conscious of the grave responsibilities placed on us by our charter. We have not been content to let these provisions of our chapter speak for themselves. We require every member to take an obligation. We quote, in part:

"I ———, do, in the presence of Almighty God and my comrades here assembled, promise and declare that I will always uphold and maintain the Constitution and laws of the United States of America; * * * that I will always uphold the integrity and character of a brother veteran; that I will do my best to exemplify the principles of comradeship, loyalty, and devotion."

The promise to uphold and maintain the Constitution is a pledge to uphold and maintain the American ideals. Bigotry, race prejudice, intolerance, the stupidity of self-arrogated superiority, discrimination on the grounds of race, color, or creed, cannot be tolerated by an organization of veterans functioning under a charter granted by the Congress of the United States and where it professes to uphold and maintain the Constitution.

We take it that those who were chosen, without discrimination as to race, color, or creed to fight by our side for the preservation of the American ideals, have the right to expect that those of us who have sworn to uphold and maintain the Constitution and to "realize the American ideals" will "uphold their integrity and character and will exemplify toward them the principles of comradeship, loyalty, and devotion."

Speaking of the American ideals, Washington wrote to Lafayette that "these institutions will survive so long as there remains any virtue in the people."

By reason of service to our country in time of war and the injury and suffering sustained by us in defense of the American ideals, Congress has charged us with and we have accepted the obligation "to realize the true American ideals and aims" for which we fought and suffered. Comrades, this calls for sober thinking and responsible conduct.

Therefore, any veteran who is eligible for membership as prescribed by Congress is entitled to membership in a chapter of the Disabled American Veterans nearest his place of residence.

Any denial of such right on the grounds of race, color, or creed is a violation of our oath of membership, and is conduct contrary to the provisions of our charter. It would amount to the use of our congressional charter to unconstitutional, un-American ends, and would be sufficient to justify the revocation of our charter.

The question of the desirability of forming separate chapters involves other considerations. Since these comrades have the right to join us in our several chapters, the question of separate chapters must be approached entirely from a consideration of which plan will enable these comrades to better enjoy the privileges of membership, and also make them most effective in the discharge of their responsibilities.

Our experience in California and elsewhere has proved that in chapters where there are common bonds, in addition to the bond common to all disabled veterans, they have been able to function with greater harmony, and, therefore, they have been more effective. Thus, we have chapters composed entirely of naval personnel. We have chapters composed entirely of disabled veterans who are now in Government service. So we have chapters composed entirely of veterans of a certain campaign or who served in a particular arm of service. In many of our chapters we have Negro comrades who enjoy the respect and affection of their respective chapters and some hold office. On the other hand, some of our Negro comrades in California desired to form their own separate chapters, and the results have amply justified their wisdom.

Therefore, the answer to the second question is that we cannot require the formation of separate chapters on the grounds of race, color, or creed. But we can and should make available to them the experience of such separate chapters and wherever greater advantages will accrue to them and to the organization we should assist them in organizing their own chapters.

ALFRED ARAM,
*Department Judge Advocate.*
SAN JOSE, CALIF., *September 17, 1945.*

I approve and adopt the foregoing opinion.

JOSEPH SPEDDING,
*Department Commander.*
SEPTEMBER 18, 1945.

## Gus Edwards

EXTENSION OF REMARKS
OF
### HON. SOL BLOOM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I

include the following editorial on the life of the late Gus Edwards which appeared in the Washington Sunday Star of November 11, 1945:

GUS EDWARDS

If the history of show business in America ever is written in terms of bicgraphies of the great impressarios who created it, the name of Gus Edwards may lead all the rest. He made dozens of stars. The roster of prodigies whom he sponsored, taught, and trained is literally a scroll of fame. His method was to capitalize on the natural instinct of children to dramatize themselves. Understanding that what the youngsters needed was competent instruction, he educated them in all the tricks of the entertainment trade and then proved the efficacy of his technique by touring the country with his "school" of kids.

Eddie Cantor, George Jessel, Eleanor Powell, the Duncan sisters, Mae Murray, Mitzi Mayfair, Hildegarde, and many other vaudeville, screen, and radio headliners received their inspiration as well as their earliest professional guidance from Gus. The legends of their careers trace back in numerous cases to his genius for obtaining what he called "breaks" for them. Meanwhile, he achieved an independent success as a composer of popular songs for grown-up performers. For Anna Held he wrote, I Can't Make My Eyes Behave. Several of the Ziegfeld Follies featured his productions. The tunes were not classic, neither were the words authentic poetry, but millions of people whistled In My Merry Oldsmobile and By the Light of the Silvery Moon

Obviously, Edwards will be remembered. He had a rich, colorful, and useful life. Let it be added that part of the credit was due to his wife's unfaltering help. She traveled with him when he took his troupes on tour and was a foster mother to all the Lilliputian crew, and she still was with him when at last, long sick, he died.

## St. Lawrence Seaway and Power Project Meets Delays

EXTENSION OF REMARKS
OF

### HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Monday, November 12, 1945*

Mr. PITTENGER. Mr. Speaker, I want to preface my remarks with just a suggestion as to what constitutes the St. Lawrence seaway and power project. I do this because most people, in fact, nearly everybody, admits that they are not informed about this matter. The project contemplates the deepening of channels in the rapids section of the St. Lawrence River from a depth of 14 feet to a depth of 27 feet so that ocean-going vessels can travel from the Atlantic seaboard to the various ports on the Great Lakes, Cleveland, Detroit, Chicago, Milwaukee, Duluth, Minn., and other ports. In effect it establishes a fourth seacoast 2,687 miles long from Duluth to the Atlantic Ocean. In connection with this project there is involved the building of a dam and below that the construction of a power project at Massena, N. Y., which will furnish 2,500,000 horsepower in terms of electricity.

In the Pathfinder, Washington, D. C., for November 7, 1945, there is a short article dealing with this project and of special value is a colored map which tells its own story and one glance at it will convince anyone of the vast possibilities to the Midwestern section of the United States as well as to the Atlantic seaboard, when the St. Lawrence seaway improvements are made.

DELAYS ARE DANGEROUS

Friends of the St. Lawrence seaway and power project do not like to admit the fact that it will soon be a year since there was tangible progress made in connection with this matter. In December 1944, the St. Lawrence seaway and power project was offered as an amendment and while there were no hearings in the Senate there was a roll call on the amendment in the Senate, and for reasons not here discussed real progress was made. This roll call vote was truly victory in defeat.

However, there appears to be no justification for the fact that this project has been delayed in the year 1945 for over 10 months and on this date it is just as far away from making progress as it has ever been during the last 50 years. I repeat, delays are dangerous and if the friends of this project are having a hand in the delays, then they had better take inventory. One of the ancient legislative tricks of the opposition is to practice the art of delay and postponement. If you are opposed to a measure, the longer you delay it the better. Anyone familiar with legislative procedure knows just exactly that this is true. Seaway advocates must admit that the advantages are with the opponents of the St. Lawrence seaway and power project. I will call the roll on them some of these days.

In this connection the Duluth Herald, of Duluth, Minn., under date of October 29, 1945, has an interesting editorial by its able editorial writer in which some optimism is expressed. His high hopes may or may not be the result of wishful thinking but anyhow the editorial is interesting and is as follows:

THEY'RE TALKING MORE ABOUT IT

The pessimistic express themselves as disgusted with the whole seaway situation, and predict that current efforts to secure its construction will fail as others have failed in the past.

But, for the resuscitation of optimism in such folk, let us point out that more people who count are talking more about the project.

That usually is taken as indicating not only renewed but growing interest.

Senator CONNALLY, chairman of the Senate Foreign Relations Committee, has been authorized to appoint a special committee to study the proposal, chiefly as to what is the best form for dealing with it in Congress. That certainly is something that should bolster spirits. That action followed President Truman's advocacy of the St. Lawrence project, and after a lot of discussion on the side. The President characterized the St. Lawrence idea as "one of the great projects of the world," in his message of October 3.

Raymond Moley, in an article in a weekly magazine of recent date, asserted that the influence of the East, especially in opposition to the St. Lawrence project, will be less decisive from now on than ever before. We certainly hope he is right and realize that incidents and discussions of the recent past give him a good basis for his conclusion.

An article on the Minnesota Resources Commission, by its director, James W. Clark, which appeared in press dispatches recently, lists as one of "two most encouraging prospects" the progress toward completion of the St. Lawrence seaway. The commission, which in its recent report, virtually ignored the seaway, must be waking up, or somebody has told Mr. Clark the facts of Minnesota life.

All in all, the project has taken on a very vigorous rejuvenation. It is not yet to be regarded as certain of fruition, nor even as a probability, but it certainly can be put at or near the top of the list of possibilities, and that's better than we have ever been able to classify it before.

You will note that the editorial writer in the Duluth Herald waxes eloquent in one paragraph in the editorial because the Minnesota Resources Commission has arisen from its Rip Van Winkle sleeping potion and has issued another report. I do not mean to say that it is remarkable that a report has been issued, but as the editorial writer indicates the fact that the Minnesota Resources Commission actually found out about the St. Lawrence River indicates that the Commission is getting slightly damp and nobody needs to feel that it is just a case of mildew.

THERE IS CAUSE FOR PESSIMISM

One of the ablest newspaper correspondents in Washington is Gustaf A. Nordin, a northern Minnesota boy who has a grasp on executive and legislative situations in the Nation's Capital and who knows how to correctly analyze them. Mr. Nordin does this job very diplomatically in his column in the November 6, 1945, issue of the Duluth News-Tribune, published at Duluth, Minn., and his article reads as follows:

WASHINGTON WITH NORDIN

(By Gustaf A. Nordin)

WASHINGTON.—Delays in getting hearings started on the St. Lawrence waterway joint resolution introduced in Congress 2 months ago may prove to be the next hurdle for proponents of the deep seaway.

The Senate Foreign Relations Committee October 24 authorized Chairman TOM CONNALLY, Democrat, Texas, to name a subcommittee to consider the legislation. Two weeks have gone by and no sign has developed that the Texas Senator is anxious to hurry the thing along.

It is known that strong advocates of the plan in the Senate had hoped to see hearings already under way. With the bipartisan support of the seaway—10 influential Senators sponsoring it in the Senate while Speaker SAM RAYBURN authored the House version—it was believed no further delays were in store for this important midwestern waterway.

If hearings do not get started this fall, advocates of the legislation may find Congress take a Thanksgiving-Christmas holiday. That would put the whole matter over to the next session of Congress in January.

A lot of delays could develop as a new session gets under way—especially if there is more than meets the eye of the stalling now going on.

Should hearings be held up until spring under such circumstances, it is hard to know how the seaway proposal will fare. Next year is an election year. Congressmen and Senators will not be looking for a controversial issue to hurt their reelection chances. Rather than face the waterway issue, which has been pushed from pillar to post for three decades, the congressional committees might decide to withhold activity until after November 1946 elections.

Keep in mind, that could happen unless something is done immediately to force hearings.

CONNALLY was honest when he said he would take his time in selecting the subcommittee. He contended his anxiety to bide his time was to be sure all sections of the country are represented instead of just one section. That should not be difficult to do. He has only 22 members on the Foreign Relations Committee to choose from, 6 of them being sponsors of the joint seaway resolution.

Of the six sponsors on the parent committee, three are from the Midwest, one from the East, and two from the South.

Perhaps the answer lies in a different explanation Chairman CONNALLY gave the press after the subcommittee authorization was voted.

He pointed out that there are still two schools of thought on the Great Lakes-to-the-Atlantic waterway. One favors the agreement form of legislation, which requires but a simple majority of both houses to be approved. The other favors a treaty form with Canada, which would require two-thirds vote of the Senate—and likely would result in seaway defeat again.

But President Truman, Majority Leader BARKLEY, Republican Leader VANDENBERG and others supporting the legislation have offered the plan along a third line—a joint resolution. This, too, would take but a simple majority of both Houses. The controversial features are pretty much eliminated, yet development of power and navigation resources are preserved.

Chairman CONNALLY has asked members of the Foreign Relations Committee to submit names of those whom each believes should be on the subcommittee. That might be another way of holding up final selection of a committee to get to work.

A spokesman for the group made this comment:

"The Senator [Mr. CONNALLY] is in no hurry about it. He is busy with other matters right now—the atomic bomb, Pearl Harbor, and delegation of powers to the United States representative on the United Nations Council."

And all of the problems are not in the Senate. Republican Gov. Thomas E. Dewey, of New York, may find himself in an embarrassing position if he can't get the New York congressional delegation to see the light.

Reports are trickling through that most of the upstate New York Republican Representatives are balking. Only three—FULLER, KILBURN, and BENNETT—are said to be ready to go along when the resolution reaches the House. If true, that poses a problem for Mr. Dewey, who has been a firm advocate of the waterway, although he has, as Governor of New York, insisted upon protection of his State's power rights in the project.

As yet there is no cause for pessimism, proponents of the seaway insist, but the sudden slow-down in senatorial activity since the joint resolution was introduced is forcing waterway backers to get busy or the excellent groundwork laid among Democrats and Republicans may crumble before their very eyes.

There are some things that Mr. Nordin does not discuss, probably because it would make his article too long. He does mention the fact that Christmas is coming and does not appear disturbed in contemplating the result that the year 1946 will soon be with us and not a thing done to make progress in the way of getting hearings or getting legislative action on the part of Congress. This is indeed laudible optimism. My frank opinion is that the story as told by Mr. Nordin in the Duluth News-Tribune for November 6 does give cause for pessimism.

Next year is an election year and to experienced observers on Capitol Hill that fact tells its own story when a legislative program is undertaken.

The American people are interested in this project. Those who have not informed themselves should do so and then they should tell their duly elected representatives how they feel about the matter. Right now the lobbyists who are opposed to the St. Lawrence seaway and power project are flooding the country with a lot of vicious propaganda which is intended to frighten Members of Congress and mislead them in respect to pending legislation on this subject.

---

## Storm of Public Protest Brewing Over Nation's Housing Scarcity; Newspapers Taking Up the Cry For Immediate Action To Meet Inflation Crisis

EXTENSION OF REMARKS
OF
## HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 8, 1945*

Mr. PATMAN. Mr. Speaker, frequently within the past several weeks, I have humbly tried to warn the Members of the House against the approaching national crisis due to the scarcity of homes for the people. I have sincerely endeavored to point out the serious dangers of the economic inflation speeding toward us in the soaring prices of homes.

Today we are hearing the distant thunder of a Nation-wide storm of public protest that is brewing from Maine to Florida over the housing situation. Some of the Nation's most responsible newspapers, big and little, already are resounding with editorial protest over the fact that neither the Congress, nor the building industry, nor the executive branch of Government have taken any forthright action to deal with unscrupulous speculators who are making a profit out of the desperate housing need of the people.

The Florida Times-Union, often called the New York Times of the deep South, demands reasonably priced homes for veterans. The Christian Science Monitor, looked up to by professionals as representing the finest in American journalism, in an unusual editorial, urges swift action against these speculative profiteers. The New York Sun points up the situation in an editorial entitled "While Tenants Wait for New Houses." The Nashville Tennessean, the Johnstown (Pa.) Tribune, the Grand Rapids (Mich.) Press, the Bryan (Tex.) Eagle—newspapers from every section of the country—are echoing the same cry for action.

Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include a few of these editorials to show the trend of the thinking among the people:

[From the Grand Rapids (Mich.) Press of October 26, 1945]

ANOTHER "BOOM BUST"?

Legislation to control the sales prices of both old and new houses has been asked by Price Administrator Bowles, but Congress seems in no mood to amplify legislative price controls. Congressman PATMAN, of Texas, who declares that "discharged war veterans are throwing away their wartime savings in paying sky-high prices for second-rate shelter," said this week that "drastic action is needed to prevent a repetition of the boom-bust cycle" in housing that followed the First World War.

An unprecedented volume of home building is in the cards for the next 10 years to make up for the dearth of new construction during the war and also to meet the housing demands of returning veterans and shifting populations. The National Housing Authority estimates the need at 12,600,000 new nonfarm dwelling units, of which 10 percent should be built each year during the next decade. The Bureau of Labor Statistics predicts, however, that about 900,000 new dwelling units a year will actually be built during the next 5 years. The record construction in any previous year was 935,000 in 1925. Over the last 40 years, new housing units averaged about 475,000 a year.

At present there is no legislative restriction on the prices that may be charged for newly built or used homes, although there are still price ceilings on the materials that go into construction. The ban has now been lifted on the construction of homes selling for less than $8,000, which before October 15 existed under the famous order L–41.

There is ground for PATMAN's fear of another boom-bust. After the other war, conditions in the housing field were about what they are now. Demand was high and supply low. By April 1920 the price level of materials was 214 percent higher than before the war and new housing was in the luxury class. Inevitably this was reflected in rentals, which by 1925 were 60 percent higher than when the war ended. About that time the price of new housing became too high even for the well-to-do and construction fell off. Employment in the building trades declined almost one-third in the next 4 years. With the falling off of all prices which began in 1929 and continued during the depression, many home owners could not meet mortgage payments based on the inflated prices of 1919–25 and tens of thousands of foreclosures resulted.

Similarly today, it is feared that too much new construction will go into luxury homes. Not only do these offer the highest profits for builders, but families in the upper income brackets, with large accumulations of savings and inadequate channels for investment, seem willing to buy at any price. An Urban Land Institute survey shows that three-fourths of the new homes scheduled for construction in the next 2 years will be priced at more than $5,000, while two-thirds of the need is for homes costing less than that. If the threatened black market in building materials should develop, the prices of new homes will skyrocket.

To see what can be done about all this, the United States Chamber of Commerce is calling a conference of the construction industry to meet in Washington November 1. The real purpose is to get the industry to hold prices and profits down and to divert much of its activity into the low and medium cost fields. The industry will be told that if it does not regulate itself, the Government may have to step in and do it.

---

[From the Bryan (Tex.) Eagle of October 3, 1945]

BUILDING COST CONTROLS

Officials of the Office of Price Administration, backed by some Members of Congress and other citizens more or less familiar with the situation, believe some price controls should be maintained on building materials, especially of the type required in home-building. Unless this policy is followed, they maintain, there will be a disastrous inflation in this field and many returned veterans and

others who are in the market for new homes will be required to pay exorbitant prices. If they are compelled to do this, or further delay home-building, and the real-estate market is inflated as much as it is in Bryan, for example, they have much more invested than they ever would be likely to recover.

Sunday, Representative WRIGHT PATMAN stressed the need for price controls in this field. He called attention to the fact that under the full employment program building is rated as a $15,000,000,000 industry, making it one of the major ones of the Nation. Discussing the situation he said:

"All the inflationary ingredients needed for a gigantic black market are present in the housing situation. We have a major industry with a critical scarcity of materials, a tremendous demand for new homes, and plenty of money for purchases, with no prospect for any price control on the finished home.

"A widespread black market in an industry of that size will have an impact on our postwar economy that is little short of catastrophic.

"The demand for new homes already is exerting tremendous pressure on the industry. It is estimated there is a need for 12,500,000 new homes in the next 10 years. The War Production Board says more than $6,000,000,000 should be spent in the next year on construction, not including repairs and renovations which would add another $2,000,000,000 to the cost of work needed. More than 1,500,000 returning servicemen need homes, in addition to the pent-up civilian demand for more than 1,000,000 houses a year.

"Coupled with this pressure is the critical shortage in construction materials—seasoned lumber, tile, brick, castiron soil pipe, low-priced plumbing fittings, gypsum lath, and a multitude of other items."

During the war controls were tight on most or all these materials. Some were obtainable only on a priority basis and on others price controls were put in operation. Now, with supplies opening up slightly, but still a great shortage in many material lines, it is believed prices will sky-rocket unless controls are inaugurated or maintained.

The consensus is that the price-control program maintained thus far on everyday necessities, many of which have been comparatively scarce, has prevented a highly inflated condition. It is reasonable to believe that if this policy is dropped, or if it is not employed in fields where shortages still exist and where demand is greatly stepped up because restrictions on securing these materials have been lifted, we shall have inflation in this field. Sight should not be lost, either, of the fact that approximately 60 percent of the inflation after the First World War came after the last shot had been fired and that this inflation finally resulted in costly economic and social disaster.

---

[From the Nashville (Tenn.) Tennesseean of October 2, 1945]

CEILINGS ON ROOFS

Congressman WRIGHT PATMAN'S plea for continued Government controls on the costs of home building, including the completed houses, is buttressed with the soundest economic arguments. Certainly something should be done to head off the impending skyrocketing prices and competitive rush for scarce materials which will follow the removal of most of the current restrictions 2 weeks hence.

Mr. Bowles has opposed the removal of restrictions until a safe stockpile, both as to quality and quantity, of building materials has been built up. He has also urged that an additional step be taken by imposing ceilings on finished homes, old and new. Mr. PATMAN ably supports the conclusions of the OPA head at every point.

The WPB has estimated that an inventory of at least 13,000,000,000 board feet of lumber is the minimum safe margin over the pent-up demand for housing. The national inventory is at the lowest level in history—an estimated two to four billion board feet—and the quality is poor. The shortage also extends to castiron pipe, lath, plumbing, brick, tile, and other building items.

An additional invitation to spiraling prices in the building field is the fact that Congress has taken no action toward renewing the Second War Powers Act, which expires January 1, or the other legislation which gives the President control over priorities, prices, and rationing.

Congress cannot afford to permit the raw economic forces of long-denied demand and limited supply to wreck the $15,000,000,000 industry before reconversion is half completed. Ceilings on finished homes would be one very strong check on a dangerously wild market.

---

[From the Johnstown (Pa.) Tribune of October 25, 1945]

HOUSING AND PRICE CONTROLS

Although Congress does not seem to be disposed to increase price controls, there may be good reason for legislation to control the sales prices of houses, new and old. Prices have skyrocketed in response to the active demand for homes. Representative PATMAN, of Texas, charging that discharged war veterans are "throwing away wartime savings in paying sky-high prices for second-rate shelter," said this week that "drastic action is needed to prevent the boom-bust cycle" in housing that followed World War I.

An unprecedented amount of home construction is in the cards for the next 10 years to make up for the dearth of new construction in the last 6 years and also to meet the new housing demands of that part of the population that is shifting to new localities. The National Housing Authority puts the need at 12,600,000 new nonfarm dwelling units, with 1,260,000 to be built each year during 1945–55. The United States Bureau of Labor Statistics estimated that about 900,000 new dwelling units a year will actually be built in the next 5 years.

To realize what these estimates mean, one need realize only that new housing units over the last 40 years averaged about 475,000 a year. The record construction in any one year was about 935,000 in 1925.

The most difficult problem of the housing situation is that of providing low-cost dwellings, the field in which the demand is heaviest. It was this problem that forced the Federal Government to adopt its wartime housing program. The return of millions of servicemen to civilian life, most of them eager to marry and establish homes and families, is expected to force the Government to continue with its housing activities, and probably to expand them. The construction of luxury homes will be sufficient, in all probability, to keep the construction industry busy, but the greater demand will be in the low-cost field, and that may bring with it price-control legislation.

---

[From the Tampa (Fla.) Morning Tribune of October 27, 1945]

THE COST OF NEW HOUSES

Price Administrator Chester Bowles wants legislation to control the sales price of houses, but Congress doesn't seem inclined to accede to his request. Representative PATMAN, of Texas, warns that "drastic action is needed to prevent the boom-bust cycle" that followed World War I.

An unprecedented amount of home construction is on the program for the next 10 years, to make up for the lack of new construction in the last 6 years, also to meet the demands of shifting population. The National Housing Authority estimates that 12,600,000 new non-farm dwelling units a year will actually be built in the next 5 years. Compare this with the figure of 475,000 units a year over the last 40 years.

One fear is that too much of the new construction will go into luxury homes. These offer the highest profits to the builders and also to prospective owners. If the threatened black market in building materials should develop, the prices of new homes will go up all the more.

Something definite may come out of a conference of the construction industry, called for November 1 by the United States Chamber of Commerce. The real purpose is to get the industry to hold prices and profits down and to divert much of its activity into new low-cost and medium-cost housing. The industry will be told that if it does not police itself, the Government will.

---

[From the New York Sun of November 6, 1945]

WHILE TENANTS WAIT FOR NEW HOUSES

Much dissatisfaction seems to have been aroused in the real estate trade by the OPA's decision to impose rent ceilings on new housing. The agency delayed long in making its announcement, and uncertainty in the building trades served only to retard plans for an incalculable mass of new construction. The viewpoint of many builders apparently is that the announced policy of restricting the rents of dwellings not yet erected will further discourage construction. The secretary of the Commerce and Industry Association of New York, T. J. Miley, has already proposed that the Emergency Price Control Act be amended to deprive the OPA of authority over construction of housing designed for renting rather than sale.

The OPA itself believes that it can allow enough for increases in building costs since 1939 to compensate investors in new housing. Ostensibly the OPA has at heart the interests of tenants, yet clearly tenants will suffer most if the new policy further delays construction of housing in all rent classifications. Certainly if the shortage of dwelling space continues to become more serious, some modification of the OPA policy on new housing for rental will be demanded.

An essential source of relief for the shortage is the financing of repairs and improvements by the Federal Housing Administration. Now that restrictions on loans and on the use of building materials have been removed, many property owners will be able to remodel houses and thus provide living quarters which until now could not be made available. Representative WRIGHT PATMAN has made strenuous efforts to bring to wider attention the problems created by scarcity of building materials. He has charged that in the controversy over the lifting of governmental controls on construction of homes, the difficulties caused by lack of lumber and plumbing and other materials have been overlooked. Families with limited cash and little credit meanwhile are patiently awaiting a more auspicious time to take the first steps toward ownership of that suburban home which so many hope will free them from the prevailing fear of being roofless in a world of skyrocketing costs of shelter.

---

[From the Christian Science Monitor, Boston, Mass., of October 25, 1945]

PROTECT THE HOME BUYERS

Cheers should greet the announced intention of Senator WAGNER and Representative PATMAN to introduce legislation to curb speculative builders' profits. Veterans, war workers with money in their pockets, and others who may have been waiting for peacetime to buy that little home have been dismayed in recent instances by the prices asked. And this feeling may grow worse. Unless Congress gives someone the authority to control the price of finished homes, these

potential home buyers will be unprotected from inflation and the rapacity of speculative builders.

The OPA has theoretical control of the price of building materials, but since allocation of scarce materials has been abandoned, its only chance of holding inflationary pressures in check is to post prices in every place where building materials are sold. Even if these should hold against the threatening inflationary flood, there's a weakness in the flood wall. It is the omission of the top layer of sandbags: the fact that the Government does not have authority to control the price of finished houses offered for sale.

New homes will be out of reach of most people, says Chester Bowles, Price Administrator, if this control is not established. Already, due to wartime scarcities and increased wages, building costs have risen one-half or more. Even if black-market operations in materials are brought reasonably under control, speculative builders may still demand any price they please—and get away with it.

Largely because the cost of new homes is already in the stratosphere, the price of older dwellings is inordinately high. Another obvious disadvantage of lack of a ceiling on new-home prices is that maintenance of rent control will be made increasingly difficult.

The whole situation is one capable of working injustices on many, but Congress can remedy it. OPA has not asked for the job of controlling the price of finished houses, but it is the logical agency for the task.

---

[From the Florida Times-Union, Jacksonville, Fla., of October 25, 1945]

VETERANS ARE ENTITLED TO REASONABLY PRICED HOMES

The request of Price Administrator Chester Bowles for legislation to control the sales prices of houses, new and old, places in the spotlight a problem of the greatest concern to all Americans. At the same time it places Members of Congress in the unenviable position of yielding to the demand that restrictions of every nature be removed from the building of homes, or giving veterans an opportunity to reestablish their homes, which were broken up while they were away fighting for their country, on a reasonable basis.

Representative PATMAN, Democrat, of Texas, charges that the war veterans are "throwing away wartime savings in paying sky-high prices for second-rate shelter," and urges that "drastic action is needed to prevent the boom-bust cycle" in housing that followed World War I.

All that is necessary to confirm the Texan's charge is to get the story of almost any veteran who has returned to civilian life, and is trying to find a place in which to set up his furniture, long in storage, in order that he may reclaim the companionship of his family.

Inasmuch as Congress apparently is not in the mood to give this matter the attention it needs, in fairness to the war veterans, it would not be amiss for those veterans to get in touch with their Representatives in Washington and make their stories available for the records. Such stories would fill many voluminous volumes of best-seller caliber that ought to bring shame to men and women on the home front until every veteran has been restored to a home free of the monetary excesses and indifferences that are so glaringly evident wherever the returned serviceman turns today.

A conference of the construction industry has been called by the United States Chamber of Commerce to convene in Washington November 1, the primary purpose of which is to get the industry to hold prices and profits down, and to divert much of its activity into new low-cost and medium-cost housing. The industry will be told that if it does not police itself, the Government will.

That is one conference that would do well to mix liberal portions of patriotism with its economics, for there are 12,000,000 servicemen to be returned to civilian activities, and they are flocking to the veterans' organizations by the thousands. Thus they will be in a position to wield an influence upon lawmakers that will decide the future course of Government. Already they have in mind the sacrifices they made along the battle fronts while others, many through deferments, were left at home to enjoy the highest incomes in history, and too often striking for more. Obviously they will not be in any mood to put up with more of that sort of thing, regardless of its source.

Every veteran is entitled to a job, to a home on a reasonable basis, and to a kind of treatment from the various civilian service industries that does not place him in the position of an intruder in the sacred precincts of highly privileged classes.

---

## How To Create Jobs in a Free Economy

EXTENSION OF REMARKS
OF
**HON. PAUL W. SHAFER**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks, I include an address on how to create jobs in a free economy, delivered by Mr. Joseph L. Trecker, president of the National Machine Tool Builders Association, before the forty-fourth annual meeting of the association, in Chicago, October 22, 1945. This address, in my opinion, is one to preserve.

Gentlemen, I am going to talk to you today in terms of ideologies.

You can poke fun at ideologies if you want to. Yet in the last two decades we have seen one ideology sweep Russia; we have seen another sweep Germany and lead to the World War; and a third threatens to overturn the basic philosophy of the British Empire.

Meanwhile, our own country has been a battleground for various ideologies; and all that most of us have done about it is to tell each other that the world is going to the dogs.

Industry has tried in a vague sort of way to develop an ideology, but we have been too narrow in our point of view. Most of the arguments which we have put forth have been on behalf of our own self-preservation; and that isn't enough. The people don't care about us. The people are interested in themselves. They have exactly the same degree of self-interest as we have. Therefore we cannot gain any real following for our philosophy until we learn to interpret that philosophy in terms of the public interest.

So I propose today to develop an ideology for industry, based upon the question: "How to create jobs in a free economy."

Now, first of all, note that I say "in a free economy." It is a simple matter to create jobs under a dictatorship.

Germany created jobs and Russia created jobs, by simply ordering people to go to work as directed by the Government. And in the old days jobs were created by the institution of slavery.

I am talking about a system of government under which a man is free to choose the type of work he thinks he wants, and to compete with other people for the job he is after.

It is significant, therefore, that as a matter of history there has been more job opportunity in the United States under our free economy than has ever been the case in any other country in the world.

That cannot be explained away on the ground that we were a frontier country with vast natural resources. The chief foundation for job opportunity in the United States lay in our tremendous industrial development.

Now, what was the basic principle behind our industrial development under a free economy?

The basic principle was competition.

So if past history is any guide, I think you can lay down the premise that the operation of the competitive system leads to the creation of jobs. And I think that this has been instinctively recognized by most of our population and has been reflected in our laws and against monopoly.

Now, if we accept the evidence of past years that competition creates jobs, we have to go further and ask how and why does competition create jobs.

All of you here today know the answer. Competition creates jobs, because competition is always a matter of offering more people better things at lower cost.

All right—how do competing companies contrive to offer better things to more people at lower cost? They do so by the use of productive equipment which increases the output of the individual worker. In other words, they do it by utilizing the principle of maximum productivity, whereby machines and men become partners in multiplying output.

A NEW PRINCIPLE

What is not generally understood is that this is a new principle in civilization. Before the advent of productive equipment as we now know it, this principle did not apply.

For instance, suppose a company made mouse traps purely by hand. Once this company's overhead was taken care of, production costs remained constant no matter how many mouse traps it sold.

But then along came Eli Whitney, who introduced the principle of interchangeability of parts. Out of that there arose our present production system under which costs of production go down in proportion to volume.

In my opinion, it is the failure of industry to educate the public to an understanding of the basic economics behind the volume production principle that has led to much of our present social unrest.

VOLUME PRODUCTION AND JOBS

Suppose we define, in an elementary way, the basic economics of volume production in terms of jobs.

Insofar as a company, by the aid of good machine tools and other productive equipmen, can cut the cost of its product, it can offer that product at a lower price. As the price goes down, its potential market increases. As its market increases, its volume goes up. As its volume goes up, it can hire more men. That is how more jobs are created.

Machine tools and other productive equipment come into this picture by way of reducing costs. Well—how do they reduce costs? They reduce costs by increasing the productivity of the individual worker. So we arrive at the fundamental principle that jobs are created by increasing the productivity of the worker.

That, gentlemen, is the ideology which I think industry has thus far failed to present, and must somehow contrive to present and to sell today.

The New Deal and the labor unions have put forward an absolutely contrary ideology.

Their premise has been that since this is no longer a pioneer country and we have reached our frontiers, there is a limit to the number of jobs that can be created. Therefore, they say, our problem becomes one of sharing the available number of jobs among the largest possible number of people.

The fallacy of this point of view lies in the simple fact that there is no limit to human desires. Therefore we have no frontiers, we have no limits as to possible number of jobs that can be created, and employment possibilities are limited only by the extent of our ability to reduce the purchase price of the things that people want to buy. Proof of this fact is evident in the industrial history of our country.

DESIRES VERSUS NECESSITIES

Sociologists are always fond of talking about minimum requirements of a decent existence. But as a matter of fact, most of the employment in our country has been founded not upon the things that people had to have, but upon things that people wanted over and above the necessities of existence.

People lived perfectly well before they had automobiles, radios, refrigerators, and vacuum cleaners. Those things do not represent necessities of existence. In fact, people lived perfectly well before they had telephones and before they had electricity. All that people really have to have is adequate food, shelter, and clothing.

The great industries of our country, and the employment that resulted therefrom, have been founded upon things that people wanted, but didn't really have to have.

Now, gentlemen, all those jobs were created jobs. I want to emphasize that fact. They were created by inventors, engineers, and practical production men, who contrived to satisfy human desires at prices that people could afford to pay.

Now suppose we look forward. What about television? What about the helicopter? What about the hundreds of new devices that are in the offing? Devices that represent not human needs, but the fulfillment of human desires?

Every one of these new ideas will result in jobs. They will result in more jobs provided the cost of the product can be brought within reach of the average pocketbook. And this can be done by men and machines working together on a basis of maximum productivity.

You cannot create jobs by presupposing a static economy which has reached its frontiers. All you can do in that kind of economy is share the work—with less money for all concerned.

The myth of frontiers and job limitations will be utterly exploded when the principle of competition with maximum productivity as its chief motive power is accepted as a foundation to employment progress. This, I say again is the ideology which industry must now put forth.

But in order to do that, we must contrive to explode the fallacy of hourly wage rates.

HOURLY WAGE RATES AND JOBS

The idea of hourly wage rates arose back in the days when time was in fact at least a fair measure of productivity. But today this assumption has completely gone by the boards. The idea now is that a man should turn out only as much work per hour as is permitted by his shop steward. This is a reflection of the over-all union ideology that there is only so much work to be done, and that unless it is spread out to the greatest possible extent, there will not be enough jobs to go around.

It is exactly on this point that we arrive at a head-on conflict between industry's concept of creating jobs, and labor's concept of creating jobs. Labor's idea is that by limiting productivity, more jobs can be maintained. Industry's idea is that by increasing productivity, not only can more jobs be maintained but additional jobs can be created.

In this connection, it is rather interesting to look for a moment at what has been happening in Russia.

The left wing of organized labor in the United States has often expressed a strong leaning toward the Russian system of regimentation, as contrasted to the American system of competition.

But in Russia today workers in most cases are paid on the basis of productivity per hour. The incentive system, which is so generally objected to by organized labor in this country, is for the most part in full effect today throughout Russian factories.

Furthermore, the rewards for increasing output are on an accelerated basis. The more a worker exceeds his standard, the larger is the premium he gets.

It is certainly a paradox when Russia, under a system of regimentation, accepts and utilizes the principle of maximum productivity, while in America where the whole preservation of our social economy depends, in my opinion, upon the acceptance of that principle, organized labor is proceeding in exactly the opposite direction.

In any event, hourly rates are not a fair measure for compensation under our volume-production system. I don't think we ought to go back to the straight piecework system which was abused in past years by many manufacturers. But I say that we should work out some method where, by mutual agreement, men's pay should be determined more by their output and less by their time-clock records.

PRODUCTIVITY IS THE KEY

Until the workers of this country get through their heads that jobs depend upon productivity, we are not going to make proper headway in creating the number of jobs we must have to maintain the employment levels which we want in this country.

And that leads directly into the question of job security. This is another of the fallacies which is being encouraged by the labor unions and the left wing sociologists.

If competition is the foundation of job creation and productivity is the key to competition, it follows that the man who does not produce on his job is no more entitled to job security than is the company that fails to produce a better product at a lower price entitled to economic survival.

If every employee, whether he is an efficient worker or not, is entitled to a job, every company, whether it is an efficient producer or not, should likewise be entitled to a profit.

The end of the road of the philosophy of job security is the abolition of competition, a controlled economy, governmental regimentation, and a regime comparable to that which was adopted by Germany and Italy.

As a matter of fact, it is simple to get job security. All you have to do is to go back to the days of slavery. The slave had job security. He never had to worry about being out of work.

At the same time I think industry would do well to study ways and means whereby employees who do produce can gain a greater degree of job security than they have had in the past. Employers used to ask themselves, "How can we cut our working force and thereby make profit?" Today the question should be, "How can we keep men employed at a profit?" Don't forget that our employees are our customers, and we can't have profits without pay rolls.

Industry can't guarantee job security to anybody, but industry can teach the principle that productivity is the key to steady employment.

The philosophy of productivity will not be easy to sell—for not only the labor unions, but the Government, have long backed an opposing ideology.

Ever since the advent of the New Deal, practically every move that could be taken by industry leading toward larger employment as the result of greater productivity was opposed by Government.

By the application of its depreciation policy, Government imposed a penalty upon the installation of productive equipment.

Government made it more difficult for companies to secure investment capital for new enterprise.

By its tax policy, Government made it more difficult for companies to retain out of their earnings the money needed for plant modernization.

Government encouraged the unions in their philosophy of restraining productivity, and pay for hours worked instead of for work performed.

And, finally, Government has upheld the practice by labor unions of breaking contracts and thereby interrupting production.

The only way in which I can interpret this situation is that the unions have sold the public the idea that the future welfare of most of the citizens of our country will be better served by adopting the ideology of limited production and Government regimentation than by adopting the ideology of competition and maximum productivity.

That is why inevitably we come back to ideologies. We can't laugh them off any more. Industry must present an ideology and sell it to the public and to the Government. That ideology cannot be one of profit for the manufacturers. It has got to be one embracing the self-interest of the largest possible number of people.

And here is something else. If we are going to put forward an ideology, we must be mighty sure that we adopt in our platform the good things that have been part and parcel of the New Deal platform, and you and I know that there are many of them that have been good.

There were many abuses in industry which were corrected by the New Deal methods. We must accept these corrections as representing progressive measures. Particularly in this respect I think we must accept the SEC; we must accept the basic principle of collective bargaining; we must accept the principle of taxation higher than in past years; and we must accept the general principle that workers are entitled to the highest degree of job security commensurate with the operation of the competitive system, and to a fair share in the rewards of increased productivity.

So we arrive finally at an ideology based in the main upon the following premises:

1. We can increase employment in this country only in proportion to productivity.

2. Productivity can be increased only by the increasing utilization of machines which enable the worker to multiply his own output.

3. The pay which the worker gets should be related to his output, rather than to the time clock.

4. Taxation policies should be revised so that there will be an incentive, instead of a penalty, for the installation of equipment which will lead to greater productivity.

There, gentlemen, is a bill of goods. But we will get nowhere with it if all we do is to indulge in the vicarious satisfaction of telling it to each other.

TELL ALL THE PEOPLE

How can we sell this ideology to the American public, to labor leaders, and to our legislators in the Congress and in the Senate?

I present this broad problem to our industry because our industry is the very key to the entire picture. We probably know more about the underlying principles involved than any other industry in the United States.

As I see it, it is our responsibility to broadcast this ideology. Nobody else is going to do it for us. How many times have you said to yourself, "Somebody ought to get up and tell these people a thing or two." Well—you were absolutely right. But that somebody is you.

Some of you may say, "How can this little industry of ours ever hope to make any dent on our national philosophy?" Gentlemen, that is purely a defeatist attitude.

Not so long ago, as history goes, there was a man who sat up in an attic and wrote a

book that has come close to turning the world upside down. His name was Karl Marx.

In the middle of the American Revolution, when things were desperate and it looked as though the whole cause might be lost, an obscure journalist wrote one essay that stiffened men's backbones and was a major factor in tiding over the crisis. That essay was called "Common Sense." It was written by Tom Paine.

In the face of facts like these—and there are plenty of examples like them—how can anyone say that a whole industry, with all of the facilities at its command, cannot make any substantial dent upon public opinion?

And unless the philosophy of limited productivity can be defeated, we stand to face in this country a steady decline in the invention and development of new devices and new equipment, a slowing down in scientific advancement, and a retrogression in our standard of living.

Our industry will share that fate, because our future is, whether you like it or not, inevitably tied up with the thinking of large masses of people. The thinking of people is reflected in laws and governments. We, in turn, operate under law and government. The thinking of people is reflected in the practice and behavior of industrial employees. Decreased costs of manufacture—which is, after all, what our industry has to sell—can be gained only by the cooperation of industrial employees.

In my opinion, the future of our industry will depend upon the extent to which people and Government may come to understand and support the principle of productivity as the basic foundation of maximum employment.

## Document Reveals Dashnag Collaboration With Nazis

EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 1, 1945*

Mr. CELLER. Mr. Speaker, in justice to the Armenians, I herewith submit a statement from the Armenian Mirror-Spectator as of September 1, 1945, entitled "Document Reveals Dashnag Collaboration With Nazis," and excerpts from Propaganda Battlefront, as of September 30, 1945, entitled "Document Shows Dashnags as Nazi Collaborators":

[From the Armenian Mirror-Spectator of September 1, 1945]

DOCUMENT REVEALS DASHNAG COLLABORATION WITH NAZIS

(EDITOR'S NOTE.—The following document, translated into Armenian from the original German text and published in a pamphlet in France, recently arrived in this country. As the document reveals, the so-called Armenian National Council (not be confused with the Armenian National Council organized and now functioning in America) appealed to Alfred Rosenberg, Nazi minister of the eastern occupied areas (Russian) to turn Soviet Armenia into a Germany colony. The council was comprised of the following Dashnag leaders: President, Prof. Ardashes Abeghian; vice president, Abraham Gulkhandanian; secretary, Haroutune Baghdasarian; members, David Davidkhanian, Garegin Nuzhdeh (father of Tzeghagrons), Vahan Papazin (Count), Dro Ganayan, and Der-Tovmasian.)

1. The Armenian National Council was organized in Berlin, December 15, 1942, under the patronage of the ministry of the eastern occupied areas. The former will endeavor to carry out its program by maintaining permanent ties with the eastern bureau as well as with other jurisdictional departments (authorities). Thus the Armenian National Council undertakes to be an agent between Germany and the Armenians, and to that end is ready to serve the people and, of course, within the coexisting circle of the European peoples.

2. On the one hand, the Armenian National Council strives for the liberation of Armenia from the Bolshevik yoke and the Russian domination, but, on the other hand, it encourages the efforts of the Armenian nation for freedom and the political self-government of Armenia.

3. In order to carry out these purposes and programs freely, to achieve and to establish them firmly, the Armenian National Council considers the political protection of the German Reich over Armenia the most secure guaranty. On this occasion the Armenian Nation Council is actuated by the idea that in this way the policy followed by the Armenian leaders of the Middle Ages may be revived and established; according to the policy, the powerful German Reich was considered the liberator of Armenia and of the Armenian people.

4. For the successful execution of its program the Armenian National Council finds it imperative to gather together all the Armenian national living forces. It will strive to achieve this purpose by oral or written methods.

5. The Armenian National Council finds it imperative—the gradual return to the fatherland of its nationals who under definite historic or political conditions, against their will, were compelled to emigrate and now live in various countries. In this category are, first, artisans, skilled workers, farmers, also physicians, nurses, writers, and intelligentsia, etc. Only in this way will it be possible to utilize the inner creative power of the Armenian people in its entirety for the growth and progress of the country—and it is this power which has been accepted and appreciated by the noted travelers and scientists of Europe.

6. The Armenian National Council, to second its program, will call the attention of its patron government upon the territorial needs of the present-day Armenia. The Armenian National Council, as far as it is capable, will try to solve this problem justly in Transcaucasia, and, if necessary, will call upon the adjudication of the Reich.

7. The Armenian National Council is convinced that the efforts of its people should be crowned with success because Armenia, through the powerful help of the German Reich, will become a self-governing country and, as such, will be built up. Only in this way will the Armenian people be able to develop freely their native culture and national life in all its phases. Language, literature, industry, economy, administration, justice, etc., and, of course, in new ways and new direction.

8 The Armenian National Council will do everything to facilitate the work of its patron government, including the national wealth of the land, taking into consideration the economic reconstruction of Armenia and the interest of the two peoples.

9. Under the protection of the German Reich, Armenia, so far as she is able, will strive to strengthen the German influence in the Near East. In this connection the Armenian National Council finds it imperative to evaluate the bitter disappointments and terrible misery which Russia, as well as England, have caused on the Armenians in the course of history. This is a strong reason for the Armenian people to turn their face from (relinquish) the above-mentioned governments forever. In this connection the Armenian National Council would like to mention the fight of many years which the Armenian people waged against the Russian tyranny, whether czarist or Bolshevik. On this occasion the general revolt of the people on February 18, 1921, should be remembered, as a result of which the Bolshevik despotism was overthrown and a national government was established, even though for only a short time.

10. Besides this, the Armenian National Council will strive to cultivate relations with all neighboring peoples, and especially with the people of the Caucasus and their national organs, and, of course, upon the basis of mutual understanding and common interests.

11. Realizing the historic, political, economic, and cultural intimate ties between great Germany and her protectorate, Armenia, the Armenian National Council will consider it its high duty to strengthen these mentioned ties and to render them unbreakable. For this purpose are already called, and hereafter will be called, those auxiliary Armenian forces which are now active and fighting with the Germans for final victory and liberation.

12. The Armenian National Council is an agent in the present period of transition. Its jurisdiction and activity cease the moment when, under the leadership of Germany and the help of the Armenian National Council, a new government is created in Armenia.

(Translated from the German, Berlin, February 15, 1943.)

---

[From the Propaganda Battlefront of September 30, 1945]

DOCUMENT SHOWS DASHNAGS AS NAZI COLLABORATORS

Conclusive proof of the Fascist character of the American Revolutionary Federation (Dashnag) was provided recently with the discovery of a German document showing that eight top-ranking ARF officials entered into an agreement with Alfred Rosenberg to serve as Quisling rulers upon Germany's conquest of the Caucasus.

The document and supplementary photographs show that on December 12, 1942, ARF leaders in Berlin, headed by the notorious Gen. Dro Ganayan, formed an Armenian National Committee to serve as agent between Germany and the Armenians. The Dashnag traitors regarded "the political protection of the German Reich over Armenia the most secure guarantee," and looked upon the Nazis as "liberators of Armenia."

ARF leaders in Boston, Douben Dasbinian and Simon Vratzian, at firs frantically denied the authenticity of the document, but finally admitted in the party organ, Hairenik, that it was genuine. They offered the lame excuse that the ARF leaders were all noble and patriotic men who could do no wrong. Photographs show Dro Ganayan posing with high-ranking Nazi officials and other Dashnag chieftains charged with training ARF spies to penetrate into Soviet ranks. Another Dashnag Quisling, active with Dro in Berlin, Rumania, and Bulgaria was General Nejdeh, organizer of Tzeghagrons (race worshippers), the ARF Youth Corps in the United States.

Sympathy for the Nazis was expressed in Asbarez, Dashnag organ published in Fresno. On February 23, Asbarez protested against a harsh peace, saying: "A harsher treatment (of Germany) is not possible to formulate. * * * Whether such dragonic treatment of the vanquished people by the conquerors will serve its purpose, will thwart their recovery forever and will prevent future wars, is moot question."

And on August 10 it attacked the Potsdam conference on three points, apologizing for Germany, and attacking the harshness of the terms. It regarded as reprehensible to let the living standards of the German people excel that of the small and poorer people of Europe. It decried the peace terms whereby the highly talented, industrial and com-

mercial German people were deprived forever from engaging in heavy industry and commerce.

ARF leaders have falsely represented themselves to Americans as representatives of the Armenian people, and, under that guise, terrorist Dro and his Quisling gang made their agreement with the Nazis.

## Lack of Housing In Long Beach, Calif., Area Means Lack of Job Opportunities for Veterans—50,000 Unfilled Jobs for Veterans But No Place To Live in Southern California

EXTENSION OF REMARKS
OF
**HON. CLYDE DOYLE**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. DOYLE. Mr. Speaker, the following editorial in the Press-Telegram and Sun, at Long Beach, Calif., on November 8, 1945, speaks clearly of the very condition I have been calling to attention of this House and of the NHA.

It is not so in some districts represented by distinguished Members of this House; but it is nevertheless a fact in the Eighteenth District of California that, increasingly, job fulfillment and opportunity is more and more lacking because housing and homes are lacking for the workers and their familes.

And this applies to GI's too. That is a disgrace, in my judgment.

Nor, do these veterans and GI boys have a big bankroll to buy a new house with; their pay for fighting for us has been relatively insignificant. Their families come to southern California to greet them; they find no place to lie their heads in rest nor to live together as a reunited family. It is tragic and unsound.

Nor has the period of reconversion fairly commenced for the human reconversions necessary. The spirits of men, the ambitions of men, the family relationship of men, the education, cultural, religious aspirations of men, the ultimate morale of these veterans is dependent upon homes—happy housing surroundings; time does not permit delay.

Here is the editorial so powerfully and sanely written:

HOUSING FOR VETERANS

Shocking lack of provision for returning servicemen is shown by testimony at the hearing in Los Angeles before the State senate interim committee on veterans' affairs.

Witness after witness testified yesterday that veterans are forced to go without needed hospitalization because of crowded conditions at the Sawtelle veterans' facility, that many of them have been victimized by usury sharpers and swindlers, and that thousands of them cannot take jobs in southern California because of the lack of housing.

The men out of service want to settle down here and go to work in civilian life, and jobs for them are available, but they cannot take the jobs because there is no place for them to live.

Returning servicemen are made the mark of swindlers and extortioners of various kinds because they mostly are young and inexperienced and have several hundred dollars of ready money each on their discharge from service. Their protection from these wolves, so far as it is possible, is the imperative duty of agencies created to aid returning servicemen, police, and veterans' organizations.

Hospitalization, of course, is a Federal function. Every Congressman representing southern California should be given a complete report of the Los Angeles hearings and make it his first duty to get relief for the veterans. The facts already revealed show that the situation here is acute.

One witness yesterday stated that as of October 30 there were 50,756 unfilled jobs for veterans in the 11 southern California counties, and there are 35,194 applications by veterans for jobs in this area, but the veterans cannot take the jobs they want and which are waiting for them because of the lack of housing.

Unquestionably there is a national shortage of building materials, but a nation that performed prodigies in supplying the means of war surely can provide decent shelter now for the men who won the war.

Southern California, particularly Los Angeles County and most especially the Long Beach-Los Angeles Harbor district, are abnormally congested areas. Often there are as many men in Navy and Army uniforms as civilians in a local street scene. Many of these servicemen have families here.

The result is an aggravated housing problem in this region. The housing need here is not unique—the need admittedly is Nation-wide—but neither is it average or typical. The housing need here is so unusually great as to constitute an emergency, deserving immediate attention.

## Proposal for World Memorial Day

EXTENSION OF REMARKS
OF
**HON. LOUIS LUDLOW**
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. LUDLOW. Mr. Speaker, I present for printing in the CONGRESSIONAL RECORD the text of a letter I sent today to the President of the United States, as follows:

NOVEMBER 11, 1945.

Hon. HARRY S. TRUMAN,
*President of the United States,*
*Washington, D. C.*

DEAR MR. PRESIDENT: On this Armistice Day, the first since the end of World War II, I venture for your consideration the suggestion that the time has come to transform and enlarge the annual ceremonial known as Armistice Day and make it a commemoration of the heroes who died to make men free in both world wars.

This enlargement of the meaning of the day would be a recognition of the successful end of the Second World War and would be in keeping with the atomic age and the newly organized world society.

Armistice Day has had inspiring significance in our national life and it seems appropriate that its beautiful customs by which the people have poured out their gratitude to their soldier and sailor dead should be extended to a world-wide scale.

This might be done by the creation of a new day in our calendar of special days which could be called, for lack of a better name, "World Memorial Day," when the people of the world might pay their homage at the same time to the heroes of all nations who gave their all for the cause of freedom and humanity in both world wars.

I think all of us will agree that May 30 should continue to be our national Memorial Day, but there may well be established a new world memorial day which would carry with it a connotation of affection for the head of the two world wars, together with humanity's hopes and prayers for perpetual world peace.

The designation of a Sunday for this purpose probably would be wise, as that would not increase the number of days that involve interruption of work and would also surround the occasion with a fitting air of reverence and solemnity.

While more nations were engaged in conflict in the Second World War than in the first, the inspiring motive of both wars was the same—the removal of the shackles from the human spirit so that all men might walk upright and free.

In a broad sense the Second World War was but a second chapter of the first, involving in the main the same conflicting forces and the same cosmic issues.

The selection of a new day that would unite in one commemorative occasion what otherwise would continue throughout the years as two separate observances on separate days is a matter, I think, which could well be regarded as coming under the scope of the jurisdiction of the United Nations organization. I hope you may deem it a proper matter to be brought to the attention of the United States members of the Preparatory Commission of the United Nations which will meet soon in London, with a request that they invite the cooperation of the representatives of the other nations in fixing a new day when tributes may be paid simultaneously all over the world to the precious dead of both World Wars.

Very sincerely yours,

LOUIS LUDLOW.

## Another Letter From a Serviceman

EXTENSION OF REMARKS
OF
**HON. CLARE E. HOFFMAN**
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 7, 1945*

Mr. HOFFMAN. Mr. Speaker, here is one more letter from a serviceman:

PHILIPPINE ISLANDS.

To the EDITOR:

Remembering the Public Opinion column in your paper, I thought I'd drop you a line and let you know some of the inside facts on the present demobilization plan. According to all the reports over the radio and in the newspapers, the folks back home think everything is going along fine. When it comes to propaganda, the United States Army makes Goebbels look like a piker.

"Seventy" in October, "sixty" in November, 2-year men the first of the year. Yes; it makes good headlines for the folks back home to read. We are getting tired of that song and dance.

Every day I talk to men with 80, 90, and even 100 points who are trying to get in depots to be shipped home. These depots are filled with men waiting for transportation, while all the time Liberty ships leave Manila Bay empty.

The Army's excuse for this is that these ships aren't equipped to carry troops, yet there are men here now who came over on these same ships despite the poor chow, lousy washing facilities, and crowded sleeping conditions. They would gladly do it again if it meant getting back home.

The Army has the "demob" plan so messed up we sometimes wonder if it wouldn't be better to marry a Filipino and settle down here. I can't kick yet as I only have 62 points, but the high-pointers are beginning to feel

bitter about the whole thing. Sooner or later there may be trouble, such as the Canadians displayed in England.

The Congressmen back home should be notified of these things so that they can get the Army "on the ball."

BOB BORGMAN,
*Corps of Engineers.*

P. S.—At the present rate of demobilization we should all be home in 3 years.

## GI Loan Fails to Meet Need, Takes About 45 Days to Consummate Loan—GI Loan Should Be Primarily for GI's, Not for Banks

EXTENSION OF REMARKS
OF
### HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. DOYLE. Mr. Speaker, again I call attention of the Members of this House to the fact that the GI bill is in many ways inadequate; nor should those who authored it feel that they are being criticized either when I say this. They could not have planned everything to be perfect at the start.

But now, there is no longer time for delay. There has been too much of time elapse as it is. I respectfully urge that everyone concerned with action on this GI bill front, get results desired at the earliest possible date.

The Eighteenth District of California which I represent, is one of the strategic and important areas of our great Nation. It is said that at present date there are likely 50,000 naval personnel in Long Beach alone; the great Roosevelt Base and naval dry docks are there located; the fleet rides at anchor behind the protective breakwater in its home harbor; a great separation center is there and the naval hospital, too So, with these few items of what is there located called to your attention, you will realize that from my home city of Long Beach, with its over 300,000 people, the letter I hereafter set forth, is speaking loudly of conditions which must be corrected—and now.

This letter from the executive director of the veterans' service center comes in reply to one from me in which I asked him to tell me what the actual experience was with the GI bill in three fields of human needs for the GI boys. In loans; in education; in housing. The letter is self-explanatory. Let us move in and without delay and do something about it.

The letter follows:

CITY OF LONG BEACH,
*Long Beach, Calif., November 8, 1945.*

CLYDE DOYLE,
*Member of Congress,*
*House Office Building,*
*Washington, D. C.*

DEAR FRIEND CONGRESSMAN DOYLE: I received your letter yesterday, and I read it to my staff here at the service center last evening and asked them for any explanations that they would care to have me include in a letter to you. Briefly, they were as follows:

1. The percentage of GI loans being processed is low because the value of the property in the Long Beach area today, is too high for the banks to allow a loan to go through on it.

Another reason that the GI loan is failing, is the extreme amount of paper work connected with it. A recent magazine article estimated the paper work at 12 hours. Most of the banks do not care to use a member of their staff, for that length of time, on a loan whose chances are slim. It takes approximately 45 days, at best, to consummate one of these loans at the present time. Mr. Crow of the Bank of America, tells me that the loan is sent to New York or Washington, D. C., for approval, and that the establishment of an office in Los Angeles would reduce this time considerably. Of course, the main trouble with the GI loan, is the fact that it is a bank loan, and the boys who haven't been earning any money in civilian life, due to military service, are unable to produce the collateral that is necessary.

2. On the question of the educational phases of the GI bill, our education man, Mr. Loyal Thomas, of the local public schools, believes from his contacts here daily (20 to 35 per day) that a revision of the age clause and an approximate increase in the monthly stipend of 40 to 50 percent would be most effective. While statistics prove that men over 23 do not readily readjust themselves in school, a huge readjustment of all of our boys today would offset an arrangement to remove the 25-year limit.

I believe that many of the colleges and universities are working with the housing problem through the medium of huts and trailers, and if the rental of these trailers was kept nominal the stipend per month would not have to be increased too much.

3. As for our housing problem, it is still No. 1 in the Long Beach area. I believe that a Nation-wide advertising campaign to keep the servicemen's wives and families at home would be an aid, and if the serviceman, himself, was given top priority in the matter of transportation, it might keep some of these women from coming out here on a wild-goose chase. It should be impressed that the serviceman does not know for sure the day and date of his discharge and arrival, and for the women to stay home and wait a little longer.

You asked me what we need in the way of housing. The answer is, anything and everything. Rooms are available for single men and women but that is all. There are no family accommodations to rent in Long Beach. I believe that is the total extent of our case at the present time, and I shall keep you advised in any other matters that may come up.

Sincerely yours,

D. P. AHERN,
*Executive Director of Veterans' Service Center.*

## Control of the Use of Atomic Energy

EXTENSION OF REMARKS
OF
### HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. SMITH. Mr. President, on Sunday, November 11, at Princeton University, I had the privilege of participating in a broadcast on the subject of the control of the use of atomic energy. The other participants in the broadcast were Prof. Henry D. Smyth, chairman of the department of physics at Princeton University and author of the official report on atomic energy for military purposes; Prof. William S. Carpenter, chairman of the department of politics and president of the New Jersey State Civil Service Commission; and Prof. John F. Sly, professor of politics and director of the Princeton surveys of Princeton University. The program was directed by Prof. Roy Dickinson Welch, chairman of the university's faculty committee on radio.

Inasmuch as the broadcast was carefully prepared by the participants and discusses some of the principal issues which have been raised on the subject of the control of atomic energy, I feel that it makes a valuable contribution to our present consideration of this important matter, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the broadcast was ordered to be printed in the RECORD, as follows:

ANNOUNCER. Ladies and gentlemen, WOR takes pleasure at this time in bringing to you the Princeton University Preceptorial of the Air, another in a weekly series of forum discussions by Princeton professors and their guests on topics of national interest. This comes to you from Wodrow Wilson study in '79 Hall on the Princeton University campus. Your moderator, Prof. Roy Dickinson Welch, chairman of the university's faculty committee on radio.

Professor WELCH. Good afternoon, ladies and gentlemen. Ever since the first atomic bomb destroyed Hiroshima, this question of control of atomic energy has taken on greater and greater significance. The visit to this country of Prime Minister Attlee and Prime Minister King to discuss this question with President Truman; and recent public statements by Mr. Molotov, Mr. Churchill, and also by President Truman, indicate that until this question is settled, we shall live in an increasingly uneasy world. To discuss this control of the use of atomic energy, there are gathered here today, in the Woodrow Wilson study on the Princeton University campus, four men of eminent authority. Here is the Honorable H. ALEXANDER SMITH, United States Senator from New Jersey, who represents the stateman's responsibility in passing upon any proposal that may be adopted for controlling this energy. Also here is Prof. Henry D. Smyth, chairman of the department of physics at Princeton University and author of the official report on atomic energy for military purposes. Professor Smyth, a foremost student of nuclear physics, and one of the important participants in the research that developed the atomic bomb, speaks with an authority shared by few on the scientific prospects of this new energy. Here, also, is Prof. William S. Carpenter, chairman of the Princeton University department of politics, and president of the New Jersey State Civil Service Commission; and Prof John F. Sly, professor of politics and director of the Princeton surveys of Princeton University. These latter two men bring to the discussion a wide and responsible experience in regulator processes of government.

In order that we may be on common ground in discussing this vital problem, I should like to ask the panel one or two clarifying questions. Professor Smyth, since the bombing of Hiroshima, the national press has been full of the most amazing reports pertaining to the destructive effects of atomic bombs. Some of these reports seem so fantastic as to be almost beyond belief, and there has been an effort in some quarters "to cut them down to size," so to speak. In your judgment, has there been some exaggeration of the effects—both actual and potential—of the destructive qualities of atomic energy?

Professor SMYTH. Yes, there have been exaggerations, such as early reports from

the Jap press pertaining to the long-time poisoning of the ground and to the damaging effects of bomb radiations extending far beyond the area of the blast itself. These were not confirmed by later investigators. But let there be no doubt about this: Atomic energy is powerful beyond anything man has ever known, and the splitting of the atom is a process totally different from any other process familiar to this planet.

Professor WELCH. Could you give us, Professor Smyth, just a layman's explanation of what makes this atomic process so different?

Professor SMYTH. Perhaps it can be understood this way: All other sources of energy depend on changes only in the outer structure of the atom. This is true of the digestion of food, of the burning of coal, the explosion of dynamite, or of any other familiar chemical change. The atomic bomb, however, depends on changes in the nucleus—the very heart of the atom. Such nuclear changes release millions of times more energy than any chemical change. Just as splitting the sun would make much more difference to us than disturbing one of the outermost planets.

Professor WELCH. Can you give us some idea of what a Pearl Harbor sneak attack with atomic bombs might mean if directed against the continental United States?

Professor SMYTH. It is not possible to be specific, but a few thousand bombs of the type used at Hiroshima could cripple this country's industry and destroy a large part of the population.

Professor WELCH. Is there, Professor Smyth, any hope of an effective defense against atomic bombs—that is, a defense that might be developed within the foreseeable future?

Professor SMYTH. If you mean protective devices or counterweapons of a military nature, I would say no—and there is not likely to be any. In the future, bombs of enormous destructive range could be sent as rockets from any spot on earth to any other spot. These will doubtless be jet-propelled, and find their targets by radar. The attack would, of course, be a surprise one, and the rockets would come in such numbers that many of them would probably get through any antiaircraft defense. We might not even know from what country the attack had come.

Professor WELCH. You present a most ominous picture.

Professor SMYTH. I am speaking only as a scientist. Our sole hope of survival as a nation in an atomic war would be to have our cities and industries dispersed throughout the country, preferably underground. Then at least a part of our population and industry would survive the initial attack and could retaliate with equally destructive bombs.

Professor SLY. Mr. Welch, could I ask Professor Smyth a question?

Professor WELCH. Certainly, Professor Sly.

Professor SLY. There has been much talk about the so-called secret we hold in regard to the atomic bomb. Without divulging vital information, Professor Smyth, could you tell us the nature or character of the information that is secret?

Professor SMYTH. Well, the situation is very much like this: The fundamental scientific principles on which the atomic bomb is based were well known by 1940 to scientists in every country. The only secret of the atomic bomb that the United States has for the moment—and it is for the moment only—is our knowledge of technical details in the process of manufacture and final assembly of the bomb. In a few years, other countries can certainly develop these same manufacturing processes—or even better ones.

Professor SLY. Now may I ask one more question: If this secret involving the details of manufacture and assembly were to be shared with other nations, just how would we go about sharing it?

Professor SMYTH. If we were to share it completely, we would have to permit the scientists and engineers of other nations to inspect our atomic bomb installations, and actually to watch the manufacture and assembly of a bomb from start to finish. Short of this, we could possibly provide each country with complete blueprints of the bomb assembly, without inspectional privileges.

Professor SLY. May I inquire of Senator SMITH as to what the attitude of Congress might be toward sharing our secret in either of these two ways?

Senator SMITH. While I cannot speak for Congress, I do not think my colleagues in the Senate would at the moment agree to either of these proposals. Before any such steps were taken, I, for one, would certainly insist upon agreements providing for a two-way exchange of information extending to the future developments of atomic energy—both military and industrial—in all countries party to the agreements; and in addition, some kind of permanent, international authority to administer such agreements—an authority in which we could all have confidence. Under such conditions, Congress might take some such steps—but not at the present moment.

Professor WELCH. I take it, Senator SMITH, that your suggestion would involve some kind of international committee or group that would have complete access to all laboratories and manufacturing plants involved in the harnessing of atomic energy in all countries?

Senator SMITH. Yes; but as I said, Professor Welch, I believe that we are very far from a move of that sort.

Professor WELCH. Professor Carpenter, do you have any questions to ask Professor Smyth before we pass on to the problem of controls?

Professor CARPENTER. Well, two things seem to me to stand out from Professor Smyth's statements: First, no nation can ever again afford to risk even a successful war; and, second, there is no longer any safety in the supremacy of armaments.

Professor WELCH. Are those fair conclusions, Professor Smyth?

Professor SMYTH. I think so. I am not sure just what a "successful" war means, for in the larger sense, no modern war is ever "successful." But one thing is now abundantly clear to those of us who are aware of the meaning of atomic energy: A war between two industrial nations, each well dispersed and each well equipped with atomic bombs, would probably destroy a large part of each nation.

Professor WELCH. And is there, from now on, any safety to be found in the supremacy of armaments?

Professor SMYTH. Certainly not in the sense in which we have been accustomed to think of it. We have heard it said recently that even if an armament race should develop the United States would have a great advantage and could keep ahead of other countries on the production of a stock pile of bombs. But atomic bombs last a long time after they are made. If 5,000 atomic bombs could wipe out all the great cities and industries of this or any other country—provided they had not been dispersed—there would really not be much advantage in having more than 5,000 bombs. In other words, even a small country possessed of this number of bombs and determined on a lightning attack, could wipe out a much larger and richer country overnight. It is, moreover, fair to assume that the bombs of 10 years from now will dwarf the ones used over Hiroshima—and, incidentally, will be produced at a lower cost than the equivalent in ordinary bombs.

Professor WELCH. Well, I think the problem and its implications are plain to all of us. In some way we must set up an international control of the use of atomic energy. Control, then, is what we must seek. Professor Carpenter, have there been any precedents—international or domestic—as to how this new force could be both adequately and appropriately controlled?

Professor CARPENTER. Precedents in this field are singularly scanty—indeed, almost nonexistent. The practice has been for the government which possessed the greater scientific knowledge in the methods of warfare to guard that knowledge with the utmost care.

Professor WELCH. But is there nothing at all to which we can turn for guidance?

Professor CARPENTER. There have been occasions when nations have renounced the use of some method of warfare. England and France in 1854 abandoned privateering. Two years later, the Declaration of Paris contained an article extending the principle to other nations. The use of poison gas was forbidden in The Hague Convention of 1899 and reaffirmed at the Washington Conference of 1922. Poison gas was, as a matter of fact, not used in the recent war, but there is a strong suspicion that its nonuse was due not so much to international agreement as to the fear of retaliation and to the fact that strategic bombing was found to be more profitable.

Professor WELCH. Did the League of Nations develop anything of a regulatory character that might be helpful?

Professor CARPENTER. Almost nothing. The problem of inspecting armaments was once investigated by the League, but nothing came of it. Under the League's administration of reconstruction loans in Austria, Hungary, and Bulgaria, the Council of the League appointed commissioners to reside in each country to supervise the use of money available under the loans. Their work, however, was largely advisory plus certain approval powers in regard to procedures. The refugee settlement question in Greece was placed under an autonomous settlement commission, two of the four members being appointed by the Council of the League. These, however, are very pale examples to support the regulation of the use of atomic energy.

Professor WELCH. It seems, therefore, that historical precedents offer us almost no guidance. Senator SMITH, can you tell us about curent proposals that have been suggested to Congress for the control of atomic energy?

Senator SMITH. Specifically, we have been considering the question of the domestic control of atomic energy which the so-called May-Johnson bill aims to cover. For the purposes of our discussion today, this is not of first importance compared with international control; but I might note in passing that there is grave danger of hampering the free scope of scientific research and discovery if anything approaching rigid governmental controls—either domestic or international—are imposed on this or any other field of scientific effort. The danger of excessive controls of exploratory research was the chief defect of the May-Johnson bill. Senator BALL has, within the past few days, introduced a substitute bill intended to correct these defects, but I have not yet had an opportunity to examine it thoroughly.

Professor WELCH. What have the hearings developed concerning the international control of atomic energy?

Senator SMITH. The important issue, of course, is whether we can have adequate international controls—and if so, whether we can trust those in control—in other words, whether we dare to pool what knowledge we have and what further knowledge we may develop, and if so, with whom? It has been suggested that this new instrument of such unprecedented destruction—so little understood and so different from anything in the whole history of human experience—should be placed under a special authority composed of representative world scientists,

Other groups have suggested that we immediately organize a "world government" to rule us all through some sort of world parliament and world police force. Still others point to the San Francisco Charter and urge that the control of atomic energy be placed in the Security Council of the United Nations Organization.

Professor WELCH. I gather, Senator SMITH, that you think that even if we had the confidence and the courage, we should have to choose among three methods. Either a special authority, as you have said, or a world government, or some development out of the United Nations Organization. Would you care to express your own opinion, Senator, on which of these courses should be followed?

Senator SMITH. I do not think the international problem has been sufficiently developed to permit a complete answer at this time. Before we proceed, however, to a general discussion of these and other possibilities, I want to enter a strong protest against considering any proposal looking toward a world government or a world republic at this time. Any such proposal now will only tend to dilute our confidence in the accomplishments at San Francisco in the setting up of the United Nations Organization. Whatever else may be our policies, we must, in my judgment, build from that. The San Francisco Charter is not perfect. It is certainly not the long-range final destination in world organizations. But what we need to be working for today is progress rather than perfection—milestones on the road to world understanding and peace—even though the final expression of our hopes and efforts is still a long way off.

Professor WELCH. You feel strongly, Senator, that no new international authority should be established to handle this matter?

Senator SMITH. I do. We cannot have two or more world organizations. The one we have is more—far more—than many of us dared to hope for, and nothing must be done to weaken it. But, above all else, we must immediately put into practice the spirit of human understanding and confidence that dominated at San Francisco and brought such amazing success to that Conference.

Professor WELCH. Thank you, Senator, for so frank an expression. Well, gentlemen, in view of the facts you have had presented and the situation you have discussed, what immediate action would you suggest toward the control of atomic energy? Professor Sly, do you care to start?

Professor SLY. Only to propose a rather grim premise but one which seems to me fundamental. It is this: Nations today do not make peace the first objective of their foreign policies. Their first objective is security; their second objective is domestic prosperity; and their third objective is peace. The only way to place peace first is to place security and prosperity in a position where they are no longer issues. A very tall order, indeed, but let us talk only of modest beginnings.

Professor WELCH. Professor Smyth?

Professor SMYTH. If, as Professor Sly has indicated, security is the first aim of modern diplomacy, I can only fall back upon the implications of my previous statements. There remain two choices open to us: Either we shall have to move a large part of our industrial and domestic economy underground and concentrate on developing the maximum destructive power of atomic energy—this may bring us a precarious survival, but it will not bring us peace; or, we shall simply have to stop fighting each other and concentrate on the maximum productive powers of atomic energy. This would promise us both security and peace, and also, I believe, prosperity. There seems to me no middle course.

Professor WELCH. Professor Carpenter, does that make sense to you?

Professor CARPENTER. It does. I suppose the first choice is possible—and I fear only too likely. But I cannot conceive that any people anywhere would voluntarily choose a life of perpetual burrowing to keep a few feet under the latest jet-propelled, high-penetration bomb. As fantastic as it may seem to a disillusioned, suspicious, and war-torn world, I propose to talk about how to stop fighting—and I agree with Professor Smyth, there is no middle course.

Senator SMITH. Mr. Welch—

Professor WELCH. Senator SMITH?

Senator SMITH. Professor Carpenter proposes that we talk about how to stop fighting, but I want to ask if we can get at our problem that way? What is it, really, that prevents us from having peace? I believe that what we know as "national sovereignty" is the chief stumbling block to world peace. If this idea of "national sovereignty" could be relaxed—all over the world, and even just a little—then an important beginning could be made in creating a world without the incitements to make war. As you well know, Professor Carpenter, almost no impression has been made on this idea of "national sovereignty" since it took hold of nations nearly 400 years ago. A new political force must be released for the world by statesmen and political scientists exactly as new physical force has been released by the physicists and other scientists—and it may take quite as long to do so.

Professor WELCH. I am sure we all hope that you are right, Senator—what do you suggest?

Senator SMITH. Simply that the United States take the initiative and invite representatives of the British Empire and Russia to enter into informal discussions looking toward the formation of an international partnership for the development of atomic energy. I say informal discussions because no binding agreements could be expected until the possibilities are thoroughly explored; I say partnership because I am seeking a common enterprise as opposed to ruthless competitive bidding among sovereign nations, which is, to me, the root of so many of our international troubles. If this course were followed, the three nations concerned could plan for their joint approach to the other members of the United Nations Organization, looking toward the establishment of international cooperation in the use of atomic energy, within the framework of the United Nations Charter. The purpose would be to prevent competitive armaments, to safeguard world peace, and to make the peacetime benefits of atomic energy available to all peoples.

Professor WELCH. You suggest an international partnership for development—I note you say nothing of control.

Senator SMITH. That is right. Talk of controls seems to me, at the moment, to be premature. The immediate question is not control. It is the attitude of mind with which we approach the problem. Everyone is talking about the need of a new line of thinking to meet the promise of a new world of atomic power. Well, let's try it—let's forget (so far as this question is concerned) world police forces, economic sanctions, inspectional and reporting services, and all the rest of the panoply of potential force upon which we have depended so long and so vainly, and try something a little different; namely, a partnership arrangement in the development of this great new power. Controls will follow—not, however, as police measures—but rather as a set of commercial bylaws growing naturally and easily from the needs of a common venture.

Professor SLY. I like what you say, Senator, and it makes sense to me; but we will never get anywhere with it until we name names, and the names at the moment are England, Russia, and the United States. Anything more than temporary and superficial differences between England and the United States are to me unthinkable. But as between Russia on the one hand and England and the United States on the other—there is suspicion, distrust, and even fear. To put it bluntly, Russia's attitude toward international cooperation today is very much like the attitude of the United States toward international cooperation in 1920—although Russia has behaved somewhat better; she did, at least, join the United Nations Organization. I would like to add this thought to your proposal: If the United States invites Russia to such a conference as you propose, and either Russia does not come or fails to cooperate, that the same offer of partnership be made to England alone, with the hope that Russia may join at a later date.

Professor WELCH. Does that suggestion meet with your approval, Senator?

Senator SMITH. Well—yes, I think so. As Professor Sly points out, however, it is common knowledge that our relations with Russia are not as smooth as we would like, and I would not wish to see an element of threat enter the negotiations. In other words, I would not say to Russia, "Join with us, or else—."

Professor SLY. I did not mean to present it as a threat—rather let me say as a "stimulus." It looks very much as if the day of the giant power in world politics is here, and just in case things should go wrong again, perhaps in the beginning, we should take our partners where we can find them. England well may be, at present, our only opportunity—certainly our most hopeful one.

Professor WELCH. Do you think, Professor Carpenter, that the adoption of this proposal would tend to weaken the prestige of the United Nations Organization?

Professor CARPENTER. I think not. After all, the United Nations Organization is not yet a going concern, and the Security Council is not even formed. Would it not be likely that as Senator SMITH's international partnership developed and other countries were admitted (as I assume they would be), that the Security Council might become, in a sense, the trustee of the partnership, and serve as an administrator of its affairs.

Professor WELCH. Would you agree to that, Senator?

Senator SMITH. I would hope that some such development would take place. I would hope, further, that with the leading nations working together in this common effort—an effort that I realize would, in the beginning, be extremely limited—that sufficient confidence would be created to extend this type of cooperation into other fields—possibly medicine, agriculture, and the engineering sciences.

Professor WELCH. Professor Sly, does this proposal seem to you to hold any hope?

Professor SLY. Well, at first thought, Professor Welch, it sounds to all of us, I think, a little frail and a little vague, but we shall have to start with something like it. Perhaps the conversations between Mr. Attlee, Mr. King, and Mr. Truman taking place today are steps in this direction. Certainly no major country will submit, at the present moment, to the type of controls that have been so freely discussed. The recent proposals to arm heavily, on the one hand, and to outlaw the atomic bomb as a military weapon, on the other, just do not alone make the slightest sense to me. Nor in my judgment should we scatter such secrets as we have throughout the world without substantial assurance of good faith—and not too much risk. This will take time, and a diplomacy almost as new as the bomb itself. But this is very clear to me: We will either find a common bond in this new atomic force, or in place of security we will find ourselves striving only for survival.

Professor WELCH. Professor Carpenter, you have something to add?

Professor CARPENTER. I would just like to emphasize two things: The first is the urgent need to make the tremendous implications of atomic energy clear to every citizen in America. This, I think, is a new responsi-

bility that our scientific men must assume, for they alone speak with authority and full understanding in the field. The second thing I would like to emphasize is that I would urge the prompt passage of domestic legislation to prevent the internal abuse of this new force and to encourage the freest possible study of it.

Professor WELCH. Gentlemen, I feel that you experts have done our listeners a great service. You have made three proposals:

1. That an informal conference be set up between Great Britain, Russia, and the United States to establish an international partnership among the United Nations designed to develop the peacetime use of atomic energy, and ultimately to prevent its use as an instrument of destruction;

2. You urge the widest possible publicity in the United States and Foreign countries pertaining to the tremendous implications of both the use and the abuse of this energy; and

3. You urge the prompt passage of domestic legislation to assure us internal protection and to encourage the freest possible scientific development.

If the world is not to set out to destroy itself—and any such idea is inconceivable—the world must gradually agree, in good faith, to control for mutual benefit, this incalculable force.

## A Chance for Peace

EXTENSION OF REMARKS
OF

### HON. JOSEPH H. BALL

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. BALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "A Chance for Peace" which I delivered Friday night, November 9, before the Cincinnati Foreign Policy Institute at Cincinnati, Ohio, and which was broadcast over Station WLW.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is just 3 months since the Second World War ended in complete victory over the Axis. Are we already losing the peace? Have we and our allies already begun to drift toward another and many time more destructive war?

Many millions of thoughtful Americans are asking those questions today. They are asking them in thousands of letters pouring into our offices in Washington, and over dinner tables and in meetings from Maine to California.

I have been asking myself those questions and I do not like the answers I reach.

The United Nations Organization we are about to establish, with its veto power and many concessions to national sovereignty, was always weak for the task of preserving world peace. Since the atomic bomb exploded, the Charter appears pitifully inadequate. Leadership in strengthening the United Nations Organization must come one of the three great powers: Russia, Britain, and the United States. Yet there has been no indication of even the desire to move in that direction from the responsible leaders of any one of those three.

Instead, it is becoming more and more apparent that the governments now in power in Britain, Russia, and the United States, are planning to rely for security far more on national strength and regional arrangements than on a world-wide security organization. Far from strengthening our collective security organization, we are already embarking on a secret, nationalistic armaments race in the invention and production of even more destructive weapons with ever greater ranges. This we are doing in the face of historical precedents which indicate that the climax of every such race in the past has been an explosion into war.

Even before the United Nations Organization is established, the real power of the world is being frozen into the old power politics, spheres of influence pattern which, if not broken up in time, will make a mockery of that peace Charter on which the peoples of the world have pinned their hopes. Yes, we protest bitterly against the frank and sometimes brutal way in which Russia chooses to manage affairs in her particular sphere in Eastern Europe, and we condemn the imperialism which occasionally shows through the smoother operations of Britain in her sphere in the Near and Far East. But we have a congenital blind spot when it comes to recognizing the similarity between what Russia and Britain are doing in their spheres and what we are doing or propose to do in our own sphere, the American hemisphere and the Pacific ocean, which takes in a fairly large slice of the whole world.

It is futile and unrealistic, even if more comfortable, to try to blame Russia and Britain for this tragic situation. Our own Government is playing much the same game, albeit somewhat less aggressively. Certainly we are not exerting any vigorous leadership in the opposite direction. At best, as occurred in the London Conference, we oppose unilateral decisions by Russia in Eastern Europe, but so far we haven't proposed any constructive alternative solution to Russia's security problem.

If this drift is to be stopped, and some realistic move made toward preserving world peace, the United States will have to make it. Leadership is thrust upon us, whether we like it or not, not only because much of the world is looking to us for rehabilitation help, but because of our tremendous economic and military power, and above all, because we made the atomic bomb and we used it. If we refuse to accept the responsibility of leadership, then the world will continue to drift toward a third great war.

It is equally futile to blame lack of courageous leadership in Washington for our present depressing outlook. We'd better look nearer home, at what you and I and Neighbor John are doing and thinking. By and large, in this democracy, we get just about the kind of leadership from our public officials that we want and deserve. If we are so confused that we don't know what we want, or too lazy to think things through and decide what we want, then we get no leadership at all and the nation dirfts, as it is drifting today, toward chaos.

And as long as a substantial number of the 135,000,000 of us in American prefer to listen to demagogic appeals to hates, fears, and prejudices rather than appeals to our reason, which may involve some unpleasant decisions, we and the world will continue to drift.

The democratic, peace-loving peoples of the world are facing a critical test in the next few years. It isn't easy to make up the collective mind of 135,000,000 people and develop a strong, vigorous and concrete foreign policy. It can be done only if every one of us is willing to do some tough thinking, and rid ourselves of some of the ridiculous paradoxes and prejudices in which we are bogged down today.

Here are a few of the paradoxes I'm talking about.

We want our Government to take an even stronger position against Russian unilateral decisions in eastern Europe, yet every poll taken shows an overwhelming majority of us determined that the United States hang on to most of the military bases we have used in the Pacific war. What is the difference between Russia wanting absolute control in nations adjoining her, from which an attack was launched on her in 1941, and our wanting absolute control of the bases from which the attack on Pearl Harbor was launched? Apparently we want Russia to place all her faith in the United Nations Organization but we're not willing to place any faith in it.

Often the very same people who demand that we talk tough, in fact dictate, to Russia and Britain, are the very ones who insist that demobilization of our armed forces, which General Marshall says already is going so fast it amounts to disintegration, be still further speeded up. They are usually the ones who bitterly oppose even consideration of peacetime conscription, as a precautionary measure to make sure that our voice raised against aggression will not again be disregarded because we are impotent. Just what are we to do if our allies don't like our dictation?

We are supposed to keep the atomic bomb a closely guarded national secret, on the basis that all nations can trust our intentions but we dare not trust any other nation, or even the United Nations with the secret. We should demand a settlement in Palestine to our liking, but we should not assume any responsibility for the enforcement of that settlement. Similar confused and paradoxical reactions could be multiplied indefinitely.

I've been pretty rough with we, the people. I have done it deliberately because I think we need some harsh talk to wake us out of our lethargy and get the American "let's do something about it" spirit in action. American boys didn't win the war by sticking to relatively safe fox holes. They won by climbing out of the fox holes and slugging it out. We won't win the peace by staying in mental fox holes hoping that something will turn up. It's time to slug it out with the facts and realities, decide where we want to go, and then get going.

It is futile to blame lack of leadership in Washington for our present drifting. Destructive criticism has never accomplished anything constructive. But that does not mean that we, the people, are helpless. We can do something. We can think this international situation through, decide where we think America ought to go, and then demand that our political leadership start moving in that direction. If a strong enough demand of that sort is made, the kind of vigorous leadership we need will develop.

Let me state the realities of the international situation as I see them, and chart the direction in which I believe we should demand that our Government in Washington move.

The facts are not pleasant. Perhaps it is very late to reverse the drift toward a "power politics-spheres of influence" pattern for the world. All history indicates to us that such a pattern inevitably leads to war. But while it may be late, we owe it to future generations to at least try to save the peace.

We and the peoples of the British Commonwealth talk the same language and have much the same political background. When we talk of freedom for the individual, free elections and democracy in international conferences and agreements, we can be reasonably confident that when it comes to the specific application of such principles, we will not be too far apart.

There is no such common understanding between ourselves and the Russians. The London conference made it tragically plain, that despite Moscow, Teheran, Yalta, and Potsdam, we and the Russians do not mean the same thing when we talk about or agree upon "free election" or "interim governments broadly representative of all democratic groups in a country." When Russia speaks of democracy, she doesn't mean the same thing we do. This is a grave problem and

one which must be solved if we are to work effectively with Russia in an international organization to preserve peace. To ignore it, or try to fool ourselves that it does not exist, will hinder rather than help a solution.

We are confident, despite a minority indulging in vociferous anti-Russian jingoism, that the overwhelming majority of our people want desperately to work with Russia and not against her. But it is equally clear that the Russian Government does not share that confidence in our intentions. In view of our resistance to Russian regional security aims, while admitting of no discussion of our own regional security moves, our obvious reluctance to trust Russia with the atomic bomb secret on any basis whatsoever, and the jingoistic anti-Russian talk that is all too prevalent here, Russia's suspicions are easy to understand. Just becoming irritated will not remove those suspicions, but some constructive leadership on our part might do it.

It is becoming increasingly clear that the division of Germany into four different occupation zones has not worked out well, just as the division of Europe into spheres of influence has slowed down economic recovery and undoubtedly will increase suffering and starvation among the people of that unfortunate continent during this winter. The whole mess in Europe cries aloud for a truly international control with the power back of it to make it function.

The solution is not, as Russia proposes, to duplicate Europe's chaos by setting up the same system in Asia. Nor is the answer for the United States to insist on retaining solely in its own hands the decisive power in Japan and Asia. That way we are likely to wind up as thoroughly hated in Asia as Russia will be in eastern Europe if the present situation continues.

We have talked about how modern communication and transportation have made us one world. Most of us would say that we accepted that reality. But the fact is that our Government and Russia's and Britain's Governments are acting as though we still lived in the world of the nineteenth century. We talk about one world, but we do not act as if it is one world.

The civil wars now raging in Indochina and Java show that the urge for freedom of those peoples is not satisfied by the weak and watery promises of the San Francisco Charter. If it is wrong for Russia to impose puppet governments on Bulgaria and Rumania, isn't it equally wrong for us and the British and Dutch and French to impose governments on Java and Indochina which they don't want? Where is there any real difference? What moral justification is there for applying one standard in Europe and another in Asia?

International decisions in Europe cannot be considered separately from those in Asia, Russian isolation and secrecy cannot be discussed apart from the atomic bomb secret, a settlement in Palestine must fit into the whole European and Near East picture, and we cannot insist on a voice in the affairs of Europe and Asia and also demand a strict observance of the Monroe Doctrine in this hemisphere.

We can't have our cake and eat it too. We cannot insist on a free hand in the Americas and the Pacific and expect Europe and Asia to place their trust in the United Nations Organization. It won't work. We cannot play it both ways at once. It would be far better to openly throw overboard collective security and arm to the teeth, than to continue our present double talk which is only fooling ourselves and confusing the rest of the world.

It is possible, that by dominating the world and spending vast sums on military preparations, we could in effect achieve a Pax Americana for a few decades. I am against that, for reasons I will elaborate in a moment. But such a policy would make more sense than our present, do nothing, policy of drift.

Or we could really throw our leadership and strength into making collective security work. We could act vigorously on our belief that this is one world. I think that is the only course that holds any hope for us or the world.

Before examining the steps necessary, if we choose that course, let's take a look at what the atomic bomb, the proximity fuse, the B-29, and the V-1 and V-2 projectiles mean in terms of national defense, possible war, and the prevention of another world war.

It is difficult to believe the destruction of this war unless one actually sees it. Despite news stories and newsreels, I had no real conception of the devastation wrought by our bombing of Germany with old-fashioned TNT until I walked the streets of Cologne and Aachen, and flew in a cub plane over the shattered industrial cities of the Ruhr Valley. Having seen that destruction and desolation myself, I am convinced.

I believe it utterly when General Marshall says that any future aggressor will strike first at the United States, whose great power, mobilized during two precious years, turned the tide and defeated the Axis. Next time we'll be the first, not the last, victim of aggression.

I believe it completely when Dr. Oppenheimer says that in one swift night raid 20 key industrial cities of the United States could be destroyed and 40,000,000 of our people killed with atomic bombs. I believe him when he tells us the scientists so far cannot envisage any effective defense against such an atomic bomb raid.

I believe the many scientists who have told us that the so-called atomic-bomb secret is no secret at all, and that the applied research and engineering discoveries which enabled us to produce it can be duplicated by any industrial nation in from 3 to 10 years, making it certain that another war if it comes will be an atomic war. To talk of outlawing use of the atomic bomb by international agreement strikes me as ridiculous. No aggressor would be deterred by any agreement from using a weapon so powerful.

I know that we have bombing planes with a range of 3,000 miles today, and it is only a question of time until all major nations have them, or their successors with even longer ranges. I believe the scientists who tell us there is no theoretical reason why rocket and other self-propelled projectiles cannot be fired at targets three and five thousand miles distant, and directed to a specific target by remote radio control.

I believe completely the scientists and military strategists who have told me that once the planes in an atomic-bomb raid have left their home bases, nothing could avert terrible destruction, perhaps the complete extinction of our civilization; that the only possible defense against such an attack would be to attack first, striking potential bases for such a raid before they were even completed, let alone the planes launched.

I believe the scientists who tell us that when the problem of industrial use of atomic energy has been solved, and they are confident it can and will be solved, that peaceful and beneficial application will utilize the same finished materials which are put together to make an atomic bomb. I am confident we would not withhold any such beneficial discovery from mankind. But I also believe the scientists who say that once plants to make the finished materials necessary for peaceful utilization are established, converting those plants to the manufacture of atomic bombs would require only 3 to 6 months.

Those are the grim and soul-shaking facts upon which we must build the structure of world peace. Difficult and unpleasant as they are, they are the realities we must face squarely. To close our eyes to them, to continue to drift, is to condemn future generations to death, destruction, and chaos.

There is a further intangible which I believe we must consider. It is my conviction that fear based on ignorance and lack of understanding is the greatest danger of all in the world today. Russia is fearful that we are building a stock pile of atomic bombs which may sometime be used against her. Britain is fearful that the United States will once again make international commitments which when the show-down comes we will not fulfill. And we are afraid of what Russia, behind her Chinese wall of isolation, might do with the atomic bomb if she had the secret. The only antidote to that kind of fear is knowledge and faith. We must know what Russia is doing, she must know what we are doing, and Britain must be sure that we will not repeat the mistakes of the past. And we must have more faith in the peoples of the world, in the collective judgment of mankind, once they know the facts. That faith in our own people is the very foundation stone of our democracy. No lasting structure for peace can be built on a foundation of fear.

In the light of these realities, what will be the consequences if we choose to seek security solely in our own national strength, the alternative toward which we are surely drifting today? Remember, the only practical defense against the atomic bomb is to attack first and wipe out the bases from which we might be attacked before they can operate.

That means that not only must we seize and fortify bases all over the world, but we must be prepared to attack immediately from those bases any nation that shows signs of preparing for aggression. We dare not wait until the aggression is actually launched. To do so is to invite destruction. That is one of our realities. In other words, if we are going to rely solely on our own strength, we must always be the aggressor in the future, because only the aggressor will stand any chance of avoiding destruction of his homeland. That is the only logical solution of the realities we face.

Do you want the United States to deliberately choose that course? Do you want the United States to drift into a position where our only chance of survival demands such a policy? I do not believe there can be any moral justification for such a policy under the ethics of God or man. If there is, then we had no moral right to oppose Hitler and Hirohito. I do not believe the American people will ever, under any conceivable circumstances, support such a policy. I reject it as unmoral and unworkable. Yet I am convinced that we are drifting toward just such an impossible dilemma today.

The other alternative is for the United States to place its faith in and throw its strength into fashioning a collective security organization strong enough and democratic enough to at least stand a chance of preserving peace. I would not junk the United Nations Charter, but build upon it. After all, it does represent a large area of agreement among 51 nations, and a starting point.

I believe the United States should take the lead, along with Britain and Canada, in calling together at the earliest possible date an international conference at which all delegations would be half politicians and half scientists. One of the most hopeful developments in the atomic bomb is that at long last the scientists, who have turned our world topsy-turvy, are becoming interested in politics, which has been following the same rut for a hundred and fifty years. But heaven forbid that we should have just another international conference where delegates wrangle for months over vague generalities. That would accomplish nothing. Such a conference should meet to consider specific changes in the United Nations Charter proposed and published in advance.

It is my conviction that six major changes in that charter are essential if the United Nations Organization is to be strong and democratic enough to give us and our children even a hope of peace. Here are the six:

First. The veto power of any one of the five permanent members of the Security Council must be eliminated, and decisions to take action against a threatened aggression made by a majority vote of six or seven members, with any member nation directly involved in the issue not permitted to vote. Obviously, any aggression with atomic bombs in the future is most likely to start with one of the great powers, which are the only ones likely to have the industrial capacity to produce it. If such an aggressor through the veto power is in a position to stop any quick action, then obviously the organization is useless insofar as preventing an atomic bomb aggression is concerned. That is tough medicine for the United States. Contrary to any impression you may have that the veto power was a concession to Russia, the fact is that we wanted it every bit as much as did Russia.

Second. We must create a true international police force, composed of quotas of various nationals thoroughly mixed and under an international command, in place of the present pledge by individual nations that parts of their national forces will be made available to the Security Council on call. This force should occupy key bases and strong points throughout the world and no individual nation should be permitted to have military bases outside its own territory. I am familiar with the major argument against an international police force, namely, that an armed force without an assured home base of supply is impossible. I think there are two possible solutions. One would be to maintain always on the bases occupied by such force supplies and matériel sufficient to last for 6 months or 1 year of fighting, which would make them independent of supplies for the critical period in a war. A second would be to limit national forces to those necessary for internal policing and repelling of an invasion by ordinary arms, making the international force strong enough so that it could assure its own supply sources. My next proposed change in the charter would also go far toward meeting that objection.

Third. The international force should have the only legal and authorized stock pile of atomic bombs permitted in the world. Whether manufactured in the United States or elsewhere, every atomic bomb in existence should be taken immediately to one of the two or three strongest international bases and there kept. All manufacture of such bombs should be under the strictest supervision of the Security Council.

Fourth. The Charter should provide for the complete interchange of all scientific knowledge, including military applications as well as all others, among all member nations, and for the free inspection by scientists and others acting as agents of the United Nations, of any and all activities in every nation. The details of making sure that such an interchange and inspection is complete and impossible of evasion will have to be worked out by the scientists. The realities of the atomic bomb make such a free interchange and inspection the only feasible way of making sure no individual nation is manufacturing atomic bombs in secret.

Fifth. The Security Council should be authorized and directed, the instant any nation violates the agreement on free interchange of knowledge by closing its borders or refusing complete freedom of inspection, to order the international police force to move in on such nation and discover and destroy any secret preparations for war being made. Of course, the authority would also apply to preparations made openly. The important thing is that the world dare not in the future drift and delay while a would-be aggressor prepares to attack. The only way an effective policing job can be done in the atomic age is to do it before the aggressor can prepare. That is probably the toughest issue of them all to meet. But it seems to me the only logical solution which squares with the facts we have outlined. If the United States alone assumed that responsibility, I do not believe it could be justified on moral grounds. But I believe that for the organized world community to take such action, which is essential to the survival of civilization, is morally justified by the realities of the world.

Sixth, and last. We should rewrite the trusteeship provisions of the Charter and place directly under its administration such trouble spots of the world as Java, Indochina, Korea, Trieste, Palestine, and perhaps even Austria and Bulgaria. At the same time, it might be a good idea to turn over to the United Nations the administration and occupation of Germany and Japan. This change is not perhaps so vital to the control and prevention of atomic war, but I doubt seriously whether the organized world can continue to treat the same basic problems of individual rights and freedom one way in Europe and another way in Asia and make it work.

Those are the conclusions I have reached after a great deal of thought about the hard facts we are up against in the world today. I am not too happy about my conclusions, because I can see many grave difficulties in the way of obtaining world-wide agreement on such proposals or even a substantial part of them. The greatest difficulty, perhaps, might be getting the people of the United States to agree on proposing them. I know, of course, the $64 question that is in all your minds. What about Russia? Would she come out of her isolation and agree to such a program? What could we do if she refused to go along?

There can be only one answer at this time. We cannot know what Russia will accept unless and until we propose something. Even the most jingoistic of our Russian critics seem to give Stalin and his advisers credit for being tough-minded realists. I am inclined to agree. And I believe that with realists, we stand a chance. Perhaps an invitation to Russia's leaders and scientists to observe a demonstration of the atomic bomb dropped in Siberia might help. And as a last resort, there is always the possibility of organizing the rest of the world and leaving Russia in self-imposed isolation.

The United Nations organized as I have proposed would be a superstate. We would have government on the world level, and the United States National Government, like those of all other nations, would in the field of war and preparations for war be inferior to and subject to the United Nations. So what? Are we going to be frightened by mere words into disregarding the realities of the world in which we live?

Which is more precious for us and our children and our grandchildren—complete national sovereignty, or a chance to live in peace? Let us pray God that America has the courage and vision to make the choice in time.

---

## Peacetime Compulsory Military Training

EXTENSION OF REMARKS

OF

### HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered by me at the Central State Teachers College, Stevens Point, Wis., on November 8, 1945, setting forth some of my reasons for opposition to peacetime military conscription.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once again we have the issue of peacetime compulsory military training squarely before the Congress. After considerable vacillation, the President recently recommended the enactment of such legislation.

This endorsement was the signal the militarists were waiting for. We shall shortly witness a gigantic propaganda drive in the public press and over the radio designed to push the legislation through Congress early next year at the latest. Proponents frankly admit that this is their last big chance to fasten peacetime conscription on America. They know all too well that the opinions of returning veterans and the considered judgments of more normal times will do their cause no good. So they choose to strike for their objective before the reaction against the plan becomes too great.

There are some well-meaning people in their ranks who firmly believe that we should have a large training program. There are well-meaning people who confuse mere numbers with true military security. There are others who have suffered irreparable losses in this war and who seize upon this in desperation as insurance against repetition.

The militarists know full well that calm, full, and frank discussion of the facts involved will cause large deflections in the ranks of these people, and so they want to push the program while the aftermath of war still beclouds the issues and facts.

In my brief discussion of this subject today, I want to address myself to some of these issues and to try to shed some light on various arguments advanced.

#### INTERNATIONAL RESPONSIBILITIES

Let me say at the outset that I advocate that we fulfill our international responsibilities. I favor adequate military security for our Nation and the winning of the peace. And no responsible official in the Government or Congress who is either for or against military training is advocating any other course.

I make that statement to clear the atmosphere of debate upon one of the most far-reaching decisions in our history, because some of the supporters of this adjunct of totalitarianism attempt to brand those who oppose it as having no concern for winning the peace or maintaining our national military strength. I shall endeavor to explain later in this discussion why it is my firm conviction that compulsory military training will actually weaken us in a military way, as well as in economic and social respects, while at the same time lulling us into a false sense of security.

#### WAR: CONTEST OF TECHNOLOGY

It was apparent even before this war that the science of war was rapidly becoming a contest of technology. The war proved this and clearly showed that manpower without the latest weapons of war is virtually helpless. High-performance airplanes, radar, and other electronic equipment, guided missiles and rockets, the proximity fuse, and the atomic bomb are the spectacular weapons that immediately come to mind. Other thousands of technical inventions and improvements serve to emphasize further the point as we look back on the war.

It is true that we still required many millions of men to win the war, despite our mighty technical weapons. One reason is that our activities were expanded over the entire world, over much more territory than a previous war had ever been fought. Another reason is that all too often we were not

efficiently organized. But perhaps the primary reason, other than the necessity of occupying territory, is the fact that modern technological warfare requires tremendous numbers of men behind the lines repairing and maintaining equipment. In general, the men behind the lines, the ground crews and maintenance personnel, are more closely associated with the normal activities of industry and the laboratory than they are with the military.

INDUSTRY AND SCHOOLS CAN SUPPLY TECHNICIANS

It is undoubtedly true that our future military strength will require us to make sure that we have available for any emergency a sufficient number of technically trained men who can perform technical war jobs without too much conversion. Apparently some who desire a military-training program for all youth think the Army should do this. This is a rash conclusion. A strong industrial economy is rich with technical personnel who can do the job. Any additional training along this line that needs to be done can best be done within our present technical schools and industrial organization. What we need most is a good corps around which to build; an efficient professional army, well organized, surrounded by proper technical personnel and up-to-date weapons, and loaded with practical plans for rapid expansion if the occasion demands.

The modern criterion for war strength is not manpower, but rather it is technical and industrial power and the requisite raw materials to feed the industrial activity. We are proceeding in the wrong direction when we indiscriminately draft prospective scientists and put them in uniform.

DANGERS OF RASH ACTION

We came dangerously close in the recent war to the point of destroying the source of our own strength. We blindly drafted young scientists and then put them in routine jobs in the Army and Navy, where no use was made of their exceptional talents. So firmly entrenched was the idea of mass service and mass training and mass conscription that a few leaders who did recognize the indispensability of the services of these men had to go to the absurd lengths of blanketing these men into uniform by Presidential order, in order to keep intact the personnel of certain Government laboratories. This is an excellent example of the kind of Frankenstein we can create for ourselves when we make a fetish of universal training, or place our complete confidence in brute numbers.

I cite the previous situation as a case where blind action tended to retard technical progress. It could be worse. And peacetime military training would be precisely the factor that would produce the worse condition, namely, not merely retarding but choking off the ideas for technical progress even before the ideas are born.

It is a well-known fact that most of the startling technical progress of the past war came from outside the armed forces. And many a scientist and engineer will bitterly tell you that his developments and contributions were made in spite of, not with the help of, the services. The military atmosphere simply is not conducive to progress in science. And I am frankly concerned over the numerous reports in the press and elsewhere telling how the services have largely alienated those who did the work behind the scenes and received very little credit therefor when the cloak of secrecy was lifted.

SCIENCE AND MILITARY DO NOT MIX

The plain fact is that science and the military do not mix. If we seek to inculcate the youth of America with what the military proudly calls discipline—then simultaneously we destroy the creative, the inquisitive, and other special aptitudes of our youth which make for technical progress. There would be exceptions, I know, but the general result would be a leveling process, regimenting all to a general pattern.

News correspondents filing stories from Germany nowadays are continually writing about the amazing servility of the German people in accepting and obeying any orders issued, no matter how harsh. They are unanimous in reporting that it is no particular deference that is being shown to the victors, but simply an acceptance of the fact that the Allies are the successor government to a previous government that demanded and instilled this militaristic servility in its people.

If that is what we want in our youth, we will get it with mass compulsory military training. Even if we don't want it, we will get it with peacetime military training.

PEACETIME TRAINING DISTORTS GROWTH

Advocates of military training are always enthusiastic about training young men. They explain that young men don't have set ideas and prejudices against military training and take to it. What better proof can be had that militarism takes advantage of immaturity and distorts normal thought processes? It is no credit to those who teach military discipline that they can break the spirit and imagination of a boy more easily than a man.

Mass peacetime military training is not only a drug to youth, it is also a drug to the members of the professional army who must do the training. Several of the military historians who have studied the mass training programs in Europe in the past two centuries have commented on the problems of assigning top-notch military men to teach civilian armies. They point out that insofar as military training is concerned, mass teaching is not akin to generalship on the field of battle; that a long tour of duty as an instructor, especially if kept in the same surroundings, tends to weaken him as a battle commander; that he becomes imbued with the fixed dogmas that he teaches, if not totally discouraged with the impossible task of making a military man out of every boy. This, of course, is the directly opposite situation to that which prevails when a select few who desire military training are chosen for such training in institutions comparable to our present military and naval academies.

PROFESSIONAL ARMY MAY BE IMPAIRED

I repeat, there is a very real danger that mass training on a grandiose scale can seriously dilute and impair the effectiveness of a professional army that we need for adequate military security.

That brings me directly to several questions I want to pose. What can we expect to teach the trainees? What length of training is necessary? How long will what they learn be of value to our national defense? What are the alternatives? What are the human costs?

First, what can we expect to teach the trainee? It is generally admitted that in peacetime the prospective trainee will be apathetic if not actually unwilling to undergo training. That is definitely strike one on the teacher in any training program. As to a course of training, proponents of the training have widely separate views in what they advocate for the curriculum. We have those who want to use training to promote the health of the Nation. We have those who want the program to be strictly military. We have those who want a broad training. We have those who want a specialized training to suit the individual. We have those who want to train all youth, men and women. We have those who want to select only the best specimens of young manhood.

SOCIAL BENEFITS AND COSTS

My own personal opinion is that some health benefits might be derived from the training. We have many undernourished and underprivileged youth who might benefit physically. But if health be our objective, why not go to the root of the health problem directly? And why must we tie military training to it? If it is necessary and desirable to insure better health for our youth—and few will argue against it—the corrective proposition should stand or fall on its own merits, and not be a subordinate side-issue to military training.

It is frequently argued that universal training will have democratic benefits socially. This is not true. Instead of promoting wholesale social conditions, the segregation of large masses of men for prolonged periods undermines accepted social attitudes and standards of values. The reason is simple: It is an unnatural life and conducive to many warped attitudes and behaviors. This is an important part of the heavy social price we would pay for compulsory military training of all our youth.

ARMY VERSUS TECHNICAL SCHOOLS

Some of the advocates of training try to make it more palatable by suggesting that the curriculum be partially elective and include a variety of subjects among which they cite aerodynamics, electronics, jet propulsion, rocket missiles, and allied subjects. They may be excellent sugar coating and may entice some to swallow the bitter pill that goes with it, but it is sheer folly to imagine that any effective results along these lines could be obtained in any short training course or with any trainee who had a limited background. Subjects like this can be taught much more effectively within the framework of our present educational system, including the technical schools operated in conjunction with certain industrial organizations. During the recent war it was the technical experts brought in from the various schools and industrial organizations who carried the brunt of the training programs for the Services. Why should we try to make a technical college out of the Army when we are better equipped to do general training in our present educational system?

It is a different matter when we come to specialized military applications of highly confidential nature. Many of these devices will be developed and studied behind the closed doors of Government laboratories. But it would be a nonsensical policy to allow every Tom, Dick, and Harry in any civilian training program to have access to equipment of highly classified nature.

TIME RAPIDLY NULLIFIES TRAINING

Let us suppose for a moment that we have trained one class of trainees. How much time was necessary or how much money it cost is for the moment irrelevant. The real question is How long will this training be valuable to the Nation? The answer is found in our experience in the recent war. In many branches of the Army and Navy it was the established policy to train and retrain, or train and refresh at periodic intervals for the reason that technical progress was so rapid it was necessary to do so. This will be equally true in peacetime. Hence, with the diversions of civil life, the ravages of time, and the changes in military tactics, it is not unreasonable to expect that the potential value of the training will be almost zero less than 5 years thereafter. A single weapon can change military tactics overnight, as we have learned in connection with the atomic bomb.

COMPARATIVE FINANCIAL COSTS

What are the costs of a system of military training? In a study on postwar fiscal requirements, the Brookings Institution has estimated the direct costs of training would be a minimum of $1,360 per man per year, based on a trainee wage of $30 per month, and excluding instructional and supervisional costs which would be considered a part of regular Army and Navy costs. Multiply this by 800,000 trainees and you get a bill

for military training that is in excess of $1,000,000,000. Now, contrast this with the total public expenditures for education: Federal, State, local; boys and girls, men and women; full-time day schools, vocational schools, night schools, part-time schools; colleges, universities, libraries. Toward the support of all of these institutions, with about 26,000,000 persons attending school, total support, including various grants and aids, is only about $2,500,000,000. If we are to spend money on training, we might do better to spend more of it on our established educational institutions.

Financial costs to the Government are only one of the costs involved. I have already mentioned other social and human costs. But over and above these there are still other intangible costs that will be very serious. One is the loss that will result from the interruption of education. Educators confirm the statement that too often an interrupted education—for whatever the reason—means the end of education for that person. Too often the student does not return to finish. This is just another social cost we would have to pay.

MILITARISM WOULD STUNT NATION

I feel strongly that the mere existence of the universal philosophy of militarism would stunt our national growth. Ask anyone who has served for any length of time in the military establishments. If he is candid he will confirm the fact that the accepted attitude all along the line is, in vernacular language, "Don't worry about it; don't stick out your neck; keep your own skirts clean; let the next fellow do it!" I don't have to convince you that such an attitude is not conducive to progress.

What are the ingredients of national strength? Everyone will agree it is a combination of manpower, economic resources, and national morale. However, a mere reservoir of any or all of these factors is not enough. The speed and mobility of modern war requires that we be able to translate these factors into offensive striking power and that we maintain a proper balance between peactime uses and probable wartime needs.

On the one extreme, we could devote all our manpower and resources for military purposes. Obviously, unless we intended it for aggression and plunder, this would be a national folly of protecting an empty cupboard; because economic wealth and strength can arise only from creative economic activity. Such a policy could lead only to national financial suicide.

On the other extreme, we could devote no manpower or resources for peacetime military purposes. This would be the cheapest, but a disastrous policy.

MILITARY REQUIREMENTS DEPEND ON WORLD OUTLOOK

As long as international relations remain uncertain we have no alternative but to maintain sufficient military power to cope with eventualities. How much manpower will be necessary to maintain sufficient military power is a decision that must be squarely met on the basis of three factors: The world outlook with respect to international relations; the extent of our foreign policy commitments; and the security of the United States and its interests.

Our forefathers recognized the danger of militarism to the democratic way of life. Ever since the founding of the Republic we have resisted every effort to fasten compulsory military service upon the people except in time of war. This traditional resistance of the citizens of the United States is not based on mere theory nor prejudice. It has been clear through all history down to this very hour that universal compulsory service in peacetime has been the characteristic of governments which have been to a greater or lesser degree totalitarian and despotic. We should not reverse our policy without complete understanding of its far-reaching, devastating effect on fundamental human rights and the political, economic, and social consequences which it will bring about in the years to come.

STRENGTH FROM HOME, SCHOOL, CHURCH

We have always depended upon the family, our educational system, and the church to build the moral and intellectual strength of American youth. A year of universal, compulsory peacetime conscription will snatch every youth away from these three great institutions of American society at the most critical period in their lives. It is no reflection on the military to deny that they cannot provide adequate substitutes for the family, the school, and the church.

In fact, every thinking person knows, if he is honest with himself, that the military, despite any efforts they may make, is an organization radically different from any of those we have relied upon in the past to build for better citizenship and higher moral values.

In the world in which we now live, it was never more important for ourselves and for humanity as a whole that we strengthen and foster the family, the schools, and the churches, as the institutions for the development and attainment of the highest ideals of human conduct. Can anyone seriously argue that a year away from these institutions which have been the source of development of American civilization will weaken their influence upon American youth? And here let me warn you not to be taken in by the window dressing which the advocates of peacetime conscription will set up to make the proposal more attractive. They will talk about giving educational courses; they will shout about the religious opportunities which they will provide. If they could get by with it, they would cook up some military substitute for the influence of the family.

No! A thousand times no! Despite all their efforts the military cannot provide an adequate substitute for the family, the school, and the church, when it comes to developing and improving the moral and intellectual values of our society.

REVERSAL OF NATIONAL POLICY INVOLVED

I think any thoughtful citizen will admit that the burden of proof is upon those who advocate that we reverse our national policy and adopt the abhorrent system of universal compulsory military service. And they have not proved their case. It does not make it so just because men in high places say it is so.

The experience in two world wars should make us pause before we take the first step toward totalitarianism. Twice in my lifetime we have furnished the decisive military force to defeat nations which have relied upon universal military service for vast numbers of trained reserves for their military power.

EXPERIENCE OF FRANCE

In this war one of the first nations to fall was France. She relied upon universal service for her national security. I can recall early in this war that some of those—both military and civilians—who are now loudest in their support of universal service were saying that the French Army was the greatest in the world. They pointed to the huge reserves trained as a result of the French policy of universal compulsory training. We all know now that mere numbers of trained reserves proved to be a false base of security for France.

If someone says that the atom and the V bombs have changed the situation, I ask in turn what evidence is there that these discoveries and others yet to come point to building our military security on masses of men trained for a year? On the contrary, the logic of scientific developments for war point in the opposite direction. They indicate the need for vast, well-organized research, and the maintenance of highly trained and constantly retrained military forces of sufficient size to provide adequate security for America and to fulfill our international responsibilities and obligations.

VOLUNTARY ENLISTMENTS SATISFACTORY

There is no evidence to prove that we cannot have such military forces as we require on a voluntary basis. On the contrary, the results now being obtained in the recently launched voluntary recruiting program indicate that it will be a success. Just before I left Washington, enlistments were being made at the rate of 2,500 per day and the drive is just beginning to gain momentum. This rate will produce 75,000 per month which now exceeds the quotas being inducted under the Selective Service Act. This record is being made at a time when we still have to maintain large occupational forces in both Europe and Asia.

To make the voluntary system work over a period of years we will have to reassess the compensation offered and the conditions of service. We will have to provide more opportunities for promotion, in-service training for skills and professions, as well as additional retirement benefits, but I am convinced the job can be done. Others may disagree but before we break our national life-long tradition and take the consequences in social, educational, and moral retrogression, let us make the effort.

Let no man say we do not have time to try the voluntary plan. We are getting all the men the military now require by voluntary enlistments and the wartime conscription act. For the immediate future, we have millions of men who have had the best training the military can now provide. In case of an emergency in the immediate future, they will be available.

NO NEED FOR HASTY DECISION

There is no need for a hasty decision to fasten peacetime conscription on American youth forever. It is the proponents of this alien system who are in a hurry. They have everything to gain and nothing to lose if they can stampede the people and the Congress into making this initial move toward totalitarianism.

No, the evidence is clear that we do not have to take this decision on the basis of any immediate situation.

If it is argued that peacetime conscription is required for the more distant future, I ask who is it we are preparing to fight? Certainly no informed person can contend it is one or all of the enemies we have just defeated. They have been crushed, their ability to wage war destroyed or in the process of destruction. They will not be able to wage war in the foreseeable future, as General MacArthur has said, and every competent military authority I know agrees with him.

Then, is it one or more of our allies we are preparing against? If the proponents of conscription in peacetime answer "yes", then I say let us propose to our allies the universal abolition of peacetime conscription before we launch on another destructive, mad rush among our allies for rearmament and peacetime conscription.

The mothers and fathers, the educators, the clergy, the citizens, and the youth of America are entitled to frank answers to these momentous questions before we sentence our youth to involuntary servitude even for 1 year.

Let us not import this alien philosophy and stunt our growth as a Nation with militarism. Let us maintain adequate military security by voluntary methods and free the people of this great Nation to devote their energies toward building a better America, a better world, and winning the peace.

## Science and the Draft

EXTENSION OF REMARKS
OF
**HON. GORDON L. McDONOUGH**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. McDONOUGH. Mr. Speaker, when I introduced H. R. 2827 in March providing for the deferment of scientifically trained men from the armed services, in the same way that Russia, France, England, and Canada have done, little or no notice was taken of it. Since we have revealed the atomic bomb everybody has become scientific minded. We hear from all quarters that we must protect our scientists, except from the Military Affairs Committee who have had the bill under consideration since it was introduced.

Here is an editorial from the New York Times calling attention to the need of protecting our scientists:

SCIENCE AND THE DRAFT

For about 3 years scientists, engineers, and educators have been protesting against the dragnet policy of Selective Service, a policy which, though it did consider workers essential in war industry, made no distinction between research and truck driving. Particularly strong was the joint protest which was uttered a few months ago by the American Council on Education and the National Research Council and which predicted that because of Selective Service industrial progress would be retarded 20 years. Secretary of War Robert P. Patterson has now made a proposal which recognizes "the desirability of granting deferments to young men who had their scientific education interrupted in order to engage in war research activities and who now wish to complete or further their education in scientific fields."

Good as this is, it is not good enough. The young men who will now be permitted to continue their studies must have had at least 2 years of service in some scientific or engineering war activity. What of the many young engineers, chemists and physicists who are still wearing a private's uniform? And what of others who were deferred for occupational reasons and who wish to return to teaching, research, and production? And what of the thousands who will be inducted for police duty for at least 2 years in occupied countries? All these technically trained men ought to be returned to college or to industry if the tempo of technological progress is to be maintained.

Great Britain and Soviet Russia drained the last necessary man to fight, yet both countries wisely recognized that the training of scientists and engineers must not be interrupted because of war. The statistics speak for themselves of the pass to which we have been reduced. In 1940 about 110,000 students were enrolled in engineering courses alone; now the number is under 40,000. And this at a time when, in the reconversion of industry, we need all the technically trained men that we can muster. The policy of the Selective Service never had sufficient justification. It is time to revise it thoroughly.

We will probably realize the error of not adopting this kind of legislation too late when we wake to find that other nations, more alert than we have been, have surpassed us in scientific developments, even while we hold the secret to the greatest scientific discovery of the age, atomic energy.

INDUSTRY FEARS DRAFT WILL RETARD PROGRESS

The aircraft industry has warned Congress that the continued drafting by Selective Service of young, qualified aeronautical engineers was seriously interfering with the Nation's research and development program and hampering reconversion.

The statement was made by R. E. Gillmor, president of the Sperry Gyroscope Co., and a member of the board of governors of the Aircraft Industries Association, in presenting a comprehensive program for maintaining national leadership in research and development, to the War Mobilization Subcommittee of the Senate Military Affairs Committee.

POSITION IN DANGER

"The Nation's position of aeronautical leadership cannot be maintained for long," Gillmor said, "if the aircraft industry continues to lose its engineering personnel at the present rate."

He cited one aircraft company which lost five engineering specialists during October alone, and has 25 others subject to induction at a time when it is working on more secret projects for the Army and Navy than at any time during the war emergency. One other company has 49 engineers now subject to induction, another has 23, and still another, 7.

REPLACEMENTS UNAVAILABLE

"We must remember that no college-trained replacements for these specialists are available," Gillmor pointed out.

The industry statement cited reports that Britain and Russia were embarking on greatly expanded aeronautical-research programs and contrasted these trends with recent drastic reductions in appropriations for Army and Navy aeronautical research and experimental research work. Requests by the Army and Air Forces have been reduced from $245,000,000 to $115,000,000, while the Navy's requests were cut from $148,000,000 to $61,000,000, the statement said.

## Management Opposes Ball-Burton-Hatch Act

EXTENSION OF REMARKS
OF
**HON. HUGH DE LACY**
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. DE LACY. Mr. Speaker, because I believe it is highly important to the entire question of antilabor legislation now pending before this House, I desire to call attention to a poll conducted by Modern Industry, one of the largest and most authoritative business magazines in this Nation, on the question, Should industry support the Ball-Burton-Hatch Federal Labor Relations Act?

The overwhelming majority of the readers of this magazine—from a total of 50,000 readers among management men in 31,500 plants in America voted a resounding "No."

While the Ball-Burton-Hatch Act is not now before us for consideration, this vote has a significance beyond the terms of that bill. I firmly believe that through such measures as the Smith bill (H. R. 3937), as amended by the gentleman from Illinois [Mr. ARENDS] in the Military Affairs Committee, and as reported to the House, and the Hobbs bill (H. R. 32) we are proposing to enact piecemeal the most repressive provisions of the Ball-Burton-Hatch bill.

Therefore, I desire to include with these remarks a letter which I received from the publisher of Modern Industry, setting forth the results of their poll. It is particularly important since it shows that management in every section of the Nation disagrees with the principles of repressive labor legislation.

The letter follows:

MODERN INDUSTRY,
*New York, N. Y., November 9, 1945.*

The Honorable HUGH DE LACY,
*United States House of Representatives, Washington, D. C.*

DEAR SIR: Should industry support the new (Ball-Burton-Hatch) Federal Labor Relations Act?

Modern Industry's, Debate in Print, a regular feature of this industrial magazine with more than 50,000 readers among management men in 31,500 plants, covered the pros and cons of this timely question in the September 15 issue.

The readers of Modern Industry, given an opportunity to have their say on this question by means of a post-card ballot, voted as follows:

| | *Percent* |
|---|---|
| No | 57.9 |
| Yes | 42.1 |

Senator JOSEPH H. BALL, of Minnesota, one of the sponsors of this bill, wrote in favor of it. His opponent was Arthur T. Jacobs, labor economist for the National Foremen's Institute, Inc.

Breaking down the total vote by regions, opinion across the Nation lines up in this way:

| | Yes (*Percent*) | No (*Percent*) |
|---|---|---|
| New England | 38.8 | 61.2 |
| Mid-Atlantic | 37.9 | 62.1 |
| North Central | 45.8 | 54.2 |
| South | 41.6 | 58.4 |
| West | 44.8 | 55.2 |
| Pacific Coast | 41.5 | 58.5 |

If you'd like to receive tear sheets of this debate, please let us know. And we shall also welcome your comments on this issue.

Cordially yours,
ELDRIDGE HAYNES,
*Publisher.*

## Leadership and American Business

EXTENSION OF REMARKS
OF
**HON. JAMES H. MORRISON**
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. MORRISON. Mr. Speaker, leadership today is the outstanding problem in our domestic and foreign endeavors. Congress, business, and labor cannot avoid these responsibilities. We are today searching for practical ideas to meet the present crisis. Our great President, Harry S. Truman, has asked for the cooperation of all.

We, the lawmakers, must analyze every issue and reach for a constructive conclusion and solution.

Our great industries must register their beliefs and policies as labor registers theirs. In my State of Louisiana successful employment is similar to that of

every other State—mutual understanding and cooperation of both business and labor.

It is almost universally agreed that free enterprise made our Nation great—we should continue to make it great and strive to make it even greater.

The following address should be read by every American. It is a direct, forceful, and masterful approach of these problems by one of America's greatest industrialists—the Honorable R. W. Gallagher, chairman of the board of directors of the Standard Oil Co. of New Jersey.

The following is Mr. Gallagher's address:

Our Nation has just ended a major war victoriously. A great challenge has been met. A task has been completed—the task of beating down a serious threat to our way of living. But all of us are aware, I am sure, that the job was not a final one. Conclusion of the war does not mean the end of problems. On the contrary, there are signs aplenty that the problems of peace are no less vast and no less urgent than those of war. Scores of questions, affecting the whole future of our country, must be answered. Many of them must be answered by American businessmen.

Challenges and problems are not strange to us. American business has successfully and constructively met them in the past. But in that past, problems were mainly those of production—of organizing the great resources of this country to meet people's material needs. Businessmen did a remarkable job in that field.

Today, of course, there are still problems of physical production. But by and large we can see ways to supply the goods that people need to live full and healthful lives. American business understands and practices the technique of large-scale production.

Now, however, we face problems that are more difficult than those of material output. They are more difficult because they are less tangible. These are the problems of distribution, of government, of security, of human relationships.

When the chief need of the American people was for material goods, certain individuals discovered means for meeting those needs, and they became the great businessmen of the country. Because they found ways to solve the problems of their day, they exercised leadership in their society. That leadership carried America far toward the goal of individual freedom and happiness.

If American businessmen are to continue to lead they must bring to the problems of today no less imagination, no less energy, no less ability than they have applied to the problems of production.

Essentials of leadership are awareness of the deep aspirations of people and ability to provide constructive suggestions as to how those aspirations may be realized. Leadership will not be granted to those who are content simply to point out the difficulties and flaws in the proposals of others. If today's managers of private enterprise are to justify their positions, they must conceive their duties in broader terms than simply the production of goods. They must have a sense of public responsibility; must see their function in society from a modern viewpoint, and must assume active roles.

It is not enough merely to adapt ourselves to changed conditions. We ourselves must help change conditions; we ourselves must find and show the way.

I do not want to convey any impression that I believe the responsibility is ours alone. What I am saying is that unless we bear our share of the load, the initiative will pass to others by default. Neither am I suggesting that today's complex economic problems do not at times require the help of government in their solution. But I am warning that when management, or labor, or local government, or any other group turn to Federal aid to solve problems they ought to be capable of solving themselves, they should realize that they generally will have to give something in return. If one asks, for example, that the police powers of the State be used for his benefit, he does not get the advantages of that power for nothing. He has to pay, and often pay double. He may, in fact, be endangering the very freedom which is one of the basic aspirations of all our people.

This is not because men in Government are hostile to the liberties of the people. The question is simply how far in such cases the power of government will be used to regulate, and to what degree such regulation may become permanent. It seems certain to me that the regulatory powers of government will be exercised to the extent that the private leaders of our country fail to accept and meet the responsibilities that society has entrusted to them. So-called government interference often is not really interference at all, but is induced by the inadequacy of those who normally are depended on to meet the need. If America has proper leadership, few situations will arise which will call for intervention by government in the private affairs of its citizens.

In the Declaration of Independence there is a phrase which states that governments derive "their just powers from the consent of the governed." Let me paraphrase that and say that, in a free society, leadership derives from the willingness of people to follow.

People will follow someone who tries to find answers to their deeply felt needs. They will desert leadership which ignores their needs or which is limited to criticizing proposed solutions without putting forward any alternatives.

As evidence of this we have only to consider the support that can be obtained for what are often called "crackpot ideas" when those ideas seem to offer solutions to problems which face large numbers of people. The Townsend plan is a good example. It won thousands of followers because it offered a scheme, however impossible of practical operation, for meeting the desire of people for economic security. It lost its force following the adoption of more practical measures which attained the same objective.

In this connection I might observe that "crackpot ideas" are symptoms which may deserve more respectful consideration than we usually give them. Their very existence may call attention to a problem. The more such schemes there are the more important the problem is likely to be. In the field of scientific invention, for example, the greatest number of novel ideas usually springs forth where there is most pressing demand for a new way to do things. Before Cyrus McCormick demonstrated his reaper in 1831 there were records of 1 German, 2 French, 22 American, and 33 English attempts to make a reaping machine. Many of those devices were no doubt completely impractical—"crackpot ideas"—and when McCormick found the right answer to the problem of easing the toil of gathering grain the earlier machines were discarded. But at least the inventors were trying—and they were making progress for all of us by that most basic device of the researcher—trial and error.

In general the great mass of a people have a pretty accurate sense of the important needs of their time. What are some of the needs which most concern the American public today?

Obviously, they want a plentiful supply of low-cost products and services. But they want more than that.

They want protection against threats to their living standards through sickness, accident, unemployment, and old age. They want the standards of their families protected against the death of the chief earner.

They want industry and labor to work together. They want small business and new business given every chance and encouragement.

They want leisure and the means to enjoy it healthfully. They want to raise their own living standards and to give their children opportunity for still higher ones. They want dignity, self-respect, and jobs in which they get credit for what they do.

These things must be provided not just here and there but on a large scale. I think the solutions to these problems can come largely from American businessmen.

In the first place, businessmen already occupy positions of leadership—positions achieved through the ways in which they met the demands of society when our problems were principally those of production. In attaining those positions, businessmen have accumulated valuable experience. They are accustomed to solving problems. They are used to getting things done. What is more, they have the will to find answers.

Look around you today. Already we can see that those who are assuming leadership in business recognize the important problems of our time and are moving toward their solution. Let me quote from a recent article by Russell Porter, of the New York Times, reporting his impression of American businessmen:

"A fundamental change has come over the American businessman since 1929. Elmer Gantry has gone and so has the stuffed shirt with a dollar sign on front. * * * The typical businessman and industrialist whom one meets when traveling around the country is a keen specialist in management, production, engineering, or one or other technical professions. * * * He wants sustained high levels of production and employment at good productive wages, in an atmosphere of industrial peace at home and world peace abroad * * * he takes a great deal of pride in the fact that the American system outproduced all the totalitarian regimes in the world combined during the war and considers it a matter of prestige as well as survival to do the same in time of peace. He is very conscious of the cause-and-effect relationship between depression, war and revolution and he is out to prove that the United States, with its free enterprise system, regulated of course for the public good and in the national interest, but not controlled by Government bureaucrats and secret police, can and will avoid the debacle suffered in other countries where the inefficiency of diluted brands of democracy has paved the way to power for reactionary elements; right in some cases, left in others."

The experience of the American businessman is a very valuable social asset. It is this experience which enables him to see the dangers in those "crackpot ideas" I have mentioned. It is important that such dangers be pointed out. But we should not stop with criticism. Showing up fallacies is a very important job, but when business stops there, it risks appearing negative or obstructive. Let us never be so intent on pointing out the 10 good reasons why something won't work that we give the impression we don't want it to work.

In criticizing, let us always remember that many innovations which at first appeared impractical later turned out to be of great benefit. Consider, for example, that in 1832 a Boston newspaper, discussing a proposal to shorten the customary working day from 14 to 10 hours, commented as follows:

"It strikes the very nerve of industry and good morals by dictating the hours of labor, abrogating the good old rules of our fathers and pointing out the most direct course to poverty; for to be idle several of the most useful hours of the morning and evening will surely lead to intemperance and ruin."

In addition to offering our sound appraisal of programs proposed by others, let us present our own plans for change of American life where there is greatest demand for progress.

If we are to exercise leadership, we cannot sit on the sidelines. We must examine trends and ideas, many of which are related only indirectly to our immediate business concerns. We should furnish ourselves with facts, not prejudices—form accurate opinions, make plans and expound them.

When we say that we have experience, we are saying that we have experimented, that we have tested and tried. The words "experience" and "experiment" come from the same root, meaning "to test", "to try."

American business won its position of leadership by its willingness to push out into uncharted territory, to measure with skilled judgment the risks connected with such enterprise, and to move ahead with daring and vigor.

Now, as never before, there are new trails to be blazed through the social-economic territories of the modern world—pathways to new and better forms of human achievement.

Let us lead the way!

I sincerely trust and hope that this company will always follow the ideals and principles as laid down by Mr. Gallagher.

## The Battle for Peace

EXTENSION OF REMARKS
OF
**HON. FRANCIS J. MYERS**
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the topic, The Battle for Peace, delivered by me over the radio on the program Congress Speaks, on November 13, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am grateful to the Columbia Broadcasting Co. for this opportunity to address you on the program Congress Speaks.

I want to talk to you tonight about the future—our future and the future of our children. If we are to have a future as a Nation, even a future as individuals, if we are to keep the human race and the creatures of the earth alive much longer, there are some things to be done. We haven't much time in which to do them.

Twenty-seven years ago, America was delirious with joy. The war to end wars had been fought and won. The world had been saved for democracy. The boys were coming home. A defeated Germany, we were told, lay prostrate and gasping. There were plans then, fine, courageous, and practical plans, to make into reality the dream of enduring peace.

Those of you who learned about them only from history books no less than those who lived them as teen-agers or as adults know what happened in the days that followed. The plans were sabotaged and wrecked; the dream became a nightmare.

As soon as the frightful job of war was over in 1918, America washed its hands of world affairs and went in for having fun and making money. America was rich and powerful, who would dare bother us? Behind our false security and with our false prosperity, we had a crazy wonderful time. It was nice while it lasted, but it gave us an awful hangover.

Well, the shooting is over once again. We are at the threshold of another era. Other dreams. Where do we go from here?

There are some things in our favor this time which weren't there after 1918. With the end of the shooting that time, we quit. We'd done our part, we thought. Now it was up to those foreigners abroad to get together.

This time, however, I think every American realizes the war is not over, that only the worst phase of it, the horror phase, is over.

We know that we face now yet another battle, a bloodless but extraordinarily difficult battle, the battle for peace. We've got some good, but far from perfect, weapons to help us, such as the United Nations Organization and its agencies, UNRRA, and the Council of Foreign Ministers. We must make them work. We must strive with all our might against fear and want and intolerance here at home as well as overseas.

During the shooting war, during the battles for military victory, we never dared relax, we stifled our doubts, we lived and thought with the spur of our emotions. Victory was our only business. It was comparatively easy to formulate our national policies in those days. The test was simple: Would it shorten or prolong the war? Little else mattered.

The kind of battle we're fighting now requires something altogether different. This time, in the battle for peace, we must painstakingly think our way to victory. We must use our reason all the time and use it sometimes till our heads ache with the effort. We can't do our best thinking if we are suffering from the jitters. And, ladies and gentlemen, America has the jitters—bad.

We in America have decided we want no more wars. At this moment the whole world wants peace.

One problem is to make the desire permanent in nations where it might be temporary. We're working on that now. These nations are Germany and Japan. I trust we will never give up our control over them until their present peacefulness of expediency becomes one of conviction. That will take time and it will take occupation forces. Already many voices are urging us to pull up stakes in Europe and Asia.

With regard to the members of the United Nations, there is no need to convince one another that war is horrible and should be outlawed.

The other problem is to prove that war can be outlawed and that each nation is ready to do its part.

I don't have to dwell on how necessary it is for us to achieve that aim. Everybody knows by now what a couple of atoms can do when induced to explode.

So far there are no insurmountable obstacles in our path to peace. The obstacles which do stand in the way in the battle for peace are mental hazards, road blocks of the mind, buzzbombs of the intellect. We can have peace only if we think in terms of peace.

Well, mark you, ladies and gentlemen, the way a lot of people are thinking these days, World War III is inevitable.

They are thinking war.

It is not that they want war. It is that they expect war. They are speculating on who the future enemy will be. There is frenzied talk of preparations for war.

War with whom?

Let's look at it in another way. Suppose in some powerful foreign land, which had many powerful weapons of destruction, many people were daily speculating about the inevitability of war with America.

As lovers of peace, we wouldn't be pleased to hear about it. But because the talk was there to be heard, to be freely expressed and duly reported in their newspapers and in turn relayed to us by correspondents for our newspapers, we couldn't very well ignore the implications. There would be only one result.

We, peace-loving America, would get ready to fight. With Pearl Harbor in mind, we would be on the alert constantly for the signal to attack. If the situation persisted long enough it would become so intolerable that it is conceivable we, peace-loving America, might strike the first blow. In atomic warfare, the attack is the only defense we have yet discovered.

Were that to happen, peace-loving America would find itself literally talked—yes talked—into war.

Does anyone want that to happen?

Yet consider for a moment what is happening in America these days. Daily, in the Congress, in the newspapers, over the radio, in our meetings, on street corners, there are new expressions of fear of possible aggression from a particular source.

Sometimes the source is named, sometimes implied. Always, however, it is Russia.

The Russians don't want to fight us any more than we want to fight them. But the constant needling, the daily accusations, the scare stories, the expressions of fear and suspicions can have, if they are not already having, a tragic and disastrous effect.

No marriage of man and wife could stand up under such a steady barrage of recriminations and blame. How, then, could peoples of divergent interests, different languages, conflicting immediate goals and deep-seated and historic suspicions remain friendly for long under such conditions?

The answer is, They could not.

But the world's future requires that they must.

Instead of working in that direction, however, much of the effort in many quarters in many countries, including our own country, seems to be devoted to magnifying the differences, ballooning the fears, fanning the fires of suspicion—building little things into monsters of importance and nurturing them.

Of course we've got differences with Russia. We don't like some of the policies they espouse for eastern Europe; they don't seem to like those we propose instead. We don't like their political philosophy or their brand of democracy. We don't like their attacks upon religion. We don't like communism. In Japan we are far apart on a program for control and reconstruction.

As peoples we are comparative strangers. I feel if the Russian people were less a mystery to us the differences might be fewer. We must not allow our differences to permit the world to drift into hostile camps and armed blocs. If it does war will be inevitable in another generation.

We must seek to find some common footings, to become better acquainted as peoples. All that will help. But we have to work at it.

We have differences with Great Britain, with France, with other nations. Does that mean we must prepare to fight them, too? Of course it doesn't.

Ladies and gentlemen, we must get over the jitters and do it soon.

Our mediums of information in this country are doing a generally thorough job. We are getting all the facts which can be gotten, and that is all to the good. But minor facts and major facts frequently are not clearly defined as such.

As a result, every instance of thoughtlessness, every omission, every misunderstanding, every disagreement, becomes a new crisis.

The result in America has been a disheartening retreat into isolationism. We are beginning to think too much and too often in terms of power, of our great military might, of the secret of atomic energy.

Haven't we learned power politics won't work? Haven't we found isolationism a prelude to disaster? The more we retreat into nationalism the more we inspire counterpart nationalisms elsewhere. They can't exist side by side for long without exploding.

I do not propose appeasement, surrender of principle, timidity, and national helplessness in our diplomatic dealings. But at the same time, I want to warn against complete dependence on the atomic bomb.

We can't hide behind it for long, any more than we were able to hide behind the oceans of the Atlantic and the Pacific. We can't keep the atomic secret for long and unless we win the battle for peace, the next war will be a push-button war. Cities, major cities, will be utterly destroyed in a matter of minutes.

Both policies are disastrous—appeasement or arrogance.

There is a middle ground.

Our Government is, I am convinced, trying to find that middle ground and follow it. There have been failures. Conferences have ended in stalemate. Well, then, we must have more conferences. Personalities have clashed. They must learn to get along on common ground. Russian statesmen have been unbending at times, and arrogant. The spirit of compromise has oftimes been missing from their agenda.

But agreements have been reached before on issues of transcendent importance and difficulty by the heads of states at the topmost level. They must continue to talk these problems out. The peoples of the world have a right to demand it.

In the meantime, of course, America must remain strong. Of course, we must retain a vigorous armed force. The aggressor nations we have just defeated recognize now, and unfortunately will recognize for many years to come only one restraint, and that is the restraint of force. We must help provide that force.

We must have a career army of men, devoted to democracy, who will represent us for years to come as the guardians of our victory over Germany and Japan.

Those same career peace-keepers must also be available to the forces of decency of the United Nations for the suppression anywhere in the world, of aggressive war.

And at home, we must keep our eyes peeled for the thoughtless, the selfish peace criminal who may rise in our own midst, who would beckon us again down the road to isolationism—and to the world's end.

As a great President whose life was sacrificed in this victory told us only a few short years ago:

"This generation of Americans has a rendezvous with destiny."

My fellow Americans, we have made the commitment at a thousand places all over the world—at Normandy—at Okinawa—at San Francisco—yes; we have made the commitment, and with God's help we must keep the date. We must win the final battle—the battle for peace.

## Statement by Dr. H. C. Urey on May-Johnson Bill

EXTENSION OF REMARKS
OF
**HON. GORDON L. McDONOUGH**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. McDONOUGH. Mr. Speaker, Dr. H. C. Urey, of Columbia University, member of the Uranium Section of the Natural Research Defense Committee, a recognized expert on atomic energy who played an important part in the development and production of the atomic bomb, met recently with a group of Congressmen to discuss pending legislation on atomic energy. At this meeting Dr. Urey made the following remarks:

As Dr. Szilard has pointed out to you, there are perhaps a variety of reasons why we should wish to develop the consciousness of atomic energy in this Nation. It may be we will need many bombs. We hope not, but perhaps that is possible. In the second place, we may wish to develop to the greatest extent the peacetime use of atomic energy. What I wish to say this afternoon deals with the possibility of getting an effective scientific organization in the United States for whatever purpose may be necessary in the future.

The remarks that you will hear expressed by the various scientists on this subject are conditioned by the fact that we have worked for a number of years under the Manhattan Engineering District of the United States Army Engineer Corps. The May-Johnson bill reads to many of us just like a continuation of the Manhattan District. We can find many analogies between the organization set-up in these bills and what did occur in the last few years under the Manhattan District Division of the Army. Now, the over-all problem of atomic energy is very interesting. It was really very exciting to work on the project that produced atomic bombs. There is much work in the future to be done that is also very interesting to a certain number of scientists, but by and large a great fraction of the work that we did on atomic bombs and will have to do in the future is scientific drudgery. I emphasize that because I think it is necessary, in drafting legislation, to realize that fact and not feel that it may be possible to get scientists and engineers working on this problem regardless of handicaps that may be set up. Take for example the problem of the production of atomic bombs. Oppenheimer, Fermi, Teller, Smythe, and Allison are all leaving this project and going to universities, and regardless of legislation will still leave and go.

Scientists are not generally interested in producing destructive weapons. Their work and interest lies on the side of positive results to their labors. Now the continued manufacture of atomic bombs along lines they are made at the present time is possible, but any new development on bombs will be difficult to secure. I believe that there is only one way that we can get a concentrated effort on the new development of atomic bombs, and that is for the United States to be approaching a state of war, in which case these scientists of the country will rally to the defense of this country as in the past. But if it appears that we are entering a period of peace, then the scientists will want to direct their efforts to that end. It takes top-flight scientists to make new developments for atomic bombs. The one thing that will be done is to develop fundamental science that underlies any such military preparation, providing the conditions are not made unfavorable.

Now the problem of peacetime development—a certain fraction of the work again is quite interesting, but a large fraction of it is no more interesting than the petroleum industry, or railroad, or making automobiles, or a large number of jobs of that kind. If we continue to put high barbed-wire fences around laboratories where men work and security regulations that go with such high barbed-wire fences, most of the scientists—the better ones—are going to find it desirable to accept positions with Standard Oil of New Jersey, or du Pont, or something else. It's just the idea that one type of employment looks more interesting than another. At the same time let us recognize that our large industrial companies are not greatly interested in this problem. They do not see anything to sell. You can sell plutonium to the United States Government, and that is all, and they do not know at what price the United States Government will buy plutonium if they make it. The problem of getting peacetime power is a very difficult one, indeed. I am not nearly so afraid of monopoly, as many other people are. My greatest fear is that there won't be much worth monopolizing by anybody. To get power out of uranium means that we must be able to utilize the heat that is generated. The problem of getting useful energy out of burning coal or getting it out of uranium fission results in much the same reaction and the same magnitude of problem. So in carrying forward such a large peacetime problem as the getting of energy out of uranium, it is necessary to have the help of our large industrial companies that have the requisite engineering experience to carry on such problems, and it does not really exist anywhere else.

I wish to mention with these preliminary remarks, a few things in the May-Johnson bill. The security threats—and I don't care much whether it is thousands or millions of dollars, the effect will be precisely the same. Why should one work under the possibility of disgrace, when all one has to do is to go somewhere else and do work of precisely the same kind, on another subject. There are only a few scientific people attracted to this because of the problem per se. Most of the people that must work on this will find their little corner of the job no more interesting than another job, and they don't see why they should spend their lives under threat of imprisonment and fine.

Now we have to remember that in trying to recruit men to work on the problem in peacetime, the endless rules and regulations of the Manhattan district frustrates scientific men more than anyone could possibly understand, unless you actually worked in the organization for some time. The prohibition that I cannot talk to my scientific colleagues on the subject of our work is trying. The danger of explosion in the diffusion plant, while I was directing research on the problem, that was one piece of information that was forbidden to me. The men were not allowed to talk to me about details of the possibility of explosion in that diffusion plant. My colleagues will give you endless examples of the same sort of thing. We are afraid the May-Johnson bill would make inevitable the continuance of these security regulations together with all its frustrations.

I mentioned the other night that scientists are like a great fleet of ships of many different sizes, and they should sail on the infinite sea of the unknown. The effect of these compartmental regulations is to scatter these ships in small inland lakes with no possibility of the exchange of information in a large way. Now it is all right to complain about these things, but it is not very constructive.

I wish to make a few suggestions in regard to what can be done in legislation to make the conditions what they should be in order to get the maximum effort on this problem. First, I do not believe there should be any security regulations whatever except in connection with the immediate military application. The structure of the bomb itself, details of the large production plants—these are things which are usually kept secret in the manufacture of munitions. All scientific information should have no curb on it whatever. Remember that is the way we worked before the war and it brought forward a great deal of trained scientists and a great deal of scientific information which could be applied to war problems in an emergency. Remember also that the scientists on the atomic bomb project brought this problem to the United States Government and imposed a secrecy on themselves before the Government did because they felt it

would be important for the war that was coming, and that it would be important for the defense of the United States, and their patriotism is a greater protection to the Government than any rules or regulations that can possibly be made. In order to bring individuals and industry into this problem there should be a minimum of regulation and control. I have a firm faith in the system of free enterprise.

Now, some of the things that need to be done. In the first place, there is the matter of hazards. Pilot plants and large-scale establishments looking toward production of bombs or production of power are dangerous. It is only right and proper that the Government should regulate any phase of this work with respect to actual hazards. Permission should be given by some Government authority before a large pile can be put up in any given community.

In the second place, we must be careful that fissionable material, such as uranium 235, plutonium, etc., are not diverted to improper uses, namely, making of explosives. We can imagine what would happen if we had a large number of plants in the country generating power and hundreds of the plants should be withdrawn and turned into the manufacture of bombs. We must be careful that does not happen. Control by the Commission along that line is virtually necessary.

In the third place, as long as the state of the world is what it is, we must expect there will be security regulations, but to the military applications only.

In the fourth place, since this has been developed by the people of the United States, we should try to prevent monopolies, but at the same time not prevent legitimate private enterprise and legitimate profit for work that is done by our industrialists themselves.

Some of the things I definitely think we should not do: In the first place, we should not attempt to control research at all. Research is a thing that withers under control. Neither I, my best scientific colleagues, nor anyone else that is acquainted with research activity would attempt in any way to say what shall or shall not be done in the field of research. I may think a given experiment is foolish. That opinion should have no value, because my young colleague may have a much better idea than I have. We should not try to control this research any more than you should try to control literature. Perhaps you have observed the effect of control on the literature of Russia. It runs down rather narrow lines. Control of any intellectual activity will prevent it from blossoming the way it should. We should not try to prevent private persons, universities, or industrial companies from doing research in any field of pure science.

I think with these remarks I have presented to you some of the problems that we have in inducing people and companies to work on this problem. I think it is vitally important that we stimulate as many people as possible to work on the problem with enthusiasm. The May-Johnson bill would greatly discourage such efforts because of its restrictive clauses.

## Resettlement of Palestine

EXTENSION OF REMARKS
OF
### HON. ROBERT F. WAGNER
OF NEW YORK

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able, instructive, and timely address delivered by the former Secretary of the Treasury, Henry Morgenthau, Jr., at a dinner given in his honor on November 7 at the Hotel Astor in New York by B'nai B'rith.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A few months ago a wave of horror swept the civilized world. Photographs and moving pictures were released showing the manner in which Germany treated slave labor and persecuted prisoners. Everywhere men stood amazed, enraged, horrified. These are uncomfortable sentiments to hold, but it is important that we should remember them, for it is important that we should do something promptly about those victims of the bestial system which we have overthrown. The horrors that those pictures made known to the world confirmed what we at the War Refugee Board had long known about the tragedy of those who were in Germany's power.

Many of those emaciated walking skeletons who roused our pity are still in Germany. They are the men, women, and children who bore the brunt of Nazi terror and survived. For as much as 6 years they went through more than the torments of death for the same cause for which we in this country were fighting.

They are dying by the hundreds. Before midwinter, they will be dying by the thousands, unless our efforts on their behalf are multiplied many times over. While we have been enjoying this excellent dinner, with nothing more serious in our own lives to fret about than when we are going to get a new car, a new refrigerator, or a new pair of nylons, men have been dying of starvation and exposure. I am informed that this death rate among the displaced is so high that between now and this time tomorrow night, 50 of them will have died. And the next night, and the next.

In the cold-blooded language of diplomacy these people today are "displaced persons," and are the subject of notes, memoranda, orders and agreements, couched in the necessarily chilly prose of official documents.

"Displaced persons" is a pitifully inadequate phrase to describe this multitude of misery. They have witnessed the murder of their kinsmen and friends. They have been beaten and starved. They have been driven mercilessly at forced labor. They have been penned up amid indescribable filth. But it is hardly necessary to attempt a description of what these people have suffered. You and I know the story all too well. It has been a goad to our consciences, and I daresay that most of you have spent sleepless nights worrying over the tragedy of displaced persons, as I know I have, and as I am sure Franklin Roosevelt did and President Truman does.

When Germany collapsed there were 8,000,000 of these displaced persons in that country. By dint of really herculean efforts, the Allies have repatriated about 6,000,000 of them. Our pride in that accomplishment, our relief in delivering these millions out of bondage, cannot obscure the fact that almost 2,000,000 more human beings in Germany alone must look to the United Nations for life and hope. Furthermore, these constitute the most difficult group among all the displaced persons. They are the ones who are too weak to be moved. They are the ones who have no homes and no countries to which they can return. They are the hopelessly lost human debris of war. Surely, nothing that we can do to restore these derelicts to normal life can be too much trouble or too great an expense. This is a work that cannot be translated into dollars, for who is to say what a man is worth?

It seems clear to me that this work is one of the prime responsibilities of the United Nations. We all fought to liberate these people, and we have a duty to them and to ourselves. This is nothing less than the reestablishment of the displaced people in the common task of building a decent world.

This would be the true spirit of reconstruction. It is the spirit in which Franklin Roosevelt set his name to the Atlantic Charter and laid the basis for the United Nations Organization. It rests with us to carry out the obligation to make the Atlantic Charter and the United Nations Organization into an active force for peace and justice, not just another couple of scraps of paper.

I have been profoundly disturbed, as I know you have, to realize that our responsibility has not been discharged any too well. The Harrison report, with its evidence that the lot of displaced persons had been little improved since liberation from Nazi rule, was a shock, but a wholesome shock. President Truman promptly forwarded a copy to General Eisenhower with strongly worded instructions to remedy the situation. The general undertook personal inspection tours, and within a few weeks reported to the President that conditions had been materially improved. We can hope that the improvement will continue.

But that is not the end of the problem. There remains the question of what to do with these people beyond the immediate task of feeding, clothing, and sheltering them. So far, the burden has fallen upon the Army, aided by 300 to 400 UNRRA teams operating in Germany. Eventually the whole problem of the displaced will have to be shouldered by UNRRA, in Germany as well as elsewhere.

In recent weeks we have heard a great deal of criticism of UNRRA. No doubt some of it was justified. But a great deal of it was based on a misunderstanding of the limitations imposed by UNRRA's Constitution. It cannot work in such countries as France and Holland, which pay their own way. It cannot make distribution to individuals but only to the governments with which it has entered into agreements.

But under the magnificent leadership of Gov. Herbert Lehman, UNRRA has gone far to overcome the handicaps of the difficulties it had to face and the lack of appropriations. No one could have done more than Governor Lehman, I know no one who could have done as much.

UNRRA has suffered, no doubt, from an inability to get field people of the highest type and capacity. And its avowed objective is to care for only 10 percent of the many millions in need of its services.

It is easy to criticize shortcomings in a task of such magnitude. But it is plain that our choice is not between UNRRA and something better. Our choice is between UNRRA and nothing. That was recognized by the responsible leaders of both parties in Congress during the debate on granting UNRRA the rest of our first installment on our commitment to the organization.

It is almost unbelievable that the balance still due on our first installment is $550,000,000. It was solemnly pledged by our Government in an act of Congress passed more than a year and a half ago—on March 28, 1944. The total United States contribution—the same as that of every country—was 1 percent of the national income. After a year and a half, the balance of that appropriation has still to pass the Senate. The commitment has been fulfilled by the House of Representatives, although tardily, somewhat grudgingly, and with imperfect understanding of what it was doing. In fixing conditions under which the American share of the funds must be spent, the House has failed to grasp the fact that it was not appropriating for an agency of the United States Government, but for an organization set up by 44 sovereign countries. UNRRA represents one of the first efforts of the United Nations to carry out a common peacetime task. For one nation's legislature to

attempt to govern it even in the most laudable of aims is to disavow the principle of international cooperation.

I sincerely hope that the Senate will promptly recognize the responsibility of America to take the lead in genuine collaboration if the nations of the world are to work together as partners.

I am sure that all of us here tonight are disturbed and uneasy over the lag in meeting our commitments. The need is so urgent, the case of millions of human beings so desperate, that it comes as a painful shock to learn that while our own Congress debates an appropriation pledged a year and a half ago, other nations have appropriated their share of UNRRA's expenses for next year. Instead of being the straggler in the parade, we ought to be up front, leading it.

The fate of the displaced persons in Germany and all the rest of Europe, or at least those sections of Europe where UNRRA can operate, rests upon our action. No one knows very accurately how many of them there are. Those who are actually in assembly centers can be counted. Thus we know that there are 1,300,000 in the assembly centers in Germany alone. But tens of thousands, hundreds of thousands more are scattered through a dozen countries or more. Fifteen thousand have recently wandered from Austria and Czechoslovakia to Italy. Thousands of others have taken to the roads, hopelessly seeking shelter or a bit of bread. Other thousands are in hiding, fearing to return to their native lands.

All these people present many and special problems. But there is one group set apart from the rest by its sufferings and its fears. The remnants of Europe's Jews are a small minority of the displaced persons, but they are the most difficult to resettle.

The total Jewish population of Europe outside Russia is now estimated at about 1,333,000. Of these, only about 100,000 are believed to have survived in Germany and Austria. Virtually all of them have passed through the inhuman tortures of the labor camp and the concentration camp.

By the very nature of the Nazi, these 100,000 German and Austrian Jews are the ones whose sufferings stood out even among the general misery of the displaced. Few of them have any homes to which they can return. And yet they, like most of their comrades in despair, are singularly in need of aid that will go beyond the mere handing out of a few bits of clothing, a minimum relief diet, and medical care. Spiritual and economic rehabilitation are equally essential. For years these people have lived abnormal lives. They have been deprived of any trace of the amenities of family, community, and religious life. They have been thoroughly brutalized and regimented by the Nazis. Our obligation does not stop with feeding and clothing them. We must provide the understanding, tact, and social wisdom that will permit these victims of war to enter a new environment as fit members of society.

I am convinced that there is only one solution for the homeless, stateless Jews—the immediate admission of at least 100,000 to Palestine. For Palestine is the one refuge where they could be assured of achieving at once the status of welcome and respected citizens.

This solution is by no means a new thought. It is the one ardently desired by a great many of the displaced Jews themselves, as all competent observers have noted. Earl Harrison, in his report to the President, said:

"For some of the European Jews there is no acceptable or decent solution for their future other than Palestine."

Harvey Gibson, of the American Red Cross, who made a tour of the displaced-persons camps at General Eisenhower's invitation, says that 95 percent of the Jewish refugees in Europe want to emigrate to Palestine.

This was the thought, too, behind President Truman's request to Prime Minister Attlee that 100,000 Jews be admitted to Palestine. I sincerely hope that President Truman will renew his request during Mr. Attlee's visit to this country. Mr. Truman expressed the same thought in a letter to General Eisenhower: "I am communicating directly with the British Government in an effort to have the doors of Palestine opened to such of these displaced persons as wish to go there."

That was a thoroughly statesmanlike and a thoroughly humanitarian appeal. It should be put into effect by application of an old and cherished American principle—the right of self-determination. The displaced Jews of Europe should have the right to decide whether they wish to remain as citizens of the countries in which they have lived or decide whether they want to go to Palestine.

The 100,000 whose need is most urgent and who have expressed a desire to emigrate, should be admitted without delay.

But the problem of the displaced Jew is not the sole concern of any single nation, nor of any small group of nations. It is the responsibility of all the peoples who fought fascism and won a new opportunity for democracy.

Therefore the whole question of the future of Palestine should be placed under the auspices of the United Nations Organization. This was the kind of procedure most people had in mind when they acclaimed the result of the San Francisco Conference as a long step toward peace. We felt that at last we had an organization big enough to do the really big jobs

If we are to tread the paths of peace, we must get used to working with the machinery of peace. Such a resettlement as I have proposed, such a use of the right of self-determination, can only be achieved by the joint determination and common efforts of all free peoples. A world problem must have behind its solution the force of a world authority. Only so can we achieve the goal of justice and freedom for which we have fought and for which we know in our hearts we must continue to figh replacing the weapons of war with the weapons of peace.

## Armistice Day Address by Edward M. Scheiberling

EXTENSION OF REMARKS
OF
### HON. ARTHUR CAPPER
OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the RECORD the address delivered on Armistice Day, November 11, by Hon. Edward M. Scheiberling, national commander of the American Legion, at the Tomb of the Unknown Soldier, Arlington National Cemetery.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We mark the twenty-seventh anniversary of a day of jubilance: When millions of men laid down their arms, when a vast campaign of death and blood letting was over, when a whole world looked forward to an everlasting peace, when all mankind lifted eyes to Heaven and thanked God that war had ended.

Yet while we gather here today in the awesome presence of a soul whose worldly name is known only to our Divine Father we are again drawing the curtain on another and more terrible conflict than any which the world has known before.

That November eleventh of 1918—that day of jubilance and the hope that it raised in human hearts have been proved by subsequent years to have been but empty myths.

We named that day Armistice Day and it is Armistice Day as we know it now.

It is a tragically suitable, appropriate name, for it marked the making of a truce and not the birth of peace. It was merely the beginning of a pause between conflicts.

And so I say to you here, in the presence of the soul that is the symbol of priceless sacrifices, that we as a nation and we as individuals have the burden of appalling responsibilities upon us. None of us dares shed those responsibilities. No loyal American will shirk them.

Foremost of those responsibilities is wholehearted and unselfish support of American policies—both foreign and domestic—which will most contribute to the peace of the world.

Second is establishment of the means by which those policies can be carried out.

The time in which we live and the years before us are such that the United States can never again safely isolate itself from the rest of the world. Our standards of living rest upon foundations implanted every place the world around. There were practical examples of it in the war just past when our Government was forced to resort to rationing of the most basic necessities of life as well as the items of pleasure and luxury.

What we experienced in America was multiplied a thousand, perhaps 10,000, times among other peoples in other lands who turn to us with lifted eyes and outstretched arms, imploring us in the name of Christian principle to assume our responsibility for the preservation of world peace.

Look where you will in the world, no other nation nor any combination of nations is ready to assume that responsibility. Perhaps we may soon have all of the appropriate machinery to carry out the purposes for which two World Wars were fought, but meanwhile the burden is ours. The world knows that. We ought to know it, for our freedom is a thing that knows no boundaries.

Moreover, our duty is fixed upon us by the preamble of our own Constitution, which plainly states that among the purposes of our Government are the "promotion of the general welfare and the securing of the blessing of liberty to ourselves and our posterity."

Row upon row of white crosses in Normandy, Italy, Okinawa, and Guadalcanal are mute testimony to how close we came to losing that we are charged as individual citizens with protecting.

What means, then, must we adopt to insure our own security and to assure the world that the United States has grown to that mature stature which makes it capable of acting in the interests of world peace?

There is but one answer. We must keep ourselves strong so that no future Hitler, no future Mussolini or Hirohito will dare to challenge us. We cannot do that painlessly. We must give of our time and our pleasure. We must reach into our pockets for a money contribution in the form of taxes.

Our Navy must be large enough, strong enough, and modern enough to maintain the freedom of the seas. Our Army must be similarly strong. Our citizenry must be prepared both militarily and industrially.

To make the citizenry ready we must have men and women trained in industrial and military ways.

The American Legion, of which I have the honor to be the national commander, has fought for 25 years to establish a plan of universal military training.

A contribution of only a few months, at the most a year of time, by the youth of our country for universal military training would be a small price to pay for our future security. There would be ample time left

for industrial, scientific, and professional training.

Unless we are willing to accept these responsibilities, to face them courageously, and to assure nations both large and small that out of an armistice America will forge a peace, then we shall not have performed our duties to God and country and the thousands whose names are emblazoned in the history of our wars will have died in vain.

## Minimum Wage Rates

EXTENSION OF REMARKS
OF

### HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement regarding Senate bill 1349, the minimum-wage bill, made by me before the Senate Committee on Education and Labor on October 16, 1945.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and members of the committee, I should like to urge that the bill before this committee, S. 1349, be given favorable consideration and that it be reported out of committee in its present form as soon as possible. By increasing the present minimum wage rate to 65 cents and by extending coverage to maritime and agricultural processing workers who are not now affected by minimum wage legislation, this bill goes a long way toward the recognition of the doctrine set forth in 1906 by the recently deceased Msgr. John A. Ryan. In his book, the Living Wage, Monsignor Ryan states: "The laborer's right to a living wage is as valid as his right to life; the difference is merely in degree of importance. The State is morally bound to compel employers to pay a living wage whenever and wherever it can, with a moderate degree of success, put into effect the appropriate legislation."

The enactment of S. 1349 is a step that is long overdue; furthermore failure to enact this bill will seriously affect the smooth operation of our economy. Since 1938 when the Fair Labor Standards Act went into effect the cost of living increased approximately one-third, causing the present statutory rate of 40 cents per hour (which, even in 1938, according to budget estimates, failed to provide adequate subsistence) to trail far behind the living-wage rate and the wage rate now being paid the majority of the workers. In the words of President Truman, the Fair Labor Standards Act, in its present form, has become "obsolete." The proposed 65-cent minimum which would be put into effect under this legislation and the 75-cent rate which would become effective 2 years hence would yield, according to the Bureau of Labor Statistics, an estimated $1,300 and $1,500 per year, respectively, provided continuous and regular employement were available to the worker. This is barely the minimum cost of an adequate family budget at the present time. Furthermore, it is the rate that is now in effect among 80 percent of all factory workers.

In the State of Pennsylvania, where most of the major industries are already paying high wages, particularly the basic steel industry and nearly all branches of the metalworking industries, there are still a number of industries such as textile and apparel, tobacco, fertilizer, stone and clay products, and leather products where the workers receive less than 65 cents. The Food, Tobacco, Agricultural and Allied Workers Union of America has estimated that 11,250 cigar workers in Pennsylvania receive less than 65 cents per hour, and a considerable number of the 5,000 cannery workers in the State are paid under the 65-cent rate. While no exact figures are available on the rates paid textile and lumber workers, it has been generally revealed that large numbers of the approximately 180,000 Pennsylvania textile workers and a considerable number of workers in the manufacture of pulpwood products receive less than 65 cents. The United Electrical, Radio, and Machine Workers of America estimate that of their 150,000 members about 10 percent are paid below the 65-cent minimum. Of those plants that are not unionized the percentage is as high as 30 percent. It should also be noted that women workers in this industry bear the brunt of the low wage rates.

I should like at this time to read you a portion of a letter from Mr. Batz, president of the American Federation of Hosiery Workers, Branch No. 10, who in his own words tells what this legislation will mean to the hosiery workers:

"DEAR SIR: On behalf of the thousands of hosiery workers who are members of Branch No. 10, American Federation of Hosiery Workers, Reading, Pa., I am calling your attention to the Pepper minimum wage bill, H. R. 3914 and S. 1349, which will provide an immediate minimum wage of 65 cents per hour and increase minimum wages to 70 cents per hour during the second year and 75 cents per hour following the second year.

"We hear much talk about full employment. However, full employment at substandard wages can only become a disguise for human exploitation. A nation whose workers are paid so little that they cannot purchase the goods and services they produce can never be a fully employed nation. Workers must be able to earn enough money to maintain their health and welfare in order to live a truly democratic life in this great democracy of ours.

"Let us hope that victory has not been in vain by forgetting our own people who have done so much to preserve a real honest-to-goodness democratic nation. I trust you can realize how important this 65-cent minimum wage is to our people and what it means, not only to them but to the whole Nation.

"Sincerely yours,

"JAMES W. BATZ."

The benefits of a living wage are confined not merely to the substandard worker. Its advantages extend to every class of worker and every type of employer. Increased wages among the lowest paid workers means an immediate expenditure for goods and services and this will tend to support a high level of production and full employment. Furthermore, low wage rates tend to depress high wage rates in the same area and in neighboring areas.

The protests from employers who claim they will have to go out of business should 65 cents become the minimum wage rate do not seem to have much justification. Most employees of major manufacturing industry groups already receive 65 cents per hour. Only 330,000 employees in manufacturing industries receive less than 50 cents. Even among those industries that pay a substantial proportion of their workers less than 65 cents an hour many of the workers receive almost as much as 65 cents. Thus, the increase in pay rolls that would be required to raise all these workers to the 65-cent minimum would be relatively small. In only three industry groups would pay rolls be increased by more than 5 percent; tobacco, 11 percent; basic lumber and timber products, 9 percent; and textiles, 6 percent. Wage payments in these three industries typically constitute only about one-quarter of the value of the product and considerably less than this—about 6 percent—in the tobacco industry.

When the 40-cent minimum was proposed, examples were cited of establishments that would have to go out of business, resulting in serious unemployment. Actually there does not appear to have been any serious result of this kind.

There are inefficient producers in practically all industries, and firms are constantly failing with or without a minimum wage. It is not surprising that some of these firms blame their failure on the minimum wage, others on Government interference. But it will usually be found that competitors of these firms in the same communities continue to operate and make money apparently unaffected by the minimum wage. The truth of the matter is that some producers are so inefficient that they cannot stay in business without being subsidized from the wages of their own workers. The minimum wage is particularly designed to put an end to such practices.

It will be found that most employers will pay the minimum wage because it protects them from unfair competition. Mr. Baer, manufacturer of silk and rayon throwsters, supports the 65 cent minimum for this reason. In a letter to me he writes:

"The Baer Co. has been in the business for 50 years and we consider that minimum wages are absolutely an essential thing if utter chaos is to be averted. We have seen the times when through competition we have been forced to bring wages to an absolutely ridiculous figure and we feel that if we, as well as our competitors, have an irreducible minimum it will endow to the advantage of not only our labor and ourselves but also to the industry as a whole. We likewise believe that the small added expense that would have to be made and the price of the finished product would be that small that it would not harm the sales of the products representing these minimum wage structures. We have seen a lot of economic experiments in America—some have been good and some have been bad. However, this is to be expected. We feel that adequate wages and just minimum hours are things that should remain and stay with the textile industry.

"Bear in mind that textiles in America create a large employment pool and if our people can be given fair wages it must follow the collective purchasing power. This would be a very sizable sum. We therefore, ask you to use your good influence in seeing that this textile field receives and gets a fair minimum wage and that same shall be retained regardless of peacetime conditions. The opposite of any other action but this means a chaotic labor market with wages of 15 to 20 cents per hour. It will likewise mean labor disturbances, uncalled-for union action, and so forth. The writer has gone to business school and knows there is something like the law of supply and demand. But at the same time can see no reason why this law can't operate at a fair livable minimum wage as well as an unfair, unlivable, unjustifiable starvation condition. We likewise, feel that if all our competitors are made to pay the same irreducible minimum it would put none of us in an unfair competitive position."

It should not be overlooked that the minimum wage stimulates improved organization and the introduction of efficient equipment and methods. Often the savings resulting from these improvements more than offset the cost of the higher wage. In a study of the seamless hosiery industry, after the enactment of the FLSA in 1938, it appeared

that about 10 percent of the establishments in the industry were faced with serious operating difficulties. On the other hand there were instances where an adaptation of the machinery permitted so great an increase in the productivity of labor that labor costs were lower after the 25-cent-minimum wage became effective than they had been before.

I am confident that just as occurred with the enactment of the Fair Labor Standards Act in 1938, enactment of the 65-cent-minimum hourly wage, and increasing this minimum to 75 cents in 2 years (which sum is barely adequate to provide minimum subsistence) will greatly benefit industry and labor. Furthermore these benefits will far outweigh any resulting hardship to individually isolated plants.

## Tribute to Mountains by Jane Marie Surface

EXTENSION OF REMARKS

OF

### HON. TOM STEWART

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. STEWART. Mr. President, I ask unanimous consent to place in the Appendix of the Congressional RECORD an article entitled "I Love Mountains." This article was printed in the November 11 issue of the Washington Sunday Star as a prize contribution. It was written by a young lady 15 years of age, Jane Marie Surface, who is a student at the Western High School in the District of Columbia. Its beauty of thought has appealed to me, and I desire to take notice of it in this manner. I congratulate the very capable young lady for this beautifully expressed tribute to mountains, which I, too, sincerely love. I think her expression that they are "symbolic of high ambitions" is quite worthy of sincere meditation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I LOVE MOUNTAINS

(Prize contribution by Jane Marie Surface, 15, Western High School)

To me, mountains are the most majestic form of beauty in the whole wide world. They tower so high into the sky, and some are so very tall that I think if you could ever reach the top you would truly be at the very gate of heaven.

My love for the mountains is, perhaps, very natural, for I have taken many trips through them. When I am there, I have a feeling of such deep peace, it seems to me that if anything were coming my way which would cause sorrow or grief, the mountains would shut it off and it wouldn't reach me.

A place surrounded by high, beautiful mountains is a place I should call a realm of everlasting happiness.

Yes, I know many of you must feel as I do. I hope so, for it is a feeling of wondrous joy. Love of the mountains is love of all good things. They symbolize to me high ambitions, ambitions of only honor and achievement; and so, if you strive high, high as the tallest mountain, your reward can only be one of the highest success, greatest joy, and eternal happiness.

## Labor Unions and Politics

EXTENSION OF REMARKS

OF

### HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials published in the Fairmont Times. The first is entitled "Labor Unions and Politics," and it was published in the October 23 issue of the Times. The second, entitled "Political Education," was published in the October 13 issue.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fairmont (W. Va.) Times of October 23, 1945]

LABOR UNIONS AND POLITICS

We have just read an account in the CONGRESSIONAL RECORD of an interesting discussion of the part taken in politics by the labor unions with particular reference to the activities of the Political Action Committee.

A distinguished Senator states that it is apparent that the political high-pressure drive which was organized by labor dictators in 1944 was a mild effort compared to the onslaught which these dictators are preparing for the 1946 and 1948 elections. It is asserted that these labor leaders aim at a power which will enable them to pull the strings and make puppet legislators jump. We infer from this debate that union labor when it engages in political activity becomes communistic. We also note that such participation is antagonistic to our constitutional form of government.

The Political Action Committee distributed 100,000,000 pieces of literature in the last elections. According to our alarmists this is leading our Nation straight toward a totalitarian form of government. This movement is all the more meanacing because the unions have a reserve of $160,000,000 in their treasuries.

It would be very disturbing if the political activities of the unions were unusual or subversive. We make no defense for the mistakes or blunders of labor leaders. If they are fighting to elect legislators who are favorable to their cause, they are doing nothing more than is being done by other groups. The Senator who made all the above charges against the political activities of the labor unions says he is not the servant of any one group or interest and yet if the National Dairy Association should find its interests jeopardized by the development and improvement of oleomargarine to compete with butter, he would be the first to hop if not jump to its protection.

This leads to the observation that people who live in glass houses should not be hurling stones.

The United States Chamber of Commerce owns and occupies a palatial marble building in Washington. It is not unfair to say that it maintains its organization in the Capital of the Nation for one purpose, and one only, and that is to promote Federal legislation in its interest, and to fight all measures that do not meet its approval.

The manufacturing association has an organization of national scope which does not hesitate to take part in politics, and to elect candidates that it considers safe, and to defeat those considered inimical to its interests.

Even the American Bankers Association has not been averse to promoting or opposing political movement.

With reference to campaign expenditures we would surmise from what we have heard and know that the big interests have spent thousands where the labor unions have spent hundreds. The offense of the unions seems to be in getting out the vote. Special interests are best served by restrictions on suffrage. Our form of government will not be ruined when 90 percent of the qualified voters go to the polls. This will do much to eliminate the legislative puppets of special groups and interests.

We like the idea of the league for political education. Back of the conflict between ambitious labor leaders and captains of industry is the movement of great social and economic forces. In spite of themselves men are swept forward by those forces. We refuse to accept the philosophy that men are traveling the road to serfdom. We are less than a hundred years from human slavery, and we will not be satisfied until man is entirely free.

We may concede that labor leaders are often narrow in their thinking and selfish in their actions, that the managers of industry in many instances have been short-sighted and stupid, and that big business at times seems more concerned about property than about the welfare of human beings. After making such concessions however we still have faith to believe that the great majority of men are at heart humanitarians and not selfish brutes. We are a long way from practicing the principles of the Golden Rule but we are more and more realizing that our own well-being is wrapped up in that of others.

Anyhow we are not disturbed or frightened by the efforts of the Political Action Committee, nor by the activities of all the other leagues and groups that are carrying on programs of political education It may annoy the undercover politicians, but it will be wholesome for our representative form of government.

---

[From the Fairmont (W. Va.) Times of October 13, 1945]

POLITICAL EDUCATION

We noticed in the papers that a committee of the United States Senate is engaged in a controversy over the confirmation of the appointment to Federal office of a man who worked for the Political Action Committee in the campaign last year. The ostensible reason given by the opposition is that he was allied with one particular labor organization and that his appointment would not be acceptable to other organizations. The real reason, of course, is resentment towards the Political Action Committee for its activities in the campaign.

In this connection it might be well to discuss the program of that committee and other movements for the instruction of voters. There has been a widespread movement for the study of legislative procedures in recent years.

The League of Women Voters has pioneered in this type of work and other organizations have carried on similar programs. The Political Action Committee aroused criticisms and opposition because it aimed at the reelection of President Roosevelt.

The opposition to its purposes did not invalidate the value and importance of the work which the committee did. Its main objective was to get voters registered and qualified to vote and then to prevail upon them to go to the polls.

For years a large segment of our citizens never took the bother to register or vote. They had not been made to realize their stake in government and the steps which they must take to promote and protect their interests.

Political candidates are disturbed and apprehensive when a large proportion of the voters goes to the polls. For illustration, the Republicans felt their chances for winning in 1944 would be greater if there was a small turnout of voters.

Limitation on the number of voters in certain southern States gives a tremendous advantage to candiates who want to continue in office. The poll tax is manipulated so as to keep the majority of citizens from voting. It it easier to handle a small minority of the voters than it is to secure the support of a substantial majority.

There has been a growing interest in recent years in legislation and the actions of public officials. Labor organizations, educational associations and many other groups keep a close tab on the record of their Representatives. Members of Congress and the legislature sometimes attempt to confuse their constituents by subterfuges in defeating desirable legislation. Owing to wider knowlege of such matters this becomes increasingly difficult. The legislator who tries to serve special and selfish interests while pretending to be devoted to the general welfare cannot dodge his record.

A favorable plan for killing legislation for which a Member of Congress does not want to be responsible on the record is found in the congressional committee where many bills are strangled or defeated. There has been a movement recently to require a record of the voting in committees. The House and the Senate may avoid the record by a voice vote or by standing for the count.

Both in Congress and in the legislature the dodging of votes on a question on which the Member does not want to take a positive position has become an art. Often, when there is no other way to evade the issue, the Member may be unavoidably absent. There are many members of our legislative bodies whose position on matters of legislation is never uncertain. They are definitely classified with some group or school of thought.

We hold to the theory that the best cure for the evils of democracy is more democracy.

When a majority of our citizens have an intelligent understanding of representative government and are able to evaluate the services of their lawmakers and public officials, we will have more efficiency and honesty in public life.

It may disturb Members of Congress and the legislature for the labor organizations and other associations and groups to have active legislative committees to check on their record but, in our opinion, such activities make for better government.

Representatives go wrong when they seek the promotion of their individual and personal interests instead of the welfare of the State and the Nation. It is a hopeful sign that more of our citizens are voting and that many more are learning what government means to them.

## Relation of Wages and Prices

EXTENSION OF REMARKS

OF

### HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day of Monday, October 29), 1945*

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Drop Anchor, but Full Speed Ahead," published in a recent issue of the Philadelphia Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DROP ANCHOR, BUT FULL SPEED AHEAD

"Drop anchor and full speed ahead."

The skipper who gave that order would be guilty of no more absurd contradiction than the administration when it says: "Hold prices; raise wages."

Of course, President Truman faces a dilemma.

If, in order to control prices, he freezes wages, we face an epidemic of strikes which may well force us into a postwar deflation.

If he takes the ceiling off prices to raise wages, he faces the danger of inflation.

President Truman tried to solve this dilemma in his speech of October 30 when he said:

"After a reasonable test period which, save in exceptional cases, will be 6 months, if the industry has been unable to produce at a fair profit, the entire wage increase will be taken into account in passing upon applications for price ceiling increases."

But this is obviously an unrealistic and inadequate solution. Industrialists will not and cannot spend millions in big production on the chance that 6 months from now they may or may not be able to persuade OPA to grant higher prices.

A big factory is not going to grant higher wages and spend millions for material and machinery when its accountants report that the greater its production, the more money it will lose.

Of course, there are some industries which could grant higher wages without raising prices. But it would take months, if not years, to settle such controversies throughout the United States.

If the administration had no better solution than this to the wage and price problem, it should never have called the labor-management conference. To allow the conference to evade the main issue and bog down in a morass of empty words will do more harm than good.

The Record believes there is a sure, adequate, and fool-proof solution to the dilemma. It could be enacted immediately as an addition to the new 1946 tax law. Here it is:

Allow business to raise prices on condition that thereby it subjects itself to the excess-profits tax.

This will produce the following results:

1. Business would only raise prices when absolutely necessary in order to meet increased wages and other costs. Business would raise prices only so much as was absolutely necessary to maintain normal profits, since practically all of any additional profits would be taken away from it in taxes.

2. Any inflationary effect of increased prices would be counteracted by increased taxation which would allow Government to reduce the national debt and thereby the excess of credit dollars.

3. Labor and management would be free to carry out collective bargaining on a sane basis. Whether management could grant labor's demand for the same take-home pay in peacetime as in war would depend upon whether the particular business could meet competition and upon whether the public would be willing to pay a higher price for the product.

The Record believes that the majority of labor leaders are intelligent enough to realize that these factors are as important to the members of the union as to the owners of the business.

Is labor's demand for the same take-home pay in peace as in war unreasonable?

Most of the criticism comes from men whose incomes are well up in five figures. A few dollars a week more or less doesn't seem very important to them.

But take the case of the man supporting a wife and two children, earning 80 cents per hour. He has been working 48 hours and has been paid for 52 hours, or $41.60 per week, less 80 cents withholding tax. He has taken home $40.80 per week.

Now he is working 40 hours for $32, less 70 cents withholding tax, or $31.30 per week. The $9.50 reduction, 23 percent of the wage to which he has become accustomed, may well be the difference between comfort and penury.

Perhaps it is impossible to grant everyone the same take-home pay as he had before. But we can't blame labor for asking for it, and management should strive to come as close to that figure as is possible.

## Tomb of the Unknown Warriors

EXTENSION OF REMARKS

OF

### HON. HOMER FERGUSON

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

*Wednesday, November 14 (legislative day Monday, October 29), 1945*

Mr. FERGUSON. Mr. President, I have before me an editorial entitled "Tomb of the Unknown Warriors," from the Detroit Times for Monday, November 12, 1945. It also appears in the other Hearst newspapers. I consider it very timely, and for that reason I ask to have it printed in the RECORD for the benefit of the Senate and others who read the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TOMB OF THE UNKNOWN WARRIORS

The Tomb of the Unknown Soldier is our national memorial to our American dead of World War I.

It is time now to consider a memorial as beautiful and as inspiring to our nearly 300,000 dead in the war recently ended.

The white marble Tomb of the Unknown Soldier stands silhouetted above the trees in our National Cemetery at Arlington, Va., bearing the simple inscription: "Here rests in honored glory an American soldier known but to God."

None but God knew the identity, the race, the religion of this soldier brought home from France a quarter century ago to "rest in honored glory"—a symbol of all who gave their lives for our country. As he became a symbol so did his tomb become a shrine, and there over the years America has paid tribute and the families of our hero dead have found consolation in prayer.

A new memorial is in order, and it is appropriate to bring home for similar tribute two of our unidentified dead of World War II—one from the Pacific war and one from the Atlantic theater. For these were in reality two wars, each more terrible than any in history and one fought beyond the span of the other.

We believe the men who fought on these two battle fronts and the families of the men who died on these battle fronts will wish this distinction made.

It would also seem appropriate to erect the Tomb of the Unknown Warriors rather than another Tomb of the Unknown Soldier. In this way all branches of our armed services will be symbolized. For our dead of these latest conflicts, sleeping now in the far lands and the alien seas, were members of all branches—Army, Navy, Marines, Coast Guard, and the Air Corps of each service—warriors all.

## The Atomic Jag

EXTENSION OF REMARKS
OF

**HON. DANIEL A. REED**
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. REED OF New York. Mr. Speaker, a heated and continuous discussion of the atomic bomb is furnishing a convenient smoke screen to hide the utter failure of the domestic and the foreign policy of the New Deal. Hysteria is the stock in trade of the administration.

Under leave to extend, I am inserting an article entitled "The Atomic Jag," by Milton Mayer, which appeared in the Progressive, Madison, Wis., Monday, November 12, 1945, as follows:

THE ATOMIC JAG

(By Milton Mayer)

The brave new world is upon us—if only we can control the atomic bomb.

The kingdom of heaven is here—if only we can control the atomic bomb.

The shoeless are shod, the hungry are fed, the homeless are housed—if only we can control the atomic bomb.

The slaves are freed, the lowly are risen, the dawn is here, and our troubles are over—

If only we can control the atomic bomb.

And even if we can't control it, we can still run away from it. The discussion of what to do with our shattered civilization has sunk so low that eminent social scientists can participate in it. One says to decentralize our cities—as if the shotgun principle, devised to frustrate the decentralization of quail, would not be applied to the bomb. Another says to go underground—as if mankind had struggled up from the cave, only to go back to it in the end. If we can't control it, we can still run away from it, and the brave new world will be here.

Of course, there's still China, ablaze between two nonatomic totalitarianisms. And the Baltic and Balkan and half the Korean and German people transferred from a variety of slaveries to the nonatomic slavery of Stalinism or western power politics. And the nonatomic British shooting the Dutch East Indians and the French Indo-Chinese—with American guns—until the French and the Dutch can take over the shooting themselves. And our own nonatomic conversion of Germany into what the London Economist calls "a vast derelict human slum," with its ex-soldiers enslaved by the French and the Russians, its children and aged facing death from incapacity to resist the cold, 25 percent of its arable land gone, and, in the American zone, only 15 percent of what industry remains working at 5-percent capacity.

And then there are—or are there?—a few little nonatomic problems still unsolved here at home. There is skyrocketing unemployment on the horizon, with its accompaniment of racial and religious tension. There's a little matter of hopelessly inadequate unemployment insurance, not to mention medical care, housing (formerly known as slum clearance), and education. There's the cost of a $2,000,000,000-a-week war, still on the cuff. There's the poll tax, the restrictive covenant, the social segregation, the exclusion of ten or twelve million workers from social insurance, child labor, and the monster of municipal corruption. And the steady trend, in and out of Congress, to reaction.

If only we can control the atomic bomb.

Or run away from it.

Or sell it, or give it away.

Or organize it. Or federate it.

Or drop it, in concert with peace-loving Britain and Russia, on the Guatemalans or the Koreans.

When men like Robert M. Hutchins say that "the atomic bomb is the only thing worth talking about," it is time to realize that the country has gone on an atom jag. The bomb has succeeded the Nazi death camps and the trials of the war criminals as national diversions. While we fiddle with the bomb, the world is burning. While we gape and gawp at an impotent invention—impotent to solve our preatomic problems—the problems fester on. And, while we marvel and wonder and shudder at the newest implement of destruction, the problems that are really destroying us fester faster and faster.

The atomic bomb is the only thing worth ignoring in this desperate condition of our civilization. If we are bent on exterminating ourselves, we will do it with or without the atomic bomb. If we are bent on saving ourselves, we will do it with either primitive or advanced technology. If we are bent on going to war, we will go to war with what we've got, or, like Hitler, with what we haven't got. If we are bent on being at peace, we will tackle the causes of war first.

The atomic bomb is simply the latest circus in a long, long line of bread and circuses. We are face to face with the fact that we lost the war and that Hitler is winning it, and we want to think about something else. It isn't the atom bomb that's caught up with us—it's our misspent faith and hope and blood and money. It isn't the atom bomb we're running away from—it's ourselves. It's pleasanter now to forget Pearl Harbor than it is to remember the "four freedoms." And who of us now wants to face the haunting fact that we went to war in 1917 against imperialism, militarism, treaty-breaking, and atrocities against civilian populations?

The problems we had before World War II—the problems that cause the wars we lose—were still unsolved when the Messrs. Roosevelt and Willkie started accusing each other of leading us down the road to war. The problems we had were still unsolved when, after the collapse of 1937, and the concomitant end of the New Deal reforms, the war boom began. In 4 years of blood, sweat, toil, and tears, we have succeeded only in adding to our unsolved problems the paradox of a Jim Crow army fighting against nazism; the paradox of peacetime conscription—the cornerstone of the Prussianism we thought we defeated 25 years ago; and the paradox of participation by the land of the free in the maintenance and extension of slavery all over the world.

Even if the control of the atomic bomb would, somehow, solve our unsolved problems, we cannot control it. The scientists estimate that any nation can solve the few technical problems, which we call "secrets," in perhaps 2 years. The process, they admit, is simply one of trial and error common to all industrial research. And since we do not know how far the other countries have advanced under the cloak of secrecy, it may not be 2 years at all, but 6 months, or a month, or tomorrow, or yesterday. One of the half dozen greatest atomic physicists is in Russia. Professor Urey, whose discovery of "heavy water" made the bomb possible, warns us that one of the leading physicists on the bomb project here is a Dane now in Denmark, and another a Frenchman now in France.

Just what are the secrets on which we are trading? Just what have we got to offer Russia or anyone else? A 6-month advantage in industrial research in exchange for the surrender of the dream of world conquest and the regurgitation of the peoples and resources they have conquered? And to whom will the secrets, if there are any, be "entrusted"? To a unilateral organization of the three senior and two junior victorious powers, not one of whom, except China, which has nothing to lose, was or is willing to surrender any part of its sovereignty? To an organization which has not been able to meet, has no meeting in sight, has not been able (or willing) to write a peace anywhere, even in Italy, and whose minor representatives were unable to keep one meeting together?

The victorious nations did not even pretend to try to organize the world in San Francisco. They pretended to try to organize the victorious nations, as if the peace of the world would be menaced by the totally conquered and half-destroyed losers. And even the pretense was patent when the organization proved to be no organization at all in the sense of having its members bound by the rules. Are we to suppose that a sort of atomic shotgun wedding of nations will now hold them together when they could not bring themselves, in San Francisco, to promise to love, honor, and obey?

The atomic bomb is the last straw of the "one worlders," as it is the last circus of the rest of us. Since we could not get "one world" the only way it can ever be got—by the people of the world everywhere wanting it and willing to pay for it—perhaps we can get it by force and fear and distrust and terror.

If we will all go around with our pockets full of atomic bombs, we shall all be happy. If we will threaten each other with nonexistent secrets, we shall all knuckle under. Justice—which as Plato pointed out long ago, holds even a band of thieves together—is dispensable. War makers will suppress war with bombs, just the way criminals suppress crime with guns. And when the great big supercolossal bombs now in preparation everywhere hangs over everybody, peace will prevail, the way it prevailed after the invention of gunpowder.

True, the atomic bomb will blow us up faster than the blockbuster, or weekday bomb. But, as Major de Seversky pointed out after looking at Hiroshima and Nagasaki, a sortie of 200 flying fortresses with weekday bombs would have made as big a hole. True, too, atomic energy will clothe and feed and house the world much faster than steam or electrical energy. But if we are thinking in terms of clothing and feeding and housing the world, why are we helpless to touch the slums here at home with the energy we have, and why are we using the energy we have to convert Germany into a desert?

When the atomic jag is over, we shall have to face our plight in the sober daylight. When the beautiful dream of painless extermination is over, we shall have to get up and go to work on the reality of economic, political, and social injustice all around us. We are late for work already; we have slept and slept, dreaming dream after dream, of a car in every garage, of a new deal with free chips, of Hitler as our destruction, and the atom as our salvation. Now we have got to work fast.

When our economic system broke down we plowed under cotton and corn though millions were cold and hungry. Now that our moral system has broken down, we might just as well plow under laboratories and physicists. We did not know how to use the cotton and corn we needed. We do not know how to use the power we need. If all we can do with the wonders of our age is throw them at each other, we might be better off with nothing to throw more dreadful than rocks. At least the Egyptians built the pyramids.

Of course the third atomic bomb has got to be kept from being dropped. But to keep it from being dropped is only to obtain a reprieve. If we cannot use the reprieve to regenerate our civilization there is no point in stewing around to get the reprieve. And we, who dropped the first two bombs, have got to give the world, which now stands in

terror of our might, the first evidence of moral regeneration.

We can do it by fighting, along with Congressman JOE MARTIN, for the abolition of peacetime conscription everywhere; by fighting, not merely for the control of the atomic bomb, but for the international abolition of national armaments, including the blockbuster, or weekday bomb; by dredging up the Atlantic Charter and supporting the struggle for the liberty of all people everywhere, not only in India, but also in Puerto Rico; and by fighting, above all and before everything else, for the forgotten "four freedoms" here at home. Only then will we persuade suffering and cynical humanity everywhere that we mean what we say.

If we cannot make democracy work in the richest nation on earth, we cannot export it to our enemies or our friends. If we cannot control ourselves, we cannot control the atom.

## The Truth About Foreign-Trade Zones

EXTENSION OF REMARKS

OF

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Thomas E. Lyons, Executive Secretary, Foreign-Trade Zones Board, Department of Commerce, before the Boston Lions Club in the crystal ballroom, Hotel Kenmore, Boston, Mass., November 1, 1945:

When young Frederic Tudor advanced the idea of shipping ice from his father's pond at Saugus to the Tropics in the early 1800's, Boston thought him mad. Shipping men said that such a cargo would melt and swamp the vessel. Tudor's first venture was a failure as he had provided no means to insulate the cargo. Later he experimented with all sorts of filler material available in his day, including rice, wheat chaff, hay, tan bark and even coal-dust and finally discovered that sawdust was useful for purposes other than stuffing dolls.

When Congress passed the Celler foreign-trade zones bill in 1934, before the ink had dried on the enrolled act and months prior to the issuance of regulations under which these zones would function, certain Boston foreign trade and allied interests began to assail the measure. Every conceivable kind of objection was raised in a lengthy report prepared under the guidance of a reputable foreign-trade group. At the time this report was written its sponsors had no reason to know whether or not the foreign-trade zone had any advantages over the conventional customs methods of handling imports, but as in Fred Tudor's day they were out to melt the ice and swamp the boat even before its keel had been laid.

Unfortunately, Washington officials responsible for the administration of the act and especially some of us in the Department of Commerce, had not had time to develop insulating material to offset these attacks. With our meager knowledge of the subject we felt that the only proper way to determine the value and usefulness of the foreign-trade zone for promoting foreign-trade was to await the establishment of one or more such facilities and then examine the results.

Furthermore, this Boston assault was entirely unexpected—for only a few short months before a recognized authority on maritime matters, representing the Boston Port Authority, the Boston Chamber of Commerce, the Boston Maritime Exchange and the Boston Retail Trade Board, had appeared before the House Ways and Means Committee and urged enactment of the foreign-trade zone bill. This spokesman for the foregoing Boston interests also placed in the RECORD a statement showing that the Massachusetts Department of Public Works had inquired into the subject a few years earlier and reported that a foreign-trade zone was needed for New England manufacturers and urging the Federal Government to enact appropriate legislation.

No doubt by this time many of you are thoroughly mystified as to the purposes and objectives of the foreign-trade zone and how it functions in the field of foreign commerce. Let me first explain the conventional procedure for handling foreign merchandise seeking admission into the United States. Under the various tariff acts importers have a choice of several methods for the handling of dutiable merchandise when it arrives at a designated port of entry. If the goods are ready for entry into our commerce a consumption entry is made at the customs-house, duties are assessed and paid and merchandise thereafter is free to enter domestic distribution.

If the importer chooses he may make a warehouse entry wherein duties are estimated and a bond for double the amount of duty is posted with the collector. The goods must then be moved in a bonded conveyance to a bonded warehouse, where they may be stored for a period not exceeding 3 years, after which the duties must be paid or the merchandise exported.

Should the importer pay the duties upon the commodity instead of posting bond, and retain it continuously in a bonded warehouse or otherwise in the control or custody of custom officials, he may later withdraw it for transshipment within a 3-year period from the date of importation. Upon such withdrawal 99 percent of the duty paid is returned by the Government to the importer. Similarly, in the case of articles manufactured or produced in this country in conjunction with imported merchandise but later exported in the combined state, the duties paid on the foreign goods, if previously arranged with customs, are refunded except for the 1-percent deduction.

The procedure described in the previous paragraph is known as drawback and in the past it was a vital index to the two-way movement of foreign commerce in the United States, imported for reexport.

If the importer fails to make one of the foregoing entries within 48 hours after the goods are unladened, or unless for valid reasons he obtains an extension, the collector of customs will take them into his custody as unclaimed merchandise. This procedure is known as general order and if not claimed within 1 year, the collector is authorized to sell the merchandise.

These restrictions and formalities were not calculated to encourage trade and commerce in this country. Opportunities for freedom in the manipulation and transshipment of cargoes which were available in at least 43 strategically located foreign free ports placed this country in a clearly disadvantageous position for competition with European trade centers.

Such was the economic background that led to the agitation and original overwhelming support in 1934 for the establishment of the American prototype of the foreign free port.

A foreign-trade zone is a segregated, fenced-off, policed area in a port of entry equipped with piers, warehouses, and other essential facilities where foreign merchandise may be deposited without being subject to customs laws. In these zones merchandise may be manipulated in various ways, but manufacturing and exhibition are not permitted. The zone is a sort of hospitable island where an importer can set his merchandise down while he makes up his mind what he wants to do with it. If the owner decides to reexport the goods, he may do so without customs formalities or he may leave them in the zone for an indefinite period, while he finds a market either here or abroad. Further, he may mix such merchandise with other foreign or domestic goods and then bring the resultant product into the country upon payment of appropriate duties or he may decide to ship the combined product to some more favorable market abroad. While foreign merchandise is in a zone, prospective purchasers may examine it and the owner may even sell at auction if he selects this method of marketing his goods. All these activities may be carried on with the minimum customs supervision and without expense for bonds or inconvenience of drawback restrictions.

As already indicated, some of our foreign trade friends here in Boston seized the opportunity to interpret the new law. Their report, issued October 5, 1934 (legislative committee of the Foreign Commerce Club of Boston), stated that the committee was setting out both the pros and cons of the question. The document then proceeded to set out all the bad features, both real and fancied, of the foreign-trade zone, but if any good points were perceived in the idea, they were carefully omitted. Following the release of this report several shipping papers in the Boston area took the cue and started to ridicule the zone idea.

The furore raised by these militant and unexpected objections caused Boston port authority officials to decide that they should sponsor another study of the foreign-trade zone and funds were appropriated to engage a well-known European for this work.

It was into this atmosphere of hostility and indecision that Mr. H. Fugl-Meyer, director of the free port of Copenhagen, arrived in Boston early in November 1934 to conduct the study. Fugl-Meyer's report has done more mischief to the port of Boston than it has to the foreign-trade zone program, and I am not minimizing the harm to the progress of the zone plan either. Unfortunately, because of his limited knowledge of American customs, port practices and laws, Fugl-Meyer was led inadvertently into diagnosing all of Boston's chronic transportation ills and his adverse report, based primarily on collateral issues, related to the weaknesses of the port rather than to the utility of the foreign-trade zone.

It appeared that each of Fugl-Meyer's Boston advisers had some pet aversion, in most cases remotely connected with the free port study, which he wanted aired; matters that Fugl-Meyer, a stranger in a strange land, could hardly have exhumed in his brief 2 months' study. Without trepidation, Fugl-Meyer chided the United States Supreme Court for distinguishing a port from a locality, a practice which more appropriately might have been left to our own nationals, while his fluent discussion of our complicated territorial rate structure as between competing ports betrayed an intimate knowledge of the subject which could have been acquired only after years of study and association.

With regard to the free-port idea, however, Fugl-Meyer was not so sure of his ground so he hedged by reporting both for and against the project. For instance, Fugl-Meyer says (p. 17, his report):

"Although many difficulties may arise there is a possibility that a free zone, run commercially, may some day be needed, when conditions change."

Well, conditions certainly have changed since 1934 when it is recalled that we were then emerging from the depths of a depression. Fugl-Meyer, in his conclusions, states (p. 36):

"As soon as the major ills of the port are cured, an extension is warranted," and further, "It would be possible to build this so it could be converted into a free zone if desired."

In another conclusion Fugl-Meyer says (p. 36):

"There are many improvements to be made, one of them may one day be the establishment of a free zone * * *," and on page 20, "When it is decided to make an extension, it would be reasonable to build it in such a way as it could be used some day as a free zone."

Fugl-Meyer further states (ch. IV, p. 10 of the report) that Hamburg and Copenhagen are no criteria to show the need for free ports in the United States and he cites the fact that the great ports of London and Antwerp have been developed without free-port facilities. Here Fugl-Meyer has completely ignored the one prerequisite which must inevitably be present to warrant the existence of a free port or foreign-trade zone, they are useful only in countries having protective-tariff systems such as Germany, Denmark, and the United States. Both England and Belgium were free-trade countries during the period when their great ports were being developed, and even today foreign merchandise is handled in the ports of these two countries with a minimum of customs interference. From the standpoint of entrepot trade, both England and Belgium may still be regarded as free-trade countries.

In addition, it might also be pointed out that many of Fugl-Meyer's statements are both conflicting and confusing. For instance, he states (p. 15):

"It (the bonded warehouse system) has this advantage over a free port, that the bonded goods can be stored at any point to which the steamer happens to bring it, or wherever the owner of the goods wants to have it stored for future use."

Although later on he refutes all this by his one logical conclusion (p. 25):

"The fact that most of the warehouses are located far from the terminal facilities reduces the transport economy of the port."

Of course anyone familiar with our customs laws and port practices knows that Fugl-Meyer was wrong when he stated "Bonded goods can be stored at any point at which the steamer happens to bring it." Storage warehouses are bonded by the Treasury Department and imported merchandise must be removed from the piers to these bonded warehouses within 48 hours after landing or as I previously stated, the collector will take custody of the shipment as abandoned merchandise. Usually such warehouses are located a considerable distance from the pier where the goods are landed and transfer to these inland warehouses must be performed by bonded truckers at the expense of the owner of the merchandise.

Furthermore, a part of the imported merchandise must be sent by bonded truck, also at the owner's expense, to the appraiser's stores for appraisal. Later these goods are sent to the bonded warehouse, at owner's expense, for storage with the balance of the shipment.

Although Fugl-Meyer needed only 60 days to assemble his material and submit his report, during this time he found an opportunity to lecture on free ports at New York. On December 28, 1934, while still engaged in the Boston study he spoke at a meeting sponsored by the New York Port Authority, and from the remarks made at the meeting it appears he discussed matters which were not embodied in the Boston report. For instance, he stated that the creation of the foreign-trade zone at Copenhagen was violently opposed at its inception (1894) by storage warehouse and allied interests. Further, the theme throughout Fugl-Meyer's report was that there were no existing facilities at Boston which could be adopted to foreign-trade zone use. Yet in his New York talk he conceded that $8,000,000 were expended on new Copenhagen free port facilities at a time when the opening of the Kiel Canal was threatening Copenhagen's strategic Baltic position.

A final reference to Mr. Fugl-Meyer. Upon his return to Copenhagen from Boston, Fugl-Meyer was interviewed in Berlin by local newspapers on his American visit. Fugl-Meyer told the Berlin reporter that Boston, at least for the time being, should abandon the plan of having a free harbor. His reasons were the following: The traffic-geographic conditions are not in favor of Boston; secondly, there are technical difficulties, much construction work will be required; in the third place Boston does not have internationally trained importers and exporters, i. e., no merchants who specialize in foreign trade.

Apparently the Peabodys, the Perkinses, the Pierces, the Forbeses, the Spragues, and the Winsors were not at home when Fugl-Meyer called.

In a supplemental report to the State Legislature (House No. 1951) 1936, the Port Authority cited the uneconomic position of the port of Boston resulting from loss of traffic as the basic reason for turning down the foreign-trade zone. The Port Authority advanced dire arguments that the establishment of a foreign-trade zone would cause the abandonment of warehouses located in other sections of the port. Why warehouses in the same section but not in the zone would not be affected is not explained.

While it is possible that a harbor warehouse wherever located might lose some of its bonded business, increased port activities resulting from operations of a foreign-trade zone are calculated to create additional bonded and free traffic for these warehouses. Ordinarily only a small part of a public merchandise warehouse is used for the storage of bonded imports so that the loss of bonded business under any circumstances would not be serious.

Other arguments advanced by the Port Authority against the zone were (a) only 19 percent of the inbound cargo at the port of Boston was from foreign countries, the other 81 percent being United States coastwise trade; (b) foreign reexport is so small at the present time (1936) as to be considered negligible. It might be pointed out that the primary purpose of a foreign-trade zone is to overcome these two weaknesses. Obviously, if Boston enjoyed a large import trade and if reexports were substantial and satisfactory, the need for a foreign-trade zone might be questioned. On the other hand, where these weaknesses are readily admitted, it seems that you Boston businessmen would not overlook installing any device or facility which might correct this unhealthy situation.

Just why Boston's predominantly inbound waterborne domestic traffic should be a factor in deciding the fate of a foreign-trade zone is not clear to me. In determining this matter it would seem much more important to analyze Boston's total foreign trade—exports as well as imports. For example, in 1938, 85 percent by weight of Boston's foreign commerce consisted of imports while only 15 percent comprised exports. In terms of value, the picture of this unbalanced trade is even more striking: 88 percent imports as compared with 12 percent exports. Boston's exports in 1938 were about one-half of 1 percent of the United States total.

This brief analysis of Boston's place in the field of foreign trade and shipping leads to the inevitable conclusion that her main weakness is in her export trade. Correct this deficiency and the other problems will solve themselves.

A foreign-trade zone would aid materially in developing this badly needed export traffic. "How," you query, "can this be possible when the foreign-trade zone is designed for imports?" The answer is simple—traffic generates traffic. Ships arriving at the zone to discharge foreign cargoes for storage and reconsignment would be available to load export merchandise designated to the same foreign areas. While such exports could be handled at piers outside the zone, obviously it would be more economical to assemble export merchandise in the foreign-trade zone where it could be loaded along with foreign merchandise awaiting transshipment, thus avoiding expense of shifting the ship.

Possibly, at first the radius of the area for originating exports might be restricted to the local community but as dependable shipping services increase Boston's tributary regions will also expand and there is no reason to conclude that the area would of necessity be limited to New England.

During the immediate prewar years (1938–39) about 1,200 vessels in foreign trade were entered at the port of Boston. About one-third of these were engaged in trade with the Maritime Provinces and eastern Canada, leaving about 800 ships to transport Boston's substantial flow of imports from every part of the globe and over every important trade route. While some incoming vessels were fully loaded it may be safely assumed that half of the 800 ships arrived with unused cargo space. Suppose each of the remaining 400 vessels carried on additional 500 tons of cargo for the Boston foreign-trade zone it would have amounted to the substantial total of 200,000 tons annually.

If only half—or 100,000 tons—of this potential foreign cargo had been reexported it would have doubled Boston's 1938 export tonnage and increased by more than 50 percent that for 1939. Scrap-metal shipments for both years have been omitted from these calculations as at best they represented an abnormal prewar movement of little value to any port

You query, what right have I to assume that ships on trade routes serving Boston would lift cargo for this port not previously carried? The answer is that the foreign-trade zone provides the foreign shipper with an entirely new and competitive facility not heretofore available to him. Under existing practices, an exporter in Calcutta or Glasgow is not going to risk sending his valuable merchandise to this country until he has complete plans for its disposal. The operation of our bonded warehouse laws generally work to discourage a shipper 10,000 miles away from consigning his goods to an American port.

Let me illustrate with a case that happened here in Boston recently. Our tariff laws provide for lower duty rates on certain merchandise when used for specific manufacturing purposes. Leather and wool—both vital in Boston's trade—are included on the list. Recently an English exporter consigned leather to a broker here who paid the duty at the reduced rate. As no market was found the leather was later returned to England. The collector not only refused to refund the duty paid but required the owner to pay the difference at the higher rate. The Customs Court supported the collector as he had followed the law, but this English firm and many others will hesitate before sending subsequent consignments to this country. Had the leather been sent to a foreign-trade zone—where prospective customers could examine it, such a situation just could not happen.

Here is another advantage of the foreign-trade zone. Foreign shippers seldom have advance knowledge of warehousing and handling costs, especially over long periods. Such a speculation would of course dissuade an owner abroad from sending his goods to distant shores hoping to find a purchaser after its arrival here. On the other hand, the foreign-trade zone must operate as a public utility; rates and charges must be just and reasonable, and rate schedules must be published, a foreign shippers knows exactly what his American costs will be before the goods are loaded on vessel abroad. Privately owned

commercial warehouses are under no such obligation to the shipping public.

Although the Boston report (Fugl-Meyer's), which by the way was sent to port officials all over the country, and the recent war, both served to retard the foreign-trade zone program, the establishment of such facilities in several additional major ports is now assured. Aside from the New York zone which was opened in 1937, several other ports, including New Orleans and San Francisco, are scheduled to establish foreign-trade zones as soon as the facilities are no longer needed for military purposes.

It is my understanding that the functions of the Boston Port Authority recently have been greatly expanded and that appropriations have been made for port improvements. May I hazard the suggestion that a master plan be developed now for integrated ocean-freight terminals which can be built as funds become available. Such a program would offer a much better opportunity for attracting ships and trade to Boston than the erection of a number of separated pier units scattered over the waterfront. If the former procedure is followed, there would be no difficulty and little expense in turning a part or all of these facilities into a foreign-trade zone.

In conclusion, may I again refer to our friend from Saugus; while his first venture was a failure, Frederic Tudor went on to become the first international iceman, serving every important port in South America and the Far East. His flourishing Calcutta trade came just in time to preserve Boston's East India commerce from ruin. If Frederic Tudor were here today I am sure he would say "Let's give this foreign-trade zone a fair trial; let's put Boston's foreign-trade future on ice."

## Radio Address of Hon. Fred Bradley, of Michigan

EXTENSION OF REMARKS
OF

### HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. BRADLEY of Michigan. Mr. Speaker, under permission granted to extend my remarks in the RECORD, I include my radio broadcast of this week over Stations WSOO, Sault Ste. Marie, Mich.; WDBC, Escanaba, Mich.; and WMAM, Marinette, Wis:

Last week, if you will recall, I had as my guest on this program the Honorable BARTEL J. JONKMAN representing the Fifth District of Michigan who, as a member of the subcommittee of the Foreign Affairs Committee of the House of Representatives, recently completed a 7 weeks' tour of Europe studying the United Nations Relief and Rehabilitation Administration program and the lend-lease program insofar as both are concerned with feeding, clothing, and otherwise rehabilitating what we are told are the starving peoples of Europe.

We had before us on the floor of the House October 31 and November 1, the appropriation measure to provide an additional $550,000,000, as our previously committed balance in our total appropriation of roughly $1,350,000,000 out of a total appropriated by all of 45 countries of roughly $1,875,000,000. This measure, of course, passed the House overwhelmingly inasmuch as it was a previous commitment. It did not do so, however, without some amendments and considerable arguments about the administrative inefficiency in the operation of the UNRRA program and considerable discussion about the interference that UNRRA is receiving from certain of our allies in the last war, notably in the instance of Russian-dominated countries.

From the figures that I have given you previously, you can see that the United States—which was in the forefront in organizing UNRRA—is putting up about 72 percent of the total cost of this program whereas some other 44 nations are putting up but 28 percent of the total funds.

You ask, How does this all come about? Let me take just a few minutes to give you the history of UNRRA. Some of you will recall that in May of 1943, I took it upon myself to go down to a certain mysterious conference of United Nations representatives that was being held at Hot Springs, W. Va. The newspapers said I crashed the gate. That is not exactly correct because I was greeted very cordially by Judge Marvin Jones who presided at that conference and who formerly had served as a Member of Congress and as chairman of the House Agriculture Committee. Judge Jones assured me there was nothing mysterious about the meeting and that I could assure the House membership they would be free to attend any and all sessions of the conference. Armed with that assurance I then returned to Washington, after being certain that I had a room reserved in the hotel proper where the meetings were being held and on my return the following day, after having made a speech on the floor, had with me the Honorable FREDERICK C. SMITH of Ohio. We spent several days in Hot Springs thereafter but found on our return that we, and every other Member of Congress, were definitely barred from all sessions at which any work was being accomplished. We, and so could anyone else in the United States, have attended either the opening and closing sessions both open to the public of these momentous meetings. Everything else was in secret or closed sessions.

It was at this so-called food conference that UNRRA was born, after it had been conceived in London and rejected by the rest of our allies because of proposed British domination, at the expense of the United States, of course. In other words the British brought to us their proposal for a world rehabilitation organization to take care of the starving peoples in the conquered nations of Europe and elsewhere in the world and as is seemingly customary with the British their proposal called for Uncle Sam to foot most of the bill. Our State Department had fallen for the bait, hook, line, and sinker. Representative SMITH and myself were denied any access to any information of value and could not determine just exactly what was in the cards.

Several months later, at the request of the Honorable FRANCES BOLTON, Congresswoman from Ohio and a member of the Foreign Affairs Committee, that committee held a closed session with secret minutes being taken down and not available to any other Member of Congress, outside of the great Committee on Foreign Affairs. They called before that committee Mr. Dean Acheson, of the State Department, who had been noted by Representative SMITH and myself at the meetings after our arrival and who it was noted invariably sat with the British rather than the American delegates at that conference during their meals. Dean Acheson explained to the committee, at Mrs. BOLTON'S request, the proposal to which the State Department had in effect already committed this counry to participate in this UNRRA program, the funds for which were to be based upon 1 percent of the national income of each of the participating nations but the disposition of those funds to be controlled by a central committee consisting of a representative from each of the various nations contributing thereto and the supervisory and immediate control vested in the hands of a small group consisting of the so-called Big Four powers—United States, Great Britain, Russia, and China.

In the minutes of that momentous meeting of the House Foreign Affairs Committee, the chairman of that committee expressed considerable surprise that the State Department had gone ahead with this program, apparently with the approval of the White House, without even taking into its confidence either the Senate or House Committees on Foreign Affairs.

It was obvious that the State Department had in effect committed us without any legal authority whatsoever and it was at that time that a younger member of that committee, Representative FULBRIGHT, of Arkansas, suggested that perhaps it might be well that the Congress give some legal status to this our first participation in a United Nations agreement. He suggested that a simple resolution be drawn up stating in effect that it was the sense of the Congress that we should participate in this and other worldwide United Nations programs. This was approved by the committee and later by the House and Senate and was known as the famous Fulbright resolution, probably upon the strength of which Mr. FULBRIGHT later was elected to the United States Senate, where he now serves. A point to be remembered, however, is that this resolution was in substantiation of a commitment already made by the State Department with the approval of our late President Roosevelt and was in effect nothing more than a face-saving gesture for both. Of this angle, the public has heretofore been told nothing.

The Congress later committed this Nation to an appropriation of roughly $1,350,000,000 as our share in this UNRRA program. Our first appropriation toward this sum amounting to $800,000,000 has already been made and we were thus obligated to furnish an additional $550,000,000, which as I have said previously was voted favorably on November 1 and which, having been a previous commitment, I naturally supported although I voted against and spoke against the original idea of our joining UNRRA in the first place.

Why the rest of the world, and more especially our State Department, should expect that we should put up 72 cents on the dollar while 44 other nations put up 28 cents on the dollar for each dollar expended by UNRRA, and concerning which we are but one lone voice in the control of the disposition of that huge fund as opposed to six for the British Empire is beyond my comprehension. This is especially true when it has been proven beyond all shadow of doubt that much of the contribution we are making in the form of tangible goods has our own labels removed therefrom and other nations take the credit for being the benefactor to the starving peoples of Europe and elsewhere. That in brief is the history of the start of UNRRA. We did control the appointment of the chief official of UNRRA and President Roosevelt appointed former Governor Lehman of New York as that guiding genius. It is but natural to assume, as we pointed out in last week's broadcast by Mr. JONKMAN, that UNRRA has made a great many mistakes and has exhibited a tremendous amount of inefficiency—which was freely admitted by members of the UNRRA staff—to all of which it has been subject to much criticism by the press and by Members of Congress. Such criticism has served to keep that organization more on its toes and much of the previously exhibited inefficiency and incompetency has since been corrected. It still remains a fact, however, that much of UNRRA's beneficence has admittedly gone into black markets and whole shiploads of food, medicine, clothing, etc., have been diverted and sold by the starving nations we were trying to help and unquestionably much of our largess has been appropriated by the armies of occupation on the eastern side of Europe and especially in the Balkan countries overrun by Russia.

One of the reasons this has come to pass has been due to the fact that UNRRA simply delivers the goods to the borders and the governments of these countries then take over and distribute our alms as they see fit without any further supervision by UNRRA. In many instances heretofore we have been denied the opportunity to have duly accredited representatives of the American press or radio visit those countries for the express purpose of finding out just where the American taxpayers' money was going.

Consequently in passing this additional appropriation on November 1, the House of Representatives was fortunate indeed to be able to write into this appropriation two definite restrictions as to the further operation of UNRRA which I believe sincerely will improve the situation if they are carried out.

The most important amendment introduced by Representative DIRKSEN, Republican, of Illinois, and amended by Representative CLARENCE BROWN, Republican, of Ohio, provided that hereafter no largess from UNRRA should be distributed in any nation unless accredited representatives of the American press and radio were permitted free access to these countries to see how our taxpayers' dollars are being expended and to see to it that an honest distribution is being made to those who are genuinely in need of same and above all to make sure that none of our largess is being used to feed and clothe the Communist dominated armies of those nations nor indeed the Russian armies of occupation themselves. This amendment was supported almost unanimously by the Republicans and with the support of a goodly number of southern Democrats carried on a roll call vote by a margin of 20 votes. It was, of course, vigorously opposed by the administration forces.

Another rather minor, but I think a very important amendment, was adopted as proposed by Representative CHRISTIAN HERTER, Republican, of Massachusetts. As Mr. JONKMAN pointed out to you last week, a major difficulty in the feeding of Europe stems from lack of transportation through the ravages of war. UNRRA has admittedly been handicapped heretofore in the disposition of its largess by a lack of truck, rail, and vessel transportation. Arrangements have been made for the American Army of Occupation to turn over to UNRRA a considerable number of trucks for this purpose. However, it was learned that when UNRRA took a truck load of produce, food, medicine, or clothing to the border of one of the recipient countries that country in turn not only took over the contents but the truck itself and then distributed it in its own manner. Mr. HERTER's amendment will henceforth put a stop to this practice of taking over our trucks.

Further, the bill itself provided that henceforth duly designated officials of UNRRA shall be permitted to enter these recipient countries and satisfy themselves and so report to Congress that our largess is being properly distributed to the right people. Nevertheless, the House felt that we should have still a further check through the agencies of our press and radio reporters and thus adopted the Dirksen-Brown amendment.

Last week, due to many important local elections all over the country, the House had no legislative program, but of course some mittees were continuing hearings on legislation requested by the President. That brings me to the reaction in the House to the President's so-called wage-price speech. The reaction was very definitely unfavorable even to some staunch administration supporters. For instance, I spoke with a number of southern Representatives who all agreed that it was about time President Truman got rid of some of his White House advisers, holdovers from F. D. R.'s "palace guard," who were leading him astray and very far away from his own personal policies exhibited so admirably when he first assumed the Presidency after the death of Mr. Roosevelt. Some Washington news commentators reported that his speeches were being written for him by Judge Samuel Rosenman, who wrote most of Mr. Roosevelt's speeches in his later days. It is to be recalled, for instance, that when Mr. Truman assumed the Presidency he stated in effect that hereafter Congress would do the legislating for this country free from White House influence, and that he would tend to his knitting as the administrator of the executive branch, charged by the Constitution to carry out the mandates of the Congress. Surely if left to his own conscience and his own resources, based upon his many years of service in the Senate of the United States, Mr. Truman personally would not have stooped to such an absurd position as attacking two outstanding committees of the House of Representatives which failed to jump at the crack of his whip and report legislation the need for which both of those committees conscientiously felt had not been shown to be paramount at the moment. Mr. Truman well knows that the Congress is fed up on taking orders from the White House on important and far-reaching legislation and that he can expect little cooperation by indicting either the great Ways and Means Committee or the Committee on Expenditures in the Executive Departments. For that reason I predict to you right now, you will not see any unemployment compensation bill come out of the Ways and Means Committee, nor any full employment bill come out of the Committee on Expenditures in the Executive Departments—at least not for some time.

---

## Military Training

EXTENSION OF REMARKS
OF
## HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. SMITH of Ohio. Mr. Speaker, under unanimous consent, I insert in the RECORD a radio address I delivered opposing conscription in a debate of this subject with Mr. Edward M. Scheiberling, national commander of the American Legion, over WRC, the Washington outlet of the National Broadcasting Co., 1:30 p. m. Tuesday, November 13, in conjunction with the twenty-fifth anniversary of American Education Week:

Ladies and gentlemen, the subject of this discussion is wrongly stated. It should be Universal Military Conscription to Train for Combat and War Service as a Part of the Program of the Education of American Youth instead of just Military Training as a part of such program.

President Truman, in urging the adoption of the plan, calls it universal military training, tries to make out it is not conscription, but refers to it as being compulsory training for combat and war service. The dictionary defines conscription and compulsory military or naval service as being synonymous. Until the movement to set up this program was started no one thought of conscription and compulsory universal military training as being anything else but the same thing.

Let us be honest in discussing this subject and call things by their right names.

This is a plan to conscript the youth of our Nation for military training in the art of war.

The reasoning and devices now being used to press the one year conscription through would have much more force for extending the period later. That has been the experience. The pattern never changes.

Let us not be deceived. If we approve conscription for 1 year now, we should be prepared for 2 or 3 years' conscription later.

And if our physically fit and crippled male youth are to be conscripted now, why not the same for our female youth later? Should we not be prepared for that, too?

To connect conscription with education creates a decidedly false notion. In America education has always meant preparation of our youth for industrial pursuits, and in contrast conscription has meant preparation for war. Our people have always associated education with liberty and conscription with militarism, and properly so.

Reason is the law of education, obedience to command that of military training.

We ought to go to the bottom of this question It was the conception of education as preparation to fit our youth for industrial service that made America. Here is the source of her great strength, her ability to out-produce, live better, and achieve the almost miraculous in military might.

Why now throw away this precious jewel and adopt that which we just spilled our blood to destroy? History has demonstrated that conscription and freedom will not mix, one or the other must go.

What are the forces which motivate this movement? A few honestly believe it is needed to make us militarily secure.

But is this all that motivates the generals and admirals and power seeking group in the Government to make peacetime conscription a permanent institution? Do not believe it. Self-aggrandizement plays a prominent role.

What more than this program of conscription is needed to complete the regimentation of our people?

The argument that conscription would improve the health of our male youth is wholly without foundation. There is no scientific evidence in medical literature that I know of to support this allegation. Unrealism like this claim has contributed powerfully to bring this Nation to the deplorable condition it is now experiencing.

Will anyone argue that in peace or war the men comprising the German conscript army were more physically fit than our civilian soldiers who have just defeated them so disastrously?

Conscripton is unconstitutional.

Why the hurry, pressure, coercion and deception to induce Congress to pass this act? The war is over.

The answer is that the leaders of this program know they could not possibly put it through in any other manner. They know that they dare not permit the matter to become a public issue, and that if the people could express themselves at the ballot box they would turn it down overwhelmingly.

They have no respect for representative government, and seek to replace public servants by public masters.

Those who complain of OPA or other bureaucratic restrictions, or that demobilization is being deliberately retarded, cannot consistently support conscription, since this would enhance the power to regulate their lives.

The proposal to institute conscription is a part of the program to set up a dictatorship, as is also the proposal before the Senate now to give the President power to declare war.

Let us stop building a dictatorship, let us stop fighting wars to aggrandize imperialism of other countries, and let us relieve our minds of the crazy delusion that providence has directed us to finance the world, to police the world, and to reform the world, and to mind everybody's business but our own. This done, conscription will not be needed.

## Expediting the Army Demobilization Program

EXTENSION OF REMARKS
OF
**HON. COMPTON I. WHITE**
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
*Monday, November 12, 1945*

Mr. WHITE. Mr. Speaker, there is so much misunderstanding and criticism of the War Department in demobilizing our armed forces that the facts presented in a letter just received from the War Department in response to a protest which reached this office are enlightening and, I am sure, of national interest. The letters are inserted herewith.

Representative COMPTON I. WHITE,
*House of Representatives,*
*United States Congress,*
*Washington, D. C.*

DEAR REPRESENTATIVE WHITE: We are writing in strong protest against the continued unnecessary delay in Army demobilization of soldiers who are anxious to resume their civilian status.

The flood of reports coming from boys held needlessly in camps, doing nothing, wasting time, becoming bitter at the slow unwinding of army red tape, is arousing a hot resentment among thousands of folks back home. Hundreds of reports are coming from army camps that soldiers are being held in the Army just to provide high-salaried jobs for commissioned officers.

We voters are demanding prompt congressional action to prove definitely that the peoples' representative still have the final control and authority over any military clique that might be endeavoring to perpetuate itself in office.

We rely upon you to vindicate our faith in your ability to interpret the wishes of the home folks in adequate congressional action.

Sincerely yours,
L. A. WILLIAMS.
Mrs. L. A. WILLIAMS.

---

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
*Washington, D. C., November 8, 1945.*

Hon. COMPTON I. WHITE,
*House of Representatives.*

DEAR MR. WHITE: I refer to a communication received by you from Mr. and Mrs. L. A. Williams, protesting against delay of demobilization of the Army.

There has been no delay in the demobilization program, on the other hand, demobilization is far in advance of the anticipated schedule. Since May 12, 1945, 2,500,000 soldiers have been discharged from the Army, and the War Department contemplates that all those eligible for discharge in the European theater, of whom there are about 2,000,000, will be returned to the United States for demobilization by February 1946 and that all those eligible for discharge in the Pacific theater, of whom there remain about 1,600,000, will be returned to the United States by June 1946.

It is to be particularly noted that the rate of demobilization at the close of World War II is about three and one-half times faster than was in the case of World War I. It is the further intention of the War Department to return to the United States for demobilization in 10 months an Army which it took 4 years to deploy in the various overseas theaters.

There are considerable misunderstandings in the public mind relative the matter of demobilization. Your constituent may be assured that the Army is being demobilized as rapidly as is humanly possible. So far as any knowledge of military history goes, no country in the world has ever before attempted to demobilize an Army of 7,000,000 soldiers in 10 months.

Sincerely yours,
WM. F. PEARSON,
*Colonel, General Staff Corps, Liaison.*

---

## Shipping Facilities for Return of Members of the Armed Services

EXTENSION OF REMARKS
OF
**HON. JOHN E. FOGARTY**
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. FOGARTY. Mr. Speaker, I have here an editorial which I wish every Member would read. It calls attention to a very serious situation. Danger threatens and this newspaper has very clearly pointed out the root of our trouble.

Every day brings new complaints from the men stranded overseas. I have had complaints from men in southern France stating that United States transports are being used to carry French colonial troops to Indochina and points in that area. There are thousands of men growing frantic in the Pacific and in Europe while our armed forces either neglect or refuse to make use of available shipping to bring them home.

I think it is time we spoke out. I think every Member should join in a general demand that all shipping be concentrated on the one most important task—bring the men home now.

If we raise our voice—if we make enough noise—we will get action.

It is time we stopped taking excuses.

[From the Providence (R. I.) Journal of November 13, 1945]

SNAFU

After a good many weeks of inexplicable delay, during which a near-explosive situation has developed at American embarkation points overseas, Washington at last is taking steps to speed up the return of high-point American veterans. Six battleships, 18 aircraft carriers, and 20 cruisers have been earmarked for the work and the job of converting them into transports is expected to be completed in 30 days.

If all goes well the prospect is that accommodations on home-bound ships soon will be found for all the fighting men with long service records who have been cooling their heels and living on unfulfilled promises at dismal, crowded camps in France and at bleak, half-forgotten outposts in the Pacific.

The daily notices of troop-ship arrivals in this country, plus the repeated assurances of redeployment officials in Washington that all is going well, give the impression that the program is moving smoothly and swiftly. But from the other side of the water, where tens of thousands of veterans sit waiting, a different impression prevails. More than 100,000 American soldiers are crammed in the redeployment camps at Marseilles alone.

Just where the responsibility lies is not at all clear. What is clear is that since VE- and VJ-days thousands of veterans have piled up at ports overseas, heard promises that they would soon be on board ships headed home, and then been forced to sit waiting for ships that didn't come.

When days dragged into weeks—and under these circumstances a week is eternity—the men squawked loudly and emphatically. It was explained that there weren't enough ships for the work. Against this the GI's read reports that of the several thousand Liberty and Victory ships plying the seas only about 400 were engaged in carrying troops home. It was explained that every available oceangoing ship already was engaged in vital work. Against this the Stars and Stripes published a picture of six Liberty ships anchored and abandoned as surplus in Mobile Bay.

Perhaps the most irritating facet of the whole tangled business, from the stranded GI's point of view, was the picture of hundreds of big Navy ships tied up for review at Navy Day ceremonies at dozens of United States ports. The Navy's explanation that the warships were not suitable for transports sounded hollow at the time. The Navy's decision now to put these same ships into transport work supports what the GI's believed all along, namely, that the Navy was concerned with the fanfare of Navy Day and wasn't at all concerned with the plight of the stranded veterans.

There have been hints that the Government deliberately has slowed down the homecoming on the ground that a sudden inflow of large numbers of veterans would complicate even further the home-front problems of reconversion, employment, and strikes. If this is so, clearly the mistake was in making promises to the veterans which couldn't be kept.

Out of this snafu a number of subsidiary problems have developed. The idle, homesick, and angry veterans in France have taken out some of the irritation on the French people. They have built up an artificial dislike of the French and made themselves so obnoxious that the dislike has become mutual. The result is that French-American relations have deteriorated at an alarming rate and the effects of this ill-will are certain to be felt for years.

---

## Havens for Homeless Jews

EXTENSION OF REMARKS
OF
**HON. SAMUEL DICKSTEIN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following communication published in the New York Times of October 9, 1945:

HAVENS FOR HOMELESS JEWS—ALL UNITED NATIONS HELD RESPONSIBLE FOR PROPORTIONATE SHARE

To the EDITOR OF THE NEW YORK TIMES:

The situation in the Near East is apparently approaching a crisis; very soon violence and bloodshed may result. For this I fear our country is partly responsible.

I believe sincerely in the peaceful settlement of disputes, a policy to which the United States is now committed, and I am deeply interested in the Near East through connections with American colleges and universities in that area. I am therefore greatly distressed by the policies now being urged on our Government, policies which threaten violence and upheaval in that critical region of the world.

Sooner or later Arabs and Jews must sit down together and reach an agreement regarding life in Palestine. Why should they not now gather about a conference table to

arrive at some adjustment and avoid violence?

Surely it will be no kindness to the Jews to secure by force their admittance in very large numbers to a section of the world where they will have as neighbors many millions of enemies.

Are not some Americans urging the plan of forcing Britain to force the Arabs to admit the homeless Jews in order to escape our own responsibility toward these unfortunate persons? The conscience of the world should recognize the obligation of us all to help the homeless Jews whose persecution by Hitler we have so bitterly denounced. Each of the United Nations should accept its proportionate share of those Jews who seek new homes. The Arab nations have already offered to accept their share.

What will be the number the United States should admit? Perhaps 200,000? Then let Congress admit these over and above the usual immigration quotas. And let us stop evading our responsibility by urging that our Government force Britain to force Palestine to take in far more than its share. Thus we may avoid setting the Near East aflame.

VIRGINIA C. GILDERSLEEVE.

NEW YORK, *October 6, 1945.*

## UNRRA Appropriation

EXTENSION OF REMARKS

OF

### HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. D'ALESANDRO. Mr. Speaker, under leave to extend my remarks, I include therein an editorial from the Baltimore Sun of November 2:

STUPID AND CALLOUS

The action of the House of Representatives in amending the UNRRA appropriation bill so as to forbid use of the fund in any country which puts restraints upon American correspondents' activities would be ludicrous if it were not so callously inhumane.

No reader will need to be told that we are as much devoted as any representative to the principle of press freedom. All men of good will must ardently wish to see that principle accepted and honored throughout the world. But it will not be advanced by withholding assistance from hungry peoples; men are not brought to see the light by denying food to them and their children.

Indeed, the whole basis of this action of the House is characterized by a kind of moral irresponsibility. If there is a nation—say Finland—whose population faces a lean and bitter winter but whose current government maintains a censorship over press and radio, then the denial of UNRRA help lays a most cruel punishment upon their people for a condition for which the government is to blame. It is as if a physician refused treatment to a child injured in a traffic accident because he, the physician, strongly disagreed with some of the political opinions held by the child's father.

A concept repugnant alike in ethics and simple human feeling underlies the position adopted by the House. The concept is this: The succoring of a suffering people is not an obligation, is not an act which is good in itself, but is a political means, a form of coercion. Even within the sphere of expediency it is a stupid position, since we are not likely to persuade peoples of the rightness of our faith in a free press by telling them they shall not eat.

The excuse that freedom of reporting is necessary to the right use of UNRRA supplies is patently a flimsy invention, because UNRRA officials themselves will be able to check on the operations of their organization in any country in which that organization functions. Approval of the UNRRA appropriation is right, for Europe's hungry peoples cannot be left to starve; but this shocking amendment ought to be eliminated before the bill is passed by the Senate.

## Equalization of Freight Rates

EXTENSION OF REMARKS

OF

### HON. W. R. POAGE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a letter from a farm lady of central Texas to the chairman of the Committee on Interstate and Foreign Commerce:

NOVEMBER 14, 1945.

The Honorable CLARENCE F. LEA,
*Chairman, Interstate and Foreign Commerce Committee,*
*House of Representatives,*
*House Office Building,*
*Washington, D. C.*

DEAR CHAIRMAN LEA: The subcommittee studying the Bulwinkle bill (H. R. 2536) has closed its hearings after 9 days of testimony. During that time, many persons testified for the bill and not one against it.

The only opposition to the bill is a report from the Department of Justice and a telegram from Gov. Ellis Arnall of Georgia. In 419 pages of testimony, not a single verbal statement of oppcsition appears. Governor Arnall requested permission to appear before the subcommittee but was unable to be in Washington on the day the committee designated. The hearings are now closed.

As a southerner who has fought long and hard against freight-rate conspiracy, I urge your committee to reopen hearings and to hear Governor Arnall or anyone else who wishes to testify against the bill.

The record has presented only one side of the picture. The full committee and the Congress should have both sides presented before they act.

We in the South want Congresss to know that our fight for equalization of freight rates is lost if the Bulwinkle bill passes.

What does the Bulwinkle bill do?

1. It takes the rate-making bureaus or "conference methods" of the railroad companies out from under the scrutiny of the Department of Justice's Antitrust Division and makes them subject only to the scrutiny of the Interstate Commerce Commission.

It is a bad precedent for the Congress to start exempting large corporations or parts of large corporations from our antitrust laws.

2. It legalizes the rate-making bureaus of railroads, if and when the ICC approves the agreements among railroads by which they are organized, while at this very moment these bureaus are object of court suits in the Supreme Court and in Nebraska.

In other words, the Bulwinkle bill and the procedures provided for therein will undoubtedly pardon the man before he comes to trial.

The South sees in Governor Arnall's case in the Supreme Court and in the Department of Justice's case in Nebraska important steps toward the final goal of freight rate equalization. If the Bulwinkle bill passes and if, under it, rate-making bureaus are legalized, then notwithstanding these cases, we're licked before we get started.

We southerners have long been victim to the freight rates cooked up in the conferences of railroads. We are well aware and enraged that it costs more to send first-class freight from Mumford, Tex., to New York than from New York to Mumford—the same distance in miles. In other words, it is not the distance that counts but the direction in which it is going.

We're tired of this nonsense. We want a national integrated rate system where it costs the same, mile for mile and pound for pound. Why not pattern after the parcel-post system? It works. It is fair.

The passage of the Bulwinkle bill would set us back 100 years—perhaps forever—in our fight for fairer freight rates. The railroads know this. That's why they have come forth with it on the very eve of court decisions which, I feel sure, will not treat their rate-making bureaus kindly.

Since the South has so much at stake in the bill, I urge you to reopen hearings and let Governor Arnall and those associated with him in his remarkable fight on behalf of the South be heard.

Sincerely,

MRS. JUD COLLIER.

## Civil War in China

EXTENSION OF REMARKS

OF

### HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 8, 1945*

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Evening Star of November 9, 1945:

CIVIL WAR IN CHINA

Although Chinese politics are often not what they appear and sometimes take surprising turns, current events point ominously to full-scale civil war between the Communists and the Nationalist Kuomintang Government headed by Generalissimo Chiang Kai-shek. The main battleground is logically the group of northeastern provinces, formerly under Japanese occupation. The struggle here is complicated by the presence of some 60,000 United States marines, garrisoning Peiping, Tientsin, and other key cities under an agreement with the national government to facilitate the surrender and evacuation of Japanese troops. This has been bitterly denounced by the Communists as intervention, and the prompt removal of the American detachments is demanded. The State Department has announced that it is planned to withdraw them.

At so crucial a moment it is well to analyze the basic factors behind the current situation, and on the basis of such analysis to attempt an evaluation of the deeper trends.

The first thing to understand is that the present armed clash in China is merely the latest stage of a Kuomintang-Communist struggle which has been going on for the past two decades. The Japanese invasion of China merely banked the fires of factional strife without quenching them, and now that the common Japanese menace has been removed the strife is being resumed.

The main reason why the two factions have been unable to compose their quarrel is that, in the last analysis, both aim to control the

whole of China and guide its national evolution. However, this does not mean that the two should be considered in terms of equality by outsiders. Despite their best efforts the Communists have never been more than a local rebellious opposition to a Central Government that has consistently controlled most of China and has been recognized and dealt with as such by nearly all foreign nations. America, like Britain and Russia, are under treaty obligations to aid the National Government in promoting China's postwar reconstruction, and it would appear to be in our interest that such assistance should be continued. We certainly would gain nothing and would lose much by seeing China devastated by a prolonged civil war. To avert that evil we could well afford to risk the displeasure of the Communists, who would be genuinely satisfied only if we withdrew all support from the National Government and thereby tacitly acknowledged the claim of the Communist regime to equality of status. There would seem to be no reason why Washington should now alter the policy of full recognition and support for the National Government which it has hitherto pursued.

## Dry-Goods Merchants Present Interesting Exhibit in Connection With OPA

EXTENSION OF REMARKS
OF
### HON. WILLIAM A. PITTENGER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. PITTENGER. Mr. Speaker, renewed interest in the activities of the Office of Price Administration is manifest in a variety of ways. In the House Office Building there is an OPA exhibit which the retail dry-goods merchants say tells its own story. This is not exactly a rival attraction intended to take interest away from the retail dealers in automobiles and trucks, who are having their hearings before the Committee on Small Business in the House caucus room. However, it would appear to a casual observer that the men who retail dry goods for a living have a great deal in common with the men who sell automobiles and trucks for a living.

In spite of constant protests by OPA officials that they are keeping prices down, in a newspaper item today I noted a news story to the effect that OPA has raised the ceiling 15 percent on underwear, shirts, and so forth. This means that the manufacturers can charge 15 percent more on some two dozen items than has heretofore been possible. This story in itself shows the inefficiency and dreamland-like atmosphere which surrounds OPA. They had to either increase the price which the manufacturers could charge or else there would be no underwear for returning veterans from World War II. The story which really shows what happens when you interfere with the law of supply and demand is found in the Washington Daily News for today, November 14, and is as follows:

OPA UPS CEILING 15 PERCENT ON UNDERWEAR, SHIRTS

To spur production of low-cost clothing needed by veterans, their families, and "others with limited incomes," the Office of Price Administration today had authorized a 15-percent increase in manufacturer's ceilings on some two dozen items.

Items included in the order issued late yesterday include those which returned GI's have found hardest to obtain—underclothing, socks, handkerchiefs, pajamas, shirts. Especially shirts. Also included are training pants and shirts for small children, knit vests for women.

The OPA order, effective tomorrow, gave retail ceilings which will vary according to the article. Examples: Men's shorts now 40 cents, up to 50 cents, those selling now at $1.35 up to $1.70; men's pajamas now $1.35, up to $1.65. OPA said increases would be less on knit than woven goods.

The above item shows what is happening to the dry-goods business when Government experts try to control the law of supply and demand, prices, and other matters that have to do with the manufacture and distribution of any kind of merchandise. The item also disproves the suggestion that OPA has kept prices down.

DRY-GOODS ASSOCIATION EXHIBIT

The article that is of particular interest and which tells its own story is the item in the Washington Daily News for today, November 14. This relates to the exhibition of the Dry-Goods Association. The item in part reads as follows:

THE CONSUMER PAYS AND PAYS—MERCHANTS' EXHIBIT TRIES TO BLAME OPA

OPA is doing everything from "discouraging childbirth" by the price on scooters to knocking the bottom out of the men's shorts business, according to merchants who have opened a "let's knock some sense into the OPA" exhibit in the New House Office Building.

In an effort to pressure Congressmen into voting out the OPA "hold the line" policy, Representative FRED A. HARTLEY (Republican, New Jersey), of the Smith Committee To Investigate Executive Agencies, and the National Retail Dry Goods Association are putting on a display of alleged pricing inequalities—which yesterday nearly led to blows between an OPA man and a dime-to-dollar store magnate—over an electric iron.

VERBAL BATTLE

In a roomful of rayon petticoats, men's balbriggan knit pajamas, and electric appliances, Robert Seidel, of W. T. Grant Co., and Louis A. Williams, OPA chief of housewares and hardwares, faced each other over an electric iron which Mr. Williams claimed "we never put a price ceiling on at all." "You did," retaliated Seidel. "We didn't," growled Williams, which led to an exchange of "dids" and "didn't" which ended only when Williams grabbed an electric heater and stalked away.

The dry goods association is attempting to prove that OPA is forcing inferior goods at high prices on the consumer because OPA is holding the line on ceiling to established manufacturers.

SCOOTER EXHIBIT

Prize display at the exhibit are two scooters, one a sturdy little vehicle, the other a spindly imitation. Allegedly the manufacturer of scooter No. 1 was forced out of the business when OPA refused to lift the 1941 ceiling wholesale price from $1.92. But manufacturer of scooter No. 2 applied to OPA in 1945 for a ceiling based on current costs and was given a ceiling of $3.75, according to Dr. Paul C. Olson, official of the NRDGA. He added, "It's discouraging childbirth—it's race suicide."

"It Starts in the Cradle," shouts a red-letter sign over two baby dresses. OPA is making babies wear obviously inferior little garments which cost wholesale $10.50 per dozen, while manufacturers refuse to make organdy whatnots at $8.50 per dozen, claim the baby dress people.

The dry goods merchants are expecting OPA Chief Chester Bowles to visit the display. Yesterday they kept peering out the door anxiously. One commented repeatedly, "Boy, will Chester's face be red."

Mr. Speaker, we will, of course, be met with the argument that the OPA is necessary to prevent inflation. In my opinion, that is not true. We need price controls but they should be administered by some branch of the Government with men of some practical experience in charge, who know what the normal business requirements demand and who use some common sense in establishing whatever regulations are needed. You will find none of these elements in OPA. It is a failure and is retarding economic recovery and production on a peacetime basis. Just bear in mind that as long as OPA carries out its theory, making it impossible for people to make a profit, just so long will we follow the economic program that prevents production of goods. This means no jobs. So when the unemployment lines begin to lengthen and that is very likely to happen, just remember that OPA has done everything it could to create unemployment.

## Suggestions for Improved Occupation of Germany

EXTENSION OF REMARKS
OF
### HON. CHARLES R. CLASON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. CLASON. Mr. Speaker, Mr. Hubert W. Kregeloh is a commentator on Station WSPR at Springfield, Mass., who has gained widespread recognition as a scholarly, thought-provoking analyst of world affairs. He brings to his large audience of listeners carefully prepared essays on international problems. He has lived overseas for many years, has studied and worked in foreign countries, and has gained an insight into the character, outlook, and ambitions of many foreign groups with different ideologies.

Recently Mr. Kregeloh discussed conditions in Germany. Some of his remarks have been devoted to the administration of internal affairs in Germany by the Russians, British, French, and Americans.

Because of his background, experience, and personal knowledge of the people of Germany I am certain that all Americans can gain a better understanding of the part played by our Government in postwar Germany at the present time by reading the remarks of Mr. Kregeloh, which I herewith quote:

Since 1942 the best American experts had warned the military and civilian authorities that once again the German problem would not be resolved satisfactorily if the conquering Allied Powers assumed the administration of a defeated Germany without a detailed blueprint, on which they could jointly agree, to cover the requirements of the assignment. Such a blueprint was never drafted and Allied rule in the Reich tragi-

cally bears out the warning. Some United States Army officers connected with the European Allied Military Government have endeavored to paint a relatively bright picture of the situation, which is understandable; all of these men are naturally eager to give the impression that they have done a good job. But General Eisenhower himself has warned that the situation is bad and that, apparently, is the opinion of all competent authorities.

Chief blame for failure rests with the inability of the Allies to agree on a joint program for all of Germany. It was, for example, impossible to hope for genuine democratization of the German people after the division of the country into separate zones. In every zone the population is exposed to different forms of indoctrination—with the difference between the Russian sector on the one hand and the Anglo-American-French zones on the other especially pronounced. This can only result in confusion when eventually the zones are eliminated and Germans again intermingle freely. Recently, the unsatisfactory consequences of the division of Germany into separate zones were admitted publicly, among others, by General Eisenhower and British Foreign Secretary Ernest Bevin. Under these circumstances the occupation in the American sector separately could never have been a complete success even if a workable blueprint and better men had been available.

Yet the division of the Reich must be accepted as a fact. Plans are being submitted from various quarters for remedial action applicable to the whole Reich, but cannot be considered at this time because approval from the non-American occupying powers is probably unobtainable. The necessity remains, as far as we are concerned, to strive for every possible improvement of conditions in our own zone. Top-ranking correspondents whose dependability has never been questioned (including Drew Middleton, Raymond Daniell, Tania Long and Anne O'Hare McCormick of the New York Times, Pat Frank of Overseas News Agency) have reported conditions of such seriousness that we cannot afford to leave them unattended irrespective of the policies pursued by our allies in their zones.

On the basis of a conscientious study of all available information and personal observations in Nazi Germany over a number of years prior to the outbreak of World War II, I would propose certain measures to improve the situation. My suggestions fall into two main categories, the problem of the army of occupation and the civilian administrators who will replace Army personnel.

ARMY OF OCCUPATION

The morale of our Army in Europe, magnificent in the days of fighting, is poor now that it has switched to the task of occupation. The soldiers are dominated by the desire to get home because they have never been informed intelligently why their presence now is as vital to the winning of the peace as it was before to the winning of the war, because the vacillating policies tried out in Germany do not convey the impression of purpose and efficiency, and because the officers themselves are not uniformly an inspiration to the men. Especially grave is the circumstance that with increasing frequency Germans, instead of absorbing American democracy, are indoctrinating our troops with many of the Nazi ideas.

Knowledge of this situation will help us to cope with it insofar as its effects might be felt in the United States. We shall be able to steel ourselves against the popular misconception that GI Johnnie, having been there, must be right; we shall be capable of spotting the poison when contaminated servicemen espouse it on their return; and we should succeed in applying effective countermeasures. Countermeasures will be needed. Correspondents report that many servicemen in Germany now voice such alarming thoughts as "the Jews and their practices were responsible for Hitler's rise to power in the first place." These ideas, if left unattended, could fan to dangerous proportions already existing anti-Semitism in the United States.

More effectively, steps should be taken at the source of the trouble—in Germany. Since our troops presently over there are of low morale and in peril of infection with Nazi ideology, their value is doubtful and in any case limited. In the long run their contribution to the objectives we set out to accomplish might be completely negative. Under these circumstances, they should be pulled out at the earliest possible moment and replaced with an entirely new force, specially trained and streamlined for the occupation. In this way much of the harm already done could be neutralized.

*A. Composition*

1. Volunteers: The Army should at once begin to assemble in the United States an entirely new occupation force, composed exclusively of volunteers. The question whether in the future America's entire needs for military manpower can be met through voluntary enlistments is controversial. But it should at least be possible to find a sufficient number of volunteers for the task of occupying Germany among officers and men already in uniform—especially if that service is rendered more attractive than it is now. Volunteers should be used for this important task because their morale is always higher than that of draftees.

2. Selection: Officers as well as men for this purpose should be carefully selected for above-average intelligence and education. Recruits should all be 21 years or older. Germany today is a moral cesspool, and there is validity in public protests against exposing 18- or 19-year-old youngsters to the unusual immoral temptations over there.

*B. Training*

1. Indoctrination: Since the purpose of the recruiting drive would be the creation of a special occupation force, in preference to sending just anyone to Germany, the selection of volunteers of above-average intelligence and education must be implemented with other requirements. Training must take full advantage of the higher mental level of the recruits and avoid the mistake of creating lack of interest, a frequent cause of low morale with high-caliber men.

Emphasis must be overwhelmingly on spiritual and political indoctrination. All will have had combat training, many combat experience, before taking this course. Moreover, the probability of their having to fight as soldiers of occupation is small, whereas administrative ability and political astuteness will be needed every day. Therefore, physical instruction can be restricted to refresher and fitness courses, and instruction in new weapons introduced since their combat training. For the rest, training should be on a mental level comparable to college instruction, designed to equip the trainees with a type of knowledge which is now completely lacking in our army of occupation.

2. Period of training: In view of the facts that the men are already soldiers, have volunteered, and are specially selected, indoctrination training (once the program has been blueprinted) should require a relatively short period. On the basis of my own experience in conducting certain types of indoctrination courses for unselected military personnel, I should estimate that 3 to 4 months of intensified training would suffice, provided the instructors are thoroughly qualified.

3. Instructors: Qualifications include a thorough grasp of the material, efficiency in selecting the necessary while omitting the superfluous, ability to include a maximum amount of useful knowledge in the time available, and—especially important—a talent to stimulate enthusiasm in the trainees. The instructors must be international relations and current events experts with a progressive outlook. The faculties of colleges and universities should be able to provide a portion of the instructors. Other competent men will be found among newspapermen and radio news analysts with lecture experience, especially among foreign correspondents, some of whom are deeply concerned with the problem.

To attract good men and to do the job right, remuneration should be satisfactory. Many individuals qualifying eminently as instructors would be interested if they could work on the project on a part-time basis.

*C. Service*

1. Period of time: This should be limited. Soldiers who do not become desperately homesick after a certain length of time in Europe are in danger of starting to feel at home in the enemy country, and even a strong character with the best political training may find it difficult to resist German influences. To some extent this threat can be countered by providing adequate American recreation and education facilities and opportunity for leaves and furloughs in European countries outside Germany.

It is nevertheless advisable that the members of the occupation force, as a rule, not be left in Germany longer than from 6 to 12 months. After that period officers and men should be returned to the United States even if they desire to stay, and they should be replaced with a new force that had undergone the same training in the interim. Exceptions, especially among the officers, would be men who had proved themselves extraordinarily efficient in the field. These could be retained for additional terms if they desire, and could break in the new arrivals.

The limitation of the occupation service to a relatively short period is also desirable because it will stimulate the enlistment of qualified military personnel who would be rebuffed by the prospect of additional service for a long time.

2. Rotation: The military authorities will no doubt find it desirable to institute some rotation system, especially at the start of the new program, under which a portion of the force would stay one or more months longer than others. This will forestall the total disappearance of seasoned occupation troops before the replacements have had a chance to familiarize themselves with the service in practice.

CIVILIAN ADMINISTRATION

It has been officially announced that, while the army of occupation is to be retained, the American military administrators are to be replaced by civilians before June 1946. We assume that in the future the Army officers in the American zone will be in charge only of the army of occupation, which would constitute the enforcement instrument of the newly appointed civilian administration. A distinct probability of improvement is to be anticipated. With notable exceptions, the Army officers now in charge of administrative functions have not done an outstanding job—chiefly because, despite the brilliant record many of them made on the field of battle, they did not have the training, talents, knowledge, and taste for the peculiar complexities of the administrative task. They were needed during the transition from war to peace, when the job continued to be as much military as administrative, but (again with notable exceptions) they are not now in functions suited to their qualifications and training.

Apparently the civilian administrators are to be selected on a voluntary basis, with special attention paid their qualifications, such as the ability to speak German, understanding of the broad problems involved, and specialized experience in such fields as public relations, industrial supervision, banking, transportation, food distribution, and others. The civilian volunteers will approach their

assignments with greater enthusiasm and more competence than most of the men running the administration of Germany now. To mention one crucial element, our correspondents have reported that much too large a number of United States Army officers are wanting in efficiency because they do not know enough German and are forced to rely on native translators and interpreters of uncertain dependability.

Yet encouraging as the prospect of the change appears, those familiar with the German mentality will voice a serious objection. Germans, even before Hitler's rise to power, had been trained to associate authority with a uniform of some sort. The American who would attempt to boss them in a business suit has a serious disadvantage against him in comparison to the American in uniform—even though the latter might be much less competent. Ridiculous as it sounds to Americans, modern Germans are not awed by a civilian irrespective of his authority, while they will bow and scrape before almost any man in uniform, especially if added to the uniform is a string of pompous titles. Under nazism this cult reached its most grotesque excesses, largely because uniforms and titles made zealous Nazis of mediocre men who would never have amounted to much in our society. Shortly before the war, the streets of German cities were crowded with men in all sorts of uniforms, some of them fantastic. Inquiry often resulted in information that the wearers were officials in the forestry department, electric light company, and similar nonmartial institutions.

I suggest, therefore, that we should be making a grave mistake if we dispatched administrators in business suits to Germany. They should be given a specially designed uniform, distinctive in appearance, however, from the uniforms of our armed services. The fancier that uniform is, the better. It would be worn exclusively by American civilian administrators and would pass out of existence with the termination of the occupation. We may expect that the idea, so much in conflict with American tradition, will not be palatable to the Army, Navy, and Marine Corps, the public, nor to the men who wear the uniforms. However, we must bear in mind that we are dealing with a people of strange ways and we want results. We wish to develop a better policy in Germany, and we also want the Germans to carry out our orders with promptness, not with the secret suspicion that the American does not have the authority he assumes. A uniform, any uniform, is exceedingly necessary in the Allied administration of Germany.

## Compulsory Military Training

EXTENSION OF REMARKS
OF

### HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Rev. Sam H. Zealy, of Washington, N. C.:

LOCAL MINISTER DISCUSSES COMPULSORY MILITARY TRAINING

(By Sam H. Zealy)

"I am clear in my own mind that, as an essential factor in the maintenance of peace in the future we must have universal military training after this war." These pertinent words were penned and spoken by the Commander in Chief of the Army and Navy. It is very apparent that our President advocates universal training for the youth of these United States. Since these lines were spoken the present President has called for universal military training.

The American Legion together with other military organizations concur in the same view. Here and there we find ministers of the gospel and even some denominations who favor the idea.

However, in a recent coast to coast survey sponsored by the Aeronautical Training Society only 67 percent of the civilian population favored making military training compulsory. This, too, is a wartime survey. Militarists are of the opinon that when peace comes, this percentage will decrease considerably.

But the clergy seems to be alining itself together on the issue to oppose any compulsory training in peacetime, though some think we should be better prepared than we were before Pearl Harbor. The Federal Council of Churches of Christ in America, supposing to speak for some 22,000,000 Protestants in 25 denominations is unalterably opposed.

A spokesman for the Committee on World Peace for the Southern Baptist Convention has declared that a compulsory law now enacted is a defeatist view.

The Roman Catholic Church has firmly opposed the principle. The Committee of the Roman Catholic Association for International Peace says, "America's new position in world affairs calls for a reorganization for our traditional defense policy but universal peacetime military service should be a last resort."

The National Commission on Christian Higher Education of the Association of American Colleges has asked for a delay in congressional action on this matter.

It is repugnant to a right-thinking citizen who lives in "the land of the free, and the home of the brave" to think of such a law being enacted and enforced in peacetime. But there are certain facts which the same citizen must face.

First, we must admit that the world is not Christian but pagan. There are 2,500,000,000 persons on this globe and only 500,000,000 profess the Christian religion (this group includes Protestants, Catholics of all types, Syrians, and Christian cults). There are four pagans to every Christian.

Second, we must admit and deplore the fact that Germany, the cradle of Reformation Protestant Christianity, and Italy, the seat of Roman Catholicism both were the instigators of this global conflagration.

Third, we must concede that the Bible is true and that this is not the last war and that there "will be wars and rumors of war" throughout the human history of man. Because of the above, I think we as custodians of this world ought to be realist enough to see that "this war is not to be waged to end all wars," and we ought to be better prepared to forestall the propensity of human nature.

I repeat, "It is repugnant to a right thinking citizen who lives in 'the land of the free and the home of the brave' to think of such a law being enacted and enforced in peacetime, but some such law is necessary, if we are to strive for security for our children and those yet unborn.

There have been presented as far as I have read, three such plans for securing peace for the future. Let us dwell upon each plan and evaluate it.

First, the plan for drafting our youth for 1 year's time in military training. The idea has in mind compelling the boy when he reaches a certain age to cease his schooling or resign his work and train in the arts of war for 1 year, part of the time, say 3 months, be spent in this country training and 9 months outside our borders patrolling the world.

This training would be disciplinary, educational, and extremely broadening. But it also would be very expensive to the Government and would break into the youth's line of study or work. Educators feel that this plan will make of our youth will-of-the-wisps, dreamers, and twentieth century nomads. In other words, after this training they will not immediately take up where they left off.

Second, a plan to draft our youth in the same manner as the plan above mentioned but to train them in camps of this country similar to the former Civilian Conservation Corps camps. They would not learn the arts of war except close order drill without guns. They would do the same type of work that the boys in the CCC camps did. This type of training would also be disciplinary but not as educational and broadening as the former plan.

To the Government this too would be expensive and it also would break into that adolescent period when a youth is busily engaged in preparing himself for life.

Some have suggested that there be courses taught to supplement their school. This would be splendid but the problem of expense and the impossible problem of finding teachers is unsolved.

Third, this plan calls for compulsory sports. The idea I suppose is that in each preparatory school, college, or university we have a period of athletics during the day as we have mathematics or English. This would be placed in the curriculum as a required subject.

This idea strikes a responsive chord in a peacetime citizen. Coaches are already provided for the regular program of athletics. There would be facilities available for gymnastics and all types of athletic contests. It would be conceded that this would cost incalculably less than the former two plans.

But I believe this would not be the answer to our problem. Sound bodies do not necessarily make good soldiers. There would not be the discipline taught in compulsory sports as is needed in the making of a good soldier. Some have advanced the theory that our high school and college athletics have made excellent soldiers. To that I agree, but who has sought to ascertain what percentage of them had also military training to increase their usefulness.

In my opinion, the plan that has been used in my life and in thousands of young men who attended the Academy of Richmond County in Augusta, Ga., and similar schools all over the country is the solution to our problem. I speak in regards to the Reserve Officers Training Corps, 4 years of high school and 2 years of college military training.

Let us have an expanded program of military training to reach every preparatory school in the United States where there are 100 boys who are eligible and offer this same training to the State universities and colleges as well as privately owned schools of higher education. In the latter schools the Government should issue clothing, equipment, and underwrite the youth's sustenance. This would give to nearly every boy the opportunity to have at least 2 years of college and many of them would be able to gain their degree by this initial help.

Let me say in my own military training that the groundwork for discipline, coordination, cooperation with people, public speaking, dignity, and physical development was laid. This program did not make us military minded but it did give us a feeling of security for the future.

This set-up will be more expensive than the compulsory sports plan but much less expensive than the 1 year military training. Every small town or community in which is located a consolidated school where there are 100 boys who are eligible could share in such a plan. This training should be compulsory unless the boy was excused by a reputable medical doctor. Then the 2-year college training which would be voluntary but which would provide room and board and equipment so that youths from small schools who desire college would profit thereby, together with any others who desired.

In the academy, during the years 1827–1931, we had 700 in the military department. It was staffed adequately by one commissioned officer and one enlisted man. The Government should pay one-half of the cost of the uniforms to be bought through a local clothier who would bid in on the business directly to the Government. This idea of finding clothes for a boy of this age would be highly acceptable also to the mothers.

In my 4 years of ROTC there was not one, to my knowledge, who had a legitimate excuse for not taking military training unless it was medical. Even today as a minister I still see no grounds for objecting.

This is the solution to our problem of being prepared for war in time of peace. A Reserve Officers Training Corps in every preparatory school in these United States with an enrollment of over 100 boys, and a similar unit in our school of higher learning for the first and second years, the Government in the latter schools underwriting clothing, equipment, and sustenance.

## Universal Military Training

EXTENSION OF REMARKS
OF
### HON. DANIEL K. HOCH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. HOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the enclosed letter from Mrs. May Chapman, 1230 Schuylkill Avenue, Reading, Pa., with regard to universal military training:

READING, PA., *November 12, 1945.*
Hon. DANIEL HOCH,
*Washington, D. C.*

DEAR SIR: I understand we are facing the issue of whether to have our sons serve under a system of military training for 1 year after completion of high school, or not. Having a son of my own, I have given this issue much thought and have come to some conclusions which I feel I must express:

1. While I agree that a certain amount of military training would benefit our boys, I feel that it should not be done by taking 1 year of their lives after completion of high school.

2. Yes, do let us keep our boys physically fit—at all times—examine them each year through high school, and correct any irregularities.

3. If military discipline is to be taught, why not do it during the summer months, or just during the summer following graduation? After all, our boys during this war had only a basic training of 13 weeks and sometimes were in actual combat shortly afterward.

4. If it is necessary that they should be educated as to the scientific advancements of war, in such subjects as ballistics, aeronautics, etc., as mentioned by our Honorable President, why not incorporate these subjects in the high-school curriculum; if necessary, eliminate some other subjects and have each boy select which type of service he would prefer, and study the subjects pertaining to that service? After all, it is claimed that the knowledge the boys acquired of these subjects during the war would benefit them in peacetime employment, why then would not the same thing apply if these same subjects were presented during peacetime? Also, by educating during the 4 years of high school we could teach them all the new advancements as they are made.

5. Due to the rapid change in our living standards, and the constantly increasing need for advanced education, our marriage age has advanced several years beyond that of several generations ago, thus producing moral problems which were unknown when the common marriage age was lower.

6. To take 1 year after high school would not only advance the marriage age, but also add 1 year to the period of years of completion of a subsequent college course, or any further advancement in a trade, starting a business, or at least putting another year between the age of actually earning a living.

7. In many cases I feel this year of interruption would mean a loss of incentive to continue on to college or higher education, especially in families of modest incomes.

8. In concluding, I do feel that we would be making a grave mistake if this measure becomes a law. Why train our boys to defend our democracy if we have lost the freedom we would train them supposedly to defend? Our dictators made soldiers of their men, not to preserve their freedom, but to take freedom away from other nations. Let us not make the same mistake. We mothers beg you to voice your protest against this measure.

Sincerely,

Mrs. MAY CHAPMAN.

## The Owners and Employees of the Aluminum Co. of America Rendered Such Outstanding Service to the Nation They Were Twice Awarded the Army and Navy E—Will This Administration Be Permitted To Use the Taxpayers' Money To Destroy This Great Enterprise?

EXTENSION OF REMARKS
OF
### HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. JENNINGS. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include a statement made by me and published in the Knoxville News-Sentinel of November 4, the Maryville and Alcoa Daily Times, and the Maryville Enterprise, and an editorial of the Knoxville News-Sentinel of Saturday, November 10, Baiting Alcoa.

The article follows:

The attack of the United States Government on the Aluminum Co. of America is the boldest, most unwarranted and the longest step that has been attempted by this administration and that of President Roosevelt to destroy private enterprise in this country. The great plant of the company at Alcoa in Blount County is the largest single industrial plant in this congressional district or in the entire State.

The Aluminum Co. came to this section more than 40 years ago because of the availability of hydroelectric power and the reservoir of the best and highest type of labor in the Nation. It built dams on the waters of the rivers in the mountains of Blount County and North Carolina and spent millions of dollars in our midst.

The company pioneered in the production of aluminum. It developed, trained, and maintained a department of research and has constantly increased the production of this wonder metal and constantly lowered its price. It expanded the use of its product so that today it is used to make countless household articles—pots and pans, dishes, furniture, and other articles too numerous to mention. Its industrial use is constantly expanding—in the automobile, railroad equipment—and the production of aluminum gave us the air supremacy without which we could not have won this war.

The company's plant in our midst more than doubled its capacity since 1940, and it built for the United States Government 52 aluminum plants throughout the country. It made no charge for these services, and it furnished the know-how that operated 50 of these plants for the Government. The profit from the operation of these 50 plants was divided between the company and the Government. When the company paid taxes on its $6,000,000 of profits, it received virtually nothing from its operation of these Government plants.

The company has violated no law against monopoly. If it had, the Government would have indicted it under the antimonopoly law.

The Government is attacking the company solely on the ground that it is big and that the company has created a demand for aluminum and has supplied that demand at constantly lowered prices.

The company owns only a small percentage of the bauxite from which aluminum is made. It has never prevented any other company from entering into competition with it.

This great enterprise built by the savings of private individuals and developed by the research, skill, and ability of citizens of this country is guilty of what the New Dealers consider a crime—the crime of success.

It has succeeded because it has kept in advance of the people's need for aluminum. Its growth has brought indispensable articles into the homes and lives of our people, has created wealth and comforts shared by millions of Americans, and has poured, and is pouring, millions in taxes into the Treasury of the United States, of the State of Tennessee, and of Blount County.

To give you some idea of the benefits to the State of Tennessee, and especially to Blount, Knox, Monroe, and Loudon Counties, I call your attention to the following facts:

During the years 1942, 1943, and 1944 the Aluminum Co. of America at its great plant at Alcoa, in Blount County, paid to its employees $65,462,000. This great plant in Blount County paid out in express and freight rates $14,472,000. It purchased materials in Tennessee to the amount of $12,786,000. It paid in taxes in Tennessee $4,943,000. It purchased from the Tennessee Valley Authority electric power in the sum of $20,372,000. In these 3 years it spent in our midst $118,035,000.

The Aluminum Co. is the only company in the country that will pay the Government anything like the value of the Government-owned plants that are now idle and that cost the taxpayers $700,000,000.

The Government is proposing to virtually give these plants to anyone other than the Aluminum Co., and to subsidize the company that takes them as a virtual gift, and to guarantee such company against loss in their operation. This proposal is so raw that the administration will have to come to Congress for its approval. Congress in my opinion will not approve such a scheme.

The editorial is as follows:

BAITING ALCOA

Whether or not it was the polite thing to do at the time and place, Attorney General Clark's recent remark about the Government's insistence that the Aluminum Co. of America be held a monopoly and split up were only a reiteration. The United States official who heads the Department of Justice said in an interview while here to address the State bar last week substantially what he had asserted earlier in official utterances

in Washington. But the fact that this area is the seat of the Aluminum Co.'s huge plants at Alcoa, Tenn., made his remarks here all the more pointed.

We were not surprised that General Clark's controversial attitude was to draw fire in return. And Congressman JOHN JENNINGS certainly made a vigorous retort.

"This great enterprise (Alcoa) built by the savings of private individuals and developed by the research, skill, and ability of citizens of this country, is guilty of what the New Dealers consider a crime—the crime of success," said Mr. JENNINGS.

Now the question of whether the Alcoa as a corporation is a monopoly is one that is still not finally settled. But that question is one for the courts and perhaps Congress to settle and not other Government agencies.

During the war Alcoa built and operated at Government request half a dozen plants over the country. Now, that it is time for disposal of these plants, Alcoa has waived any claim to buying and operating them under the terms laid down by the administration. But along comes the Surplus Property Administrator and offers to let competing companies obtain these plants under most favored terms—more favorable than were offered to Alcoa.

As our sister paper, the Pittsburgh Press, said recently in an editorial reprinted on this page, the question of whether Alcoa is a monopoly is one thing and whether Government subsidies should be employed to set up competitors to Alcoa in business is quite another. We feel quite sure that the payers of withholding and income taxes and buyers of war bonds did not intend for their money to be used to provide competitors for a corporation which, even though big, was big enough to pay its own way and get along for years. Alcoa did not take one dime's worth of Federal subsidy for its own benefit even during the war.

The role of the Surplus Property Division in helping to break up Alcoa as a monopoly is one that seems out of order. What the Surplus Property Administrator should do is to recapture as much as possible of the money furnished by the taxpayers of the United States that went into Defense Plant Corporation properties built to increase aluminum production during the war. That and that alone is his function, not to feed new money into the venture merely to create competition. If Alcoa is to have competitors let them earn and pay their own way.

## Atomic Energy

EXTENSION OF REMARKS
OF
## HON. EMILY TAFT DOUGLAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the statement of Dr. J. C. Stearns, who was in charge of personnel relations in the production of the atomic bomb and was director of the laboratory in Chicago during the last year. This statement was made in a meeting on atomic energy in the caucus room of the Old House Office Building on Thursday, November 8:

I am glad that Dr. Urey said a number of things I had in mind because I am sure that he can say them much better than I. Also, for your own sakes, it will allow me to shorten my own remarks. As always, I say again that I feel I have a right to speak on this subject with humility and earnestness of the same degree—both intense.

In the first place I came to Chicago at the very time the project was organized. All of you know the relation of Chicago to the atomic bomb project on the whole was much the same as the relation is between the Bell Telephone laboratories and the world-wide telephone system. Chicago was the original laboratory at which the original scientific work for the production of plutonium was consummated. It then became an advisory laboratory to all other parts of the atomic bomb project. I lived with these scientists. As a matter of fact, it was my privilege to settle and live with their troubles. My first problem on this atomic bomb project was to put Dr. Szilard on and off the pay roll three times on the same day. That gives you some idea of the way military regulations work on such a job.

I want to discuss with you what I consider scientific capital. I want to make inventory of the scientific capital that we had at the beginning of this war out of which the atomic bomb was built. I would like to divide this scientific capital into two categories, one of which, scientific principles, facts, and knowledge, was possessed by the scientists of this country at that time. And secondly, the scientific capital in terms of personnel which we had in this country at that time.

Now the scientific capital in terms of principles and knowledge was simply the knowledge of the atom. We knew it was mostly empty space with a little bit of a center. Under certain conditions we transmuted the atom into another atom. You may make the atom radioactive in which the bomb becomes a little radio sending station, or like a little machine gun which throws out bullets. The neutron is such a bullet which could be used to cause an atom to split into two atoms which become two lesser atoms and release some 200,000,000 electronic volts of energy as compared with just a few volts in an ordinary chemical reaction.

One thing I would like to make clear is that most of the scientific capital of which I have spoken was not developed in this country but came from abroad. It came from England, France, Germany, and from Italy. We were the possessors of this because it was a free interchange of scientific information. It came to us via that route and a large fraction or large percentage of this was imported capital.

Secondly, I would like to mention the kind of capital we had in the way of scientific personnel. If you have read the Smyth report you will realize that among the first five men who proposed to our country the possibility of using fission to produce a military instrument, was Szilard, who is with us, and Fermi, Teller, Weisskopf. A majority of these people were not citizens at that time. Much of the scientific capital which went all the way through the project making it possible to develop military weapons which ended—did not win, but ended the war quickly—was imported. It came to us because we have what I believe was the greatest asset in the world for defense; that is, a haven to those scientists who wished to have free expression to work in terms of free enterprise and to live in a country in which freedom existed.

What is the future of our country with respect to this instrument? I think Szilard made it perfectly clear that while it has given us an advantage and has saved many lives by ending this war quickly, we may have something which places us at a great disadvantage in the years to come if we fail now in making proper use of this energy. First of all, in living with all these scientists as I do, I know that all of them believe that this Nation must remain strong whatever its future function in the world—come war or peace. To survive we must remain strong, and no nation is going to remain strong if any of these sources of scientific capital are in any way hampered. We may remain a physically strong nation. We may remain strong if we make wise use of scientific capital, as I have already said, which during the war was greatly depleted. No more scientists were trained, nor new principles discovered, and we have a 4-year period that has been almost bankrupt from the point of view of the production of scientific capital. We must again get immediately to this phase of the work if the Nation is to remain strong.

Secondly, we must develop the second phase of scientific capital; namely, we must develop new scientific facts, principles, and laws. In other words, it means we must enter upon a vigorous wholehearted program of research which again stimulates free enterprise and research which has given rise to these unexpected things which man makes use of in times of need and in other times as well. Let me mention two things. I think we are likely to be led completely astray by thinking only of the atomic bomb. What one has done is to split the uranium atom, and in language which we all know, namely, we have chosen one main course and went down the course without investigating the side avenues. That is the one thing the military and other people did for us during the war. Our primary job was to get the bomb made. We took only one scientific fact and followed it through to its conclusion.

It is known to all scientists that if you could convert hydrogen to make helium, the amount of energy would be far greater than the amount of energy we now have by splitting the uranium atom. In my own field, a field which appears to have no social or military significance, the field of cosmic rays in which you sit up on top of a mountain during the summer and count little rays coming in. It is a practice which was almost completely dropped at the beginning of the war. This research has shown the presence of particles known as mesatrons, which release not millions or hundreds of millions of volts of energy but release hundreds of billions of volts of energy.

What I am mentioning is that if there should be another war, the strength of the country in all probability will depend as much upon new discoveries which are made as it will upon the utilization of scientific principles we already know. If we do not make provision for both the discovering and creating of these and also acquiring them from other places, we are short-sighted, indeed, as regards the strength of our own Nation.

The particular part of this May-Johnson bill which I think will be very dangerous to the country is the part upon which Dr. Urey has talked, namely, that is the part with respect to security. Let's ask what this sort of thing would do. The bill says that it is in the power of the commission to decide whether or not a harmful amount of energy has been released. Under those conditions can I work on mesatrons? I just don't know. I don't know what harmful amounts of energy are concerned. And may I join with the other speakers in my concern of the last 4 years under an organization similar to this suggested in the bill which gives me very grave doubt as to whether or not I could start in on any such thing with any assurance I could go through with it.

What would happen with the results would be twofold. First of all, we have security. If we have secrecy with respect to our own research other nations will reciprocate. They couldn't do anything else. Remember what we said at first—that a large fraction of our scientific capital in the way of fundamental research came from foreign countries. That is one field in which we cannot compete with other nations—that is the field of keeping secrecy, and I am glad we cannot.

Secondly, I am not different from other scientists. A scientist is not going to work

in a field in which he has to have freedom of thought and freedom of enterprise when he knows at any moment someone from a commission not responsible to anyone may within their own judgment say, "No, this experiment cannot go on." So we will do two things. We will lock the door to information coming in from outside—being imported. We will also make ourselves weaker with respect to research being done in this country. I think security as shown in this bill, or any security at all, will materially weaken our standing and strength of our Nation among other nations. Finally, just let me say that if security concerning fundamental research is insisted upon, that we may expect to happen here what has happened in other places. Instead of Fermi, Szilard, and Wigner coming to our shores we may expect them to emigrate to such shores where such and such a thing may be done. I feel the very bill itself sabotages—no, that is not a good word, for it is one they use on us—the very bill destroys the very thing that we want to make strong. I think it will be fine for you to hear from the next scientist, who is a young man who worked on this project.

I might say this—that the scientists entered upon this project first of all to find out whether or not an atomic bomb could be made. I think it was the hope of most of them to find out it couldn't be done and so could go home and know there was no such danger. But every step indicated it could be done, and when it was done the primary and all-important motive was that this must be done before Germany did it. They hoped that when that happened the war would end and lives would be saved and it would prevent future wars. I have seen, actually, Fermi age some 25 years on the project and each and every man who has lived for this thing comes to know, as people cannot know who hear of it overnight, what the thing means. A most enlightening statement was made by Wigner to General Groves when he said, "You will do a disservice to the American people by keeping this information from them because the American people are going to have to decide after the war what should be done with this type of energy, when they themselves have not had the time to assimilate the facts and decide what this means." I listened to this statement, and it didn't mean much to me at the time. I didn't realize it takes years of living with a thing to realize its potentialities. Secondly, that secrecy keeps from the American people the very facts that we have to know to be strong as a democracy and strong as a physical Nation. Secrecy as such in fundamental research has no place in the American scheme of things.

---

## Declaration of Principles of Republican State Central Committee of Arizona

EXTENSION OF REMARKS

OF

### HON. ROSS RIZLEY

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. RIZLEY. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include therein a declaration of principles by the Republican State Central Committee of Arizona, dated November 7, 1945.

Mr. Speaker, from out in the great Southwest comes a declaration of principles and fundamentals which, in my humble opinion, clearly presents the issues between the two major political parties in this country. It is radicalism versus prudent conservatism. Otherwise stated, the New Deal Democratic philosophy based upon a supernatural state embracing the fundamentals of state socialism versus a policy based upon the fundamental concepts of a republican form of government as contemplated and practiced by Jefferson and Lincoln.

This declaration of principles by the Republican State Central Committee of Arizona is, to my way of thinking, so timely and so clearly states the issues, as to recommend its reading to all citizens, regardless of present party affiliations, who have hope and faith in the future of a free America.

DECLARATION OF PRINCIPLES BY REPUBLICAN STATE CENTRAL COMMITTEE OF ARIZONA, NOVEMBER 7, 1945

The Republican Party of the State of Arizona recognizes that the major political issue in this State and in the Nation is between extreme radicalism and prudent conservatism.

We intend to meet this issue without evasion or equivocation and to fight it with every honorable resource within our power and our abilities.

Therefore the Republican Party of Arizona declares itself to be the Conservative Party of this State, and to be in militant opposition to the Democratic or Radical Party which by word, plan, and action is striving to fasten communistic theories and practices upon this State and upon this Nation.

We believe it to be our duty to give the voters of this State the opportunity to make a definite choice between the unwholesome trend of the Democratic Party toward state socialism or communism or unbridled radicalism, and a sane, wholesome, statesmanlike conservatism aimed to preserve the democratic form of government of the State and the Nation, and the freedom of the individual within the framework of fair and just and impartial laws courageously and impartially administered for the common good.

We believe that the only device by which a republican form of government can be maintained is through the operation of the two-party system. A strong, alert, intelligent, patriotic minority party vigilant in its opposition, firm in its criticism, efficient in its alternative proposition, is indispensable to the permanence of the Republic.

The existence of the two-party system requires the statement of opposed principles and program in clear terms in order that the citizens may make a choice at election time. There must be a defined battle line between the two parties which must be stated clearly and adhered to faithfully by the minority party. Only by this conduct can it hope to become the majority party.

The Republican Party of this State desires to compel a choice between its program and principles, and the program and principles of the Democratic Party.

Therefore, after solemn deliberations the Republican Party makes public this declaration of its principles, its program, and its plan.

President Truman has by word and act established the party line for the Democratic Party. Explicitly and clearly he has declared the Democratic Party to be the radical party of the Nation and of the States. He has made it explicit that the Democratic Party, under his leadership, will turn to the left, and that his program of legislation will carry the country in the direction of state socialism. He has made it explicit that his program shall include further centralization of Federal authority, deficit spending, radical class legislation, administration of the law to favor radical groups, curtailment of individual freedoms, a progressive nullification of the rights and privileges of the 48 States and increasing circumscription and strangling of the American system of fair and free competition in business.

In each instance, to the detriment of the State of Arizona, this radical party line has been echoed and aped by the imitative State administration of Governor Osborn.

The Republican Party of this State, therefore, true to its obligations to the State and to the Nation, declares itself to be in determined opposition to these principles and to this program. It offers a home and a rallying place for that vast body of American voters of all parties who wish to express their disapproval of 13 years of radical encroachment; and who wish to preserve that form of government and that way of life and that wise method of conducting our private and our business affairs which has made the United States the greatest, most progressive, most powerful, and most happy nation on the earth.

The Republican Party of Arizona defines its conception of the meaning of the word "conservative." To conserve means to save. A conservative party, first, is a party opposed to unbridled radicalism. It is not a party of reaction nor one whose mind is closed to suggestions for moral, political, and social improvement. It is not a party that places property rights above human rights, but a party that recognizes the importance both of property and human rights, and protects both from impairment or destruction. It means a party devoted to saving and protecting our republican form of government with its guaranties of equal opportunity for all. It does not believe in government by minorities, in class or race prejudice, or in favoring one section of our population above any other section, but it does believe in protecting all the citizens in all the rights by requiring all citizens, all classes, all groups to work for the common good. It means a party devoted to saving the right of every individual to make the most of his abilities in any business or calling he chooses, and to lay aside and keep and invest his surplus to insure security in old age; it means a party that shall devote itself to saving the United States and the State of Arizona from aping and adopting the evils of communism or socialism or any other foreign philosophy which may impair the right of each citizen to live his own life as he shall choose within the framework of just laws enacted for the protection of his neighbors.

The aims of a conservative party must be to save to the citizen his rights to maintain his home, create a family and educate it, and within his doors to worship God according to the dictates of his conscience. It must conserve his right to choose whatever calling may appeal to him as a means of livelihood, and to change that calling at will. It must conserve his right to go into any business he desires and to conduct that business without improper Government meddling. It must conserve his right to compete fairly with his business rivals, and to conduct his store, his shop, his farm, his factory according to his best judgment. The only laws that shall limit his freedom of action shall be those properly enacted to protect his neighbors, customers, and competitors from dishonesty and unfair practices and his employees from injustice and exploitation. It must conserve his right to make a profit, and amount of that profit shall be limited only by regulations against greed, extortion, dishonesty, the rights of his employees, and the health of the community. It must conserve his right not to be limited in the amount of his sales or of his production or his crops, and his right to buy where he will and to sell where he can. It must conserve and foster his right to risk his capital in new ventures and to make a reasonable profit thereby, and to compete, to invent, to expand for the benefit of himself and the community in which he dwells. This and

only this is the definition of the word "conservative" as it shall be applied to the program of the Republican Party.

The Republican Party of Arizona believes that the American system of private business and private capital has proven its excellence and its efficiency through the century and a half of the life of this nation. It must not be impaired nor destroyed. It is this American system that won the war by applying its genius, knowledge, and technique to the production and invention of ammunitions and instruments of war. This system, in operation, came to the aid of the world and saved the world. In competition with the systems of state socialism and communism it proved itself to be superior. Nations which do not believe in our system were compelled to call upon us for aid and would have gone down to defeat had not that aid been generously given. Other nations which did not believe in our system were decisively defeated. It has proved itself to be superior to any other system in war, as it has demonstrated its superiority in times of peace. The Republican Party of Arizona will fight to maintain that system against its enemies in the opposition party and the communistic allies of the opposition party.

The Republican Party of Arizona recognizes that the second of the great issues before this country is this: Shall organized labor rule the United States, or shall the United States govern organized labor?

The Republican Party of Arizona asserts that we must protect organized labor in each and every one of its just rights, but that we must not submit to be governed by it.

Organized labor comprises but a fraction of our population. We believe it dangerous to our future that a fraction of our citizens should be permitted to assume the dictatorship over all our citizens.

The Republican Party of Arizona believes that the great majority of the members of labor organizations are bewildered and appalled by the tactics and conduct of some of their leaders which have thrown this country into a turmoil of class strife, resulting in unnecessary, ill-advised and destructive strikes at a moment when unity and cooperation is necessary to undo the destruction of war, and to return this country to peace and prosperity.

We believe that the majority of the members of labor organizations desire that all unions be rescued from the hands of racketeers who have seized dictatorial powers in too many of the unions; and that they desire their unions to be purged of communistic influences which seek to make of a proper labor movement an instrumentality of revolution.

Because the Republican Party of Arizona is the sincere friend of responsible labor, and desires that labor shall be protected in all its basic rights, and assisted in its wise and prudent programs for the betterment of the workers of the country and of the State, it asserts that it will do all that lies within its power to assist the labor movement to free itself from the influence of racketeers, communists, and revolutionists, in order that the labor movement may be safe in the hands of the honest, industrious, patriotic, and moderate men who make up the majority of all labor unions.

The Republican Party proposes that all labor organizations shall be required to reorganize themselves according to republican forms and that each union, under proper law, shall become a responsible legal entity, whose rights, powers, privileges, and responsibilities shall be clearly defined, and that no labor organization shall be permitted to force its members by unwilling assessment to furnish money or to use its funds for the support of any political party or matters submitted to the votes of the people.

Labor should have its just share in the prosperity and the profits of industry; and that share should take the form of the highest possible wages, the best conditions in which to work, and the shortest practicable hours. But the public must be protected by measures that see to it that labor shall not take more than its just share to the detriment of the public at large. There exists no right in any minority group to monopolize prosperity, nor, by demanding more than its share, to prevent any other group, or the unorganized public, from participating equitably in the good things of life.

## Send Daddy Back to Me

EXTENSION OF REMARKS
OF
### HON. DANIEL K. HOCH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. HOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem by one of my juvenile constituents:

I am a little girl, you see, and trying to find a friend
Who'll be so kind and help me out with a lending hand.
You see, my problem is so big and I am just quite small,
I guess I'll never be able to understand it quite at all.

I have a daddy sweet and kind but he is far away,
And mommy always tells me we don't know how long he'll stay.
But gee, I miss him very much and want him to come home.
So mister, could you help me please, and try to bring him home?

I didn't understand, at first, why daddy went away—so
Mommy told me everything—just why he had to go.
But now the war is over and he's still across the sea.
Oh please, kind mister, help me, and bring him back to me.

I miss my daddy very much and feel so very sad
When I see some other children a-playing with their dad.
I have my mommy, it is true, but she is just like me,
So very lonesome and so blue for dad across the sea.

Now when I think of Christmas, I can think of only this
That my daddy would be the nicest gift of all the ones I wish.
But I know that good old Santa just can't bring him like a toy,
So I'm asking you to help me, please, and bring me all that joy.

I've tried to be so big and brave and not get feeling blue,
But now it seems so very long, I guess you'd feel sad too.
That's why I'm pleading for your help to make my daddy free,
And bring him home for Christmas so he can be with me.

So please be kind and help me out and I am sure there'll be
A thousand blessings from the Lord and a thousand thanks from me.
We'll all be happy once again when he comes home to stay,
And I'm counting on you, mister, to hasten on that day.

—*Sandra Leimbach.*

## Letter of Bernard M. Baruch

EXTENSION OF REMARKS
OF
### HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. GORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NEW YORK, N. Y., *October 25, 1945.*
Hon. ALBERT GORE,
*United States House of Representatives, Washington, D. C.*

MY DEAR MR. GORE: It was nice seeing you and your friends the other night. My only regret is that after such wonderful stories from all parts of the country, I should have been called upon to speak on so serious a subject as inflation. Whether I succeeded or not at that late hour—perhaps all of our minds were on pleasanter subjects—I do not know.

Here is what I wanted to say: Before we can decide the question of inflation and all the other economic problems, domestic and foreign, facing us we must get an over-all picture of the balance sheet of the country—a kind of inventory that would show these facts:

What are our present debts? These must be divided into what the public holds in bonds which is more or less a demand debt, and what is owed to others. Also how much further do we have to go in debt to pay for war contracts terminated with the goods delivered and contracts still to run? How much will we have to raise for Bretton Woods, UNRRA, and foreign loans of every type?

Then, we ought to examine our productive capacity and determine how to divide that production, first, to see that enough of what is produced remains in the United States to avoid disastrous inflation, and then how much to allocate for the rehabilitation of Europe, China, the Philippines. Unless this dividing is done wisely, we will sink and the whole world will go down with us. We should direct our aid to foreign countries by giving priority to those who need the most and who will use it to help set themselves on their own feet.

If we promise loans to foreigners, the money will be useless if they cannot buy the goods from our production here. Such demands will further inflation temporarily because they aggravate demands here. There is no use giving foreigners credit (or our citizens greater buying power through increased wages and decreased taxes) unless we are willing to establish priorities which will ration our production where we want it to go until production increases.

We must be careful, when we give aid to other countries, that this aid is not used to nationalize their industries against us, to destroy our own competitive system which, I think, should be preserved. England, Czechoslovakia, France, and other countries are nationalizing or are about to nationalize their industries. Russia has totalized herself—one buyer and one seller—and is totalizing all countries coming under her aegis.

While examining our production here, we must survey all our mineral, agricultural, and other natural resources. We should not dispose of raw material surpluses unless they really are surplus for the whole United States, not simply surplus for some one Government department. On everything else, on all that is really surplus, sell, sell, sell. We cannot go on depleting our soil and mineral resources as we have in the past 7 years without tragic results to our whole economy and national life. A study of our resources and modern scientific methods to replenish them must be undertaken quickly.

The demand for goods and increased wages—the race between prices and the cost of living—is going on here and all over the world. Last night, different men raised this question. Being the host I wanted to say as gently as I could that the conditions we are facing were brought about by our own procrastination and negligence in not having faced the issue when the first price control bill was enacted into law. All elements of cost, wages, rents—everything—should have been included in the original bill. Failure to do so started the race—as was then predicted by yourself, Monroney, and a few others. That failure is the basic cause of the present, continuous spiralling of prices.

I think that in the present circumstances reducing taxes too much now, and with no indication of future plans, is unwise—and may be seriously inflationary—until we have a better conspectus of our financial and economic condition. I had hoped this "scuttle and run" policy which is evidenced throughout our life—military, economic, spiritual—should have been held off and made parallel with peace and as we knew what our demands and obligations were. As I tried to say last night, tax reductions should have been more considered, outlined, and then put into effect, and only after the inventory into our national wealth and liabilities was known. Perhaps the experts had this before them. Even now it would not take long, perhaps a month. Then we would have had facts—not fictions stirred by all the contending pressure groups trying to help themselves in prices, wages, and taxes for their own interests and ignoring the general good. The race of selfishness is on. It plays an important part in the inflationary process.

One other thing I tried to bring out was that we must have full production. Without it we cannot keep any semblance of modern, civilized government. We risk inflation. We mute the voice with which we speak for peace in this world. With this full production we can escape inflation. Labor and management must be made to realize this. Labor disputes cannot continue to interfere with production as they do. In our civilization, where people are induced to buy things and to make them a part of their daily lives, a deep obligation rests on management and labor to fill those needs.

For years I have had high hopes of collective bargaining and intelligent leadership in management and labor to bring about understanding without interference of Government.

Reaction from the war effort has caused much of the unrest, but unless strife ceases soon, Government must take a hand, and a strong one, in the interest of the contestants, the public, and itself.

Whole segments of society have lost their perspective as to the rights of others. Worse yet, many have lost their capacity for indignation over their own wrongs and the wrongs inflicted upon others.

Sincerely,

BERNARD M. BARUCH.

P. S.—The miracle of American production can save the situation now, as it did in war, but it must hurry, hurry, hurry.

## Premium for Failure

EXTENSION OF REMARKS

OF

### HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. ARENDS. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following interesting editorial from the Pittsburgh Press dated October 19, 1945:

PREMIUM FOR FAILURE

For a long time the Government has been after the Aluminum Co. of America.

By antitrust suit and other actions it has tried to break up or punish the company. The litigation has been so involved, with proceedings of such record-breaking length, that it has been difficult for a layman to determine its merits.

Frankly, we don't know whether the Aluminum Co. is as bad as the Government says it is, or as good as its officials contend. We suspect it's in between.

We do know that when war came and aluminum was needed for planes and other weapons in undreamed-of quantities, the Aluminum Co. used its wealth and know-how and facilities to do a job so magnificent that the war could not have been won without it.

But the demand for aluminum was beyond the capacity of any private company. So the Government spent some $700,000,000 to build aluminum plants.

Now the question of disposing of these plants arises.

And the Justice Department and Surplus Property Board are determined they must go to competitors of the Aluminum Co., in order to break up what they contend is a monopoly.

But apparently this can't be done just by selling the plants to competing companies, even at very low prices.

I. W. Wilson, vice president of the company, charges that the Government proposes to provide six different subsidies to enable other companies to operate the new plants. Amid the charges and confusion, it does seem clear that various subsidies are intended.

Subsidies, of course, come out of the pockets of taxpayers.

Once started, they tend never to cease.

They are, as Mr. Wilson charged, "an invitation to reckless, extravagant, and calculated mismanagement."

We are inclined to agree that it would be a good thing if there were more competition in the aluminum industry. But not at the price of subsidies. President Truman yesterday indicated that he, too, is against subsidies.

New plants are available for companies that want to make aluminum, at low prices. Ore and waterpower and the other essentials of aluminum production are available.

If other companies still cannot compete with the Aluminum Co. under those conditions, then it doesn't seem to be a case of monopoly but rather of too much smartness and efficiency on the part of Alcoa. And surely it is bad business to use public funds to offset the lower efficiency of competing firms.

This country has a lot of other Government plants—magnesium, synthetic rubber, aviation gasoline, radio, and electrical equipment, etc.

If we start subsidizing aluminum companies that can't stand on their own business feet, then why not follow the same policy with these other plants?

Just as surely as we start it with aluminum there'll be demands to do the same thing in other fields. Then we'll have taxpayers helping sustain a lot of firms that aren't capable of competing on their own.

It's one thing to sell surplus war plants to firms that can operate them on their own money and initiative. It's quite another to use public funds to bolster poor operators so they can compete with good ones.

## "Not Unduly Exacting"

EXTENSION OF REMARKS

OF

### HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mrs. LUCE. Mr. Speaker, until last June the foreign policy of this administration in relation to the Soviet Union was well described in the memorable words of Acting Secretary of State Joseph C. Grew, when he said that we were "leaning over backward to avoid offending Russia."

Last month, our Secretary of State, Mr. James Byrnes, reported on the failure of the London Conference of Foreign Ministers. Mr. Byrnes' analysis of our present attitude toward Soviet Russia is, in his own words, that "we are not unduly exacting."

Today, many competent observers of our foreign policy claim that our failure to be firm, precise, and clear in our foreign policy exactions toward Russian rearmament and territorial and political demands in all quarters of the globe, will result in an increasing drift toward world catastrophe.

Here are three articles by distinguished commentators which have appeared in recent weeks emphasizing the dangers to world peace in this policy of laissez faire and laissez aller, that has been characterized by the Secretary of State as one of being "not unduly exacting":

PERILOUS DRIFT

(By Walter Lippmann)

With the President the men who have the chief responsibility for our foreign relations are Mr. Byrnes, Mr. Vinson, Mr. Patterson, and Mr. Forrestal. They too must be asking themselves what is the matter, and why the external influence of the United States is now so much less constructive and beneficent than might reasonably—even after grandiose hopes are discounted—have been expected of the strongest and richest power on earth. They must be aware of the mounting discouragement and dismay, and of the need to search out the causes of what is now, prospectively, a gigantic historic failure.

It is quite clear, so it seems to me, that our foreign relations are not under control, that decisions of the greatest moment are being made in bits and pieces without the exercise of any sufficient over-all judgment and general conception by the President and his chief advisers acting in consultation. Thus lend-lease was terminated abruptly and brutally, and the immediate post-war situation was aggravated quite unnecessarily; this was done not as a considered decision by the chief Cabinet officers who have to deal with other phases of our foreign relations. It is impossible to determine who is making our China policy and our Japanese policy. But the policy cannot have been reviewed by the same men who are making our eastern European policy. The contradictions are too glaring between our opposition to spheres of influence and unilateralism in Europe and our insistence upon them in the Far East. It is no less impossible to believe that the problem of the atomic bomb has been handled by men who have paused long enough to listen to the scientists who understand its nature or to thoughtful laymen who are capable of appraising its political consequences.

The fact of the matter, to put it bluntly, is that the administration is not in control of its policy. It is allowing policies to be made in the departments, in the bureaus, here and there in isolated fragments, without proper recognition of the fact that our relations with Russia or Great Britain are the net result of all the decisions which we make that affect them. It would be very convenient, no doubt, if we could take each question by itself, deal with it "on its merits" or perhaps in the light of domestic politics. But it cannot be done.

We cannot shape a foreign policy as we used to frame a tariff bill, treating each item as a local issue. But that is the way the administration is shaping its foreign policy. It is dealing separately with a whole series of questions—British finance, Bulgarian elections, Italian colonies, Jewish immigration in Palestine, the atomic bomb, the postwar Navy, the postwar Army, island bases, etc., etc. But separately these problems are quite insoluble. For they arise from a greater problem which underlies them all—whether the Big Three are settling this war or are in the opening phases of a race of armaments.

The people of this country had better realize now, before it is too late to do anything about it, how far we have drifted into accepting the supremely defeatist idea that, while paying lip service to the organization of peace, we are in fact in a race of armaments. It has, of course, been nobody's—or at least almost nobody's—deliberate intention to engage in a race of armaments. We have drifted into it by a series of isolated decisions, of which no one in high place seems to have foreseen the whole consequences.

Yet there they are, unmistakable to any one who does not let himself be confused by the complicated arguments over each one of the bits and pieces. We have drifted into a race of armaments with the Soviet Union, not only in respect to the atomic bomb, and to postwar military programs, but no less in respect to what is called power politics—that is to say, into a competition for the control of the weak but strategically important regions that lie between the Soviet Union and the United States.

How far this is Russia's fault, Britain's fault, or our own, no honest man can say; what matters is that the thing is happening, that we are all being sucked into conflict, and that we are not now using a fraction of our power and influence to avert it.

Let no one deceive himself; we are drifting. We are drifting toward a catastrophe.

Woe be to those who, when they have the responsibility to steer the ship, do not make for a safe harbor but drift with the wind and the tide.

---

LET'S TRY AGAIN

(By William Philip Simms)

It had been hoped here that the Red celebration in Moscow would lift the pall which of late has settled more darkly over the international situation. Instead, the effect has been the reverse. Three major factors are cited:

First, the mysterious and unprecedented absence of Generalissimo Stalin from both Tuesday night's gathering of Soviet big-wigs in the Kremlin and yesterday's annual parade in Red Square. Also missed were President Kalinin and Marshals Voroshilov and Zhukov.

Should Stalin disappear from the scene, there is no telling what direction Russian policy might take. Those who know him best—though none seems to know him well—claim he is a moderate among present-day Soviet officials and inclined to world cooperation. Possible successors have shown signs of chip-on-the-shoulder isolationism.

Second, the tone of Foreign Commissar Molotov's lengthy speech, delivered in the Generalissimo's absence. It came pretty near being saber-rattling. It gave the Red army principal credit for winning the war and sounded several warnings against Russia's allies. It hit the United States on account of the atomic bomb and raised evening's biggest round of applause when the Commissar said Russia not only would have atomic energy but many more things besides.

There was a dig at England and France—without mentioning names—in connection with regional blocs. Moscow has been fulminating against blocs for several weeks, charging the western democracies with anti-Soviet intentions. Mr. Molotov's speech made clear the source of this inspiration.

The Commissar's words are almost certain to arouse resentment in London and Paris. Since Russia herself first began to organize eastern Europe and the Balkans into a bloc of puppet states, western Europe has shown signs of alarm. Thus, as British Foreign Minister Bevin remarked with some feeling last night, there ought to be "nothing criminal" about the cultivation of friendship among democracies in the west.

Third factor in the gloomy outlook is the significant emphasis Mr. Molotov placed on the difference between democracy as the Soviet Union sees it and democracy as practiced in the United States, Britain, and elsewhere. It is remarked here that if establishment of democracy as a means to lasting peace is the fundamental aim of the United Nations, the outlook for Big Three cooperation is dismal indeed.

True democracy, said Mr. Molotov, "cannot exist in any other states, divided as they are into classes of oppressors and oppressed." Quite clearly, it is observed, this places all western democracies in Moscow's book of reactionaries.

The question uppermost here now is when, where, and how the Big Three can put their reactions back on the track, now that the Foreign Ministers' Council failed and confidence in meetings at highest levels has largely waned. A new effort, however, and soon, is indicated.

---

ON THE RECORD

(By Dorothy Thompson)

On Tuesday President Truman addressed Congress on the necessity of universal military training in peacetime. Wednesday Secretary of State Byrnes signed the text of the protocol of deposit of the United Nations Charter, which formally brought the World Security Organization into being, calling it a "memorable day for the peace-loving peoples of all nations."

There is something strangely ironic in this combination of events. On one day it is proposed that the United States train all its male youth for war; on the next the United Nations of the world solemnly covenant to live together in peace.

The President says, "The sincerity of our intention to support the world organization will be judged partly by our willingness to maintain the power with which to assist other peace-loving nations to enforce its authority."

To enforce its authority over whom?

The only nations not counted among the "peace lovers" are utterly vanquished and unconditionally surrendered. The victors are about to put on trial as criminals those who resorted to a war of aggression.

At such a moment the "peace lovers" enter an armament race.

The President says, "The United States now has a fighting strength greater than any other time in our history. It is greater than any other nation in the world."

But the President asks for more power. Power for what purpose?

"Until we are sure that our peace machinery is functioning adequately, we must relentlessly preserve our superiority on land and sea and in the air." * * * "Research, new materials, and new weapons will never, by themselves, be sufficient to withstand a powerful enemy."

What powerful enemy? What member of the United Nations? Superiority over whom?

The President makes another plea for "realism." So, by all means, let us look at the reality.

The reality is that at Teheran, Yalta, San Francisco, and Potsdam our political leaders gave away the power that America had built up for the cause of justice, liberty, and peace. So today they must ask for more power.

The political leaders of the three great powers rejected the Atlantic Charter, first as its provisions applied to the vanquished, then as its provisions applied to any nation weak enough to be bullied.

The political leaders of the three great powers rejected, at San Francisco, the thesis that great powers must be subject to any law governing their sovereign actions, and in the name of law established lawlessness for the powerful and servitude for the weak.

The political leaders of the three great powers threw into the wastepaper basket at Potsdam every shred of historical and ethnographical principle and human rights. By extending the frontiers of Poland under a thoroughly unrepresentative government to the Oder and the Neisse, and agreeing to the expropriation and deportation of indigenous populations, they compounded the crimes of Hitler himself—the very crimes of which the Nazi leaders stand accused before the world—and condemned millions of absolutely helpless men, women, and children to terror, migration, and starvation.

By agreeing to divide vast parts of Europe into zones within each of which four armies would have, in effect, unrestricted license to do as they pleased, they made inevitable the division of Europe into two blocs, and the break-down of the London Conference.

By agreeing, in the name of "reparations" and "industrial disarmament," to a four-way loot in countries already devastated beyond imagination, they initiated in the name of peace a new scorched-earth policy; set adrift the last remnants of order; betrayed the hopes and prayers of all Christendom, and sowed the seeds of anarchy, nihilism, and despair.

All this was done while the United States had the mightiest Army, Navy, and Air Force the world had ever seen—and the atomic bomb on the verge of perfection.

Let us then, face the reality. Universal military training is not for the "enforcement of peace." It is asked because there is no peace—in our consciences, our minds, our hearts, our policies, our societies. It is asked in the frantic hope that the great nations, estimating each other's terrifying power and maneuvering against each other over the moans of the real "peace lovers"—the suffering, sacrificing, believing, hoping, and broken-hearted people of the world—will fear to attack each other, lest the result be mutual annihilation.

This is our peace, for which the youngest and noblest died.

---

## OPA Propaganda Pressure Campaign

---

EXTENSION OF REMARKS

OF

### HON. F. EDWARD HÉBERT

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. HÉBERT. Mr. Speaker, saturated in his own honeyed phrases, ensnared by his own double talk, trapped by his own perfidy, Chester Bowles has finally

torn off the mask and exposed his contempt for the Constitution of the United States when he denounces citizens the right of petition.

No better evidence can be presented to the American public as to Mr. Bowles' own peculiar philosophy of regimentation, direction, and centralization than his attack on the National Automobile Dealers' Association before the House of Representatives Small Business Committee on Tuesday in Washington. In a statement which would have been amazing and startling had it not fallen from the lips of Mr. Bowles, the Bill of Rights of the Constitution was torn to threads and one of the cardinal principles of our democracy was pitched out of the window.

Mr. Bowles viciously criticized the National Automobile Dealers' Association for sending an estimated 25,000 telegrams to Capitol Hill in an effort to interest the representatives of the people who, unlike Mr. Bowles, were elected to office and hold office by virtue of the will of the people themselves. If Mr. Bowles would trouble himself to read the Constitution of the United States he would find in amendment No. 1, which is the first amendment in the Bill of Rights which guarantees freedom of religion, speech, and the press, also the right of assembly, and the right "to petition the Government for a redress of grievances."

Surely the telegrams which were sent by the National Automobile Dealers' Association to their elected representatives were petitions to the Government as they believe the Government to be. If these automobile dealers and other citizens could not petition their own representatives, who could they petition?

Certainly not Mr. Bowles, whose ears have constantly been deaf to any request for reason and justice in the administration of his office.

Mr. Bowles falls back on the flimsy statement that he is carrying out the will of the Congress. If he is carrying out the will of the Congress then what answer has he to the fact that more than 325 Senators and Representatives, more than half the combined strength of the Senate and the House, presented themselves at the dealers' protest hearing. Simple arithmetic indicates that 325 is far in excess of one-half of a total 531. Mr. Bowles would have you believe that these 325 elected Representatives who took time out from a busy day to present themselves at this meeting in protest against Mr. Bowles, were all wrong and Mr. Bowles is right.

Mr. Bowles talks from both sides of his mouth as usual. He, of all people, should be the last to criticize so-called pressure tactics. Throughout the year the office of every Congressman is flooded with literature from Mr. Bowles' office in a high-pressure campaign to maintain OPA. Adroit and clever manipulation of regional and district offices are used to contact Members of Congress by Mr. Bowles to promote his campaign for perpetuation of OPA. Dare he deny that he has sent impressive and misleading charts to each Member of Congress shortly before consideration of OPA legislation? Can he deny that he has badgered and high-pressured members of the cognizant committee in an effort to get the kind of legislation he wants? Can he deny that he has used the press and radio of the Nation for a propaganda pressure campaign in an effort to mislead the people and intimidate Members of Congress? Can he deny these and other things he did at the expense of the taxpayer?

And this is the man who talks about pressure campaigns and denies the right of the citizens of this country to petition their elected representatives for redress and grievances caused by the maladministration of Mr. Bowles. What meat has this our Caesar feasted upon that he has grown so strong!

Mr. Bowles if further exposed in his double dealing when he throws out the sop to cognizant and misguided citizens, who happen in this instance to be members of the Automobile Dealers' Association, by delaying announcement of his price policy until a meeting in Washington could be held. Mr. Bowles, in typical fashion, gave these people a fair and impartial trial before he hanged them. His mind was made up before anybody ever came to Washington and he merely led these poor, unsuspecting lambs to the slaughter, knowing all the time what the ultimate result would be. The hearings were nothing more or less than kangaroo court proceedings, as far as Mr. Bowles was concerned. As an example, when Louisiana automobile dealers attending the hearings become optimistic over the fine attendance of Members of the House and Senate, and were led to believe that Mr. Bowles was sincere in delaying his decision until he could get all the facts in the case, I warned them at the time not to be misled by the show. I told them that it was all an act and the guillotine was merely being set up to chop their heads off. I did not say this after Mr. Bowles made his decision public, I said it before he had anything to say, because, after all, you know I have been dealing with Mr. Bowles for a long time and the leopard has not changed its spots.

The day before the hearings were held I told Representative WRIGHT PATMAN, who presided, that it was all much ado about nothing as far as Mr. Bowles was concerned, and that Mr. Bowles would do what he wanted to do. Mr. PATMAN told me that at least Mr. Bowles had been induced to hold up his ruling until after the hearing. I then said it was just so much grandstand play and that in the end Mr. Bowles would do what he wanted to do all the time.

In a long-distance conversation with Mr. Bill Willkohm, of New Orleans, an automobile dealer, I told Mr. Willkohm that the automobile dealers could expect nothing at all from Mr. Bowles or his Office. I have never claimed being a fortune-teller or a clairvoyant, nor a seer of things to come, but you do not have to be one of these three to predict what Mr. Bowles will do in a case like this. These automobile dealers went into a game where the deck was stacked and the cards were marked with Mr. Bowles doing the dealing. They never had a chance.

This was merely a repetition of his machinations in deceit and misrepresentation in the administration of his office.

Mr. Bowles, an advertising man, with authoritative and dogmatic conclusions, tells automobile dealers what is best for them although he has never been an automobile dealer, while these men who petitioned their representatives have made their livelihood at the business. The dealers themselves say Mr. Bowles' ruling is unjust to them and they cannot exist at a fair profit. Mr. Bowles, in contrast, tells these people they will make more money than they ever made before. He tells them they will take their medicine whether they like it or not because he, the great know-all, says it is the proper medicine for them.

Mr. Bowles' braggadocio statements about curbing prices is just so much hot air. He is supposed to have been a protector of the poor man, but many are the days that the poor man could not buy the commodity on which Mr. Bowles had set a price, while the rich man was able to buy anything he wanted in the black market, which was the illegitimate offspring of Mr. Bowles' program of stupidity.

It is about time that the American people wake up and bowl Chester Bowles out.

---

## Security and the Atom Bomb

EXTENSION OF REMARKS

OF

### HON. EMILY TAFT DOUGLAS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mrs. DOUGLAS of Illinois. Mr. Speaker, under permission to extend my remarks, I include an address delivered by me at the Pulpit Forum, Peoria, Ill., Sunday, November 4, 1945:

Three months ago the first atomic bomb was dropped upon Hiroshima and a few days later, the second leveled Nagasaki. While the use of this terrible weapon shortened the war with Japan and probably saved the lives of hundreds of thousands of our boys, it has filled the people of this and of every other nation with justified foreboding as to how this frightful power of atomic energy may be used in the future.

Since much of the preparatory work in developing the bomb was carried on near my home, I have naturally received many letters from scientists and informed students about the problems which it presents. I think all reputable physicists agree on the following points:

1. Bombs, even more terrible than those dropped on Japan, can be constructed on the basis of present knowledge and more terrible explosives can probably be developed in the future.

2. With the development of jet-propelled planes and rockets, these bombs cannot only be dropped upon a nation by aircraft, but as rockets may be electrically guided to their targets. Saboteurs may also store them in suitcases and trunks to explode at a given moment.

3. So far, in spite of the hopes of certain military minds, there is no effective defense against the bomb and there is small prospect of developing any such defense in the near future. Dangers from aggression have therefore been immeasurably increased and it may

shortly be possible to destroy most, if not all, of the citizens of a nation by a push-button attack waged without warning.

4. There is little prospect that the main technical features of the bomb or of its production can be for long kept secret. The basic principle involved in splitting the atom are already known to the scientists of all nations. We, like other countries, will therefore shortly be exposed to possible attack. Neither the oceans nor science can by themselves isolate or protect us.

5. If war should occur in the future, tens of millions and possibly hundreds of millions of people would be killed. The virtal annihilation of mankind would in all probability result. Decentralization of cities and living underground might lessen but would not avert the carnage.

These prospects, when combined with the break-up of the conference of foreign ministers in London and the worsening of our relations with Russia are frightening. As far back as 1914 H. G. Wells, in prophesying the use of atomic energy in future war, wrote: "The old tendencies of human nature, suspicion, jealousy, and particularism" could not exist alongside "the destructive power of the new appliances, the inhuman logic of science had produced." This is true. If we and the people of other countries allow these baser elements of our nature to dominate us as individuals or as nations, then we are doomed to collective suicide.

But it is pure defeatism to declare as Mr. Wells did the other day: "There is no way out, around or through this impasse." Humanity has come "to the end of its tether." We have instead the chance to save ourselves and in so doing prove Mr. Wells' second conclusion wrong. We start with this great asset. The plain peoples of all countries want to live, not to die. They want the unleashed power of the atom to lift the burden of toil, to reduce disease, and to raise the standard of living. May not the sharpness of the choice before us force us all to subordinate those evil parts of our nature so that we may cooperate together to save ourselves from destruction and to bring mankind into the sunlight? At its root, the issue before us is both moral and practical. In making it, we need as never before the spirit of the founder of Christianity who by word and deed proved that love and active good-will are the supreme powers of life and can win the mastery over death and destruction.

But this spirit has to be quickly translated into action. Since we are now the strongest nation in the world and for the moment possess the secret, such action can best come from us. The strong can always offer what the weak feel too proud to ask. Without appeasing aggression and still standing firm for the principles of democratic freedom, can we not take the lead in making the two following proposals to all countries:

1. That if other nations will give up conscription, we will not introduce it in this country. Instead, we shall agree on a pooled force to put down aggression and a drastic limitation of other armaments.

2. That we, along with the other nations, shall renounce the use of atomic power for purposes of war and submit to an international inspection system.

While I am aware of the practical difficulties of such a system, I am told that they are not insurmountable.

Physicists point out that to make a bomb, huge installations are needed, the assemblage of vast materials, and the teamwork of thousands of scientists and engineers. Control over the source of supplies and inspection of factories would be among the safeguards. Certainly inspection is needed to prevent any such pledge from degenerating into the empty futility of the Kellogg Pact.

The obvious time and place for us to make such a proposal would be at the first meeting of the Assembly of the United Nations and thus would breathe life into that organization. Such an offer would be a proof of our good faith. At worst, it would spotlight any nation which is not ready to renounce aggression. At best, it would transform this atomic age into an era of real collective security and peace.

## Address to the Students in Seton Hill College

EXTENSION OF REMARKS

OF

### HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. KELLEY of Pennsylvania. Mr. Speaker, under permission to extend my remarks, I include an address by the Reverend Dr. James A. W. Reeves, president of Seton Hill College, Greensburg, Pa., to the students on October 25, 1945. This splended address vividly points to our responsibilities in these times in our desire to achieve a peaceful world.

The year 1945 will be notable in history. The end of the German war, the end of the war with Japan, the great conferences on war and peace, the British elections, the report of the Harvard committee abrogating the elective system, the Yale declaration on religion in education, the release of energy through atomic disintegration—these events terminate an era. They open another. They represent a time sequence not a casual sequence, but it would be rash to infer that the consequences of these events will go unrelated. They represent civilization with newer problems—moral, social, and geographic. However, this year of unmatched accomplishments will abide in history as a point of unparalleled failure. Men have achieved in thought, but they have failed to embody their ideas in institutions, they have not reduced them to facts. They have devised the greatest military machine the world has known. They have planned and studied, cooperated and driven in the mighty efforts of war. They have regimented the civilian population to sustain that machine. They have subdued enemies. They have won. But they have not succeeded. At least the initial efforts for peace are discouraging. Victory in war has not brought an enduring peace. That is failure.

This weakness apparently derives from the human will, the power to achieve what the intellect has created, to realize in fact or value what the mind conceives. Men can plan better than they can manage and control. This is not new. Obviously there is a gap between man's power to evaluate and his power to control and to govern, a gap between his theory and his practice, between his ideas and his actions. A wide breach intervenes between what man can foresee, plan, and create and his ability to check, to govern, and control, to use what he has devised for his own moral progress and that of his fellows, their mutual well-being and happiness. A man's motives are usually finer than his behavior. This fact education would stress.

While knowledge of any kind is a blessing, it is not the whole of life. Life is also moral. Conduct is the product of a disciplined will, and a disciplined will is the source of our checks and controls. No matter how extensively man may conquer the physical environment, there is that other world of right and wrong that depends upon his will, and you are here at Seton Hill to learn about this. To do the right, man must conquer self, and he learns self-control not by any easy method, but by determined sacrifice and pain. Indeed this issue of the intellect versus the will comes down to us in the literatures of most peoples, in the figures of Lucifer and Gargantua, one seeking to be as God, the other seeking to be a god to self, inviting to do as one pleases. Educators know these points of view. At times they have taken sides, choosing now one, now the other, even as philosophers and politicians have taken sides, always to the detriment of mankind. For if educators overdevelop one faculty of the mind, the imbalance can issue only in conflict and disaster.

Men have dreamed of a peaceful world. They have striven for it. Lately they have fought for it in the most terrible of wars. Surely we should expect that newer world order of liberty, understanding, cooperation, and confidence we imagined would appear when hostilities ceased and which our leaders prophesied. Something is wrong. Something has been wrong. Directly in front of us is a rising new nationalism. It claims to be humanitarian in outlook, affirming that economics is the whole of life and that men should be willing to trade freedom for security. This is not unknown among us, but our people reject it. To exchange freedom for security, they know leads to the compulsion state, to some form of totalitarian government which means tyranny. They know that the totalitarian state can get things done and done quickly, but the American people apparently prefer to trust to the happier if slower ways of free government under the laws they as a people make. Others do not accept this social philosophy. It is outmoded, they say. In place of it they have created a state that sets economic security, not liberty and freedom, as its goal. The Union of Soviet Socialist Republics continues to experiment with its theory and has shaped a political system to protect the experiment, but this protecting system conflicts with the political arrangements of other states. The compulsion government is basically at odds with free government, democracy as we have known it—so much so that some today, even as Karl Marx in the nineteenth century, question whether there is room on the globe for systems so contradictory.

Through long years men have striven for free governments. These governments regarded the human person as the most sacred reality they knew, the individual human person with his inalienable rights to life, liberty, and the pursuit of happiness. Freedom, they believed to be the essential condition for man's growth, progress, and happiness along with his claims to education and to marriage. They affirmed his right to a livelihood, to a job, to property which his nature demanded. His talents, his industry, all his abilities were to find expression in his work and in the products of his resourcefulness. He was not to be hampered in his endeavors. He was to live under law and the law was viewed as the outcome of his organized thinking and experience, administered by an authority that in every instance should consult his welfare. They also contended that man was not the slave of the state, much less the creature of the state. This is basic and unequivocal democracy. But the new nationalism will have none of it.

The whole matter of peace and a new world order is before you. It is a moral issue that depends upon man's willingness to take the right road. He knows that road and its direction. He knows how to plan and to construct a new world. He can engineer it. He sees clearly ahead. The difficulty is simply—is he willing to pay the price, to forego some advantages, some prejudices, some errors that coddle his self-importance and his selfishness? His intellect yields the truth. As a race man is old enough to have tested that truth by experience. Which way will he determine? He knows the truth, he knows the

good, he cannot live for self alone, he must live for mankind. Justice, not power, will secure the well-being and prosperity of the Nation and of the race. Justice is a matter of the will.

One might find in history epochs wherein men have trusted to intellect rather than to will and inversely, cultivating one capacity to the detriment of the other and to the peril of both.

The golden age of Athenian philosophy stressed both human capacities—intellect and will. The unmatchable Aristotle taught men to be moderate—"measure in everything is always best," he said. Intellect and will, he teaches, must be equally developed. There must be no imbalance, no disproportion among the powers and faculties of men's minds. Man must be able for high thinking and grand virtue. This philosophy of life you will know at Seton Hill. It is our tradition. It is humanism. Alone it is not enough. The physical environment and man in its midst are not the whole universe. The Christian tradition declares there is another aspect of the universe—God and His revelation. This is integral humanism. We hope you will know it and fashion your behavior by it. As a system it is tested and revered, with power to guide you and to support you in the confusion and anxiety that plague our people. It liberates a man, it does not fetter him. It will help you to keep your soul, to remain your imperishable and sacred self; holding to it you will not fall victims to sensualism or sophistry. We invite you to it as best equipping you to live in the modern world and to deal with it. May you prosper!

## Atomic Energy

EXTENSION OF REMARKS
OF
## HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. HAVENNER. Mr. Speaker, I think that all Members of Congress who were unable to attend the recent conference held in the caucus room of the Old House Office Building on the subject of atomic energy will be interested in reading the text of the speech made on that occasion by Dr. Leo Szilard.

Dr. Szilard's speech is as follows:

I have to apologize for not having prepared a speech for this occasion, but only after my colleagues and I met today in Washington were we able to discuss what aspect of the subject each one of us might cover. We all are interested in the May-Johnson bill, but it is not possible to discuss this bill or any other bill until it is made clear what the purpose is for which the proposed legislation is intended. Let me, therefore, say what I believe to be the real problem for which a solution must be found and you will see that that problem cannot be solved by an act of Congress alone.

It seems to me that the existence of the atomic bomb will profoundly affect the military position of the United States and that it will affect her position not favorably but adversely. You can easily judge this for yourselves if you will consider the following. As long as the chief weapons of aggression were tanks, guns, and airplanes the United States could easily out-produce any other nation or combinations of nations. If the United States produced 10 times as many tanks, guns, and airplanes as another country, her military position could be considered strong. When it comes to atomic bombs the United States has again an advantage at the outset. At first, if she has more atomic bombs this means that she could destroy more cities of another country. But if we get into an armament race, very soon we will have enough bombs to be able to destroy all the cities of a potential enemy. Additional bombs would then have very little value to us. There are no more worthy targets for them after we have enough bombs to cover all the cities of the "enemy." Therefore, if we have plenty of bombs and our "enemy" has plenty of bombs we will derive no great advantage of having 10 times as many bombs as they have. When this stage is reached (and it can be reached very fast, in the course of an armament race), when two countries have as many bombs as they can use, their relative strengths will no longer be determined by the number of bombs they have but rather by the number of cities which they have exposed to destruction. In the United States 30,000,000 people live in cities of over 250,000. Altogether 70,000,000 people live in metropolitan areas. When the armament race reaches the stage where this country and other countries have plenty of bombs ours will be one of the more vulnerable nations. In the long run it is not possible for us to win an armament race. We can do something in order to avoid losing the armament race, but the main thing that we can do in this respect is to relocate 30 to 70 million people. If we should do this, our position may not be weaker but it still will not be stronger than the position of other large countries which have plenty of bombs. I believe that it is possible to relocate 30 to 70 million people. If we are willing to spend $15,000,000,000 a year for 10 years we might very considerably decrease our vulnerability by decentralizing our cities. It we do that we may avoid losing the armament race, but that does not mean that we can win such an armament race.

From this remark it would seem that the problem which faces us cannot be solved on the domestic scale; it has to be solved on an international or world scale. I am not saying that it can be solved on a world scale either, but we have to try it. If we have tried it and failed we may be faced with a new situation. Up to now we have not tried it.

Now if you are willing to adopt this point of view that we have to make an attempt to solve this problem on an international scale then it is quite clear that sooner or later we will have to establish collaboration in this field of atomic energy with other nations. With this in view, I am more disturbed about the independence from the government of the commission, which the May-Johnson bill proposes to set up, than I am about any of the other provisions of the bill.

The greatest danger that we as a Nation face is a war which may arise more or less automatically from an armament race—a war which no nation really wants. Even if we feel that the general problem of war cannot be solved in the next 2 or 3 years at least we will want to avoid the additional danger of war which arises out of the existence of atomic bombs. It is not possible to discuss here the various methods by which this could be attempted, but most of these attempts would involve collaboration with other nations in the field of atomic energy as well as other fields. If the Government of the United States should decide in favor of such a collaboration, under the May-Johnson bill the President would presumably issue a directive to this effect to the commission, and it would be for the commission to give effect to this directive by issuing appropriate rules and regulations. Now this commission is practically independent from the Government. It has nine members who will meet at least four times a year and who are supposed to run the show. The members of the commission cannot be removed by the President except for cause. If the President wants a majority on the commission he may have to serve two terms before, by means of new appointments, he can secure such a majority.

Even if the President saw his way to remove some of the members in an emergency, he might not know which member to remove on account of the secrecy under which this Commission would operate. In the circumstances our relations with other nations might suffer because the members of the Commission have a different idea about what our foreign policy ought to be than the President. If this were the case, the danger would be great that the rules and regulations issued by the Commission would create the impression that we as a nation do not want to collaborate with other nations in the field of atomic energy. I am not inventing something that might happen in the future so much as I am thinking of similar events that have happened in the past.

During this war we have received directives which I believe originated with President Roosevelt instructing us to collaborate with a joint British-Canadian project set up in Canada. Rules and regulations issued by the Manhattan district rendered this collaboration ineffective. I do not believe that we should create in the future a Commission which is so independent from the administration that it can easily counteract, by means of rules and regulations, the directives of the administration.

You may raise the question, "What shall we do if in spite of sincere efforts our attempts to avoid an armament race should fail?" There will be those who will then begin to think about the possibility of waging a war within the next 3 or 4 years before other nations have bombs that will threaten our security. While I personally find it difficult to get enthusiastic about this solution, I recognize that from the purely logical point of view this possibility will have to be considered if all other methods fail. But however that may be right now this possibility can hardly take first place in our attention. The May-Johnson bill attempts to solve the difficult problem of setting up machinery which can be used for both purposes, that is, making preparations for a preventive war and establishing cooperation with other nations in order to avoid an armament race. If you wish to have machinery which can serve both of these purposes, you make it very difficult for anyone to provide you with a design for your machinery. I am not saying that it is impossible to design machinery which could serve well either of these two purposes but in my opinion the May-Johnson bill as it is before us cannot serve either purpose well.

In discussing the bill further let me limit my remarks to one single point, that is the question of secrecy. The question is what kind of information do you want to have kept secret? No doubt we might have to keep secret, even though we may not like to do so, technical information relating to the process of manufacture of fissionable materials and the construction of bombs. There is, however, another kind of information which you may or may not wish to keep secret and that is information which has neither scientific nor engineering character but has political implications.

Let me give you an example. The greatest secret during the war was the fact that atomic bombs could be made. Under war conditions it was perhaps legitimate to keep this information secret. But I remember that at the approach of the San Francisco Conference, many of my friends became exceedingly uneasy because they felt that the people and the delegates of the United States to San Francisco could not live up to their obligations unless they knew that atomic bombs would exist. How could they take a stand on the question of the Charter if they did not know what the situation will be with which the world will have to cope?

As a result of representations made by a number of scientists which reached President Roosevelt, the President asked that Stettinius be informed of the existence of the bomb, and I wouldn't be astonished to hear that our delegation to San Francisco also knew of the bomb.

If we go on after the war keeping information of such general type secret from the American people we prevent the American people from discussing intelligently questions of our foreign policy on the basis of facts. For instance, if we succeeded in making bombs which could destroy 400 square miles in place of the 4 square miles, destroyed by the bomb detonated over Hiroshima, would you wish to keep such a fact secret from the American people, or would you want them to know about it?

I think Congress will have to decide whether it wants to give the administration the right to withhold in peacetime information of a nontechnical nature which has far-reaching political implications. In my opinion, if bombs could be made which can destroy hundreds of square miles this would be a fact which people would have to know in order to know how to vote. There would be no need for them to know how such bombs are constructed.

Perhaps there will be an opportunity later on, during the discussion, to mention other points connected with the bill which will have to be discussed if we want to understand what this bill means—what it means to scientists and more important what it means to the country as a whole.

## Army Demobilization

EXTENSION OF REMARKS
OF
### HON. CLARE BOOTHE LUCE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mrs. LUCE. Mr. Speaker, today every Congressman is under extreme pressure from our men with sufficient points in the armed forces overseas, to urge upon the War Department that they be rapidly shipped home.

The following letter is only one of literally hundreds which have come to my office demanding more efficient demobilization.

All these letters are instantly referred to the War Department with an urgent request that the Department act as fast as possible to cut all red tape, and release shipping for high-point men who are awaiting embarkation.

HEADQUARTERS BATTERY, SEVEN HUNDRED AND SEVENTY-SIXTH AAA AUTOMATIC WEAPONS BATTALION,
APO 638, CARE OF POSTMASTER,
*New York, N. Y., October 29, 1945.*

We, the undersigned, respectfully petition you to cause an investigation of the War Department's apparent deviation from its system of discharge of personnel by points.

According to today's radio announcements, 80,000 sixty-point service personnel are on the high seas homeward bound, whereas this category IV battalion, whose personnel have an average of over 80 points, is still stationed in Germany, with no assurance as to when we may expect to proceed to a port of embarkation.

Twenty months ago the War Department speedily landed this battalion in the United Kingdom, after transporting us through enemy-submarine-infested waters with fewer ships than are available today.

Our foremost desire is to be returned home to our loved ones as soon as possible. Now that the moot point system is supposed to be in effect, do you think service personnel with 60 points should be returned to the States before service personnel with higher points?

This battalion is assigned to the Ninth Air Defense Command, under the Ninth Air Force. Personnel of this battalion are not considered to be Air Force personnel, and neither are we part of any army; therefore our priority for return to the States is zero.

We shall appreciate any action you may institute in our behalf which will return us home in the very near future. We desire immediate action by the War Department, and not promises.

Respectfully,
Tech. Sgt. FRANK H. DURAND, *Milford, Conn.*
T4 RICHARD E. FLANDERS, *Lincoln, Maine.*
Pfc ANTHONY A. GUISTO, *Waterbury, Conn.*
T5 THOMAS F. DRISCOLL, *Waterbury, Conn.*
Sgt. ROBERT G. BOUCHER, *Waterbury, Conn.*

Signatures continued on petition to cause an investigation of the War Department's apparent deviation from its system of discharge of personnel by points:

Master Sgt. Fenton S. Roskelley, Challis, Idaho, 84 points.

T4 Mark I. Jurras, Jr., Montpelier, Vt., 79 points.

Tech. Sgt. William J. Kopia, Wierton, W. Va., 97 points.

Staff Sgt. Robert P. Borzakian, Cambridge, Mass., 79 points.

Staff Sgt. Lester D. Benno, Santa Ana, Calif., 90 points.

T5 Armand Friedland, Pittsfield, Mass., 79 points.

Corp. William A. Richardson, Detroit, Mich., 76 points.

T3 Earl M. Crawford, Nashville, Tenn., 84 points.

Corp. Rudolph C. Fischer, Chicago, Ill., 82 points.

Pfc Donald D. Fowler, Hinsdale, N. H., 79 points.

Pfc John P. Tumulty, Cleveland, Ohio, 76 points.

T5 Walter F. Day, Dedham, Mass., 79 points.

T4 Norman C. Matlack, Butler, Pa., 71 points.

T5 Benjamin J. Soep, Roxbury, Mass., 79 points.

Tech. Sgt. Clifford H. Enderle, New York City, N. Y., 88 points.

Tech. Sgt. Alfred K. Scharlemann, St. Paul, Minn., 81 points.

Pfc Robert W. Long, Millersville, Pa., 81 points.

First Sgt. John Kosowicz, Jr., Irvington, N. J., 87 points.

5 Paul R. Willard, Hershey, Pa., 80 points.

WO (jg) Eugene A. Souders, Bourbon, Mo., 88 points.

T4 Robert E. Adelson, Boston, Mass., 79 points.

Pfc George Feddock, Nesquehoning, Pa., 79 points.

T4 John H. Otten, Chicago, Ill., 83 points; age 25

Corp. John L. Clark, East St. Louis, Ill., 98 points.

Pfc Robert G. Seidman, Baltimore, Md., 77 points.

Tech. Sgt. David J. McGuire, Jr., Hyattsville, Md., 88 points.

T5 Reginald Bouthot, Fort Kent, Maine, 79 points.

Pfc Kenneth J. Rapose, Fort Devens, Mass., 79 points.

T5 Gustaf O. Nelson, Worcester, Mass., 79 points.

Pfc Walter Zukowski, Chicopee, Mass., 75 points.

Staff Sgt. Gustave Blumenthal, New York City, N. Y., 74 points.

Tech. Sgt. Leonard A. Coffey, South Natick, Mass., 73 points.

T5 Howard A. Sanders, Canaan, Maine, 79 points.

T4 Francis J. Baranauskas, Aberdeen, S. Dak., 82 points.

T5 Harold G. Manning, Boston, Mass., 79 points.

Pfc Edward J. Florczyk, Pittsfield, Mass., 79 points.

Pfc Melvin H. Williams, Barre, Vt., 79 points.

Pfc Truman H. Jones, Roanoke, Va., 75 points.

Tech. Sgt. Frank W. Long, South Braintree, Mass., 83 points.

Pfc Gerald Legault, New Bedford, Mass., 79 points.

T5 John J. Doris, Jr., Valley Falls, R. I., 79 points.

T4 Andrew Lohr, Huntington Station, N. Y., 82 points.

Pfc Angelo C. Minotte, 1022 West Second Street, Duluth, Minn., 89 points.

Pfc Louis M. Tiso, 145 Transit Street, Waterbury, Conn.

Pfc Marvin E. Carter, Oregon City, Oreg., 82 points.

T5 Earl G. Wicks, Cambridge, Mass., 79 points.

T5 Lucian M. Santora, Milford, Conn., 79 points.

T5 Harry J. Dunbar, Jr., Dedham, Mass., 79 points.

Pfc Dale Burdick, Foxboro, Wis., 86 points.

Pfc Ralph A. Wernholm, Holden, Mass., 79 points.

Corp. Edmund J. Kenney, Dorchester, Mass., 79 points.

Pfc John J. Flammia, Waterbury, Conn., 79 points.

Sgt. Richard O'Donnell, Cambridge, Mass., 79 points.

T4 Theodore Pulit, New Haven, Conn., 79 points

Alfred L. Rigali, 41 Essex Street, Charleston, Mass., 83 points.

Adam S. Herman, 53 Andrew Avenue, Milford, Conn., 79 points.

## When the Ordinary Is Extraordinary

EXTENSION OF REMARKS
OF
### HON. BARTEL J. JONKMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. JONKMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Tribune, Grand Haven, Mich., for November 6, 1945:

WHEN THE ORDINARY IS EXTRAORDINARY

Sometimes the average or typical behavior of a community attracts more interests than unusual achievements. This seems to be the case lately for Grand Haven was selected both by the Western Newspaper Union and the American Broadcasting Co. as a representative American small city facing the problems of reconversion and transition to peace.

Some weeks ago a writer of syndicated articles for the Western Newspaper Union, which supplies feature material for hundreds of weeklies and small dailies throughout the country, contacted the local Committee for Economic Development with the purpose of writing up Grand Haven. He paid a visit here and interviewed a number of people.

Excerpts from his story will be published in a later issue of the Tribune. (The local story appeared in the November 3 issue of the Publishers Auxiliary and is currently being released to various papers throughout the United States.)

Last Wednesday the New York office of the ABC network, having heard of the Western Newspaper Union article, called the CED here. By Friday their representative was in the city to put Grand Haven on the air. The broadcast time coincided with the West Shore symphony concert and the program was worked out to include part of a concert number as well as the voices of several local people.

All of this was unsolicited. In fact most people here were surprised that Grand Haven would attract so much attention. They had not regarded their local activities as extraordinary, and they naturally supposed that only extraordinary events and personalities make the "big time."

Typical behavior, of course, is sometimes more extraordinary than we suspect. Reports filed by the local committee for economic development with State and national headquarters were sufficiently impressive to attract the attention of the big syndicates and networks. They showed that thorough surveys were made of the community's civic, commercial, and industrial life by the CED, city planning committee and chamber of commerce. Perhaps few of the cities of comparable size had done as good a job of appraising the problems of reconversion.

Grand Haven had done these things as a matter of course. And that was what made the story so genuine. It was not just "publicity" but an honest community effort packed with significance for the future.

Probably there is no such animal as a typical American city. That is to say, a city may typify America itself but its own individuality is something else.

Grand Haven would not be representative of an agricultural community. But its industrial diversification, its popularity as a summer resort, its progress in vocational education, its handling of the youth recreation problem, its splendid achievements in music, its well-managed municipal power plant, its hospital and other public buildings, its leadership in the veterans' counseling work are outstanding. And the loss of the *Escanaba* in war symbolized the sacrifices which war involves, just as the bond-purchasing record here dramatized individual cooperation in the war.

Which leads us to the conviction that being ordinary is sometimes being extraordinary, especially if it represents teamwork and self-analysis. Certainly it is through ordinary, everyday plugging that communities not only may hope to win a place in the sun but also to enjoy the real blessings of a happy home life and neighborly relations.

## Cost Absorption Policy of OPA

EXTENSION OF REMARKS

OF

### HON. W. F. NORRELL

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me today before the Committee on Small Business regarding the cost absorption policy of the Office of Price Administration:

On August 18, 1945, promptly after the cessation of hostilities with Japan, the President issued an Executive order setting forth a stabilization program for the transition period from war to peace. The order stated that the cost of living and general level of prices should be held at the then existing levels, and that pricing of reconversion products must be on a basis of full volume rather than on volume that will be limited during the changeover from war goods to peacetime production.

Acting under this order the Office of Price Administration has devised means of holding the line on prices to the consumer. These means include a cost absorption policy whereby the retailer is being required to absorb an increase in production costs being allowed the manufacturer.

In my opinion such cost absorption policy is patently unfair to the retailers. It may also be unfair to the wholesalers, though I am not advised regarding that.

The idea of requiring retailers to absorb increased costs allowed to manufacturers is, in my opinion unreasonable, economically unsound, and should be cancelled. The Nation cannot on the one hand provide for increased cost allowances on material and labor to the manufacturer, as has been the case during the war, and expect retail business to absorb such increases and continue to remain in business on retail ceiling prices allowed.

Contrary to statements of officials of the OPA, the retailers have had increased operating costs, including higher rents, higher salaries to their employees, identical to the increased costs of the manufacturers, and I am strongly of the opinion that relief must be given to the retailers from the policy abovementioned, if they are to survive.

I quote below a representative number of messages which I have received from retailers of automobiles, furniture, and clothing on the same general subject:

"OPA's proposed reduction in dealers' discounts would force many dealers (auto) to operate at a loss. Much of the profit dealers have made in the past has been invested in new buildings, equipment, and general improvements. To operate at a loss now with most of their capital invested would force many dealers to go out of business. We have no doubt that if OPA would make a thorough study of the dealers' costs and earnings they would conclude it to be unwise to decrease dealers' discounts." (Union Motor Co., Monticello, Ark.)

"Automobile dealers cannot endure lower discount from factory." (Critz Chevrolet Co., North Little Rock, Ark.)

"The small automobile dealer is not in a position to absorb any part in price adjustments on new cars due to the fact that we were not in war work, were limited in parts received, and held to minimum of labor by War Labor Board. Therefore the small dealer was fortunate to subsist for the duration." (Hart Cruggs Motor Co., Pine Bluff, Ark.)

"The proposal of OPA to decrease discounts of automobile dealers is grossly unfair, particularly since we have been without cars since 1942." (F. G. Smart Motor Co., Pine Bluff, Ark.)

"We, the undersigned automobile dealers in Stuttgart, Ark., vigorously protest OPA proposal that dealers absorb increased cost of automobile production as such a plan would probably result in selling new cars at a loss in the coming critical months. The future success or failure of many automobile dealers is dependent upon a just and fair pricing procedure and we therefore respectfully request and solicit your cooperation and effort in our behalf." (McCallister Motor Co., Ford Main Motor Co., Moll Motor Co., Thad McCollum Sales Co., Rice Chevrolet Co., all of Stuttgart, Ark.)

"We are of the opinion that increase of prices allowed manufacturing concerns will stop normal profit of retailers if retail merchants are forced to absorb further increase and not be allowed to raise prices accordingly. We solicit your support in obtaining relief." (Reap & Crawford Furniture Co., Pine Bluff, Ark.)

"The retailers cost of operation has increased as rapidly as that of manufacturers increase. It will be impossible for merchants to operate profitably. We earnestly solicit your support and vigorously protest this procedure." (John A. Simpson Furniture Co., Pine Bluff, Ark.)

"The practice of allowing manufacturers to increase wholesale prices and forcing retailers to absorb the full amount will force many of us out of business. At best it will cause all to operate at a loss until relief is obtained or until whatever surplus we have is used up. We vigorously protest this procedure." (O. H. Harding Furniture Co., Pine Bluff, Ark.)

"We wish to go on record as vigorously protesting Government allowing manufacturing concerns to increase wholesale prices and forcing retailers to absorb. Our overhead has increased proportionate to others and we cannot stand any further absorption and stay in business." (John A. Pope Furniture Co., Pine Bluff, Ark.)

"Anyone in business is entitled to a reasonable profit on invested capital. The Government's policy of allowing manufacturers an increase in its prices and forcing retailers to absorb the entire amount automatically removes that privilege. We implore you to do what you can to obtain relief for us." (Moore's Furniture Co., Pine Bluff, Ark.)

"We feel that we are entitled to make a legitimate profit as the manufacturers. The policy of allowing manufacturers an increase in prices and forcing retailers to absorb full amount is unjust and we protest this action." (Pine Bluff Furniture Co., Pine Bluff, Ark.)

"OPA preticketing order 578, second revision, is contrary to practices of sound business and discriminatory against retailer." (American Clothing Store, Pine Bluff, Ark.)

"Request immediate repeal OPA preticketing order 578, second revision. With operating expenses increased, retailer cannot survive if selling price cut below prewar level." (Samuel Baim & Sons, Pine Bluff, Ark.)

"In view of fact operating expenses increased from prewar, feel we are not given a fair deal in OPA preticketing order 578, second revision." (Cohen's, Pine Bluff, Ark.)

No blanket cost absorption policy should be established. Each item should net a fair and reasonable profit to the dealer.

I think Mr. Chester Bowles made a mistake yesterday in criticizing the automobile dealers for making their position known. They have as much right to be heard from as any other group of citizens.

## Truth About Germany Seen in House Report

EXTENSION OF REMARKS

OF

### HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I am inserting below a column, Truth About Germany Seen in House Report, by David Lawrence, one of the outstanding editors and columnists in the country, which appeared in the Washington Evening Star on yesterday, November 13. The article follows:

TRUTH ABOUT GERMANY SEEN IN HOUSE REPORT—WRITER CALLS ALLIED POLICY ON INDUSTRY MISGUIDED

(By David Lawrence)

It has taken a committee of the House of Representatives, Republicans and Democrats, to inject some sober truth into the story of the plight of the German people.

Writing a report that is unanimously signed by all 18 members, the House committee of which Representative COLMER, Democrat, of Mississippi, is chairman, tells the world that the cruelty being inflicted on the German people is something that should weigh heavily on the conscience of the American people and their Allies.

"If a hard peace," says the committee report, "requires the elimination of 8,000,000 or 10,000,000 Germans, it would be much more humane to eliminate them at once. The committee feels that the American antipathy to theories of racism includes an antipathy to the theory of racial guilt. Those Germans who will suffer will in the main be the very old who generally opposed Hitler and the very young who were hardly responsible for him.

"It would not be feasible to make Germany pay for the war without reconstituting its industries beyond the point needed for the support of the population at a minimum level. The committee warns that the prevention of a catastrophe in middle Europe will impose a further heavy burden on the taxpayers of the United States and on our occupying armies, if the present contradictory directives stress reparations and the elimination of all industry that can even indirectly support a war as against the necessity for a minimum standard of living for the German people.

SIMPLE QUESTION ASKED

"The committee cannot refrain from asking the simple question: 'What incentive under this plan exists for Germany to turn to democratic ways?' The committee would like to recall the origins of the Nazi movement in the disintegration of Germany during the period of inflation after the last war. The plight of German cities will certainly be worse this winter unless fuel and food are provided on a scale beyond that presently planned."

The foregoing is no surprise to those who followed minutely the events after the World War when the policies of the Allies directly aggravated Germany's plight and forced the German people to accept the domination of the military group in a desperate attempt to restore their economic equilibrium.

After Yalta, the same warning was issued in these dispatches and likewise after the Potsdam Conference. It is remarkable that an official committee of the American Congress should so soon after the war proclaim to the world such a frank criticism of Allied policy which, if it follows the pattern after the World War, may sow the seeds of World War III and again cause the American people to make sacrifices of blood and treasure.

The committee points out, in effect, that the American people will be held responsible, for we have allowed the Russians to partition Germany and strip the country of food, which is but another way of saying the American taxpayer must pay for the looting done by the Red army of the food needed to keep the German people from starving.

ONE OF TWO THINGS

The committee points out that to strip Germany of her transportation equipment and the machinery of her factories beyond the point recommended by General Clay's advisory committee of experts, can mean "only one of two things:

"(a) That a considerable part of the German population must be 'liquidated' through disease, malnutrition and slow starvation for a period of years to come, with the resultant dangers to the rest of Europe from pestilence and the spread of plagues that know no boundaries;

"Or (b) the continuation both of large occupying forces to hold down 'unrest' and the affording of relief mainly drawn from the United States to prevent actual starvation."

Very soon if the American news photographers do an honest job, as there is every reason to believe they will, the American people will see movies of starving German men, women, and children which will rival in their horror the pictures of the Buchenwald concentration camps. But these will be pictures of torture inflicted by reason of an Allied policy of indifference or misguided revenge or plain blundering.

---

## Young GI's Seek Educational Opportunities

EXTENSION OF REMARKS

OF

## HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter that I have received from a GI stationed in Bamberg, Germany, regarding the present discharge system:

BAMBERG, GERMANY, *October 27, 1945.*

DEAR SIR: I don't suppose, sir, that many days go by that you don't receive some kind of a gripe in one form or another from men in the service from our State, Illinois. That is why I must ask you to please not take this letter as a gripe, for I know you have more important subjects on your mind than to read such. The reason I am writing this letter is because I (like many other soldiers of my age) am confused.

I have a lot on my mind, sir, and would appreciate it if you would bear with me the rest of this letter. I don't intend to put you to the trouble of answering this letter, for I want to take as little of your time as possible. Due to the fact that you have spent most of your time in Washington, it is impossible for you to obtain the knowledge of what the men in the service think overseas. If it pleases you, sir, I would like to tell you just what goes on in the young soldiers' minds and what he thinks of the present discharge system. I know those last two words—discharge system—have been giving you and the few like you a real headache, especially the last several months. With your permission I'd like to put in front of you several questions and points that may help you in the future as far as the discharge system goes, and I know it will help the soldier that deserves the help, and by those soldiers I mean the combat men. The soldier that won the war the hard way.

Sir, I just celebrated my twentieth birthday here in Bamburg, Germany, this last September 28, 1945. I consider myself one of the luckiest men in the Army today for the simple reason that I went through combat and came out, with the grace of God, without a scratch. I'm sorry I can't say the same for many of my young buddies. I came overseas last January 14 and saw combat from northern France to the heart of Germany. Deep down inside of me, sir, I feel that I've done my job well, and I know that I, like many others, helped to win the war the hard way. Now that I have done my small bit for my country, why can't my country do something for me and the many other young men like me?

By that I mean why can't my country let me finish the education that I've longed for so much. If there is any reward our young soldiers deserve—the least our country can give is an education. I consider myself very fortunate that I was able to finish high school before I stepped into the life of being a soldier. Many young men were not able to do so but were taken into the Army before they were able to finish. Why keep these young soldiers in the Army when they should be in school? Why? I think we have found the reason. Congress and the Senate have stated that the way the discharge was put into effect was voted on by war veterans. If I were talking to you instead of writing could you tell me how many of these veterans were of teen age? Few, if any. How many of these teen aged soldiers were able to voice themselves? I say again—few, if any. It seems that the married man in the Army has forgotten about the young man and is thinking only of himself. I'm afraid, sir, that our Government is making a grave mistake by not letting these young men finish their education.

After all they are doing a man's job and they aren't even men. The Russian Government is way ahead of the United States as far as the discharge system is concerned. They give discharges to young men who wish to continue their education. Why can't Congress give young men who have the ability and the ambition a break? In God's name I ask again, sir, why keep these young kids in the army of occupation when they should be home in school?

Next—we young soldiers are inclined to believe that the discharge system as it is today is very unfair. It seems that the point system as it stands today is getting the men out in the States and not us over here. We read every day in the papers that men in the States are receiving discharges from the Army. I, and the rest of us realize that these men are high-point men and that they have been in the Army 2 and 3 years. But I will say this, sir, I would rather have spent 3 years in the States than see 3 days of rough combat. Now I ask you don't you think that the men who have seen combat should get out first? The men in the States didn't have to sweat out a burp gun or an on-coming enemy. They knew they would live till the next day, but we prayed that we could live until the next day.

Why can't the Army send some of these men who have seen no combat over to relieve us who have? They should—you must admit that.

You know when the Army set up its I and E program or in other words education in Europe I had great hopes. I was waiting for the day that I could get into one of Europe's best colleges for I knew it would be a great opportunity. I was going to jump at the chance. Not only I but many other young men like me had the same idea. I tried to get in more than one of these colleges, sir, but to no avail; I found that in order to attend one of these schools you had to have two or more years of college education. It was impossible for me to attend college, sir, for I took the roll of a soldier upon my graduating from high school. I'm afraid that the way things look the ending of this war is turning to be the same as the last. The soldier that won the war is now being stepped on and finally all washed up. I'll fight against it as long as I can hold a pen in my hand, these young kids deserve the best.

I see that I have taken too much of your time already and I wish to thank you for letting me have it. I hope that with the little information you have gained from this letter you may be able to help us young soldiers. We are looking forward to the help you may possibly give us—little or big. We will appreciate it more than words can express. Thank you very much.

Yours truly,

A GI.

## This Is America!

EXTENSION OF REMARKS
OF
**HON. SAMUEL DICKSTEIN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. DICKSTEIN. Mr. Speaker, I desire to place in the CONGRESSIONAL RECORD an editorial appearing in the New York Daily Mirror, which is received in the spirit of good fellowship and racial tolerance, which I believe should be commended by all men of good will. It follows:

THIS IS AMERICA!

Let us call the roll of our newly elected top officials and see if there is any hope for the country.

What a mixture!

O'Dwyer, William: An Irish immigrant from County Mayo, who came here in 1910 at the age of 20 with a few dollars in his pocket. He worked as a coal passer on a steamer, as a plasterer, bartender and policeman. Now he's to be mayor of the world's most wonderful city.

Joseph, Lazarus: A Jewish boy from Manhattan's east side; son of a devoutly religious family; had odd jobs, public schools, the law, finance, the State senate. Our new comptroller.

Impellitteri, Vincent: It's an Italian name which the printers of the city are beginning to learn to spell; he is the son of a shoemaker; he worked as a bellboy, nights, so he could study law. The new president of our city council.

Politicians here are always talking about the Irish vote, the Jewish vote, and the Italian vote.

NOT ENOUGH OF THEM

Yet, if Bill O'Dwyer had had to depend on the Irish vote, he would hardly have carried 4,032 of the city's 4,033 election districts. And he would hardly have polled 1,119,225 out of a total of 1,952,762 votes cast in the entire election by those whose roots are in every creed and clime on earth.

Similarly, the 1,115,158 persons who voted for Impellitteri could hardly all trace their ancestry back to Italy. He didn't run stronger in "Little Italy" than he did in Harlem.

And it seems quite probable that Senator Joseph has plenty of gentile friends among the 1,075,507 voters who pulled his lever and gave him a plurality of 417,832 over McGoldrick and a majority of 270,195 over the combined totals of McGoldrick and the No Dealer, Levine, also of Jewish blood and faith.

We prefer to view the returns as an indication of an American vote, which has small truck on election day with race or class or church; as an indication of strong party politics; as a healthy revulsion against any partry or clique which stays too long in office, despite the New Deal breach of sacred tradition.

And we wish the political professionals would shut their big mouths about various racial votes, which have less and less basis in fact.

As for O'Dwyer, Joseph, and Impellitteri, we have no way of knowing how good their administration will be.

Their life stories illustrate that the spirit of Horatio Alger is not yet dead in the land, for which God be thanked.

NO SIN CARNIVAL

We can imagine that men who have made such records so far would be pretty jealous about those records in the future. We feel quite sure, for instance, that Mr. O'Dwyer is not going to throw open the city gates and invite sin in for a carnival—as some people seem to fear—or hope.

Nor will Mr. Impellitteri and Senator Joseph, on the basis of their past records, play too fast and too loose with the people's interests and money.

Yes, we think there is hope for the city and the country; and we are naive enough to find inspiration in the success stories of three men who started from scratch.

There's hope for America. Indeed, America is the most, and virtually the last, hopeful country in the world.

## Foreign Trade

EXTENSION OF REMARKS
OF
**HON. EUGENE J. KEOGH**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by James A. Farley at the opening session of the Thirty-second National Foreign Trade Convention, Hotel Waldorf-Astoria, New York, November 12, 1945:

I am very happy to have this opportunity to speak on the subject of foreign trade. With the ending of the war, we are moving into the difficult, complex, and baffling era of postwar reconstruction. We are beginning to lay the foundations of enduring peace and advancing prosperity. In connection with this transition from war to peace, there is no more important topic of public policy confronting us than the rebuilding of our foreign trade. And there is no more appropriate forum for a thorough-going discussion of that topic than this National Foreign Trade Convention.

Trade is the lifeblood of business, and, in the interdependent world of today, foreign trade is an indispensable part of the whole stream of trade. The war, with its inescapable stoppages and distortions of international commerce, has taught us many lessons which we are not likely soon to forget. It has made clearer to us than ever before both the value of foreign trade and the pitfalls which abound in the decisions of governments and businessmen as to the basis on which trade will be conducted in the future.

The first great question about foreign trade is whether it is going to be managed by businessmen on business principles, or conducted or closely controlled by governments on government principles.

American businessmen know what answer they want given to that question, and I think it is perfectly clear that the United States Government agrees with them. I am not relying on speeches when I say that, but on what the Government has done.

Wartime conditions made necessary many Government controls and many other unusual practices. Since VJ-day many wartime controls of all sorts, including those on exports and imports, have been taken off, lend-lease has ended, and the Government is getting out of the importing business as fast as its commitments will allow it. So far as our own Government is concerned we can count on its doing everything it can to turn trade back rapidly to private hands.

Things are not going so fast in many foreign countries, and we ought to take a good look at the reasons for this.

In some countries there is a preference in principle for the conduct of trade by government rather than by private traders. We think these countries are mistaken, but we have no quarrel with them. Such things are ther own affair. What we do want is that they conduct their foreign trade on trading principles, and buy and sell where goods are sound and prices right and payment prompt. If they do that—and leave political preference out of the conduct of trading operations—we will take our chance on getting, in fair and open competition our share of whatever foreign business they originate.

Other countries prefer private business in principle, but they are still conducting their foreign trade directly through the government, or controlling it very closely. They are doing this, not because they want to, but because they think they have to. We need to understand the reasons why this is so, so that we can deal with them.

One of the main reasons is the difficulty of the job of reconstruction. When a country has been smashed as thoroughly as some of the United Nations have been, the job of putting the pieces together and getting production started again is so hard and so complicated that everyone concerned seems to feel that only government has enough authority to handle it. Therefore, while that is going on, foreign trade is closely controlled by government order along with everything else. Whatever emergency help we can give on reconstruction will hasten by so much the return to private trading.

Another reason for the close control of foreign trade and especially of imports by some governments is a financial reason. They are short of foreign exchange and need to apply what they have to the most essential purposes.

This is wholly natural. If our industry and transportation had been bombed nearly out of existence—if the only place we could get much of the equipment necessary to rebuild it was abroad—and if our supplies of foreign money and foreign credit were limited, we would insist on using them for the equipment that we needed and not for unessentials. That is exactly what several European countries are now doing, and they will go on doing it until they can see their way clear to release their control.

For this reason also, emergency help in reconstruction, especially financial help, will hasten the day when foreign countries can return their foreign trade to private hands and can remove the strict control of imports and exchange which is now the greatest impediment our exporters face.

Shortage of foreign exchange is, of course, a long-time as well as an emergency problem for many countries. This was recognized at Bretton Woods, and even under the Bretton Woods agreements restrictions are permitted on scarce currencies. It is important to all American exporters that dollars should not in the long run be scarce in foreign hands. It is for that reason that exporters think importers are pretty good people. Strength to your arms, we say!

One extremely important thing that we can do to prevent dollars from becoming scarce is to maintain full and regular operation of American industry. Whenever American industry operates in high gear, it chews up enormous amounts of raw materials. Many of these come from abroad, and our purchases of them produce many dollars which mean orders to American exporters. But the building up of a high level of business activity at home itself requires the maintenance and expansion of a brisk foreign trade in all directions. To bring this about, we must use, intelligently and vigorously, the increased authority conferred by the

recent renewal of the Trade Agreements Act to make reductions in our tariff. When we do that we are, of course, entitled to ask that other countries reduce their tariffs and other restrictions on our goods, and in particular that they eliminate discriminations against us.

There has been a good deal of silence in official quarters about trade agreements since the revised act was passed by Congress last June. I suggest that it is time for the announcement of trade-agreement negotiations with several important countries. When that announcement is made the Foreign Trade Council will do everything it can to support a program of really effective reductions on both sides. We ought to do our best to demonstrate that the United States means business in this matter and that when we talk about the reduction of trade barriers and the removal of discriminations all around the trading circle, we mean exactly that.

It is time for some international organization in the field of trade. We now have United Nations organizations set up or proposed for security, for relief, for banking, for investment, for food and agriculture, for labor, and for aviation. Trade is at least as international as any of these, and at least as important. We already have an international organization of businessmen, but governments also act on trade matters, and so far they have no organized international forum where problems and policies can be discussed, information and ideas exchanged, and agreements reached. The United Nations ought to get together to discuss trade matters, and they ought to do it now.

All these are elements of an American program for world trade. The formulation and carrying out of such a program imposes great responsibilities upon both government and business. I am confident that neither will fail to do its part.

## Take Randolph Churchill to Task on Ireland

EXTENSION OF REMARKS

OF

### HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following joint statement by me and Hon. JOHN J. ROONEY, of New York:

Randolph Churchill in a Scripps-Howard syndicated article, How has Ireland survived the war? has aspersed Ireland and the Irish in a most unjust manner. He would revive bitter Irish-British feuds.

He covets Irish affection but conveniently forgets the Black and Tan riots, the repression of liberties, the economic isolation, the plunder, pillage, and rapine, of Ireland by the British over the years.

Britain would still keep Eire an agricultural nation. Industry ist verboten. Industry is reserved for Ulster. On all that he is silent.

The Irish in Eire and in America cannot so easily forget the past.

Churchill admits Eire was England's bread basket during the war. Irish youth from south Ireland volunteered for British service during the war in greater ratio than British youth were drafted. Scores of citations for bravery and intrepidity have been awarded to Irish soldiers.

There is more democracy in Eire than in England today. Dail Eireen is more like our American Congress than any other parliamentary body.

Randolph Churchill, steeped in imperialism, says blatantly that Ireland could be united if Ulster were not coerced. That is the old British dodge. India could be free if the Moslems were not coerced. Jews would be admitted to Palestine according to British pledges if the Moslem Arabs were not hurt. Yet this very day thousands of Moslem Javanese civilians are strafed and machinegunned by the British in American tanks and planes in Indonesia. Hurting Moslems, Ulsterites, and others is the old fake argument. It is as false as a mirage in the desert.

"Divide and rule" has been the British imperialism practice. Set Ulster against Eire, Hindu against Moslem, Arab against Jew, Protestant against Catholic. Then step in and rule.

The American public will not be deceived by propagandist Randolph Churchill. He does not speak for the English people. He is the mouthpiece of British landed and vested interests.

Despite Britain, with her socialism at home and too much imperialism abroad, a united Ireland will come into her own and the six northern counties must join Eire.

Representative EMANUEL CELLER,
of New York.
Representative JOHN J. ROONEY,
of New York.

## State Officials Advise States Not To Depend Upon the Federal Treasury

EXTENSION OF REMARKS

OF

### HON. HATTON W. SUMNERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. SUMNERS of Texas. Mr. Speaker, recently the drafting committee of the Council of State Governments met in the city of Washington with the Federal-State Relations Section of the Department of Justice, of which John W. Andrews, is Chief.

This was the sort meeting which ordinarily in these times points its program toward the Federal Treasury for the money to finance its program. Instead of doing that, however, this group of State officials made a recommendation which shows them to be worthy representatives of self-reliant, self-respecting citizens of sovereign States; fit agents of democratic government. This is the recommendation which they adopted:

It is the recommendation of the drafting committee of State officials of the Council of State Governments that, in the interest of the development of State responsibilities, the States are urged to rely on their own resources and not to turn to the Federal Government for financial assistance in the development of the facilities.

I want to incorporate this recommendation in the permanent records of this country to the eternal honor of those who are responsible for this recommendation, indicating the policy, and embodying the spirit which will save for us our democracy, if the democracy is saved. I want also to put in the RECORD in this connection, the list of these officials to whom this credit is due. Following are the names and titles of these fine American citizens:

Harrington Adams, deputy attorney general, Pennsylvania.

Cassius M. Chichester, commissioner on uniform State laws, Virginia.

Brevard Crihfield, Washington representative, Council of State Governments, Washington, D. C.

Sidney Clifford, commissioner on uniform State laws, Rhode Island.

Hubert R. Gallagher, associate director, Council of State Governments, Washington, D. C.

Representative George W. Henley, commissioner on interstate cooperation, Indiana.

Gardiner Johnson, commissioner on interstate cooperation, California.

Walter R. Johnson, attorney general of Nebraska.

James P. Kendall, assistant attorney general, Mississippi.

E. Paul Mason, commissioner of uniform State laws, Maryland.

A. B. Mitchell, attorney general of Kansas.

Harold C. Ostertag, Committee on Interstate Cooperation, New York.

Abram P. Staples, attorney general of Virginia.

Henry P. Thomas, commissioner on uniform State laws, Virginia.

James C. Wilkes, chairman of drafting committee and commissioner on uniform State laws of the District of Columbia.

R. G. Yoder, deputy attorney general of Iowa.

Lester Orfield, Chicago representative, Council of State Governments, Illinois.

J. H. Meek, director, Division of Markets, Virginia Department of Agriculture.

Benjamin P. Storrs, director, Bureau of Markets, Connecticut.

Webster J. Birdsall, director, Bureau of Markets, New York.

W. Kerr Scott, chairman, commissioner of agriculture, North Carolina.

George R. Ross, marketing specialist, Department of Agriculture, North Carolina.

Tom Linder, commissioner of agriculture, State of Georgia.

Guy Jackson, assistant to commissioner of agriculture, State of Georgia.

Chovine Sprott, deputy commissioner, Department of Agriculture, South Carolina.

W. D. Outman, Washington representative, Florida Department of Agriculture, Florida.

C. C. Hanson, secretary, Association of Southern Commissioners of Agriculture, Washington, D. C.

Walker L. Mifflin, president, State Board of Agriculture, Delaware.

W. W. Oley, chief, Bureau of Markets, State of New Jersey Department of Agriculture.

H. K. Thatcher, president, National Association of Commissioners, Secretaries, and Directors of Agriculture, Washington, D. C.

Charles S. Rhyne, executive director, National Institute of Municipal Law Officers, Washington, D. C.

Donoh W. Hanks, Jr., executive assistant, American Municipal Association, Washington, D. C.

Harry Betters, assistant director, United States Conference of Mayors, Washington, D. C.

Keith L. Seegmiller, Washington representative, National Association of County Officials, Washington, D. C.

Credit is due also to the fine Federal official, John W. Andrews, for his cooperation with his fellow officials from the States, who recognize the fundamental fact that our States, on their own responsibility, must deal with their problems of government and finance their own institutions if they are to avoid the Federal Government cutting deeper and deeper into the sources of State revenue in order to get the money with which to make the States more and more dependent and less sovereign as they resort to the Federal Treasury to get back a part of the money which their citizens have paid into the Federal Treasury.

## New Second Assistant Postmaster General

EXTENSION OF REMARKS
OF
### HON. MELVIN PRICE
OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that appeared in the Union Postal Clerk magazine, November issue, entitled "New Second Assistant Postmaster General":

NEW SECOND ASSISTANT POSTMASTER GENERAL

Gael E. Sullivan, of Chicago, took office as Second Assistant Postmaster General on October 1, 1945. Sullivan, a 40-year-old former college professor and public administrator, was discharged as an Army major to head the vast transportation system of the postal service.

Supreme Court Justice William O. Douglas administered the oath.

Referring briefly to Mr. Sullivan's experience in mapping Chicago's future transportation needs and his accomplishments as a port officer in the Mediterranean, Postmaster General Robert E. Hannegan told of his confidence in the new Second Assistant.

Difficult transportation problems demand prompt solution, Mr. Hannegan said. He paid tribute to the long service of Smith W. Purdum, who retired as Second Assistant Postmaster General because of ill health.

"Happily we knew of Gael Sullivan, an energetic young man in Chicago, well equipped to deal with the transportation problems which confront us," he declared. "We are very fortunate in getting such a man as Gael Sullivan."

Mr. Sullivan expressed his appreciation to President Truman, Mr. Hannegan, and to Mr. Justice Douglas.

"I want to be worthy of this assignment and at this moment words lose their meaning, whether promises or prophecies," he declared. "I am going to let you look at the performance a year from now. At that time I will either have made the grade or not."

In welcoming Mr. Sullivan to the Department First Assistant Postmaster General Jesse M. Donaldson paid warm tribute to the service of Mr. Purdum. Judge Ambrose O'Connell, of the Court of Customs and Patent Appeals, a former Second Assistant Postmaster General, referred to the strong organization of transportation experts within the Second Assistant's Bureau, and told of the feeling of pride and fellowship that unites all who have been identified with the Postal Service.

As Second Assistant Postmaster General, Mr. Sullivan will be in charge of railway mail, air mail, and international mail. A native of Providence, R. I., Mr. Sullivan went to Chicago 19 years ago. Following his graduation from Providence College and Thomas Aquinas University, at River Forest, Ill., he taught at DePaul, Loyola, and Northwestern Universities. After being identified with an advertising firm for a time, he became associated with the management of the Chicago World's Fair. Subsequently, he served as Associate State Director of the Federal Housing Administration, Administrative Assistant to the mayor of Chicago, and Illinois State director of the Federal Housing Administration.

He entered the Army in 1943, serving in the north African and Italian campaigns.

His work as port officer at Cagliari, Sardinia, won high commendation from military authorities and he was appointed food officer for all military and civilian personnel on the entire island. He was cited for outstanding work in quartermaster methods of procurement and control. Special assignments included service on the Henry L. Grady mission to Italy for the State Department and as personal aide to Gen. William O'Dwyer on his special economic mission to Italy. From February 1945 to VJ-day, he served as chief labor relations officer for the Army at Detroit.

## Army Discharges

EXTENSION OF REMARKS
OF
### HON. ROBERT F. RICH
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a soldier to his brother, a resident of my district:

OCTOBER 31, 1945.

DEAR SAM: I am going to write you quite a letter here, and it is going to be one that I have never written before, and I hope I never have to ever write again. What I am about to say I think is news of great importance to every American who has men or women in the armed forces, namely the Army. This would never pass the censors, but now we are at liberty to speak more freely. Now, don't think that I am a rabble rouser, because I am far from that. I would like you to write an article in the Sun and Gazette trying to crack wide open this Army demobilization. It is fouled up (we have much stronger language to use but it wouldn't be fit). I would like you to read all the clippings, etc., and see if a suitable story could be written. Of course, by all means, show it to your boss and see if he thinks it is fit to print. I wouldn't want you to lose your job through it or getting the paper in dutch. And if it is printed, please send me a copy of it.

I have been urged by a fellow who was from our unit who has 86 points and is out at the Replacement Depot awaiting shipment to the United States for discharge. Now, these fellows have been out there for 23 days and have only moved from 4,300 on the list to 4,000 in that time, so you can see only 300 went out of the depot. They tell us to do this so that the other fellows won't have to go through the same thing, as this won't do them any good, but may help some poor guy sweating it out to get home. The fellows out there all send home a copy of our Daily Pacifican and there are over 4,000 of them going to various newspapers throughout the country to try and crack this thing wide open. We think the public should know because they are writing Congressmen and get little results. Did you know that the Senators and Representatives have Wacs answering the mail from the people and they answer it by a previously typed form letter? The Senators don't even get to see most of the mail, as these Wacs read it and that is all. These fellows in our unit were all eligible over a month ago to go home for discharge but are still here in the depots. Now, the divisions going home take with them 60-point men and this is what is causing a lot of stink. There are men out in the depots now with as high as 96 points and more, while some of these guys with 60 go home before them. These fellows at the depots say the food is terrible and you must wait in a line 3 blocks long and stand so long that it is pathetic. The 70-point men have been eligible since October 1 and tomorrow the 60 points become eligible, tomorrow November 1. So you can see how fouled up it really is.

Men back in the States with as low as 36 points don't have to go overseas any more, so how are we ever going to get home. They discharge these men becoming eligible back there in the States very quickly because they have no transportation problem and they keep lowering the score in order to make their figures look good for discharge. By the way, I have 56 points and according to plan I should become eligible in December, but I doubt if I even get home in time for my third wedding anniversary on March 6, 1946. Willie and I have spent both of the others across the seas and would like so very much to be together for our third.

Now, the Army is making a lot of lame excuses which we know aren't true. One of them is the transportation. Well, I thought that we were supposed to have the largest Navy and merchant fleet in the world. The Japs could come out with the statement that they sank out Navy during the war and we would believe them.

Another thing is they say that the Liberty and cargo ships aren't fit to carry troops. Well, they hauled us around during the war when there was far greater risk in these "tubs." Now why not, as I'm sure that everyone of us would be more than willing to put up with all these so-called inconveniences. Many hundreds of men have volunteered to work on these ships in their spare time to reconvert these ships with temporary quarters for ships going home. Well, one lieutenant colonel got the ball rolling for us and now they are reconverting a few, but they only carry three to five hundred men. An article was in the paper, of which the clipping is submitted, that a lot of good Liberty ships are in dry docks in the South going to ruin and rust. They also claim that the ships aren't being unloaded very quickly. Well, one of the GI's suggested that they let all these men at the replacement depot help unload the ships while waiting to go home and he guaranteed that the ships would be unloaded and loaded in record time. (Please excuse this typing as I am hurrying like the dickens because we don't get too much time to ourselves just now as things are pretty "chicken ——" around here. They don't even let us read our mail or the daily papers during duty hours.) General Marshall just came out with a statement that the world would disintegrate because of us letting the Army go so fast. Time, in its copy of October 29, inferred that Marshall had to sit idly by while his big Army was being taken from

him, thus cutting his prestige and power. Now these Army career men all think only in terms of war because that is what they study and it is their work. If we make the country so war conscious we are bound to have another war very soon. I believe in preparedness but not a military power. We are a peace-loving Nation. We all think the President has done a fine job so far and we admire him for it. It was fine of him to cut down on the Army's appropriations, thus compelling them to let some of them go. If it was up to the Army and the War Department to let men go we would never get out. It is only through public sentiment that something is done, as the people are supposed to be the Government. I tell you Sam, the men are very bitter about this thing and they have lost all patriotism and even have lost respect for our lawmakers, and that is very bad. I never saw the morale of the troops ever lower even after the beatings by the Japs, which they gave us on Guadalcanal, Tinian, Saipan, and the German Bulge of Christmas 1944.

These strikes back home aren't helping things either, as they are tying up our important ports thus cutting the shipping. We suggest that all labor radicals be inducted into the Army and sent overseas as occupation troops and release us men over here. I'm sure that would soon break it up. It looks as though they all stayed on the job until the war was over and now want so much more money and less hours. It looks as though they don't want us home at all because of unemployment. What do you think would happen if we in the Army would refuse to work and do our part? They soon would have us in Leavenworth serving time.

Now the British have pulled a "lousy" trick of taking away some of the big liners so now we can't send as many men home from Europe. This indirectly affects us because they will take the ships from us to use in Europe. That was awful after we gave Britain so much lend-lease which we shall never get back. What is this world coming to?

I have never hated anything in all my life as I do the Army and I bet I have aged mentally 10 years while in the Army 3 years. Of course don't tell mother or Willie this as I don't write them stuff like that and make them feel bad and sorry for me. I never "bitch" much in my letters to them and Willie knows how it is in the Army.

Both Willie and I have spent long periods of time overseas and feel as though we have done our part, and now want to get home very much. She is very disgusted with the Army and is quite bitter too. Luckily she got a vacation to go to the French Riviera, for which I am glad. It was nice that she gets to see things. We over here in the Pacific don't have it that nice as in Europe, because there is nothing to see over on these islands. We have a lot of fellows here now from Europe who served over there and they say this place is a hell hole and hate it. We always thought that it was better serving in the ETO than over here, and now we know. Well Willie has 54 points and they left all the nurses with 55 points go home for discharge in October. Well, she missed that by one point. Their score is 35 points but their going home is just as "fouled up" as ours. She can also get out for being married, but it may take time. I hope and pray that she gets home in time for Christmas, as it would be nice to be home for that. I know that I shall spend by third Christmas over here in the Pacific, but I hope and pray that by some good fortune that I am able to be home with Willie for our third wedding anniversary. Oh, by the way, in case you are interested and if I haven't already said it I have 56 points.

You see we paid for staying at a nice place like New Caledonia because we got no "battle stars" for it which count a very important 5 points. We luckily got one for up here in the Philippines which helped a little. A lot of outfits got more battle stars for being over here only about 18 months. They have four battle stars while we only have one and have been over here for 30 months. I have been over only 25 months now.

I'll have to close now for awhile, as I must go to work for the afternoon, but I'll finish this tonight, I hope.

Back again, Sam, at 5:30 p. m.

They are making us work still longer so we will have still less time to ourselves. I wouldn't be surprised to see us work for 12 hours again like we did a month ago. I tell you this so-called "peacetime Army" is terrible, and we are working harder, longer, and taking more "crap" than we ever did while the war was on.

I don't want you to use my name, but if I wanted to take the time and bother I could get thousands of signers.

What I have written before and am about to write is gotten from what I have seen, read, and heard, directly and indirectly so you can take it at what it is worth, as I can't absolutely prove all this. The magazine clippings submitted are from Time, Newsweek, and our paper, the Daily Pacifican. Please read all of them carefully and then use your own opinion and conclusion.

As I was talking about the replacement depots in one of my other pages I omitted this. This actually happened to one of our fellows here who left for discharge. He is from Reading, Pa. Now in order for them to keep up any kind of morale at all at these depots they get a man all ready to leave and put him in a truck and you think you are going to a dock to board a ship; but no, they are only transferring you to another depot which is twice as discouraging. They tell me when you are out there even though you aren't doing anything, each passing day seems like a year.

Now people back home write me and say they read in the paper that they are getting back troops from overseas so fast that I will soon be home. They even ask me if I can go out with them on New Year's Eve and Christmas. The actual figures, if published, would show you that between VJ-day, September 2, and October 15, there were actually more troops brought into the Philippines than were sent back home. These figures were published in the Daily Pacifican, our paper.

The civilian air lines are going to start operating from and to the Orient on November 1. How come they can't use these planes to get us home? There are a lot of idle planes around here that have to be used to keep in condition and should be used to take us home faster. Also the Dollar Steamship Lines are going to operate civilian service on December 1. What is this thing?

The British brides are clamoring to get back to the States to see their husbands. Well, I have a wife overseas too; only she is a nurse and in the service and an American. What gives, do these English girls expect to get to the United States before us GI's?

Ordnance has often said that if our trucks were kept in repair better by the drivers they could get us to and from the depots and to the docks faster. Well, here is an incident that happened to us 2 days ago. We order another command car from Ordnance. Well, I think one of the officers was driving it to here. Well, on the way the engine just fell right out from under the hood. I never heard of such a thing. Many big lots or rice paddies are sitting full of good trucks still serviceable, just rusting away. The Army is so wasteful that we will never catch up with the Nation's debt.

If you ever get a chance to read Bill Mauldin's book, Up Front, please do so, as every person having a son or relative in the service should read it. He writes the truth, and just like a GI would talk. He, you know, is the famous war cartoonist who was all over Europe during the war. Yes; even fighting himself before getting on the Stars and Stripes staff.

Another big farce is the Inspector General's Department inspections every so often. Everyone concerned is tipped off when they are coming, and, of course, everything is in proper order. What an inspection, even through it is thorough. Another big joke is Officer Candidate School and how you got into it. Sometime I would like to sit down and tell you all about the Army. I could go on for hours and make your ears ring.

I am mentioning nothing in here about officers, as everyone should be fairly familiar with those things by now, except for this one thing. When an officer doesn't take his leave since he is overseas, he accrues all this money, and in some cases it reaches as high as $1,200. He gets all this for nothing, plus a big leave upon getting home to the States. Now an enlisted man when he gets home from overseas and never had a furlough while there he gets exactly nothing, and you lose all of that. You get your furlough, and that is all. What is fair about that?

Another thing is an Army court martial. They are very unfair, and all that sit on the board are officers. Who can say anything against them, or they will get you for insubordination. We all think that is what our country stands for, a fair trial by jury. War criminals get nearly as fair a trial. We think enlisted men should sit in on the trial just as well as officers. We have no representation. How can anyone be justly tried. The person accused is so nervous with all the big brass that he is scared to death. This Army is never democratic.

The caste system is worked to death, and I hate it terribly. I'll tell you that when I see you in person. I was never treated like this in all my life.

Notice on the front and back of this envelope the rubber stamp in red, "Get the Boys Home." Well, we all stamp that on our letters, and we have told the mail clerk to put it on if the sender didn't already.

The next page will be purely personal stuff.

The weather here is terrible. It is so hot and the heat is almost unbearable. It rains a lot, too, and everything gets moldy and musky. Your clothes smell awful. You take cold showers to cool off, but as soon as you are dry you are perspiring again so very much. We usually sit around the tent in the daytime with just a pair of shorts and sometimes not even that and you sit there with the perspiration running off of you like rain. You must have a towel handy to wipe it off.

Now, here is a personal complaint which happened to me this morning: They changed mess hours this morning and I didn't get anything to eat as a result of it. They changed them late last night and didn't notify me or all the fellows. I went up to the mess hall at the usual time and they refused to feed me. Well, that right there is against the A. R.'s (Army Rule) because they must feed you even though it is late. They told me that the mess hours had been changed. I put up a squawk, but they wouldn't feed me. They had eggs, too, and gave each one two. We seldom get them and I like them. Our other breakfasts are pretty poor. I went to see the mess sergeant and he still wouldn't give me any satisfaction, so I went to the commanding officer. This is the first time I ever went to the commanding officer with a complaint. You see, they feed the officers there, too, and they fed some officers after I got there and also a technical sergeant and staff. I told the majors—both of them—my story and they told me they were very sorry it happened and that it wouldn't happen again and would look into the matter. But that still didn't get me fed. So I had to eat a banana, peanuts, a candy bar, and some cookies. Well, that isn't much of a meal to work the hours we do. I could have gone to the inspector

general's department and put in my complaint, as that is what they are for, but I knew it wouldn't help as all they would say is T. S.

Here is another thing: I am tired of being a technician 5 so long, so I went up to see my section head. You see, I have been in grade 20 months and in the department 2 years. I work hard and get nowhere. I asked for a transfer to another section, but he talked me out of it, saying that I should be getting a rating soon. He almost guaranteed it. I said if my work wasn't satisfactory I wanted to know. He said no; that my work was very satisfactory. I don't care for myself, but the people back home all think that since you are only a corporal or technician 5 that you must be very dull. If they only knew how this thing worked. You see, I don't kiss enough "——." But if I were to get a rating that way, I wouldn't want it.

It is remarkable how much better one feels after getting all these things off of your chest and you feel relieved. That is the only way you have of letting off steam. If you didn't do it, you would soon be a goner and a mental case.

I am now starting my twenty-fifth month overseas and Willie her twenty-third, so you can see we have been overseas too long. She is very much fed up with the Army, too, and detests it. That goes for me, too, and double. We both need each other and are very lonely over here and there.

* * * * * *

I hope you didn't think I was too windy and a radical in this letter as it wasn't meant that way at all.

Gee, how I'd love to be up there for deer hunting.

Your brother,

FRANKIE.

## OPA

EXTENSION OF REMARKS

OF

### HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

*Tuesday, November 6, 1945*

Mr. LARCADE. Mr. Speaker, under previous authority to extend my remarks in the RECORD, I wish to submit the following newspaper article by Mr. Richard J. Smith, in regard to the OPA, as follows:

(By Richard J. Smith)

Girls, if your one-way stretch girdle goes limp after only a few wearings and washings and the elastic of your new panties fails without warning, you are very likely a victim of inflation.

OPA is blamed by the National Retail Dry Goods Association for creating this inflation by favoring fly-by-night manufacturers of women's and men's apparel and household goods and stifling quality production by old-line firms.

UNEMPLOYMENT INCREASED

They also charge that OPA's back-door inflation, aside from flooding retail markets with inferior merchandise at exorbitant prices and causing a scarcity of quality goods, already has caused unemployment of thousands.

To back up their arguments they opened yesterday in Room 213, Old House Office Building, a display entitled, "The Consumer Sufferers," exhibiting some 60 standard items of clothing and household goods, side by side with more costly similar items of inferior quality.

HOW INFLATION RESULTS

Robert Seidel, vice president of W. T. Grant Company, New York City, one of the drygoodsmen in charge of the exhibit, explained how the inflation appears and its effects:

"OPA pricing policies," he said "hold standard manufacturers to their 1942 price ceilings. These concerns, converting from war to peacetime production, cannot produce their normal products at those prices, unless they lose money.

"However, newcomers, 'fly-by-nighters,' are allowed to enter these fields and are given by OPA liberal ceilings. They can and do make money."

SO CONSUMER SUFFERS

The newcomers, he said, are not concerned with quality.

"The result is," he declared, "the consumer suffers through inferior merchandise at prices far above what would be paid if standard manufacturers could get back in their normal fields."

One manufacturer, he said, unable to make profitably the lamp shades he produced before entering war production, has turned to medicine cabinets, and another from "occasional furniture" to coffins. Entering fields new to them, they were able to get profitable ceilings.

"Instead of holding the line," Seidel said, "OPA is furthering inflation. Newcomers begin with a higher markup and retailers increase the price to the consumer."

CITES INEXPENSIVE BLOUSE

He pointed out a $17.95 woman's topper blouse, made by a newcomer firm of refugees in New York. The blouse is inferior in fabric and tailoring to one which could be sold for $3.50 by a standard manufacturer, he said, if he could get a slight ceiling adjustment.

In a number of instances, the OPA policy, according to Seidel, has resulted in standard manufacturers returning to peacetime operations as subcontractors to turn out their normal products for a newcomer granted a profitable ceiling by OPA, which had denied them readjustments on their 1942 ceilings.

Seidel admitted it is pretty confused, and was showing an electric flatiron selling retail for $5.50 and another iron of superior quality which would sell for less than $3 if OPA would hoist the ceiling a few pennies, when a man from OPA came in.

He was Louis A. Williams, chief of OPA's hardware and houseware section. Seidel was joined by several other drygoodsmen. Williams seemed embarrassed and said he'd dropped in because he'd heard there was no admission charge.

The drygoodsmen said: "That's typically OPA. That's about as much as they think of the 135,000,000 consumer Americans."

Williams and Seidel argued briefly over the electric irons and Williams presently left, declining to be quoted.

The show, which is open to the public and will continue through Friday, was set up in connection with the investigation being conducted by the special congressional committee to investigate executive agencies.

## Veterans of Foreign Wars Protest Delay in Return of Troops From Pacific

EXTENSION OF REMARKS

OF

### HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Wednesday, November 14, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am enclosing herewith a copy of a letter received by members of the Junker-Ball Post, No. 1855, Veterans of Foreign Wars, located at Kenosha, Wis., within my congressional district. The action taken by members of that post is in line with the attitude of the great majority of the people in this country to the effect that there has been undue delay in the return of high-point men to the United States from the Pacific theater of operations. The time has come for prompt action and not mealy-mouthed promises on the part of authorities that they are doing their best. The record shows that their best is not producing results—and that is the test. As part of these remarks, I am including herein a letter dated October 23 from Luzon Island in the Philippines:

UNITED STATES ARMY
FORCES BASE M APO 70,
*Luzon Island, Philippines,*
*October 23, 1945.*

*To Whom It May Concern:*

We, the undersigned, hope the people back home will see fit to help the cause of thousands of veterans overseas—as far as getting them home.

Promises have been made to us, and morale building propaganda printed in our daily newspaper, Daily Pacifican, (which is controlled by "AFWESPAC," Army Forces Western Pacific) stating that all shipping space is being utilized for the sole purpose of returning high-point men home for discharge from the armed forces. Our big question is, Where is the efficiency of the Army? Why doesn't the Army back up some of their statements? We have done our part. Why can't the politicians and "brass hats" get together and fulfill their many promises and do their part in getting all of us home? We want action—not just meaningless promises.

Why do we keep hearing the same old story—"No ships"? Where are the hundreds and thousands of Liberty ships that our people back home bought war bonds to furnish the necessary capital to build? Where is the vast Navy armada that proved such a decisive factor in the winning of this war? Why weren't the Navy vessels that were sent back to the west coast—empty of personnel except Navy crewmen—used to convey troops back home? Surely the people back home would rather see their sons, sweethearts and husbands come home than to watch a lot of empty vessels maneuver around in the water. Why not postpone Navy day until the boys overseas are brought home?

As a Congressman in the States recently said, "The attitude of the soldier overseas has almost reached the point of bitterness." We wish to add that "bitter" is hardly the proper word to describe our feelings.

Directly after the close of the war here in the Pacific, we were content to sit back, be patient, and wait our turn to go home. That has all changed now. Who do the "brass hats" and politicians think they are fooling? They are not dealing with babies or a mass of illiterate men. No; they are dealing with men who have been away from their homes, their families, and their friends from 1 to 3 years—men who have had to live like animals at times, have seen their buddies killed and wounded, and yet have gone on because we knew what we were over here for and that some day we would win and could look forward to being home again. We have fought for the rights that the people back home are enjoying now. Again we ask ourselves, "Why can't we be home to enjoy the peace that we helped bring to this world?" All we get for our effort is promises.

The announcement was made official that the October 1 point system would be lowered from 80 points to 70 points, and the November 1, to 60 points. Here it is almost the

last of October, and there are still 80 and 90 point men waiting to be sent to disposition centers for shipment home. To top it all, ships are leaving Manila Harbor carrying 60- and 70-point men. Why have a point system if the officials don't abide by it?

Now we reach the so-called red apple program. That takes the booby prize. Why should the soldiers, who have only 6 to 12 months Army service and have just come overseas, be given priority on going home first equal to that of the high-point men who have spent 2 or 3 years overseas? What were the "brass hats" thinking about when they made these statements? Surely they don't expect us old timers to sit back and take that. What's happened to our democratic government?

It's getting pretty bad when our base headquarters have to establish armed guards around headquarters to keep out bad boys. Yes some of the boys have tried to find out from our I. G. and A. G. office on when they can expect to leave for home. Some of the men with 87 points and above were alerted to leave for the disposition center in Manila in preparation to going home. An order came from headquarters in Manila canceling that order. Why? No one had an answer. You can imagine how low the morale of these men was at that time. Why can't our commanding generals give us a decent answer? The answer we get is "No shipping space."

Recently we over here read an article in the Daily Pacifican where two officers from the European theater wrote to their Congressman and stated that something must be done quickly to relieve the tension and prevent outright desertion by the enlisted men of the armed forces, stating that almost every statement the Army officials have made so far have proven to be false, and that it is a discredit to their country for their fighting men to be played with as a cat might play with a mouse and to have their hopes and morale so high only to be let down by their own people. What kind of an example is our country setting for other nations to follow? Why let other countries know about the uneasiness of our powerful fighting forces? Our morale is supposed to be the highest of all fighting forces. The same conditions that prevail in our forces in Europe also pertains to the armed forces in the Pacific. The statements of these two officers were recorded in the CONGRESSIONAL RECORD in Washington.

We are still wondering why we have to sit over here and wait while back home men with 41 points—such as football stars—are being discharged from the service. Surely they are not considered as a back log. We can understand the men in the States being discharged with 60 and more points to pave the way for the returning vets, but why should men with below 60 points be discharged before the high-point veterans overseas are brought home? We don't want excuses or literature in form of pamphlets sent to our people at home in answer to their inquiries. We want results.

Recently the War Department published statements corncerning the release of men 35 years of age with 2 years of service. Up until a day ago those men were given a priority equal to the high-point men. Now we get word from our headquarters that there were no official orders received verifying the Associated Press dispatch covering the release of those men, yet we have received circulars, bulletins, and directives on sending those men home. Why were some of these men sent home and others in the same category given the story that there has been no official directive received covering their release? We understand now that they will be released some time in March 1946 with the other 2-year servicemen.

As each day goes by the overseas veteran, who sees no early possible date that he can ben sent home, gets more disgusted with the "brass hats" and politicians. What kind of people are running our Government back home? Can they do nothing to fulfill the promises made to the men overseas?

We have seen training films and received War Department directives, bulletins, and circulars concerning the redeployment and readjustment of military personnel eligible for return home and discharge from the armed forces, but the information contained in those official directives has proven insufficient as far as getting us home is concerned. We want true facts on the whole situation. Forget the promises and give us results.

Here is another incident that has taken place here in the Pacific. Cargo ships have left the docks and harbors barren of all personnel except for the merchant seamen assigned to duty on the vessels. During the war those ships were jammed with thousands of troops and used to shuttle them from one battle zone to another. Living conditions on those ships at that time were at a very low standard. The men were fed C and K rations. Now certain "brass hats" under AFWESPAC tell us that it is not a very desirable way of transporting us home. The way we feel we would gladly spend all of our time in the hold of a cargo vessel just to get home. We would gladly eat C and K rations. All we want to do is get home. Traveling by cargo ship is a way to get us home, but it is made impossible by "swivel-chair brass hats." Captains in charge of cargo ships even went to the commanding generals and stated that they could carry from 500 to 750 men home. They were refused their request, and the ships left for the States empty. This is going on every day. Why can't something be done? All we oversea veterans want is to get home to our families and loved ones. We are not particular how we get there. We have done our part. Now the politicians and "brass hats" in charge of our Government and armed forces must do theirs.

Attached to this letter are clippings from our daily newspaper, Daily Pacifican, which will substantiate our statements that we are not the only ones feeling that we are being let down. These letters are sent to the newspaper from enlisted men and officers all over the Pacific.

We sincerely hope that this will open the eyes of the right persons, and that all the veterans can expect a square deal. We want nothing but to get home. Is that asking too much?

Respectfully yours,

D. E. Hartung, technician, fifth grade; K. M. Wright, technician, fourth grade; Edward F. Gedmin, private, first class; Ernest W. Feksite, technician, fourth grade; R. G. Davenport, technician, fifth grade; R. J. Koekek, master sergeant; Woodrow Morris, technician, third grade; Carl S. Carlson, technician, fifth grade; Wm. R. Murray, private, first class; Michael A. Pastone, technician, fifth grade; Robert J. Le Gros, technician, fifth grade; F. F. Fasano, technician, fourth grade; W. H. Klicker, technician, fifth grade; Alfred A. Doney, technician, fourth grade; Leopoldo R. Ponce, technician, fourth grade; A. C. Shipley, technician, third grade; L. B. Johnson, technician, fifth grade; Julian I. Rachow, technician, fourth grade; Irving Ginsberg, technician, fifth grade; Vincent Sarch, technician, fifth grade; C. W. Sughrue, first sergeant.

## American-Soviet Friendship

EXTENSION OF REMARKS
OF

### HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Thursday, November 15 (legislative day of Monday, October 29), 1945*

Mr. HATCH. Mr. President, today the maintenance of friendly relations between nations and peoples transcends any other problem before any nation or people in the world. When I say "friendship" I do not mean a vague, indefinite, sentimental attachment based upon some passing whim or fancy. I refer to that strong and deep friendship which comes with mutual esteem, mutual understanding, and mutual respect. I stress the word "mutual" because friendship cannot abide on one side alone.

Last night at Madison Square Garden the Under Secretary of State, Dean Acheson, delivered an address at a rally sponsored by the National Council of American-Soviet Friendship. In that address he ably discussed those factors necessary to encourage and maintain friendship between these two great nations—the United States and the Soviet Union. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friendship between nations, as between individuals—genuine friendship—is something that grows spontaneously. It isn't easy to promote. It never can be forced. Governments can set the tone of international relations, but in the long run it's the people who call the tune.

The word "friendship" has been applied so liberally and so loosely to international relations, that it has lost much of its meaning. On this important occasion I shall try to use the word with all the care and respect that it deserves.

What are the factors that encourage close and friendly relations between the American and Soviet peoples? What are the obstacles in the way of a satisfactory friendship between us?

To say that there are overwhelming reasons why we should be friends is not to say that we are friends. To describe the bonds that unite us for better or for worse, on this miniature and crowded planet, is not to prove that we are happily united.

Now, I don't propose to enter tonight into a philosophical discussion of the anatomy of friendship. But there are certain conditions that usually exist between friends, and where they don't exist, you are almost certain to find something less than complete friendship.

One of those conditions might be described as an absence of tension. Friends may argue, disagree, and even quarrel—but they are relaxed with each other, in spite of their differences. They accept their disagreements as a normal part of the give and take of friendship.

To put it another way, friends are not forever taking each other apart—until each becomes obsessed and exasperated with the contradictions of the other's personality. They have accepted the terms of friendship, and they are not impelled to dig up the

roots of friendship daily to see how the plant is growing.

To do this seems to me both silly and futile. Certainly it's not the way personal or international friendships are made or preserved. But in all honesty it must be admitted that there is a good deal of this sort of thing going on in both countries.

Judging from the way our national temperatures rise and fall in relation to day-to-day events, you would think we had had no experience of living together in the same world. As a matter of fact, we have had a long and close experience, dating from the time when President Jefferson and Czar Alexander the First carried on a warm and friendly correspondence.

For nearly a century and a half we have gotten along well—remarkably well, when you consider that our forms of government, our economic systems, and our social habits have never been similar.

Certainly the contrast between our ways of life and our political institutions is no greater today, with a Communist Russia, than it was in the time of Jefferson and Czar Alexander the First, or during the period of the Civil War when Abraham Lincoln and Czar Alexander the Second guided our respective nations in a friendly collaboration of vital importance to us in our time of trial.

In perspective, the long history of amicable relations between the American and Russian peoples compares favorably with the history of our relations with the other great nations—not excluding France and Great Britain. By any standards of international relations, the record is good.

When I say this I am not for a moment forgetting or underestimating the tremendous events of 1917 and 1918 which eliminated Russia from the ranks of our allies at a crucial moment of the First World War, or the 16-year period of black-out between our two peoples, during which we withheld diplomatic recognition of each other's existence and suspended the normal contacts without which friendship cannot flourish.

But however great the loss to both our peoples from that gap in our relations, we need not regard it as irretrievable. Already a substantial part of it has been offset by our working partnership of World War II and the start toward peaceful cooperation that was made at the Moscow, Teheran, Crimean, and San Francisco Conferences, and by our joint membership in the United Nations Organization.

Taken as a whole, I repeat, the long record of common interest and common action is good. Can we put it down to chance? Can we ascribe it to all-wise governments or impeccable diplomacy? I don't think so. Forgetting governments and diplomats for the moment let's look at more immutable facts of history and geography.

There is the fact, for example, that never, in the past, has there been any place on the globe where the vital interests of the American and Russian people have clashed or even been antagonistic—and there is no objective reason to suppose that there should, now or in the future, ever be such a place. There is an obvious reason for this. We are both continental peoples with adequate living space—interested in developing and enjoying the living space we have. Our ambition is to achieve the highest possible standards of living among our own peoples, and we have the wherewithal to achieve high standards of living without conquest, through peaceful developments and trade.

We have that opportunity, moreover, only to the extent that we can create conditions of peace and prevent war. Thus, the paramount interest, the only conceivable hope of both nations, lies in the cooperative enterprise of peace.

What, then, are the difficulties which lie across the path of this cooperative enterprise?

I believe the problem is capable of rational examination. I believe, also, that it is capable of solution. The hard core of the problem has two major aspects: First, the problem of security, and, second, the problem of understanding.

Both countries have been wantonly attacked. Both have suffered grievously, but differently. Both are determined that aggression shall have no such opportunity in the future.

The attack upon the Soviet Union came from just beyond her western borders. There was grave danger of attack from just beyond her eastern border. We can get some idea of the consequences of this attack—the second of its kind in a quarter of a century—if we imagine the United States invaded by the German Wehrmacht, and an area roughly comparable to the New England and Middle Atlantic States almost completely devastated. If we imagine this area as including not only the industrial centers of New York, Boston, and Pittsburgh, but a large part of the Middle Western bread basket and a third of our population as well, we can learn what aggression means to the Soviet people. We can understand also the measure of their determination to prevent it.

We understand and agree with them that to have friendly governments along her borders is essential both for the security of the Soviet Union and for the peace of the world. Secretary Byrnes made this clear beyond doubt in his speech of October 31.

But it seems equally clear to us that the interest in security must take into account and respect other basic interests of nations and men, such as the interest of other peoples to choose the general surroundings of their own lives and of all men to be secure in their persons. We believe that that adjustment of interests should take place short of the point where persuasion and firmness become coercion, where a knock on the door at night strikes terror into men and women.

In this area where the room for adjustment is broad and where the necessity for extreme measures is absent, the problem seems wholly possible of friendly solution.

We, too, have our problem of security. The attack upon us came, not from close at hand, but from an aggressor, on two occasions, many thousands of miles away. The attacks were made upon a nation patently undesirous of and unprepared for war and solely because of our refusal supinely to acquiesce in conduct which outraged every sense of decency and right. This has led us to look for security through bases and methods which will keep danger far from us and stop the aggressor before he can again develop the power of his attack.

Our friends do not object to this but point out to us that we, too, must adjust our interest in security to the general interest in security and with the principles and organizations which have been agreed upon to insure it.

In the case of both the Soviet Union and ourselves the necessity to seek security by extreme measures or unilateral action is absent. Mr. Molotov has truly said:

"We have lived through difficult years and now each one of us can say: 'We have won and from now on we can consider our motherland rid from the menace of German invasion from the west and from the menace of Japanese invasion from the east.' The long-awaited peace has come for the peoples of the whole world."

With the menaces to the security of both countries removed it would seem that there is both time and area within which to solve all questions arising out of the need of our two countries for security. The path to solution is both through the United Nations Organization, which we have joined in establishing, and in following in our dealings with other nations the principles upon which we have agreed in the Charter.

One of these is to develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples. Another is to take collective measures for the prevention and removal of threats to the peace.

These are principles of restraint and moderation and patience and respect for the dignity and integrity of nations and individuals. They furnish the best and surest foundations of friendship.

Then there is the second aspect of our problem of friendship—the second essential ingredient of friendship. I refer to the necessity for understanding and communication between the American and Soviet people.

Enduring friendship must be based on understanding and trust, not only between governments, but between peoples. But we are faced with an immediate and practical question: How are we to know one another? Here are two peoples of strong convictions and different backgrounds. Each is committed to its way of life. Neither has the least desire to change the other. Yet each has an overwhelming desire to know and understand the other.

I confess I see no way to draw our peoples into closer understanding except by persistent efforts, on both sides, to free the lines of communication through the press and the radio, through books and magazines, through the exchange of knowledge and culture, and through travel and personal acquaintance. What we and the Soviet people need from each other and what we are entitled to ask was summed up by Marshal Stalin in a talk with Senator PEPPER. "Just judge the Soviet Union objectively," said Marshal Stalin. "Do not either praise us or scold us. Just know us and judge us as we are, and base your estimate of us upon facts and not rumors."

We have so much to learn and, what is more difficult, to understand about each other that we cannot hope to succeed except in the spacious atmosphere of honesty, candor, and knowledge. Only in that atmosphere can we keep our minds and emotions on an even keel and avoid the pitfalls of overoptimism on the one side and despair on the other. Both are equally dangerous and equally unjustified.

## Another Race in Armaments

EXTENSION OF REMARKS

OF

### HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

*Thursday, November 15 (legislative day of Monday, October 29), 1945*

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interesting article written by A. Q. Miller, editor of the Belleville Telescope, who is well known in the West as one of the ablest editors in Kansas. His views on the race in armaments are sound.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANOTHER RACE IN ARMAMENTS

If this country follows the course mapped out by extreme militarists and echoed by President Truman, who does not want to relinquish his wartime powers, we are in for the greatest armament race in history, declares John M. Hightower, writer for the Associated Press.

Before the ink is dry on the United Nations Charter and without giving this peace document, in which the world has pinned its faith, a chance to work, military influences in this country are trying to create war hysteria and rush the people into a huge military program, unprecedented in the Nation's history, which would cost $5,000,000,000, and which cannot be justified by any sound basis of reasoning. Such a proposal ignores the Dumbarton Oaks Conference, the Atlantic Charter, the Yalta Agreement, and makes a mockery out of the San Francisco Charter, which has been solemnly signed and ratified by all participating nations. In a Nation-wide address the other day when the President flouted all our peace efforts, which have been the hope of the war-weary world, and declared, "Peace must be built on power," he dashed the hopes of millions of subjugated people who have looked forward with faith to this country, believing we would assume the leadership in taking the world out of the barbaric practice of war. Top-ranking militarists, who live in a military atmosphere, and military-minded Congressmen, have systematically tried to build up a war psychology, and it has temporarily influenced the thinking of the President and some of the people.

Both General MacArthur and General Eisenhower, who are doing a fine job restoring peace in their respective spheres, and have practical knowledge of civilian as well as military affairs, have told the country that there is no threat of war in the foreseeable future, and that Germany and Japan are completely subjugated militarily and economically. We still have nearly 8,000,000 men in uniform; with no military threat from any quarter, and the United States is the only solvent nation in the world. Frankly, there are only two powers in the world who could, by any stretch of the imagination, be considered potential economic enemies, and they are begging the United States today for billions of dollars to rehabilitate their countries. In the face of such world conditions, it does not make sense for this country to suddenly abandon peaceful efforts, now in the process of being tried, and tell the world force is the only power that can be recognized, thereby suggesting a race in armaments.

What a disillusionment this must be to the American people, who were told that this was to end war, a war to make the world safe for democracy, and were solemnly promised that American boys would not fight on foreign soil. How can the Government and men in authority reconcile these things with present military proposals and make them square with the Atlantic Charter, Yalta Agreement, and San Francisco Charter? A leading educator cannot reconcile our position in disarming Germany and Japan, destroying their war text books and teaching them the ways of peace, while we propose to abandon our present educational system in high schools, colleges, and universities and teach the youth of the country the arts of war in West Point and Annapolis. While the President proposes to take out of the normal lives of our youth only 1 year for military training, Admiral King told the country Saturday that on account of the atomic bomb and other modern weapons, it should call for at least 18 months of military training for the youth of the country. This would mean that we are to take the youth of the land out of the home with its ideals and wholesome influence and place them in Army camps with the influence and environment which usually goes with such an abnormal life. It is admitted that the atomic bomb has completely revolutionized the problem of national defense and introduced the potency of science and technology. Present methods of warfare are completely outmoded, and the training of soldiers in routine Army tactics for a year or 18 months would be completely wasted. Any physical training needed can be secured in high schools and colleges, and certainly such limited training they would get in Army camps would have no technical value 5 or 10 years hence.

Nobody in this country is advocating "pacifism." (That is just a catchword used by militarists to fool people.) Everybody in this country, so far as has been revealed, wants adequate national defense, but they do not want to leave this responsibility to military-minded people who have given other groups but little opportunity to be heard in Washington.

One high-ranking military officer said if quick action was not had he was afraid the country would grow cold on the subject. The people have a right to expect their Congressmen, who are elected by the people, to give full and impartial appraisal of the whole question of national defense without being rushed into such a gigantic program with all its implications. Why not also give the boys in uniform some voice in the matter? They know more about war and the needs of the country militarily than do some of the swivel-chair generals in the Pentagon Building.

Senator EDWIN C. JOHNSON, born in Republic County, head of the Military Affairs Committee, who is opposed to such a program, says no matter what kind of sugar-coated name is given the plan it is still conscription. Congressman BENNETT of Missouri said: "Before militarism is saddled upon the country I would like to see the administration use its influence to induce other countries to abandon universal military training." Winston Churchill, speaking in Commons the other day, said: "The task of holding Germany down will not be as hard a task as holding Germany up." Churchill further said: "The RAF should be reduced to a personnel of 40,000 and the Navy should be brought back to prewar strength." Obviously Churchill does not see the need of a big Military Establishment. The Kansas delegation in Congress, expressing the sentiment of the home people, has committed itself against universal military training in peacetime as being a departure from our constitutional form of government and the principles of democracy.

Unless the people of this country become aroused to the dangers ahead—and how rapidly a military form of government is encroaching upon them and their civil liberties—they will wake up someday and find themselves in the clutches of military rule instead of civil government under our boasted democracy. Congress, the last remaining link between the people and their Government, is their only recourse.

---

## Cotton and Other Problems

REMARKS
OF

### HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. CRAWFORD. Mr. Speaker, it has been my privilege to know some of the fine outstanding leaders of the great American cotton industry. Anyone who has sufficiently applied himself to a study of this commodity and its relationship to Federal legislation, the Federal Treasury, the internal economy of the United States, and the position which the commodity occupies in our export markets, must necessarily be interested in two memorandums which appeared under date of October 29 and November 9, 1945.

These comments were submitted by two of the outstanding members of the cotton industry. The first by a cotton man, of Houston, Tex., and the November 9 memorandum by Mr. C. T. Revere, of New York City, who is internationally recognized as one of the best posted men in the industry.

For the benefit of those who are continuing their study of this commodity and its problems, I submit for the RECORD the comments of these two gentlemen:

Annual United States consumption of cotton and alternative fibers is the equivalent of about 10,000,000 bales of 500 pounds.

The present price landed at American mills is in excess of 24 cents gross weights or 25 cents net weights.

It is commonly stated that the chemical industry can and will deliver rayon staple fiber to the United States mills at 15 cents per pound net weights and rayon filament at a corresponding price. It also is commonly stated that cotton will have to sell at or about the price of rayon staple fiber to continue to hold its share of textile consumption, and therefore that it would sell at 15 cents net weights delivered at the United States mills if the price of it were not sustained by the cotton purchase program and the cotton loan program of the United States Government.

If these statements are correct, the Government cotton programs are adding 10 cents per pound, or $50 a bale to the raw material cost for United States mills consuming cotton and alternative fibers. On a 10,000,000 bale annual consumption, the additional cost to the mills is $500,000,000 annually.

The additional cost to the American consuming public is greater than the additional cost of raw material to the mills, because of the percentage factors of manufacture and distribution.

The American public also will pay as taxpayers the cost to the United States Treasury of the purchase program, the loan program, and the cotton export subsidy program.

It is difficult to forecast the costs of these programs. However, if cotton is accumulated under the purchase and loan programs, it incurs carrying costs and winds up costing the Government 25 cents or more, and if eventually it will have to be liquidated at a level established by 15-cent competition, one must be prepared for a loss not far from 10 cents per pound or $50 per bale.

The present rate of subsidy on cotton export is 4 cents a pound, or $20 a bale. Considerable cotton has been sold for export under this subsidy. To some extent, the buyers of this cotton have been confined to the United States market by the fact of being able to secure freight and credit here and not elsewhere. However, under normal conditions it is hardly to be expected that the competitive influence of rayon and rayon staple fiber will be felt less in the export market than in the domestic market, to say nothing of the competitive effect of foreign cottons.

If it continues to be the policy of the United States to maintain an artificially high price for cotton within the United States, it will become necessary to restrict production, because it is common knowledge that cotton production under scientific and mechanized conditions is most highly profitable at these artificial prices. By precedent, the restriction would take the form of protection of old cotton farms and prevention of new cotton farms. The effect of it, therefore, would be to a large extent to protect production on old cotton farms on hilly lands unsuitable for mechanization, and prevent it on new flat lands that are suitable for mechanization—

in other words, to protect high-cost, inefficient production and to prevent low-cost efficient production.

If there is a beneficiary, he will be the owner of high-cost, unsuitable cotton farms in hilly country. It is questionable, though, whether anybody can benefit by perpetuation of inefficient production. The people of the South will suffer by being deprived of the opportunity for efficient mechanized production on suitable lands which ought to be profitable at a considerably lower price.

Outside of cotton circles, the beneficiary will be the promoter of rayon manufacture. I doubt if the industry itself will prosper in the end, if mushroomed on a situation so utterly artificial and uneconomic, and therefore incapable of enduring.

And, Mr. Speaker, I now present the views of Mr. C. T. Revere:

COTTON AND OTHER PROBLEMS

Inasmuch as prices tell their own story, it is hardly necessary to state that cotton in the last day or so has reached new high levels for more than 18 years. The validity of this advance has come in for question, for despite its extent, it seems to have been largely lacking in spontaneity. There has been plenty of propaganda to the effect that the upward movement in prices has taken place in the face of "strong administration opposition." However, aside from plenty of efforts to publicize this conception, the attempts have the ring of insincerity. For one thing, Government in these times of unrest would not relish being open to the charge of sponsoring inflation.

On the other hand, while it has proclaimed its adherence to a program of stabilization, the record shows that most of its policies, to say nothing of the character of its so-called directives, have provided price stimuli that otherwise would have been absent. In spite of its attempt at thunderous rhetoric, that widely advertised declamation, "hold the line," has been under suspicion of being uttered with a pious tongue in the cheek. However, it sounded well as a slogan.

Of course, the fate of the Pace bill has not yet been settled. Nobody knows what it will be and perhaps nobody cares, but if the advocates of this measure get what they want, the matter of a further rise is largely a question of the moderation with which the proponents of the bill push their advantage. Everything then will be settled except the broad problem of cotton, which in this welter of politics and general world confusion apparently has been overlooked.

In fact, the solution of our cotton problem in its relation to the future welfare of the South and effect on world economy has been subordinated to the matter of cotton price, and particularly the price received by the inefficient producer. In order to enable our cotton South to make its most effective contribution to world recovery, we should adopt a policy calling for a substantial increase in acreage and utilizing the land best suited to producing superior qualities of cotton. Everything should be done to encourage maximum production on selected acreage. This would involve an almost complete reversal of agricultural policy, for in the past the inefficient producer for political reasons has been virtually a ward of Government.

To the industrial engineer it seems little short of tragic that political considerations should stand in the way of the utilization of the land most suitable for the production of cotton. To him such a policy would be comparable in industry to diluting our efficiency by the employment of inferior plant equipment to the detriment of needed production.

Even a casual geographical survey will convince us that we have within our borders enough land suitable for the maximum production of cotton of the more desirable quality to meet requirements that we never yet have been called upon to fill.

Here it is, America's cotton empire:

"This natural cotton land includes the flat alluvial valley of the Mississippi, from southern Missouri southward, the high plains of west Texas, the flat coastal country around Corpus Christi, the flat alluvial bottomlands throughout the south, and the irrigable desert valleys from El Paso to the west, of which the greatest is the San Joaquin Valley in California. This is country which requires neither expensive terracing, ditching, cultivation, nor picking. Efficiently farmed, with the use of machinery which already has been devised and of new types which will be developed, these lands can produce more cotton per man-hour than they have produced heretofore—and more cotton per man-hour than has been produced in any other country.

"The superior knack of the American with machinery and with engineering puzzles and the fact that our country is more fully equipped with gins, oil mills and transportation than any other cotton growing country leads one to believe that our cost in terms of man-hours will be much lower than the cost in any other cotton growing country if we apply to cotton growing the same progressive genius that we apply to other pursuits and if we grow our cotton on the abundant lands that are suited to it by nature. We can grow so much more per man-hour as to offset the advantage some foreign landowners have in labor which costs less per man-hour—the more so since experience shows that wage scales are rather definitely in proportion to the productivity of the wage earner."

There it is, America's cotton empire, with its jobs for millions and its solution of our cotton problem. Yet for 15 years under planned economy we have been building up a national policy of reducing cotton acreage in order to hold up the price, the principle of the reduction being that it shall be roughly uniform geographically, the good cotton farm cutting down its cotton acreage proportionately with the poor cotton farm (and in even greater proportion considering the special exemptions for the small farm).

If we had set out deliberately to find a way to increase the man-hour cost of cotton, we could have found no more effective way than to reduce the cotton acreage of each cotton farm and to freeze quotas of the acreage to the high-cost farms, checkmating the natural shift of production to low-cost areas.

When we begin to recognize the constructive advantages to be derived from the full utilization of America's cotton empire, we shall be on our way toward a real solution of our cotton problem, with the benefits accruing to the South as well as the rest of the world. We need have no fear of overproduction, so long as we concentrate our efforts on the selection of acreage suitable for the production of the qualities the world so urgently needs. Equipped for taking advantage of the full possibilities of mechanization in production, as we undoubtedly shall be, the American cotton grower will be in a position to meet the challenge from all sources, including foreign growths and the menace of expanded production in synthetics.

## Unemployment Compensation

EXTENSION OF REMARKS

OF

### HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. BIEMILLER. Mr. Speaker, many Members of the House have made extravagant statements on the floor claiming that workers receiving unemployment compensation were loafers and that they were refusing to accept jobs. Other Members have correctly stated that unemployed workers who refused to accept suitable employment were immediately deprived of unemployment-compensation benefits.

To date we are experiencing a shortage of well-paid jobs suitable for skilled workers. That is the reason for the seeming paradox that jobs are going begging while comparatively large numbers of workers draw unemployment-compensation benefits. I hope the Members will study carefully the summary of a recent study of this question, which I am inserting in the record, as follows:

Why are there large numbers of workers seeking employment when there are also large numbers of job openings?

Seeking an answer to this important reconversion question, the United States Employment Service, of the Department of Labor and the Social Security Board, Federal Security Agency, sent teams of investigators from Washington to three typical American cities. Chosen for the study were Atlanta, Ga., Columbus, Ohio, and Trenton, N. J. In each, officials had noted, unemployment compensation claims and listed job openings had remained at consistently high levels after the crest of post-VJ-day lay-offs had passed.

Today, the two agencies announced the results of what had become essentially a study of war workers in a peacetime economy. The study confirmed what was already suspected: (1) that the labor market had been inflated during the war by the inclusion of many workers who had learned only a single skill; (2) that there were few, if any, peacetime jobs calling for these limited skills; (3) that there has been a sharp reduction in the number of jobs available in the skilled categories; (4) that lower-skilled jobs pay smaller wages and workers' incomes have been further reduced by the return to the 40-hour week; if all the claimants in the three cities matched job openings and could be reemployed on the jobs available, they would receive a cut in take-home pay averaging from 34 to 49 percent for men and from 49 to 53 percent for women; (5) most of the available jobs were for men only, most of the job seekers were women.

Women represented 6 percent of the total claimants in Atlanta, 69 percent in Trenton, and 77 percent in Columbus. Of the job openings, from 6 to 81 percent specified "men only." While 40 percent of the women claimants had been housewives or had had no work experience before the war. But more of the women claimants who had been employed in a skilled or semiskilled job before the war than there were openings for them in the present market.

Although the studies were limited to unemployment-compensation claimants and job openings listed in local USES offices, the conclusions were found to be representative of the labor-market conditions in each of the communities, since the survey also revealed that the types of jobs offered through the USES represented typical cross-sections of current employment opportunities.

Large numbers of workers are accepting jobs notwithstanding the wage and sex limitations. This was reflected in the high rate of turn-over of unemployment-compensation claimants during the 8-week period following VJ-day. In each of the three cities, slightly over 40 percent in Atlanta stopped reporting because of ineligibility or disqualification. Of the eligible claimants, 77 percent in Atlanta and 53 percent in Columbus discontinued their claims before drawing any benefits.

The disparity between skills and job openings was clearly demonstrated. For women, clerical, sales, and service jobs constituted from 40 to 61 percent of all jobs open to them, yet only 15 to 18 percent of the women claimants had last worked in these fields. Jobs requiring high skills were all but closed to women claimants in Atlanta, although almost a fourth of them had last worked on a skilled job.

Men were similarly situated. Although more than half of the Atlanta men claimants had worked on a skilled job, only 15 percent of the openings called for skilled workers. Only 2 percent of their number had last been employed on an unskilled job, yet 59 percent of the job openings for men were classified as unskilled. Much the same situation was found to exist in Columbus and Trenton.

Comparisons of present job openings with the prewar jobs of the claimants showed a somewhat different relationship. Forty-nine percent of the Atlanta men had worked in a skilled or semiskilled capacity before the war, but only 30 percent of the present jobs called for those skills. Indeed, 59 percent of the jobs open to men were in unskilled occupations, whereas only 11 percent of the men claimants had worked in these occupations before Pearl Harbor and an additional 3 percent had not worked at all before the war.

More than half the Atlanta men earned more than $50 a week on their latest jobs, but such wages can be earned on only 12 percent of the jobs open to men in Atlanta at the time of the survey. No jobs open to women in Atlanta paid as much as $45 per week, although 70 percent of the women claimants had at least earned this much. Half the jobs listed for women in Atlanta pay $20 to $29 per week, and an additional 41 percent less than $20.

More than 60 percent of the Trenton men earned $60 a week or more on their last jobs, but 95 percent of the available jobs pay less than this amount, and two out of three pay less than $40. A majority of the Trenton women claimants had earned $55 a week or more, but less than 1 percent of the jobs open to them offered such pay.

In Columbus the majority of male claimants had recent earnings of $55 or more, but now only 7 percent of the jobs pay this much. And no jobs open only to women offer as much as $40 a week, although three-fourths of the Columbus women had last earned $40 a week or more.

Although some of the disparities cited above are due to a reduction in the workweek from 48 to 40 hours, such a reduction in hours results in only a 23-percent reduction in weekly earnings. Actually the average hourly wage rates on open jobs were 37 to 48 percent below wage rates last earned by the men and 43 to 52 percent below wage rates last earned by the women.

This is illustrated by the following table:

| | Men | | Women | |
|---|---|---|---|---|
| | Last jobs | Jobs open | Last jobs | Jobs open |
| Atlanta | $1.10 | $0.57 | $0.95 | $0.46 |
| Columbus | 1.11 | .72 | .99 | .54 |
| Trenton | 1.18 | .75 | 1.05 | .60 |

The types of jobs offered by the USES in the three cities covered a wide range of occupational skills and hourly wage rates. For example, male job openings in Trenton included 2 percent in the professional and managerial occupational, 21 percent in the skilled crafts, and another 21 percent in the semiskilled classification. Most of the remainder called for unskilled workers. Generally similar patterns were found in the other two cities.

Among females the number of professional, managerial, and skilled jobs was representative of the more limited opportunities for women which generally prevail in those fields. Clerical, sales, and service opportunities predominated in all three areas, as might have been expected, although a significant proportion of the jobs called for semiskilled workers.

## Compulsory Peacetime Military Training

EXTENSION OF REMARKS
OF
### HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of a Gallup poll on compulsory military training:

PRESSURE ON CONGRESS NO INDEX—UNITED STATES FAVORS MILITARY TRAINING 7 TO 3, DESPITE LOUD PROTESTS

(By George Gallup, director, American Institute of Public Opinion)

Repeatedly for the past 3 years public-opinion surveys have found a substantial majority of the American people favoring peacetime military training of young men. In the latest test of public sentiment the vote runs approximately 7 to 3 for the adoption of this much-discussed measure now before Congress.

The principle of compulsory peacetime training is one on which there has been a remarkable stability of public sentiment in recent years. The vote in favor has always ranged between 63 percent and 70 percent in eight institute surveys made during the period December 1942 through late October 1945.

The trend, including the latest figures, is shown below. The wording of the question in the most recent test was the same as that used in earlier years, with two exceptions. The phrase "in the future" has been substituted for "after the war," and the question concerns military or naval training for 1 year rather than 1 year in the Army or Navy.

TAKEN BEFORE MESSAGE

The latest poll was completed just before President Truman's message to Congress advocating passage of a peacetime military-training bill.

"In the future, do you think every able-bodied young man should be required to take military and naval training for 1 year?"

| | Yes | No | No opinion |
|---|---|---|---|
| | *Percent* | *Percent* | *Percent* |
| December 1942 | 66 | 27 | 7 |
| November 1943 | 63 | 29 | 8 |
| September 1944 | 63 | 23 | 14 |
| December 1944 | 70 | 25 | 5 |
| February 1945 | 69 | 22 | 9 |
| May 1945 | 70 | 24 | 6 |
| July 1945 | 69 | 24 | 7 |
| October 1945 | 70 | 24 | 6 |

A new survey is now in progress to test public reaction following President Truman's message to Congress on military training, in which he proposed that all young men, except those completely incapacitated physically, should start a 1-year training course before reaching their twentieth birthday.

The peacetime training issue is a good illustration of the fact that there are often differences in the intensity of public opinion for and against a proposal.

Congress has been hearing, by mail and by telegram, from groups in the population who are opposed to the bill. The same thing happened in 1940, during debate on the bill for the selective service draft. Congressional mail at that time was overwhelmingly against passage of the act, because more of the people opposed to it took more trouble to bombard Congress by mail and postcard than did the people in favor.

Yet the views of the group with the more outspoken opinions were not a reliable index of the views of the whole country.

Carefully conducted sampling surveys at the time found a national vote of approximately 60 percent in favor of passage of the Selective Service Act.

## Plea for Harmony in Palestine

EXTENSION OF REMARKS
OF
### HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. HAVENNER. Mr. Speaker, I desire to bring to the attention of the Members of Congress the text of a resolution which was adopted at a public mass meeting in San Francisco, sponsored by the Zionist Emergency Council and the American Christian Palestine Committee, on November 1, 1945. This resolution was issued under the signatures of the following rabbis of San Francisco: Rabbi Morris Goldstein, Rabbi E. Burstein, Rabbi Rudolph Coffee, Rabbi Morris Fischel, Rabbi Mayer Hirsch, Rabbi G. Katzman, Rabbi Bernard Marton, Rabbi Saul E. White.

The resolution is as follows:

On this twenty-eighth anniversary of the issuance of the now historic Balfour Declaration by which Great Britain officially acknowledged the special claim and right of the Jewish people to a national home in Palestine and by which Great Britain pledged her best endeavors to facilitate the immigration of Jews there and their settlement on the land; be it resolved that

Whereas the Chamberlain white paper of 1939, part of a policy of appeasement, nullified the intent and purpose of the historic declaration notwithstanding the tremendous achievement wrought by the Jewish settlement in Palestine and its magnificent contribution to the winning of the war; and

Whereas the civil and religious rights of the non-Jewish communities of Palestine are explicitly protected in the stipulation of the Balfour Declaration; and

Whereas the mandate of Palestine was awarded to Great Britain by the nations of the world solely on the terms of the Balfour declaration; and

Whereas the Government of the United States of America, which shared in the agreement with Great Britain on the establishment of the Jewish national home, has urged admission into Palestine of 100,000 Jews; and

Whereas the conscience of humanity must heed the plight of the Jewish people, which during the war now ended has suffered torture and death in proportions greater than any other people and whose European remnants now desperately seek a homeland and find the gates of the world shut before them.

Therefore, we the undersigned, rabbis of the city of San Francisco call upon the Government of Great Britain to fulfill the spirit and the word of the solemn pledge made in the Balfour declaration so that the maximum number of Jews, survivors of the concentration camps, be permitted to enter Palestine and settle and cultivate its soil without restriction or hindrance—to the end that in time they may reconstitute themselves as a free and democratic Jewish com-.monwealth.

We further urge our Government that in conformity with its traditional policy of friendship toward a Jewish Palestine and in the spirit of the appeal so nobly voiced by President Truman in a communication to Prime Minister Attlee, it continue to exercise concern and earnest efforts to bring about a true fulfillment of the promises and commitments made in the Balfour declaration. We extend our wholehearted greetings and promise of continued support to our brethren in Palestine who by their patience, valor and industry have created favorable conditions to successful absorption of a large Jewish immigration. We voice an earnest plea to all the people of Palestine for understanding harmony and good will—to the end that in the not distant future the world witness the realization of the words of its prophet of old, "Out of Zion shall go forth the law and the word of the Lord from Jerusalem."

## Annual Fertilizer Consumption in the United States

EXTENSION OF REMARKS

OF

### HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. MURRAY of Wisconsin. Mr. Speaker, to listen to some of the political agriculturalists of the New Deal one might imagine that farmers did not know anything about plant fertility until they appeared in the picture.

The following table shows the annual consumption from 1880 to 1944:

*Annual fertilizer consumption in the United States*

[Short tons]

| Year | Tonnage |
|---|---|
| 1880 | 1,150,000 |
| 1890 | 1,950,000 |
| 1900 | 2,200,000 |
| 1910 | 5,453,000 |
| 1911 | 6,024,000 |
| 1912 | 5,767,000 |
| 1913 | 6,337,000 |
| 1914 | 7,100,000 |
| 1915 | 5,324,000 |
| 1916 | 5,125,000 |
| 1917 | 5,926,000 |
| 1918 | 6,467,000 |
| 1919 | 6,626,000 |
| 1920 | 7,177,000 |
| 1921 | 4,863,000 |
| 1922 | 5,671,000 |
| 1923 | 6,445,000 |
| 1924 | 6,826,000 |
| 1925 | 7,334,000 |
| 1926 | 7,329,000 |
| 1927 | 6,844,000 |
| 1928 | 7,986,000 |
| 1929 | 8,012,000 |
| 1930 | 8,222,000 |
| 1931 | 6,354,000 |
| 1932 | 4,385,000 |
| 1933 | 4,908,000 |

| Year | Tonnage | | |
|---|---|---|---|
| | Commercial sales | Government distribution | Total tonnage |
| 1934 | 5,583,000 | | |
| 1935 | 6,274,000 | 2,000 | 6,276,000 |
| 1936 | 6,902,000 | 29,000 | 6,931,000 |
| 1937 | 8,179,000 | 47,000 | 8,226,000 |
| 1938 | 7,467,000 | 81,000 | 7,548,000 |
| 1939 | 7,532,000 | 175,000 | 7,707,000 |
| 1940 | 7,778,000 | 471,000 | 8,249,000 |
| 1941 | 8,332,000 | 851,000 | 9,183,000 |
| 1942 | 8,722,000 | 1,227,000 | 9,949,000 |
| 1943 | 10,564,000 | 899,000 | 11,463,000 |
| 1944 | 11,219,000 | 853,000 | 12,072,000 |

The 1945 tag sales up to November 1, 1945, show an increase of 12 percent over 1944 consumption or an evident total consumption of about 13,500,000 tons in 1945. These figures do not include lime or raw phosphate rock.

There is a rather limited use of fertilizers in many States some of which use only 400 to 500 tons. War prices for crops have increased the use and demand. Part of this increased use was the result of the ability of the producers to obtain the fertilizer free or at a reduced price.

Questions that arise are, first, How many of these producers will continue to use commercial fertilizer in the future? Second, What increase in consumption can be expected? Third, What influence will the increased production as a result of their use have on farm prices especially if the American producer does not have the American market for his product? Fourth, Should the producers use additional millions of tons of fertilizer especially potash and phosphate in order to even maintain the soil fertility of the United States? Fifth, Should the American producer be asked to maintain his soil and buy the fertilizer to maintain it and then be compelled to compete with agricultural products shipped in from countries that mine their land of its fertility? Sixth, Do you believe in the nationalization of the fertilizer business?

We must answer these questions correctly or we are apt to find ourselves in a rather embarrassing position legislatively. We cannot expect to continue appropriating public funds in an effort to maintain our soil fertility if the American producer is not allowed to have the rewards of his effort.

## Maternal and Child Welfare

EXTENSION OF REMARKS

OF

### HON. DENNIS CHAVEZ

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

*Thursday, November 15 (legislative day of Monday, October 29), 1945*

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Six Words and a Date," written by Clara Savage Littledale, editor of Parents' Magazine. The editorial is in support of the Maternal and Child Welfare Act of 1945.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SIX WORDS AND A DATE

(By Clara Savage Littledale)

"Do we as a nation intend to provide every mother, regardless of where she lives or what the family income is, with an opportunity to get modern, scientific maternity care? Or shall we remain content with present conditions under which some mothers and babies get the best care available anywhere in the world while others get little or no skilled medical attention?"

It's Senator CLAUDE PEPPER, speaking as he introduces a bill in Congress—the same bill that Mrs. MARY NORTON introduced in the House. The bill has a name which is Maternal and Child Welfare Act of 1945. Odd how prosaic and even dull that collection of six words and a date sounds. Actually, back of those words lie more child-bed tragedy, more heart-rending need and more regard for human life than has ever before wrapped itself up in a bill before Congress—a bill that looks as though it might pass.

And that's just the point. This bill has a chance, if you and I and our neighbors know enough about it, and care enough about it to help. And if we don't—well, put it this way:

Each year some 200,000 mothers in this country go through childbirth without the care of a physician. Think back to the hours when you were bringing a child into the world. The doctor was there, nurses were there, an anesthetist stood ready. You were suffering and in pain, perhaps in terror, but you knew everything was being done that could be done to safeguard you and your baby. Then think of the 200,000 other women who knew no such care. They struggled through without a doctor—or perhaps they died.

And again thousands of babies die at birth or soon after birth in this country. Thousands of these babies would not die if their mothers had the right care before and after childbirth. It is common knowledge that a large proportion of these baby deaths, as well as mother deaths, are preventable. Then what on earth is the matter? Why isn't something done?

That's not as simple a question as it may appear. For instance, the lives of 31,000 babies could have been saved in 1 year, if every State had given its babies as good care as did the State of Connecticut. The lives of 3,000 mothers could have been saved that same year, if every State had given its mothers as good car as did the State of Minnesota. It sounds as though one were talking in riddles, doesn't it? Just what has geography to do with the life and death of thousands of women and babies? It has a lot to do with it. The richer States—those whose per capita wealth is relatively high—can collect ample money via taxes to provide prenatal clinics and well-baby clinics and all sorts of desirable health care. Per capita wealth also makes a State a good place for doctors and nurses to locate and assures well-equipped, well-supported hospitals. It is the poorer States and rural districts that run up our horrifying maternal and baby death figures.

Is there any justice or democracy in a situation that safeguards the life of a baby if he happens to be lucky enough to be born in Connecticut or some one of the other well-to-do States, but stacks the cards against him and his mother if he lives in one of the poorer States? Do we, as Americans, believe in that kind of thing?

No; we don't, and we never did. It is just that we haven't been aware—haven't seen clearly enough—what was happening, and

why—and, interestingly enough, what brought us to a realization of the situation was the conviction that servicemen's wives and babies should have the best possible care at a cost they could afford. Patriotism, gratitude, warm-hearted humanity resulted in wartime legislation which made this possible.

Now it's peacetime. And the question before the House and the Senate and the country is whether we care enough about babies and their mothers—all babies and all mothers, no matter where they live, no matter how much money they have, no matter what their color, race, or religion—to see that not one of them shall die needlessly. Do we care enough? If we do, we will get behind this bill now up for consideration and push with all our might. This bill means that money will be appropriated for a 10-year program of necessary infant and maternal care. The United States Children's Bureau will be the administrative agency that will work with the States to see that the best in health care is provided for mothers and babies and young children, in every State, without fear or favor or duplication.

Those leaders in this country who know how shameful are our maternal and infant death rates and who know, from wartime experience, what can and should be done about them, are behind this bill 100 percent. Where do you stand? What will you do? You can discuss this legislation, you can work for it as an individual or in your woman's club, child-study group, or your parent-teacher association. You can write or telegraph the Senators from your State in favor of bill S. 1318, and your Representatives in the House in favor of H. R. 3922. (They are the same bills.) Address Senators care of the Senate Office Building, and Representatives in care of the House Office Building, Washington 25, D. C. Do something and do it now.

## National Representation for the District of Columbia—Let the State Legislatures Act

EXTENSION OF REMARKS
OF
### HON. ARTHUR CAPPER
OF KANSAS
IN THE SENATE OF THE UNITED STATES

*Thursday, November 15 (legislative day of Monday, October 29), 1945*

Mr. CAPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an able article by Jesse C. Suter entitled "Let State Legislatures Act on National Representation," which was printed in the Washington Sunday Star on November 11.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LET STATE LEGISLATURES ACT ON NATIONAL REPRESENTATION

(By Jesse C. Suter)

The plea today of the voteless and unrepresented Americans of the National Capital community is for the Congress to send to the States for their consideration and action the question of national representation for the District of Columbia. To do this it would be necessary for the Senate and the House of Representatives, each by a two-thirds vote, to pass the Sumners-Capper proposed constitutional amendment or its equivalent.

Under such amendment the Congress would be empowered to provide that in the Congress and among the electors of President and Vice President there be members elected by the people of the District of Columbia. These are fundamental American rights for which these people have been petitioning the Congress for more than half a century and on which numerous hearings have been held by committees of Congress.

The petitions have been made through the channel of the organized groups of citizens representing, with practical unanimity, all of the public-spirited activities of this great American community. These petitions speak with the official authorization and direction of the respective groups. Civic, trade, professional, labor, veterans, and other groups of men and women join their prayers for the grant of that natural right of American citizens to participate in the Government of their country.

These local organizations are supported in their earnest plea by a number of the great national, regional, and State organizations which desire to see the permanent residents of the National Capital attain the status of participating Americans and to blot out forever the anomalous and un-American condition which has prevailed at the heart of the Nation for 145 years.

Can any sound reason be given for the Congress not putting the proposed amendment in the form which it considers proper for inclusion in the Constitution of the United States and sending it on to the States for consideration and action by the State legislatures?

The intelligent, loyal, patriotic people of the District of Columbia would appreciate a frank statement of such reasons, if any exist. If there are such valid reasons, they have yet to learn of them.

Proponents of the proposal, which means more to this community than any other, feel that if there ever was a one-sided question before Congress it is that of national representation for the people of the District. They are unable to see how anything can be said to sustain any opposition. To oppose it is to repudiate the fundamental principles of American representative government. Reduced to its lowest terms the proposal is designed to provide the required power, under the Constitution, to make American citizens of the more than half a million political aliens af the National Capital community.

Surely any true American who will be perfectly fair with himself, as well as with the underlying principles of our National Government, down deep in his innermost soul must discover that he favors the Americanization of the Washingtonian. To proponents, it is inconceivable that anyone of intelligence and a practical mind should close his eyes to the self-evident fact that these voteless and unrepresented people can only be assured freedom and a square deal through the application at the seat of Government of the same rule which guarantees to the people of the States their rights as freemen.

It would seem to be entirely unnecessary to continue to reiterate to an American Congress the many reasons which support this claim of their fellow Americans of the Capital for the grant of this act of simple justice.

Twice the National Democratic Party platform has recorded its approval of the principle of this proposal. When the matter was on the House Calendar in 1940, Republican leaders in that body were ready to join their Democratic colleagues to pass the resolution if it could be brought to the floor for consideration.

The Charter of the United Nations having been ratified by the Senate and now approved by the requisite number of nations, the United Nations Organization is now a going concern and the Charter is recognized as the law of nations. But some may ask, what has the Charter of the United Nations to do with national representation for the people of the District of Columbia?

While that question has been answered before in this column, some have missed the very important point involved. A fundamental characteristic of the Charter is its solicitude for all peoples of all lands and its very definite aim to insure them the right to participate in the government of their country. A number of quotations might be given by way of illustration, but one or two should suffice.

From the preamble of the Charter we learn one of the purposes to be: "To reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal rights of men and women and of nations large and small."

And in article 73 of chapter XI we read:

"Members of the United Nations which have or assumed responsibilities for the administration of territories whose peoples have not yet attained a full measure of self-government, recognize the principle that the interests of the inhabitants of these territories are paramount, and accept as a sacred trust the obligation to promote to the utmost, within the system of international peace and security established by the present Charter, the well-being of the inhabitants of these territories; and * * *

"(B) To develop self-government, to take due account of the political aspirations of the peoples, and to assist them in the progressive development of their free political institutions, according to the particular circumstances of each territory and its peoples and their varying stages of advancement."

The proponents of national representation for the people of the District continue hopeful that before the close of the present session of the Seventy-ninth Congress the joint resolution proposing the Sumners-Capper amendment to the Constitution will be favorably reported to both the Senate and the House of Representatives, be passed by each House by the required two-thirds vote and be sent forward to the several States for ratification.

They can see no reason for further delay nor for any failure to pass and send this question on to the States. Any other action or inaction would be clearly repudiation of the Democratic Party national platform, of the United Nations Charter, of the underlying principles of the Constitution, and the Declaration of Independence.

Such wholesale repudiation of fundamental American justice would be sufficient reason for the nations of the world to challenge the sincerity of our belief in these principles advocated by our Nation.

## Death Rate Among Military Flying Personnel

EXTENSION OF REMARKS
OF
### HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES

*Thursday, November 15 (legislative day of Monday, October 29), 1945*

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum from the Air Corps of the Army relating to the death rate among military flying personnel in continental United States during 1944, which I think will be of intense interest in view of the appropriation bill which will shortly be before the Senate for consideration.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

FACTS ABOUT MILITARY FLYING

1. In continental United States during 1944 the death rate among flying personnel from aircraft accidents was approximately 30 times that of nonflying personnel from all causes.

2. At the age of 20, life expectancy of the flying officer is 12 years less than that of the nonflying officer.

3. Pilots at the age of 20 may not expect to live any longer than other officers at the age of 32.

4. One out of every four pilots will die before his thirty-ninth birthday.

5. The necessity for minimizing losses in combat while maintaining military effectiveness accents design for aircraft performance at the expense of aircraft safety factors. Developments in aircraft design results in increased performance in military aircraft while it results in both increased safety and performance in commercial aircraft.

6. To be fully effective military aviation must have the most vigorous leadership. Reduced compensation in the face of the constantly high military flying fatality rate may fail to provide the requisite air leaders for war.

---

NOVEMBER 12, 1945.

Subject: Justification of flying pay.

1. The necessity for recognizing the hazards of military flying has been accepted by all nations since the initial development of military aviation.

2. Congress first authorized flying pay in 1913 because of the hazardous nature of flying. The National Defense Act of 1920, and the Pay Readjustment Act of 1922 provided 50 percent extra flying pay for those who participated in regular and frequent flights.

3. In 1939 a special board consisting predominantly of nonflying officers appointed by the War Department to study the flying pay problem made a careful investigation into all aspects of military flying hazard and justification of flying pay. I quote from their report (p. 14): "Adverse criticism has been heard of the principle of paying military personnel for flying duty. In view of this criticism the board has reinvestigated the subject carefully and in detail. This investigation has shown that this criticism was unjustified. It has been demonstrated conclusively that any flying involves a hazard above that incurred in routine military duties which do not involve flying, and the board is further convinced that continual flying jeopardizes the mental and physical well-being of the average man. Further, the board believes that the experiences of the past 20 years indicate that the average useful service life of the flying officer will be markedly shorter than the service life of the officer on nonflying duties, due to the necessity for youthful physical and mental alertness and stamina demanded by the operations of modern airplanes in military flying. The increased hazards and expectancy of a shorter service life fully justify extra compensation to the men who subject themselves to the risks incident to flying."

4. The facts presently on hand indicate that the hazards of military flying are as prevalent today as they were in 1939. The following figures and fatality rates were computed from records available in the Office of the Air Surgeon.

TABLE I.—*Death rates per 1,000 per annum, 1944, continental United States*

FLYING VERSUS NONFLYING PERSONNEL

| | Number | Aircraft accidents | | Other than Air Corps accidents | | Total | |
|---|---|---|---|---|---|---|---|
| | | Number | Rate | Number | Rate | Number | Rate |
| Flying personnel | 235,242 | 4,207 | 17.9 | 220 | 0.9 | 4,427 | 18.8 |
| Nonflying personnel | 1,134,265 | 227 | .2 | 516 | .4 | 743 | .6 |
| Total | 1,369,507 | 4,434 | 3.2 | 736 | .6 | 5,170 | 3.8 |

The greatest number of deaths in the Army Air Forces is among flying personnel and the greatest single cause is aircraft accident. The death rate among flying personnel in aircraft accidents (17.9) is approximately 30 times the death rate among nonflying personnel due to all causes.

TABLE II.—*Fatality rates—flying personnel*

RATE PER 1,000 PER ANNUM

| Year: | *Rate* |
|---|---|
| 1932 | 17 |
| 1934 | 16 |
| 1936 | 20 |
| 1938 | 14 |
| 1944 | 18 |

Notice the rate of fatalities per 1,000 flying personnel per annum in 1944 is greater than in 1938, 1934, or 1932. At the same time the fatalities per hours flown in 1938 were 1 per 15,553 hours of flight as compared to the rate in 1944 which was 1 per 8,000 plus hours of flight.

5. The following comparisons of life expectancy between flying and nonflying officers were made from a study by the Office of the Air Surgeon.

*Average expectation of life of men at age 20*

| | *Years* |
|---|---|
| Regular Army officers, nonflying | 49.3 |
| General United States population, white males | 46.0 |
| Rated observers (Regular Army officers) | 43.4 |
| Pilots (Regular Army officers) | 37.2 |

Pilots may expect 12 years less of life than nonflying Regular Army officers. Rated observers may expect 6 years less of life than nonflying Regular Army officers.

Pilots at the age of 20 may not expect to live any longer than other officers at the age of 32.

One out of every four pilots will die before his thirty-ninth birthday.

6. Insurance companies are exhibiting new interest in writing aviation insurance. However, only one company (Travelers) have announced their rates ($12 per year per $1,000 in addition to normal rate—same as before war). Some companies are writing some at lower rates, but until the military aviation risk tables are backed up by facts they are doing so only on a tentative basis and are not publishing their rates. It is the opinion of our life-insurance contact (Colonel Grayson, of Personal Affairs Branch) that most companies will go back to old rates for military aviators as soon as risk tables, based on the facts, are worked out. There is an indication that lower rates might be available, for bombardiers, navigators, and flight surgeons.

7. It can be seen that in spite of great advances in military aircraft design and vigorous safety measures within the Air Force during the past 10 years the accident rate has not decreased. This is not comparable with the records of commercial air lines for many reasons. In the first place, performance is inimical to safety factors in aircraft design. The exigencies of aerial combat has forced the Air Forces to utilize the advancement in aircraft construction to increase combat performance rather than to use this advancement to increase aircraft safety factors. The necessity for minimizing losses in combat while maintaining military effectiveness establishes the balance between design performance and design safety factors. Military flying as a type in itself is more hazardous than normal flying. The introductions of new aircraft operated under hazardous weather and terrain conditions tend to maintain the hazard of military flying compared to the routine, constantly repetitious route flying of commercial air lines.

8. Flying pay as compensation for extra hazard inherent to military flying is as necessary today as it has been in the past. Until further developments alter the conditions in the interest of a strong Air Force there should be no change in the basic principle of flying pay.

With reference to the amendment which provides that no flying officer shall receive flight pay in excess of that paid to a major in the Army or a lieutenant commander in the Navy receiving the minimum pay of the fourth pay period: provided that no flight pay shall be paid to any officer unless the Secretary of War or the Secretary of the Navy, respectively, shall certify that the duties of the officer affected are essentially related to the air service on a flying status, I would like to bring the following information to your attention.

In 1939 a special board consisting predominately of nonflying officers appointed by the War Department to study the flying pay problem made a careful investigation into all aspects of military flying hazard and justification of flying pay. I quote from their report (p. 14). "Adverse criticism has been heard of the principle of paying military personnel for flying duty. In view of this criticism the board has reinvestigated the subject carefully and in detail. This investigation has shown that this criticism is unjustified. It has been demonstrated conclusively that flying involves a hazard above that incurred in routine military duties which do not involve flying, and the board is further convinced that continual flying jeopardizes the mental and physical well-being of the average man. Further, the board believes that the experiences of the past 20 years indicates that the average useful service life of the flying officer will be markedly shorter than the service life of the officer on nonflying duties, due to the necessity for youthful, physical, and mental alertness and stamina demanded by the operations of modern airplanes in military flying. The increased hazards and expectancy of a shorter service life fully justify extra compensation to the men who subject themselves to the risks incident to flying." The facts presently on hand indicate that the hazards of military flying are as prevalent today as they were in 1938.

The implementation of the proposed amendment with reference to flying pay will be prejudicial to the best interests of the Army Air Forces. The dual hazards of military flying, an accident hazard encountered by the individual during every minute of every flight and a career hazard which must be faced day by day throughout every year of the individual's active service life, are recognized. Any compensation for flying must provide for both of these hazards. The proposed limitation will not provide adequately for the career hazard, nor will it provide sufficient compensation for senior flying officers who are preparing themselves for positions of great responsibility in times of emergency.

When a man at the age of 20 chooses military aviation as a career, he must face the following facts: one out of four military pilots will be dead before he reaches his 39 birthday. The average life expectancy of a military pilot is 12 years less than that of those not required to participate in regular and frequent aerial flights. If there is an

inadequate compensation for the career hazards involved, few young men will decide upon military aviation as a career. It would be obviously impossible for them to provide adequately for their families in view of their shorter life expectancy.

Many of the senior positions in the AAF structure are occupied today by officers who have completed highly successful combat flying assignments. It is on their intelligence and combat experience that the foundation of leadership in the postwar Air Force will rest for the next 40 years. Few of these men will elect to remain in the service if the compensation for the hazards of their profession are reduced and their ability to provide for their families is lessened in any way. They will seek naturally a type of employment which will compensate them more adequately for their services and for the occupational hazards involved.

I particularly deplore the present approach to the question of additional pay for flying. It is my hope that the present amendment to the first supplemental surplus appropriation rescission bill, 1946, will be removed. If the Congress desires that the question of flying pay be considered at this time, I hope that it can be presented in a separate bill. In this manner it would be possible for the War Department and the Army Air Forces to present the factual records in justification of the payment of additional pay for flying as accomplished under the present system.

## What Will Congress Do About It?

EXTENSION OF REMARKS

OF

### HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. SMITH of Wisconsin. Mr. Speaker, an interesting circular has come to my attention regarding OPA and order 3 under 159e MPR 188. Here is another illustration as to what is transpiring in OPA and shows the utter ridiculousness of pricing policies established by that agency. The time has come for a show-down. Reconversion is a long way off if we permit OPA to control our economy. I am submitting herewith the information contained in that circular:

WHAT WILL CONGRESS DO ABOUT IT?

OPA has issued order 3 under 159e MPR 188 (Federal Register, Oct. 12, 1945), which permits manufacturers of hand lawn mowers to increase their prices 17 percent above those charged in the fall of 1941.

OPA says retailers and wholesalers must absorb this increase out of their customary margins on lawn mowers. Retailers absorb two-thirds of the increase, wholesalers, one-third. Retailers, says OPA, must sell lawn mowers, regardless of this increase of 17 percent, at the same prices they asked in 1942.

The order allows retailers who buy from wholesalers—and most of them do—a margin of 27 percent on hand lawn mowers. This 27 percent does not include the freight the dealer must pay as part of his cost, though this is an important item.

A number of hardware retailers were asked by the National Retail Hardware Association, 333 North Pennsylvania Street, Indianapolis, Ind., to supply the following information:

(a) The delivered cost and the retail selling price of each hand lawn mower sold by the dealer in 1942.

(b) The number of each kind of lawn mower sold.

The results of that survey are tabulated below, listing the State in which the reporting dealer is located, instead of the dealer's name:

| State in which dealer is located | Total cost of mowers sold during 1942 | Total selling price of mowers sold during 1942 | Margin |
|---|---|---|---|
| | | | *Percent* |
| Arkansas | $304.38 | $532.10 | 42.80 |
| California | 542.20 | 781.25 | 30.60 |
| Do | 628.80 | 993.80 | 36.73 |
| Georgia | 462.10 | 749.50 | 38.35 |
| Idaho | 300.85 | 468.35 | 33.84 |
| Illinois | 445.10 | 689.50 | 35.45 |
| Do | 1,126.25 | 1,743.75 | 35.41 |
| Minnesota | 674.11 | 1,088.50 | 38.07 |
| Do | 961.45 | 1,402.20 | 31.43 |
| Michigan | 373.74 | 564.50 | 33.79 |
| Montana | 164.14 | 266.30 | 38.36 |
| New Mexico | 853.06 | 1,119.00 | 23.77 |
| New York | 479.80 | 899.10 | 46.64 |
| Ohio | 644.34 | 1,058.65 | 39.14 |
| Oklahoma | 1,269.10 | 2,369.95 | 46.45 |
| South Dakota | 76.50 | 117.50 | 34.89 |
| Tennessee | 1,576.28 | 2,611.00 | 39.63 |
| Wisconsin | 1,791.33 | 3,026.70 | 40.82 |
| Total | 12,682.53 | 20,481.65 | 38.08 |

Hardware retailers cannot afford to sell lawn mowers on a 27-percent margin, even if freight were included.

Mail-order and chain-store operators are permitted a margin of 33⅓ percent.

It is useless to appeal to OPA. The hope of retailers for relief from this situation must lie in Congress.

The National Retail Hardware Association strongly endorses the report recently issued by the Select Committee To Investigate Executive Agencies. It directs your special attention to the following recommendation which is a part of that report:

"(4) That prices at retail be adjusted so as to reflect any dollar increase allowed manufacturers, except where the mark-up on the particular item is already sufficient to reflect a normal profit."

The question retailers all over the Nation are asking is:

What will Congress do about it?

The Members of Congress have shown proper interest in wanting to be sure that OPA employees who establish consumer prices and dealer margins under OPA regulations are experienced men, fully qualified to do this important work.

The National Retail Hardware Association believes that Members of Congress will be interested in the following extracts of testimony of OPA employees before the Select Committee To Investigate Acts of Executive Agencies Which Exceed Their Authority:

TESTIMONY OF LOUIS A. WILLIAMS, HEAD, HOUSEWARE AND HARDWARE SECTION, DURABLE GOODS BRANCH, OPA

(Mr. Williams was duly sworn by the chairman.)

The CHAIRMAN. State your name.

Mr. WILLIAMS. Louis A. Williams.

The CHAIRMAN. And what position do you hold with the OPA?

Mr. WILLIAMS. I am head of the Houseware and Hardware Section of the Consumer Durable Goods Price Branch.

The CHAIRMAN. How long have you been with OPA?

Mr. WILLIAMS. A little over 3 years.

The CHAIRMAN. Where was your home before you came here?

Mr. WILLIAMS. Before I came to Washington, sir?

The CHAIRMAN. Yes.

Mr. WILLIAMS. Puerto Rico.

The CHAIRMAN. Did you come from Puerto Rico to take this job that you mentioned?

Mr. WILLIAMS. I was transferred up to Washington. Prior to that time I lived in Michigan.

The CHAIRMAN. You were transferred here by whom, what agency?

Mr. WILLIAMS. The Office of Price Administration.

The CHAIRMAN. I ask you where you lived before you went with the Office of Price Administration.

Mr. WILLIAMS. Oh—in Michigan, sir.

The CHAIRMAN. Your home is in Michigan?

Mr. WILLIAMS. That is right.

The CHAIRMAN. And what is your previous business experience in the manufacturing line?

Mr. WILLIAMS. I have never actually manufactured merchandise.

The CHAIRMAN. What has been your experience in business?

Mr. WILLIAMS. I was a sales manager.

The CHAIRMAN. For what?

Mr. WILLIAMS. McKesson & Robbins, Inc.

The CHAIRMAN. What do they do?

Mr. WILLIAMS. They were wholesale distributors of soda-fountain equipment, store fixtures, drugs, chemicals, pharmaceuticals, electric appliances, and other items amounting to about 150,000.

The CHAIRMAN. Were you the company sales manager or a salesman?

Mr. WILLIAMS. I was the sales manager, sir.

The CHAIRMAN. For the whole company?

Mr. WILLIAMS. No, for the Farrand Williams division. McKesson & Robbins are a corporation controlling approximately 68 wholesale institutions in the country dealing in heavy chemicals and other allied products, store fixtures, soda fountain equipment, and so forth, and they distribute approximately 65 percent of the drugs and soda fountain equipment that is sold in the United States.

(EDITORIAL NOTE.—The Farrand Williams division of McKesson-Robbins is a wholesale drug firm located in Detroit, Mich. Based on the salary he received, Mr. Williams was probably a territorial sales manager, not sales manager for the entire division.)

Mr. FISBACH. What is your salary at the OPA?

Mr. WILLIAMS. How does that concern what we are discussing before the committee? Judge Smith, do you wish me to answer that, sir?

The CHAIRMAN. Yes; answer the question.

Mr. WILLIAMS. I think it is $6,230, but I don't know. It has gone up and down lately with the 48-hour week, the 44-hour week, and the 40-hour week.

Mr. FISBACH. According to your personnel file, in 1936 your salary was $1,500.

Mr. WILLIAMS. It might have been.

Mr. FISBACH. In 1937, according to your file, it was $2,080.

Mr. WILLIAMS. It could have been.

Mr. FISBACH. And in 1939, $2,450.

Mr. WILLIAMS. That might have been.

Mr. FISBACH. My associate here gives me an average of $1,625 over that period of time.

Mr. WILLIAMS. I am not familiar with that, so I couldn't tell you.

EXTRACTS FROM TESTIMONY OF ERNEST W. HEILMANN, PRICE EXECUTIVE OF THE HOUSEWARE AND ACCESSORY PRICE BRANCH, OFFICE OF PRICE ADMINISTRATION

Mr. FISBACH. You are a businessman, aren't you.

Mr. HEILMANN. Yes, sir.

The CHAIRMAN. I beg your pardon—are you?

Mr. HEILMANN. Yes, sir.

(Discussion off the record.)

Mr. FISBACH. You have had some 20 years' business experience, haven't you?

Mr. HEILMANN. That is right, sir.

Mr. FISBACH. Most of which has been with Spalding?

Mr. HEILMANN. It has been entirely with Spalding.

The CHAIRMAN. Doing what?

Mr. HEILMANN. In various capacities, from bookkeeping work up to sales manager of a local branch.

The CHAIRMAN. Selling what?

Mr. HEILMANN. Sporting goods.

The CHAIRMAN. Have you had any manufacturing experience?

Mr. HEILMANN. They also manufacture.

The CHAIRMAN. Did you have any experience along that line?

Mr. HEILMANN. Not in the actual manufacture, although I spent some time in the factories.

## Arctic Cradle of the Atom

EXTENSION OF REMARKS
OF

### HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

*Thursday, November 15, 1945*

Mr. BARTLETT. Mr. Speaker, with the Prime Minister of Canada in our city as a distinguished visitor, it is well that we consider the contribution which our northern neighbor has made to victory over the fascist foe. We of Alaska are well aware of the importance of the Canadian Arctic, both in war and peace. Uppermost in mind now is the fact that one of the world's great sources of pitchblende is on Great Bear Lake in Canada's Northwest Territories. Pitchblende is the raw material of atomic energy.

I ask that I be permitted to include in the RECORD excerpts from an article by Richard L. Neuberger, in the November 24 issue of Liberty magazine, called "Arctic Cradle of the Atom." This article from Liberty describes the great pitchblende deposits on Great Bear Lake. Captain Neuberger served 2 years with the Army engineers in Alaska and the Canadian Arctic.

I am particularly interested in this subject because one of the discoverers of the fabulously valuable uranium deposits in the Northwest Territories was a Canadian named Charles Camsell. In 1900 he undertook to guide an exploration which first came across the Great Bear Lake pitchblende veins. He then rose in the Canadian Government service to become commissioner of Northwest Territories. In the autumn of 1942 I had the privilege of participating with Charles Camsell in the dedication of the Alaska Military Highway at Kluane Lake, near Soldier's Summit in the Yukon Territory. I found him a distinguished and outstanding scientist.

The article from the November 24 issue of Liberty magazine follows:

ARCTIC CRADLE OF THE ATOM

(By Richard L. Neuberger)

URANIUM IS APT TO BECOME THE WORLD'S MOST PRECIOUS METAL. THE RUSTY NOTES SET DOWN 45 YEARS AGO BY A CANADIAN GEOLOGIST LED TO THE WORLD'S RICHEST SOURCE, WHENCE CAME THE ATOM BOMB

With numb fingers a hungry and half-frozen Canadian geologist, engaged in a pioneer exploration of a vast lake on the Arctic Circle, scribbled a few words as he looked up at cliffs tinted with strange pinkish seams. Then he and his guide hurried south to beat the winter that was closing down on the Barren Lands. In his wildest fantasies, the geologist could never know that the single sentence he had written would help make possible, nearly half a century later, a pair of frightful explosions which would end the most devastating war in history.

Uranium atoms, disintegrating with force beyond human understanding, blew apart over two Japanese cities, and the Imperial Government at Tokyo surrendered. Uranium was the tragic ingredient in this incredible conclusion to the second World War. Of the 92 different kinds of atoms, the uranium atom is the heaviest and has properties that no other element has. A uranium atom with 143 neutrons is known to science as U-235. Working in secrecy and haste, scientists discovered that U-235 could be split.

Thus was the atomic bomb born. It is the product of uranium atoms as they disintegrate and explode.

But where is the source of the mysterious and fabulous element which ended World War II and heralded, for better or for worse, a new era in the development of science?

Uranium comes from the bleak spot in the Canadian Arctic where, in the autumn of 1930, Dr. James Mackintosh Bell of the Canadian Geological Survey scrawled this obscure sentence in his notebook:

"In the greenstones east of McTavish Arm, the steep rock shores, which here present themselves to the lake, are often stained with cobalt-bloom and copper-green."

The sentence written, Dr. Bell and his young guide, Charley Camsell, slogged southward from Great Bear Lake. Fourteen hundred wilderness miles separated them from civilization. When finally they reached Edmonton, both were gaunt and exhausted.

For three decades Dr. Bell's sentence about the rocky shores east of McTavish Arm gathered dust in the archives of the Canadian Geological Survey. Dr. Bell died, and the guide, Charley Camsell, finally became Commissioner of the Northwest Territories.

Then, one afternoon in 1930, a prospector named Gilbert La Bine was rummaging through the reports of the Geological Survey. He was looking for likely sources of copper. Suddenly he jumped excitedly to his feet. He had read the sentence describing the rocks "stained with cobalt-bloom." He remembered a lecture he had attended at the University of Manitoba a few years earlier explaining what the pinkish stains of cobalt-bloom on rock might mean. No longer was La Bine looking for copper. Bigger game in the mineral field was now his goal—the biggest game of all—game worth a king's ransom for a single tiny gram.

That night, while his small son looked on in wonder, La Bine told his wife, "I'll get it! I'll get it! I'm on the track this time." He went to see Camsell. Where was McTavish Arm? Camsell turned to a map of Canada and pointed to Great Bear Lake. At the east end of the lake is an inlet almost on the Arctic Circle. "This is Echo Bay," Camsell told La Bine. "Right here is McTavish Arm. At this spot you will find the rocks with the pink stains."

La Bine rose to go. "It is a big, tough country," said the commissioner. "Good luck!"

It was tough indeed. Winter temperatures crowded 80° below. La Bine's partner, Charles St. Paul, fell a victim to snow blindness. But La Bine was on the trail. He and St. Paul waited out the long winter. In May, when the snow was gone, they resumed their quest. La Bine found a silver strike of inestimable riches. It left him singularly unmoved. He searched farther, examining each inch of ground.

And there at last, on a long, treeless point extending into Great Bear Lake, his search ended. He scraped at a black substance like hard dried-up tar. He examined it in the sunlight. He tapped it with his hammer. He turned to St. Paul tensely, for in his gloved hand was one of the rare substances of the earth—pitchblende, source of radium.

Canadian bush pilots flew La Bine south. He took a piece of his prize to an editor in Toronto. The editor put the black-veined mass in a box with an undeveloped photographic plate. When he opened the box, there was a picture of the rock on the plate. The pitchblende had taken its own picture. Only one substance could do that—radium.

It proved to be the greatest pitchblende strike ever found. Only one other substantial deposit was known to exist—in the Katanga district of the Belgian Congo in Africa. There is a supply of pitchblende in Czechoslovakia, where the Curies obtained the radium for their experiments. However, this supply is relatively submarginal and ceased to be used when the Congo deposit was discovered.

Between the Canadian and Congo deposits there was no comparison. The Congo pitchblende yielded 20 milligrams of radium to the ton. The pitchblende discovered by La Bine yielded 120 milligrams. When La Bine set out for Great Bear Lake, the price of radium was $80,000 a gram. After he revealed his discovery, the price dropped to $25,000.

La Bine's discovery broke the hold of the Belgium radium monopoly, L'Union Miniere de Haut-Katanga. In 1930, only 300 grams of radium had existed in the entire world. A few years later, with Gilbert La Bine tapping the deposits on Great Bear Lake, 800 grams were available to treat the dreaded cell-berserk disease known as cancer. Dr. Howard A. Kelly, the famous radiologist, of Johns Hopkins University, said La Bine's discovery was of immeasurable benefit to all mankind.

Where the campfire of Dr. James Mackintosh Bell and Charley Camsell once gleamed in the wilderness now stands Port Radium, largest known source of pitchblende on earth.

For almost 10 years La Bine and his associates paid little attention to the fact that one of the byproducts of the Port Radium deposits was a substance called uranium oxide. The byproduct was useful in glass pigments and porcelain manufacture and brought a good return. In fact, in a year when 23 grams of radium sold for approximately $570,000, the resulting byproduct of 211,857 pounds of uranium salts returned a respectable $271,100. La Bine's Arctic find not only sliced two-thirds off the price of radium, but also cut 38 percent off the cost of uranium byproducts.

Yet, despite the reduction which the Port Radium deposits caused in world prices, the income of the La Bine operations steadily soared. In a single year radium and uranium concentrates valued at $2,391,000 came from the deposits on Echo Bay, with uranium contributing nearly a third of the total value. And scientists said the Great Bear Lake pitchblende veins would last for at least a century.

La Bine still paid exclusive attention to the radium. The uranium was a convenient source of auxiliary income, and that was all; but radium was vital to the treatment of cancer.

Then, in 1942, the Canadian Government omitted from its Yearbook the value of the radium and uranium shipments from Port Radium.

"The value of shipments during 1940 and 1941 will not be published separately," the Yearbook significantly noted.

In laboratories in the United States scientists were experimenting with uranium. They studied all the 92 elements thus far isolated by man. But always they returned to uranium, and invariably the uranium that was the object of their studies came

from Gilbert La Bine's pitchblende deposits, 26 miles south of the Arctic Circle.

On January 28, 1944, Gilbert La Bine's Eldorado Mining & Refining Co., Ltd., was expropriated by the Canadian Government. It was not a wartime lease or rental. It was done in perpetuity—forever. La Bine and his staff were retained to operate the Port Radium deposits and the refining plant at Port Hope in Ontario, but the shareholders in the company were paid off at $1.35 a share. The purchase cost the Government of Canada $5,000,000. When indignant and mystified stockholders wrote protesting letters, military security agencies advised them not to ask questions.

Nor was there an explanation until the first atomic bomb exploded over Hiroshima on August 5, 1945, a year and a half after the Port Radium deposits had been made the property of the Dominion Government.

Gilbert La Bine, who is 55, is still somewhat shaken by all that has happened. 't was astounding enough to find himself on top of the planet's principal supply of radium. But to learn that the Eldorado, which he discovered in the northern solitudes, also produces the source of atomic energy has been a colossal and disturbing experience, yet, most vividly of all, he still remembers the moment that he stood on Echo Bay, 15 years ago, and held that first chunk of pitchblende in his hand.

The site of that first pitchblende vein, from which the radium and uranium ore is still extracted is now listed on the official maps as La Bine Point. But Gilbert La Bine is glad there is a Camsell River, and he wishes there were more recognition for Dr. James Mackintosh Bell. He gives full credit to the old geologist. Dr. Bell had not the benefit of all the researchers of the Curies and their successors, and he did not realize what those pinkish streaks might indicate. Yet he felt he was in the presence of important mineral deposits, for he added to his report that conditions at Echo Bay "suggest a locality to lure the prospector."

Great Bear Lake is 12,000 square miles in area, far larger, for example, than the State of Maryland. Storms toss it in summer. Ice 8 feet thick sheathes it in the 10-month-long winter. "There are two seasons up here" joked an American mining engineer working at the La Bine Point pitchblende deposits. "One is the Fourth of July, the other is winter." Indians have long hesitated to venture out on the lake beyond sight of land, so sudden and fierce are the winds which arise. Thomas Simpson, pioneer Hudson's Bay Co. explorer, told his superiors that "a calm day scarcely happens once a month on Great Bear Lake."

Thousands of United States soldiers are now familiar with this formidable region. They went into Canada's Northwest Territories, under Brig. Gen. James A. (Patsy) O'Connor, when the Alcan Highway was constructed. One of their missions was to develop an inland water transportation route along the broad Mackenzie River from Fort Resolution on Great Slave Lake to the Arctic Circle. Over this route was shipped much of the ore from Port Radium. The ore was hauled up the Mackenzie. Using two of the Mackenzie's tributaries, the Slave and Athabaska Rivers, barges and sternwheelers finally brought it to Waterways in the Province of Alberta, 1,400 miles from Port Radium.

But this wilderness waterway could be used only 3 months of the year. The rest of the time it was locked in a barricade of ice. Troops even saw ice form in antifreeze solution and Scotch whisky. Not until July do the huge floes and bergs wash out of Great Bear Lake. With Arctic weather immobilizing the water route, planes were used. The pitchblende was flown out of the wilderness 6 and 7 tons at a time.

Canadian bush pilots, RCAF fliers, and United States Army Air Forces crews participated in the winter flights. Using ski-equipped planes, they landed on fields hacked out of the timber and muskeg by American Army engineer regiments. When open water began to lick at the mantle of ice, pilots changed the landing gear to pontoons. Because Great Bear Lake was so storm-tossed, most of the fliers took to using a small feeder lake a few miles eastward, which a bush pilot named Lake Contact.

The bush pilots flew hundreds of tons of pitchblende south to the railhead at Waterways. One of them was Leigh Brintnell, who in 1930 had flown Gilbert La Bine's first mining equipment into Echo Bay. Another bush pilot made 19 trips in a single month between Waterways and Port Radium. It took 4 weeks to traverse the Mackenzie River route from the end of steel to the world's greatest pitchblende deposit. An airplane flew the shorter course across the tundra in 8 hours.

Sixty tons of chemicals are required to reduce 10 tons of pitchblende to the radium and uranium concentrates, and it was easier to transport the pitchblende to the refinery than to assemble a refinery on Great Bear Lake. Thus aerial augmenting of the summer barge shipments was essential to the atomic-bomb experiments. If it had not been for the airplane, transportation of ore from Port Radium would have been confined to the short period of the midnight sun, from July until mid-September.

The RCAF and the mounted police developed a big airfield at Fort McMurray, near Waterways. This became a major take-off point for Great Bear Lake. At rail's end the ancient equipment of the Northern Alberta Railways hauled the ore into Edmonton, and freights of the Canadian National then carried it to Port Hope for refining. From Port Hope, the uranium, extracted by a long process from the pitchblende, went to United States laboratories.

Pitchblende is still being chopped from the veins and seams on Great Bear Lake to be reduced to radium for the treatment of cancer, and to its byproduct uranium for purposes which only the future can tell.

Dr. Albert Einstein, realizing that uranium was the key to atomic energy, wrote the late President Franklin D. Roosevelt in August 1939 that "uranium may be turned into a new and important source of energy in the immediate future." His letter added that "extremely powerful bombs of a new type may thus be constructed."

President Roosevelt at once grasped the significance of these facts, and the atomic-bomb project was begun.

In 1941, two scientists, Jack DeMent and H. C. Dake, published a book called Uranium and Atomic Power. As the major source of uranium they looked to Port Radium on Great Bear Lake. The deposits of pitchblende in the Canadian Arctic, said these prophetic scientists, were the most extensive on earth, from both the standpoint of quality and that of quantity.

The world of war and crises and atomic bombs seems far from the Arctic pitchblende deposits. Indians trek in with pelts to be traded over the Hudson Bay Co. counter, and a Mountie sergeant arrives on patrol behind a team of huskies. Great Bear Lake is still the north country of Jack London and Robert W. Service. Along its rocky beaches lies the ore that is the source of atomic energy, but only a few bunkhouses, ore bins, and timber docks change it from the wilderness that the pioneer geologist visited when he wrote about the shores "stained with cobalt-bloom."

## What About Another Possibility?—Could There Be a Better Plan?

EXTENSION OF REMARKS
OF
## HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
*Wednesday, November 14, 1945*

Mr. MURDOCK. Mr. Speaker, under date of November 12, I extended my remarks in the Appendix of the RECORD and indicated therein the very great importance of the study now going on, and partially completed, by joint action of the United States Bureau of Reclamation and the State of Arizona to determine the most feasible route to divert water from the Colorado River into central Arizona. I have examined with great solicitude the preliminary report recently placed in my hands, for it means so much to the future of my State to have some of the waters of the Colorado River diverted into the central part of Arizona to vivify and revivify the splendid lands there which have such marvelous possibilities. I notice in this preliminary report that an invitation is extended to all concerned to make further suggestions if a more feasible idea can be advanced toward the solution of this complex problem and that such suggestions should be made on or before November 15. I now wish to make that further suggestion for the consideration of the engineers and officials before the investigation is complete.

It is apparent, from a study of this preliminary report, that the Bureau of Reclamation engineers, in their investigation of the various routes and plans for this project, were careful not to encroach upon the jurisdiction of any other agency of the Federal Government. They were careful to avoid infringing upon the Grand Canyon National Park and Monument. Likewise, they seemed to take no thought of the Indian Office where Indian irrigation might be combined with Bureau of Reclamation efforts, to mutual advantage and the Nation's great profit. Of course, Reclamation engineers must be guided by the law as it affects their agency and the other various Federal agencies, but it must be remembered that Congress may change the law in the interest of the general good. It seems to me that by the cooperatively working together of the Bureau of Reclamation, the Office of Indian Affairs, and the National Park Service a total good in Arizona can be accomplished far greater than either could accomplish alone and each of the agencies would profit thereby. This I now propose.

During the hearings before the Senate committee at Florence, Ariz., on August 2, 1944, as recorded on page 156 of those hearings, I called the attention of Commissioner Bashore to the fact that there were several points of contact between the Office of Indian Affairs and the Bureau of Reclamation within the State of Arizona where the two agencies

needed to cooperate to the best advantage of the State and Nation. I was thinking of the San Carlos project and the need of its expansion by acquiring more water, possibly by storing the floodwaters of the San Pedro River tributary to the Gila River and possibly by acquiring supplemental waters from the Salt River Basin.

In this latter case, such supplemental waters would have to be supplied from any waters diverted from the main stem of the Colorado River. As a second instance of needed cooperation, I had in mind the Indian reservation along the Colorado River south of Parker and its conflicting interests, which should be harmonized with the Palo Verde reclamation project directly across the river in California, deriving its water supply from the Colorado River near Blythe, Calif. As a third instance of possible and profitable cooperation, I was thinking of the Navajo and Hopi Indian Reservations in northern Arizona, desperately in need of water, and in which the Federal Government might, through the cooperation of the Indian Service and the Bureau of Reclamation, furnish water to Indian lands to keep them from direst poverty and also to the farmers of central Arizona—at the same time with mutual benefit all around. It is this third plan of cooperation which I wish to suggest for study by the Bureau of Reclamation and by the State officials of Arizona, as well as the Indian Service.

WHY NOT BUILD THESE DAMS HIGHER?

Before submitting my suggestion of a combined project to furnish Colorado River water to the western portion of the Navajo Indian Reservation while bringing most of it to central-southern Arizona, I would like to point out some other respects wherein I differ with the finding of the engineers in the preliminary report under consideration. This report calls for the building of a 700-foot dam at or near Bridge Canyon at the head of Lake Mead. It provides for a comparatively low dam near Lees Ferry. Now, it is my information that it would be engineeringly possible to build a much higher dam at Bridge Canyon and also at Lees Ferry than the Bureau of Reclamation contemplates. Since both of these dams are for power production, why should they not be built higher and thus produce more power? I believe that it would be best to produce all the hydroelectric power that it is engineeringly possible to produce by building dams at those two points as high as it is engineeringly possible to build them.

I would be delighted to see, if it is possible, a dam at Bridge Canyon for power production only, and a dam near Lees Ferry for power production only, each as much as a thousand feet in height if the sites will permit the building of such a dam.

The particular site near Lees Ferry that I have in mind is the one recommended by E. C. LaRue in paper No. 1512, and published in the transactions of the American Society of Civil Engineers in 1923. It is true that Mr. LaRue recommended a dam about 780 feet high there, but he stated that the site would permit the building of a much higher dam. The LaRue proposal was unanimously rejected at that time, but that was because of his unique and fantastic proposal of a rock-filled dam created all at one time by blasting the towering cliffs into the river by a single great explosion. Rejecting that method of building, it is not unreasonable to assume that a concrete dam, like that of Boulder, could be built on that same site and at a greater height than LaRue proposed for his earthen dam. At least, so it seems to me, and I would like to have any fallacies of my view shown up by engineers before I am willing to reject the idea.

I know it will be said, "Why build such high dams at Bridge Canyon and at Lee's Ferry to produce a greater quantity of power than can be marketed immediately?" Now, I doubt whether we can produce too much hydroelectric power in Arizona when we consider how it could be used. I shall want to clarify this a little further on. Again, I know that it will be contended that a dam the height that I would build it at Bridge Canyon would back the water up into the Grand Canyon National Monument and a few miles into the park. This might be objectionable to the Park Service. I cannot believe that it ought to be objectionable. The western end of the park and the monument are not now visited by tourists and are seldom seen by white men and are extremely inaccessible. If an artificial lake were backed up a few miles into those park areas, as it would be by my high dam, it would make accessible some of the sublimest scenery on earth, which would certainly be to the advantage of the public and the Park Service.

If the Park Service could reasonably object to the principle of the thing, on the ground that the formation of such a lake would be commercializing a portion of the park area, that could easily be remedied without sacrifice of any principle and without any physical injury, but rather improvement to the park itself, by a change in the legal park boundary line by indicating a certain contour line as boundary rather than the river's edge. This is a matter that I feel sure can be worked out agreeably by cooperation between the Bureau of Reclamation and the Park Service, both of which agencies are in the Department of the Interior. It would, indeed, be very regrettable if lack of cooperation between these two agencies of Government, or any other two agencies of Government, resulted in minimizing the benefits which both have to offer to the taxpaying public, the American people.

I DO NOT LIKE THE B PLAN

I know it is contended that a tunnel 42 miles in length could be bored from Marble Canyon westward to the canyon of Kanab Creek, and thus a large part of the water, used for power production, would bypass the Grand Canyon National Park and thus not infringe upon it. We are told, too, that such a tunnel would enable the total fall of the river to be utilized for power production, including the fall within the Grand Canyon National Park itself. I can understand that fact, but look at the cost of it. Compare costs with results. In the report the provision of this tunnel and its appurtenances are scheduled to cost the astronomical sum of $344,000,000. To my mind that is an entirely unnecessary expense, and I am wondering how long it would take such a tunnel to pay for itself through the sale of power alone. The report virtually throws out of the window the Marble Gorge plan, or A plan, of diversion, chiefly because it calls for an unheard of tunnel 143 miles long. Now this 42-mile Kanab tunnel is no plaything. It seems to me that no part of the cost of the Kanab tunnel could properly be charged to irrigation. Therefore I think that tunnel is entirely unnecessary, regardless of what plan is finally adopted to divert a part of this river into central Arizona.

True, we would like to utilize the total fall of the river in Arizona which this Kanab tunnel would enable us to do, but there are several factors against it. By dispensing with it and building a dam at Bridge Canyon two or three hundred feet higher than the one contemplated by the Bureau in conjunction with the proposed tunnel, we could utilize a part of the head, or fall within the park, without having the tunnel. Another point—if and when we should build that Kanab tunnel we propose to divert practically the whole Colorado River through it, leaving only just a small flow in the channel of the river through the canyon in the national park for scenic purposes. I should think the lovers of the Grand Canyon National Park would far rather have a clear lake at the west end of the park and a full river flowing through it, naturally, than they would prefer a trickle through the park and no inviting lake at the west end to make entrance possible and convenient.

ENGINEERS HESITATE ON SUCH A TUNNEL

Evidently the reason for the rejection of the Bureau of Reclamation's plan of a diversion directly south from Marble Gorge through a 143-mile tunnel to the Verde River is the uncertainty and hazard of such an undertaking. I do not blame engineers for hesitating to recommend a tunnel 143 miles along, especially through such mountain country of volcanic origin. Heaven only knows what such a tunnel would encounter at such great depth underneath the San Francisco mountains. I would much prefer that any necessary tunneling for this central Arizona project be under different terrain and have much less than half such a distance to go, and I believe it can be done with much less tunneling.

WHAT IS WRONG WITH THIS PLAN?

Here is my thought. If the highest possible dam be built near Lees Ferry on the site that LaRue describes, enormous quantities of hydroelectric power can be very cheaply produced. I believe the level of such a lake at that point could be raised to about 4,000 feet above sea level. Now, I would like to see central Arizona's quota of water, plus a quota for the Indian lands, plus a quota for

certain lands in white ownership in the lower valley of the Little Colorado River, all pumped out of the lake there and lifted about a thousand feet up into an aqueduct located about on the 5,000-foot contour line. This aqueduct could run south through the west end of the Navajo Indian Reservation. Such an aqueduct would carry water by gravity to many thousands of acres of Indian land belonging to both the Navajos and the Hopis and would reach and cross the Little Colorado River between Holbrook and Winslow. This canal could also furnish water to the lands in white ownership lower in the valley of the Little Colorado and could terminate at a point about south of Winslow where it would reach the mountain wall and its waters could be tunneled into the Salt River system.

Of course, most of the water carried by this proposed aqueduct would be intended for central Arizona, to be delivered at a point above Granite Reef Diversion Dam for proper distribution. Once this aqueduct reached the mountain walls, approximately south of Winslow, it could be tunneled either into the tributaries of the Verde River or it could be tunneled into the tributaries of the Salt River, such as Tonto Creek, above Roosevelt Dam. In either case, the tunneling there would not exceed 60 miles in length and might be made considerably less than that.

Even considering a 60-mile tunnel into the Salt River Basin from a point south of Winslow, that would be much less an engineering job than the proposed 72-mile tunnel south from the Bridge Canyon Dam, contemplated in the Bureau's second or B diversion plan. I repeat, I do not look with favor upon the second proposal put forth by the Bureau's engineers, because it contains two immense tunnels, the one from Marble Gorge to Kanab Creek Canyon, 42 miles in length, and the other a tunnel from Bridge Canyon Dam to Cunningham, Wash., a distance of about 72 miles. Although this would be in two parts, it involves a total of 114 miles of tunneling—which staggers my imagination almost as much as the proposed 143 miles of tunnel under the San Francisco mountains. Of course, if there is nothing better to accomplish the purpose, I will work for it.

An aqueduct from Lee's Ferry on the 5,000-foot contour line across the Navajo Reservation and across the valley of the Little Colorado to a point south of Winslow would be no greater in length than the open canal proposed from the Cunningham, Wash., to the Granite Reef diversion dam, as contemplated in the third Bureau plan contained in this report. I believe that the aqueduct across the Indian land would cost no more than the one proposed in the third plan, and the pump lift at Lee's Ferry would be about the same as the Parker pump lift, called for in the third plan.

Comparing the third plan in the Bureau's report and my own proposal, it seems to me that my proposal here would involve much less cost. The tunneling I am suggesting would not exceed 60 miles, as contrasted with 114 miles in the second of the Bureau's plans. Let it be held in mind also that even if the third Bureau plan should be followed, those two long tunnels of the second plan, totaling 114 miles in length, would be built eventually, even under the third plan. I have difficulty figuring the repayment of such tremendous costs under either the Bureau's second or third plan. What about repayment under my own plan?

My plan involves close cooperation between the Indian Service and the Bureau of Reclamation and contemplates that at least 50,000 acres of Indian land shall be irrigated and an equal amount of other lands in the valley of the Little Colorado River, all of which could contribute to the total of the entire project perhaps as much as $20,000,000. That contribution, plus the additional fact that such water as comes to central Arizona would come into the Salt River Valley where dams and power plants are already constructed and where facilities are now available to utilize such water for irrigation and power to the greatest possible extent through such existing facilities. All of this would further reduce the total cost and make repayment on this vast central Arizona project possible and assured.

## Reflection on Congress

EXTENSION OF REMARKS
OF
**HON. SAMUEL DICKSTEIN**
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's Washington Post:

REFLECTION ON CONGRESS

The House Committee on Un-American Activities, reincarnated at the behest of Representative JOHN RANKIN after the political demise of its former chairman, Martin Dies, shows how strong a force heredity can be. The present group, controlled by Mr. RANKIN, although Representative JOHN WOOD is its nominal chairman, is a chip off the old block. Whatever hope may have existed for a reform in its manners and morals has by now been altogether dissipated. Like its forebear, it is up to the old and ugly tricks of imputing guilt by association, blackening reputations by unsubstantial allegations and witch hunting among progressives. It continues to be a sleazy reflection upon the great legislative body in the name of which it is permitted to speak.

The latest item in the catalog of this committee's assaults on traditional American freedom is its action in requesting the scripts of seven radio commentators. What legitimate concern can it have with them? That Mr. RANKIN will disapprove of the views voiced by these men is scarcely to be doubted, since they have from time to time been no less critical of him than has this newspaper. That Mr. RANKIN will consider this difference of opinion incontrovertible proof of their un-Americanism is to be taken for granted from his past leaps in logic. He is entitled, of course, to his own judgment of them. But his attempt to use the power of his congressional position to brand them as subversive is an attempt to intimidate them and their sponsors, an attempt to limit freedom of speech and an attempt, indeed, to subvert basic American institutions, which is itself the worst form of un-Americanism.

Under Mr. RANKIN's guidance the House Committee on Un-American Activities has undermined the prestige of Congress by its fatuity no less than by its bigotry. Like its predecessor, it has provided a forum for crackpots. It has darted from charges against UNRRA to an investigation of Hollywood. It has subpenaed and cross-examined a gentleman from Bridgeport—simply because he happened to be a relative of the Soviet Commissar for Foreign Affairs. It has elucidated the obvious by hailing into its presence Earl Browder and William Z. Foster. It has made a travesty of the investigative process and has caused Congress to look ludicrous. Congress, for its own sake, ought to put a prompt end to its antics.

## Lt. Gen. James H. Doolittle

EXTENSION OF REMARKS
OF
**HON. GEORGE P. MILLER**
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. MILLER of California. Mr. Speaker, on November 2, the city of Alameda welcomed back from the war one of its distinguished sons, Lt. Gen. James H. Doolittle.

Jimmy Doolittle was born in Alameda on December 14, 1896. He holds a bachelor of arts degree from the University of California and took postgraduate work at the Massachusetts Institute of Technology, receiving the degree of doctor of science in 1925.

His record in and out of the Army is too well known to the American public to touch on here.

The people of Alameda are proud of General Doolittle and wanted to express that pride. The Lions Club of Alameda through its public-relations chairman Albert G. Burns conceived the idea of honoring the general at a luncheon to be sponsored by district 4–B of that organization consisting of some 64 Lions Clubs.

Immediate arrangements for the homecoming were under the jurisdiction of a committee appointed by the Honorable W. J. Branscheid, mayor of Alameda, headed by Mr. Sumner Graham, past president of the Alameda Chamber of Commerce, with Mr. John Rooks as secretary. Mr. Burns and Mr. James K. Barnett, president of the Alameda Lions Club, served on this committee also.

The program of the day consisted of luncheon served at the Hotel Alameda at noon with Supreme Court Justice Homer Spence presiding. In the Doolittle party were Mrs. Jo Doolittle, Lt. Col. Stan. Chester, Maj. Walter Masters, Warrant Officer WAC Mary E. Gill, who is personal secretary to the general. High-ranking officers in this area from the Army, Navy, Marines, Coast Guard, Air Force, and merchant marine were in attendance at this affair.

After the luncheon a parade was held through the streets of Alameda. The largest celebration of its kind in the past 35 years. After the parade the

Doolittle party were given a reception on the steps of the city hall in Oakland. Later in the evening the great dinner party was held at the Scottish Rite Temple in Oakland with about 1,300 present. District Gov. Loren A. Critser, of Lions International, was the presiding officer. Distinguished guests were high-ranking service personnel and past director Thomas S. Neilson, of Lions International. James K. Barnett, president of the Alameda Club, presented Doolittle with his membership certificate in the Lions. Miss May Ward, 1945 winner of the Lions student speakers' contest in California and Nevada spoke briefly.

Lieutenant General Doolittle's address on this occasion is a masterful one. He brought a message of importance touching on lasting peace and the continued welfare of this country.

Mr. Speaker, I am proud to live in and represent the city that give the daring and courageous Jimmy Doolittle to the Nation and under leave to extend my remarks, I wish to insert, at this place in the RECORD, his speech on this occasion:

I am particularly glad to be with you in Oakland today and I'd like now to express my appreciation for the heart-warming welcome you have given me.

California is my home State—and it is great to get back. Circumstances and a nomadic nature have taken me away from time to time, but, like all native sons, I always come back. I plan, some day, to retire from the more active life and settle down here to live—and I mean live with a capital "L."

I am delighted to have an opportunity to talk to you businessmen of the Lions Club. Civic organizations such as yours have played an important part in the welfare of the people, not only in communities throughout this country, but in other parts of the world as well. You tart in where charity leaves off. With your 220,000 members in 4,750 clubs in the United States, China, Central and South America, Cuba, and other countries, you have taken advantage of your splendid opportunity to do good—both by precept and example. I am well aware that you have participated in 69,000 separate welfare activities for the good of man. Your program of aid to the blind is outstanding among the efforts of all civic organizations.

I say this to you—not so much by way of complimenting you; I know you want no praise—but rather to remind you of the importance of the Lions Club and its capabilities for the even greater things you may accomplish.

Our Nation is now in a most difficult transitional period. We are seeking to adjust ourselves from the requirements of war to the requirements of peace. We are confronted with problems which might easily have a disastrous effect upon our national welfare. We are confused about many things. I shall speak about one phase of the situation—the importance of preparing for peace. This ties in—directly or indirectly—with almost all of our problems.

One extremely important and difficult phase of this problem is the physical, mental, and spiritual rehabilitation of our wounded and the readjustment of our returning combat troops. Everyone must get behind the program to take care of our wounded and help them help themselves—and back an educational program which has as its objective correction of the war-affected thinking—and particularly in the case of our younger people, warped development—of our returning airmen, soldiers, sailors, and marines. Equally important is the development of tolerance, patience, and understanding on the part of the folks at home. The first thing is to realize that a serious problem exists. Next analyze the problem and then solve it.

There is no need for me to tell you businessmen that profitable contracts do not grow on trees. Neither does peace. A business venture, to succeed, must be sound—well planned and executed—and it must perform a service to the public. Otherwise, it will inevitably fail. That is good common sense, and its application has made our country the richest and most prosperous nation in the world.

Peace is an elusive thing; we have not been able, through the ages, to hold on to it for more than a few years at a time. But peace is also a precious thing, and we must fight as hard to retain it as we did to gain it.

I said we are confused about many things. We are, however, certain of one thing: We hope we are done with war. We know what another war with modern weapons would mean. The statement has been made that another war would mean the end of civilization. At first that sounds like an exaggeration, but when you think of what can be accomplished with a proper—or should I say improper—application of known scientific developments, then it becomes a very real threat. We merely have to consider the full destructive capacity of an improper use of atomic energy to come to the realization that we could not survive another long war.

So, we want world peace. Well, to realize it, we must plan and prepare for it. The first step—obviously—is a world organization devoted to world peace, in which every nation pledges itself to strive, through a world council, to solve any problems which may arise. Such an organization would be set up for the good of the world, to maintain peace everywhere, just as laws and statutes are established to maintain order within a city. Such an agency, to be effective, must be capable of making any nation that doesn't choose to abide by the ruling of the majority comply with their desires.

Now for the second step. America must take an active part in world affairs. We must take a dominant part in assuring world peace. We cannot afford to take a chance on some nation or group of nations repeating the tragedy of World War II. There is only one way to avoid this possibility: We must be able to impose our will for peace upon any nation that doesn't want peace. To do this we must be strong militarily.

A sound Department of National Defense, in which land, sea, and air are coequal—where one head will establish policies and advance the desires and necessities of the three individual components according to their respective values—offers the most economical organization which can assure the safety of our Nation.

We must have an adequate Army, Navy, and Air Force—in being—ready for any eventuality.

Such an organization should be small but adequate for our requirements. It should be ultramodern, readily expandable, highly mobile, with air as the first line of defense, and, if necessary, the first line of offense. Our Air Force will be composed of high-performance fighters for the defense of America, and long-range bombers, long-range escort fighters and long-range transports for offensive operations. We must have a strong, flexible aircraft industry, which in time of peace will build commercial planes, but which can readily be converted to the manufacture of military aircraft in case of war.

Furthermore, until such time—and that time is not far off—as airplanes are available with sufficient range to permit them to go to any part of the world with a bomb load and return to the United States, we must have under our control prepared and stocked outlying bases that will allow us to operate anywhere in the world.

The need for an autonomous air force and unification of our armed forces is realized and advocated by such outstanding military figures as Secretary of War Patterson, General Marshall, General Arnold, General MacArthur, and General Eisenhower, Admiral Nimitz and Admiral Halsey, in their testimony last year, before a special committee appointed by the Joint Chiefs of Staff, joined the Army generals in favoring a single department of national defense, with independent and co-equal land, sea, and air.

Economy is today the watchword of a war-weary people. Taxes are very properly being reduced. The road to stabilization is open to us. The people must select agencies for the present and future according to the ability of those agencies to do the job and our ability to finance them. We should studiously avoid building any equipment that is not required—nor should we produce any large amount of equipment—for Army, Navy, or Air—that we feel will be ineffective in the near future.

Our air power must continue to be revolutionary. This means a continuation and expansion of the research so splendidly carried on during the war, both by the Government and by industry. We must have a well-financed national fundamental or basic research agency. Each manufacturer must maintain an aggressive engineering section—self-supporting, if possible—and if this is not possible, maintained through Government subsidy.

We must keep a step ahead of any potential enemy. An adequate air force is the best investment in defense the American people can make. It should assure peace—but if war does come, it will assure victory—quickly, economically, efficiently, and with a minimum loss of precious American lives.

The air force didn't do a great deal, relatively, in the First World War. It won its right to parity with the Army and Navy in this war. It is certain that air—due to the speed and facility with which we can travel through it and the limitations inherent in land and sea—will be the medium that will be used by the weapons of the future. This becomes particularly apparent when we realize that future wars may be fought across the Arctic wastes, and air is the only unobstructed medium of travel there. Air power will eventually become not only the decisive but the dominant military agency. We must face this fact and plan accordingly.

Our Air Force started from scratch in this war. In a short space of time it developed into a powerful striking force of more than 2,400,000 men. In less than 4 years the people on the home front built nearly 300,000 airplanes for us and for our allies. In the defense organization which I envision, I see an Air Force in the order of a half million men, with a minimum of 6,500 combat aircraft. We must also have an adequate Army and Navy. Then, with a continuation of scientific research, with air removed from Army and Navy control, with a single department of national defense assuring cooperation and coordination, all three agencies would be free to develop according to their respective values, and the United States of America would be assured of the greatest return on each dollar spent for national security.

The merger of land, sea, and air into a single department, each on a parity with the other, is essential to the safety of America. It is essential in the interest of national economy, because it will reduce the size of our defense organization to an absolute minimum and useless duplication of effort and waste. It will assure the purchase of modern and effective equipment and gradually eliminate obsolete and obsolescent equipment. When this is accomplished, America will have a modern, efficient, and economical defense organization. Then, and

only then, will we be able to face the future with the assurance that we have done everything possible to maintain the peace.

You, members of the Lions Club—in Oakland and in every city, town, and village in the country—can help to bring this about. You can do it by expressing your approval of the defense organization, which I have outlined, to your legislators. In the interest of national safety and economy, in the interest of maintaining the peace, I urge you to accept this responsibility.

## Transportation of Veterans Serving Overseas

EXTENSION OF REMARKS
OF
**HON. A. L. MILLER**
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
*Thursday, November 15, 1945*

Mr. MILLER of Nebraska. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a letter from a soldier now stationed in Hiro, Honshu, Japan. I also include some extracts from an editorial published in Japan.

Mr. Speaker, this letter and parts of the editorials indicate that all is not well in getting the high-point men back from the Pacific area. There ought to be more cooperation between the transportation division of the armed forces. Ships that are now idle should be made available for the transportation of troops.

The Senate Naval Affairs Committee received testimony November 13 that the Army had discharged a total of 2,827,000 as of November 10, 1945, and that the Navy had discharged 607,000, making a total of 3,434,000 Army and Navy discharges as of November 10. If the total number of men in all branches of the armed forces at its peak totaled about 11,000,000 men, this would still leave something over 7,500,000 men in all branches of the armed forces as of November 10. At the present rate of discharge, there will be not only many high-point men in the armed forces who are entitled to a discharge but many men who are married and have families at home still in military service at Christmas time. I have repeatedly stated that the armed forces would have more than 5,000,000 men under arms the first of the year.

Members of this Congress who have been concerned about speeding up demobilization should immediately sign the discharge petition on the Clerk's desk which would bring this subject before the Congress for consideration. It seems to me it is time for the Congress to take definite action. Otherwise, demobilization will lag and many complaints will come to Members of Congress.

The letter and editorials follow:

HIRO, HONSHU, JAPAN, *November 1, 1945.*
Hon. A. L. MILLER,
*House of Representatives,*
*Washington, D. C.*

MY DEAR SIR: You will, I hope, give a bit of your valuable time to listen to a plaint from one of your constituents. Perhaps you will remember me as ———. My trouble is that of thousands—return and discharge of overseas veterans.

I have spent only 25 months overseas and consider myself very fortunate indeed. Less than a week ago I bade good-by to a number of my friends who had spent 43 and 44 months over here.

Such a thing is inexcusable. And equally inexcusable is the way so-called spokesmen for the department are daily reporting that so-and-so-many-thousand men will be released during a given month, reducing the critical discharge score to such-and-such a figure. And no one goes home. Soon everyone will be eligible and none will be home.
